2. A folded paper container comprising a single sheet of paper cut and folded so as to form a solid substantially trapezoidal in cross section having a base, rear wall, front wall, side walls, a cover adapted to be torn off to display the contents, a display tab, and a false bottom arranged at an angle to the bottom.

1,501,017. PROTECTIVE DEVICE. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Nov. 28, 1919. Serial No. 340,969. 48 Claims. (Cl. 200—122.)

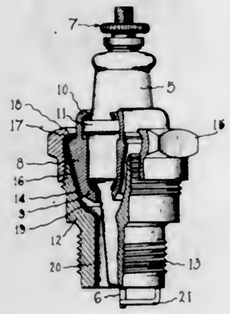
6. A protective device for electrical apparatus having different thermal characteristics in its component parts, comprising means adapted to be located remotely from the apparatus so as to be out of the direct influence of

the heat radiated from the apparatus and responsive to the load current traversing said apparatus or a proportional part of such current for duplicating the different thermal characteristics of the parts of said apparatus, and means controlled by said first mentioned means for opening the circuit of said apparatus when any predetermined temperature is individually first reached in one of the parts of said apparatus.

1,501,018. ELECTRIC-CIRCUIT PROTECTIVE DEVICE. DONALD K. LIPPINCOTT, San Francisco, Calif., assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed July 8, 1919. Serial No. 309,358. 12 Claims. (Cl. 200—123.)

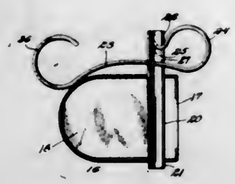
1. A protective device for an electric circuit containing electrical apparatus, comprising a heating element in circuit with the apparatus, a metallic heat storage element in which the heating element is embedded and with which it is in electrical contact and a thermal responsive device operative to open the circuit disposed in thermal communication with said metallic element.

1,501,019. ELECTRIC-CIRCUIT PROTECTIVE DEVICE. DONALD K. LIPPINCOTT, San Francisco, Calif., assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Dec. 9, 1919. Serial No. 343,483. 24 Claims. (Cl. 200—122.)



1. A protective device for an electric circuit containing electrical apparatus, comprising a metallic thermal responsive device of large mass and a heating element adapted to be placed in circuit with the apparatus embedded in said mass.

1,501,020. TOOTHBRUSH SHIELD ATTACHMENT. FRANK E. SMALL, Jamaica, Long Island, N. Y., assignor to Nancy Maria Small, Jamaica, Long Island, N. Y. Filed Sept. 22, 1923. Serial No. 664,189. 4 Claims. (Cl. 15—248.)

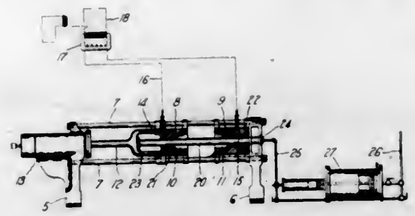


1. A tooth brush shield comprising a disc having an apertured central portion adapted for slidable engagement with a flat handle to frictionally retain the shield on the handle, the shield being provided with a marginal portion forming a V-shaped channel having its apex directed inwardly and its side walls diverging outwardly from the apex.

1,501,021. DOUBLE-INSULATED SPARK PLUG. ALBERT J. CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Nov. 24, 1919. Serial No. 340,102. 4 Claims. (Cl. 123—169.)

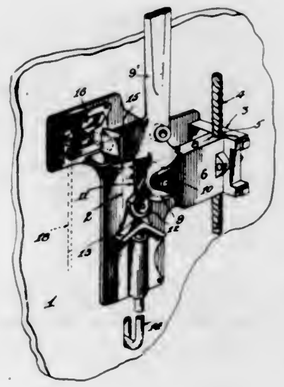
1. In a spark plug, a central electrode; an external metallic shell or casing; a grounded electrode carried by said shell; double insulation interposed between said inner electrode and said outer shell or casing; and a metallic sleeve interposed between two portions of said double insulation and located out of the path of the flow of current between said central and grounded electrodes, and which sleeve serves to support said inner electrode and insulation surrounding the same.

1,501,022. VALVE MECHANISM. CHARLES GIBFORD, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 28, 1921. Serial No. 488,225. 5 Claims. (Cl. 251—13.)



3. In valve mechanism, the combination with a valve member comprising a flow-obstructing portion and a spindle portion formed from a single piece of sheet material, said spindle portion having apertures therethrough, of a handle member comprising a resilient device seated in said apertures.

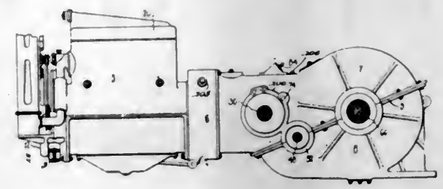
1,501,023. PROCESS AND APPARATUS FOR FORMING METAL OBJECTS. ELVIN S. GOODSPEED, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 25, 1920. Serial No. 405,906. 6 Claims. (Cl. 219—3.)



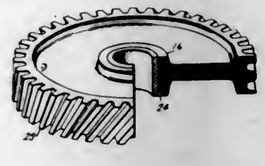
1. The process of forming articles which comprises supporting a hollow blank within a mold recess, heating the blank while thus supported to a temperature

at which it becomes plastic, applying pressure to the interior of said blank to cause the same to expand within

the mold recess, and simultaneously reducing the length of the blank to provide additional material for the walls of the blank within the mold recess.



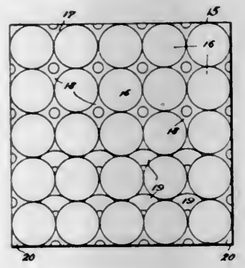
1,501,024. SAFETY APPLIANCE FOR ELEVATOR CARS. SAMUEL L. MCKINNEY, Peoria, Ill., assignor to Elevator Locks Co., a Corporation of Illinois. Filed May 21, 1923. Serial No. 640,573. 3 Claims. (Cl. 187—47.)



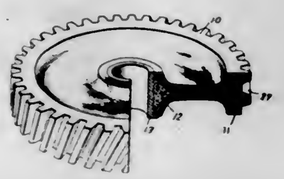
2. In an elevator appliance of the nature described, the combination with an elevator car and an operating cable, of a lever including a cam, a fixed part positioned adjacent the cable, a shiftable part lying at the opposite side of the cable from the fixed part and between the cable and said cam and operated by the latter to engage said cable, a housing enclosing and guiding the shiftable part and pivotally supporting the lever and cam, and an arm pivoted on the car adapted to be operated to hold the cam in gripping engagement with the shiftable part.

1,501,025. TRACTOR. ARTHUR C. MASON, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 22, 1920. Serial No. 367,935. 7 Claims. (Cl. 74—57.)

1. In a self propelled vehicle a transmission casing including an integral single-piece upper section and a lower section, a rear axle housed in said casing, said sections meeting each other in a joint which substantially intersects the axis of said axle and which terminates some distance forwardly of said axle but rearwardly of the front end of said transmission casing, and change-speed gearing assembled within said upper section for driving said axle, said gearing being assembled in said upper section, the front end of said transmission casing being open and annular in form, and having means whereby it may be secured to the rear end of another casing to thereby provide a vehicle frame.

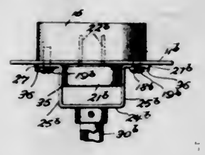


1,501,026. NOISELESS GEAR AND METHOD OF FORMING THE SAME. EMILE J. GUAY, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 10, 1923. Serial No. 611,827. Renewed Jan. 29, 1924. 22 Claims. (Cl. 74—28.)



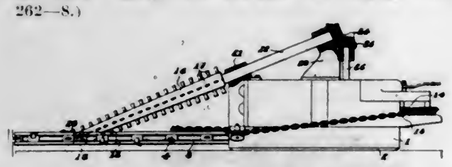
1. The method of making blanks of the character described which comprises coating disks and washers made of textile material with a binder, assembling them into a stack having a common axis, said disks and washers being interspersed, and subjecting the same to pressure and heat to compress said material and cause the binder to retain the same in its compressed state.

1,501,027. BLANK FOR GEARS AND METHOD OF MAKING THE SAME. EMILE J. GUAY, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 10, 1923. Serial No. 638,067. 22 Claims. (Cl. 74—28.)



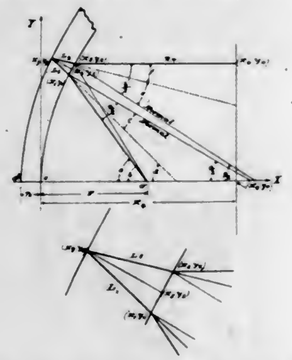
1. The method of making blanks of the character described, which comprises cutting definitely shaped members from sheet textile material, building up the blank from the members and the trimmings which remain after the members are cut, said members being interlocked with the trimmings, and finally subjecting the material to compression and retaining it in that condition.

1,501,028. NONMETALLIC GEAR AND METHOD OF FORMING THE SAME. EMILE J. GUAY, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 19, 1923. Serial No. 675,655. 15 Claims. (Cl. 74—28.)



1. A gear blank of the character described, comprising disks and rim-forming rings both made of textile material, a hub member situated between certain of the disks and composed of small pieces of textile material shaped to predetermined form before assembly, and means for holding all of said textile material in a compressed state.

1,501,029. LIGHTING FIXTURE. HOWARD R. SARGENT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 28, 1921. Serial No. 456,244. 7 Claims. (Cl. 173—330.)



1. In an apparatus of the character described, the combination of a plug receptacle, a face plate associated therewith, headed screws threaded into said face plate, a plug for electrical connection to the receptacle, a supporting member associated with the plug and provided with slots adapted to receive the shanks of the screws without the removal of the screws from the face plate, and a fixture member carried by the supporting member, said fixture member and plug being wired as a unit.

1,501,030. MINING MACHINE. DAVID SCOTT ALLISON, Salt Lake City, Utah, assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 23, 1918. Serial No. 213,280. 30 Claims. (Cl. 262—8.)

1. In a mining machine, a frame slidable on a mine bottom, means for sumping the same, and means comprising a plurality of cooperating relatively movable cutter carrying elements thereon for cutting in one sumping operation a full depth kerf having an inclined surface.

1,501,031. GLASS MIRROR. FRANK A. BENFORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 22, 1922. Serial No. 576,686. 11 Claims. (Cl. 240—103.)

1. A glass reflector having a rear surface and having a paraboloidal front surface, the former so located with reference to the front surface and of such configuration that the thickness of the glass as measured along any line normal to the rear surface is substantially

$$T_a = \frac{T_o}{\cos a}$$

where a is any angle.

Patents Nos. 1,501,032 to 1,501,892.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 324—No. 3. TUESDAY, JULY 15, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Amendment to Trade-Mark Laws.

[PUBLIC—No. 263—68TH CONGRESS.]

[S. 3324.]

An act to amend section 5 of the Trade-Mark Act of 1905, as amended, relative to the unauthorized use of portraits.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the fourth proviso of subdivision (b) of section 5 of the act entitled "An act to authorize the registration of trade-marks used in commerce with foreign nations or among the several States or with Indian tribes, and to protect the same," approved February 20, 1905, as amended, is amended to read as follows: "*Provided further*, That no portrait of a living individual may be registered as a trade-mark except by the consent of such individual, evidenced by an instrument in writing, nor may the portrait of any deceased President of the United States be registered during the life of his widow, if any, except by the consent of the widow evidenced in such manner."

Approved, June 7, 1924.

Interference Notices.

U. S. PATENT OFFICE, *Washington, June 28, 1924.*

Samuel Block, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Landay Brothers, 311 Sixth Avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered September 28, 1909, No. 75,357, to Samuel Block, 220 Wabash Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to said Samuel Block at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Samuel Block, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, June 17, 1924.*

Rice Cereal & Milling Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Cumpson-Doelman, Inc., 588 Louisiana Street, Buffalo, N. Y., for registration of a trade-mark and trade-mark registered August 28, 1917, No. 118,331, to Rice Cereal & Milling Co., Fort Wayne, Ind., and a notice of such declaration sent by registered mail to said Rice Cereal & Milling Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Rice Cereal & Milling Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, June 28, 1924.*

Lucas Thompson & Co., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Ireland Bros. Inc., of 102 Franklin Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Lucas Thompson & Co., of 40 Lispenard Street, New York, N. Y., No. 22,068, dated November 29, 1892, and the notice of such proceeding sent by registered mail to the said Lucas Thompson & Co., at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Lucas Thompson & Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Disclaimer.

1,179,717.—*Chester C. Harbridge*, Detroit, Mich. CARRIER FOR AUTOMOBILES. Patent dated April 18, 1916. Disclaimer filed May 31, 1924, by the assignee, *Detroit Carrier & Manufacturing Co.*

Hereby enters this disclaimer—

To the combination of claim 17, except where, in such combination, the peripheral flange has a portion which fits into and forms an internal seat for the demountable rim.

Enters this disclaimer—

To the combination of claim 19, except where the outwardly extending flange has a peripheral portion which forms an internal seat for the demountable rim.

Condition of Applications Under Examination at Close of Business July 3, 1924.

Room No.	Divisions, Examiners, and subjects of inventions. (Total number of applications awaiting action, excluding Trade-Mark Division, 59,541; Trade-Mark Division, 1,706. Oldest new case, Nov. 5, 1923; oldest amended, Nov. 5, 1923. The dates given are 1923 except where * indicates 1924.)	Oldest new application and oldest action by applicant awaiting office action. DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE WALKER.

Decided March 30, 1925.

INVENTION—OMITTING A PART OF A MECHANISM—INCREASED OUTPUT.

Where the traveling felt for supporting paper pulp was formerly made to move at a relatively low speed, and could thus be cleaned by washing, beating or passing between squeezing rolls and subjecting it to suction apparatus, and it was found that by omitting the beaters or the squeezing rolls and increasing the suction effect the wearing and injurious effect of the beating or squeezing could be eliminated and the speed of travel of the felt increased many times, resulting in a very large increase of output, and the improvement was widely adopted by manufacturers of paper, *Held* that the change involved invention.

APPEAL from the Examiners in Chief.

CLEANING FELTS OF PAPER MACHINES.

Messrs. Pennie, Davis, Marvin & Edmonds for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief, affirming that of the Primary Examiner, denying patentability to claims 1, 4, and 13. Claims 1 and 4 will serve for purposes of illustration:

1. The method of cleaning the felt of a paper machine which consists in supplying a cleansing liquid to the felt to loosen foreign material thereon, and removing the liquid and foreign material therefrom by the sole application of a suction effect.

4. Apparatus for cleaning the felt of a paper machine comprising means for supplying cleansing liquid to the felt, and means for applying a suction to the felt to remove the liquid and foreign material therefrom, said means being movably mounted with respect to the felt so that it may be removed from operative relation thereto when the felt is not to be cleaned.

The references relied on are: Manning, 305,615, September 23, 1884; Scanlan, 673,970, May 14, 1901; Gilbert et al, 708,219, September 2, 1902; Whisner, 920,100, April 27, 1909; Reynolds, 1,236,359, August 7, 1917; Marshall (British), 3,160 of 1870.

Some twelve claims were appealed to the Examiners in Chief and considered by them, certain ones being found patentable, but as to the others the decision of the Examiner being affirmed.

On the appeal from the decision of the Examiners in Chief appellant has withdrawn his appeal as to all rejected claims except claims 1, 4, and 13.

The appealed claims relate to a method and apparatus for cleaning felts in a paper-making machine without stopping the operation of the latter. It appears that in the operation of making paper the felts upon which the wet paper travels and through which the moisture from the paper is drawn become dirty, and the porous condition interfered with by loose particles of fiber, filler, and size being carried into the meshes, and therefore the necessity for cleaning the felts arises. Various methods were employed in the older machines for cleaning the felt, and among such methods were those disclosed in the patents to Manning, Scanlan, and the British patent to Marshall. In the first-mentioned patent the felt is sprayed with jets of liquid to wash off the dirt, and then the felt is passed through squeezing rollers to eliminate some of the moisture, and finally over suction boxes, two being shown at the right hand of the illustration in Figure 1 to further extract the water and, obviously, such remaining dirt as can be withdrawn by suction. A somewhat similar arrangement is found in the Scanlan patent, kneading rolls being shown to operate in conjunction with the suction box. This patentee states that the suction tank is used "to draw off water," that the suction pump is employed "to draw off water and refuse from the tank *c*." This would indicate clearly enough that some refuse or dirt was extracted from the belt by the suction. The felt is further dried by passing through additional wringer rolls to squeeze out the remaining water. The British patent discloses beaters to aid in loosening the particles or impurities from the wetted felt, and thereafter the latter is passed between squeezing rollers and finally over a suction cylinder to complete the cleaning and drying operation. All these machines are of the type known as slow-machines. Appellant is dealing with what he has designated as a high-speed machine. As he well notes, the appliances used with these low-speed machines of the prior art would not be practicable in machines of the high-speed variety. Felt, as contended by appellant, could not stand the wearing injurious strain of the feeding, squeezing, or beating operations incident to the methods employed in these machines formerly in use. It is appellant's contention that his discovery that he could loosen the dirt by moistening liquid and then subjecting the felt to sufficiently high suction effects as to remove substantially all the liquid and a considerable portion of the dirt without employing beaters or squeezing rolls has resulted in very marked improvement in the production of paper and that his method has been widely adopted by manufacturers of this product.

It is noted that none of the claims here on appeal makes any statement as to the speed of the machine or felt, and claim 4 does not preclude the presence of beaters or squeezing rolls shown in the prior patents. Claim 1 does recite that the vacuum effect constitutes the sole means relied upon to remove liquid and foreign material. The claim therefore defines from Manning or the other references merely by excluding the presence of the squeezing rolls, with possibly the implied effect of a higher suction. In a low-speed machine it would seem to be obvious the rolls or beaters could be

omitted and the vacuum increased without involving either invention or any material improvement in the operation of the machines or the product produced by them. Since, however, the high-speed machine could not be operated, as contended by appellant, with these devices of the prior art, it is thought there is merit in the contention that the discovery of the great advantage to be derived from appellant's method of procedure warrants the allowance of a claim substantially like claims 1 and 13, but restricted to a high-speed machine. If, therefore, claim 1 is amended by inserting after the word "machine" some such clause as *in which the felt is moving at relatively high speed*, this claim may be allowed. Also if some such change is made in claim 13, it may be allowed.

As above noted, claim 4 does not define in any way from what is disclosed in Manning. It is noted that while Manning shows the suction boxes X and W on the clean side of the felt, yet he does show a suction box, which is not lettered, just beyond the squeezing rolls V, which box is against the dirty side of the felt. There is no point in the feature that the box may be removed when its use is not desirable. Almost all devices of machines may be removed. As now drawn these appealed claims are not believed patentable.

Subject to the foregoing suggestion of amendment, the decision of the Examiners in Chief is affirmed.

ADJUDICATED PATENTS.

(C. C. A. Mass.) The Bruckman patent, No. 1,071,027, for machine for making ice-cream cones, *Held* valid and infringed. *American Cone & Wafer Co. v. Denard*, 297 Fed. Rep. 913.

(C. C. A. Ill.) The Laughlin patent, No. 1,396,687, for side bearings for railroad cars, claims 22 to 26 *Held* not infringed, and No. 1,396,688, claims 32 and 33 *Held* invalid. *Barry Ry. Supply Co. v. Laughlin*, 297 Fed. Rep. 938.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,371,413, W. P. Devine, Spectacles, decided June 7, 1924, claims 1 and 2.

Pat. 1,444,801, R. H. Moore, Lingerie clasp, decided June 28, 1924, single claim.

TRADE-MARKS CANCELED.

156,487. Bread. Nafziger Baking Company, Kansas City, Mo. Registered June 20, 1922. Canceled May 27, 1924.

158,335. Serge in the piece. The Bruner Woolen Co., Inc., New York, N. Y. Registered August 29, 1922. Canceled May 27, 1924.

163,833. Hosiery, underwear, and sweaters of wool, cotton, and silk for men, women, and children. Z. Harry Altmark, New York, N. Y. Registered January 30, 1923. Canceled May 27, 1924.

Changes in Classification.

Order No. 2,871, June 19, 1924, provides:

In class 183, Gas Separation (Division 25), establish subclasses and definitions as follows:

2.7 **Oil or gas well traps**
Processes
114.5 Separating gases or vapors from mineral oils.
114.6 Separating mineral-oil vapors from gases.

2.7. OIL OR GAS WELL TRAPS. Devices to be used near oil or gas wells to separate gas from other constituents discharged from the well. These devices may include means for separating liquids or solids from the oil together with means for separating the gas.

Note.—The combination of oil-well traps with parts of an oil-well structure are classified in class 166, WELLS.

Note.—For filters and decanters see class 210, LIQUID SEPARATION OR PURIFICATION, subclasses 43, Decanter and filter, and the subclasses indented thereunder, and 51, Decanters, and the subclasses indented thereunder.

Search this class, subclass 114.5, for process.

114.5. PROCESSES, SEPARATING GASES OR VAPORS FROM MINERAL OILS. Physical processes within this class for separating gases and light vapor, frequently gasoline, which are usually present in relatively small quantities, from liquid mineral oil.

Search this class, subclasses 2.5, 2.6, and 2.7.
Search Class—
196—MINERAL OILS, subclass 143, Increasing specific gravity.

114.6. PROCESSES, SEPARATING MINERAL-OIL VAPORS FROM GASES. Physical processes for separating mineral-oil vapors, such as vapors of gasoline or benzol, from air, natural gas, still gases, coal gas, and the like. These processes are usually by compression or absorption. Processes for separating the vapors by absorption which include a conventional step of recovering the absorbed vapor from the absorbent are classified here.

Note.—Processes whose novelty resides in the method of recovery of the absorbed vapor from the absorbent, although including a specific method of gas separation, are classified in class 196, MINERAL OILS.

Search Classes—
62—REFRIGERATION, appropriate subclasses.
196—MINERAL OILS, subclass 7, Mineral oils from hydrocarbon gases, and the subclasses indented thereunder.
252—SUBSTANCE PREPARATION, subclass 4, Volatile-organic-liquid recovery, for general recovery of solvents

The patents contained in these subclasses have been taken from class 196, Mineral Oils, and from various subclasses in class 183, Gas Separation.

In class 202, Charcoal and Coke (Division 31), establish subclasses—

14 **Coal or shale oil retorts**
15 Rotary.
16 **Coal or shale oil processes.**

The patents contained in these subclasses have been taken from class 196, Mineral Oils, subclasses 19, Coal oil, Retorts; 20, Coal oil, Retorts, Rotary; and 21, Coal oil, Processes, abolished in this order, and are directed toward the process of and apparatus for the distillation of coal, lignite, oil shale, and the like for obtaining liquid products.

Class 196, Mineral Oils (Division 31), has been reclassified with the subclasses indicated in the new loose leaf now being published for insertion in the Manual of Classification.

Lists of subclasses with definitions may be seen at the Classification Division, Room 63..

Changes in Classification.

Order No. 2,872, June 20, 1924, provides:

In class 20, Wooden Buildings (Division 46), establish the following subclass and definition:

Windows
40.4 Show-window type.

40.4. WINDOWS, SHOW-WINDOW TYPE. Window constructions especially directed to the support and protection of merchandise and arrangements for its display. In some instances cases, racks, etc., are claimed wher combined with window structure.

Note.—Particular constructions of such racks or cases are cross-referenced into class 211, STORE FURNITURE.

The patents contained in this subclass have been taken from class 20, Wooden Buildings, subclass 40, Windows, Miscellaneous.

In class 70, Locks and Latches (Division 20), abolish subclass—

102 **Sliding-door fasteners.**

The patents formerly contained in this subclass have been placed for the most part in class 292, Closure Fasteners.

In class 128, Surgery (Division 43), abolish the following subclass with its dennition:

Receptors
Aspirators
279 Siphon.

The patents formerly contained in this subclass have been placed for the most part in class 32, Dentistry, subclass 33, Saliva ejectors.

In class 128, Surgery (Division 43), subclass 276, Receptors, Aspirators, in the note following the definition cancel the word "saliva" at the beginning of the second line.

In class 139, Textiles, Weaving (Division 21), establish the following subclasses and definitions:

Weft manipulation
116.5 Pile
116.6 Longitudinal wire, anchored release end.

116.5. WEFT MANIPULATION, PILE. Means for manipulating the weft threads so that they will stand out from the surface of the fabric in the form of loops or ends.

Search this class, subclasses 21, for weft pile produced in multished looms, and 37, and the subclasses indented thereunder, for pile produced from warp threads.

116.6. WEFT MANIPULATION, PILE, LONGITUDINAL WIRE, ANCHORED RELEASE END. The weft is laid over wires which are parallel with the warp, the front ends of the wires being fast to the frame of the loom.

Note.—This type usually carries cutting knives.

Search this class, subclass 47, for similar devices for warp pile.

The patents contained in subclass 116.5 have been taken from class 139, Textiles, Weaving, subclass 116, Warp manipulation, and those contained in subclass 116.6 have been taken from class 139, Textiles, Weaving, subclasses 47, Warp manipulation, Pile, Longitudinal wire, traversing, Anchored release end, and 116, Warp manipulation.

In class 139, Textiles, Weaving (Division 21), subclass 37, Warp manipulation, Pile, add to the search note following the definition the words:

and subclasses 116.5 and 116.6, for pile produced from weft threads.

In class 139, Textiles, Weaving (Division 21), subclass 47, Warp manipulation, Pile, Longitudinal wire, traversing, Anchored release end, add the following search note to the definition:

Search this class, subclass 116.6, for similar devices for weft pile.

In class 242, Winding and Reeling (Division 21), abolish the following subclass with its definition:

Bobbin and cop winding
44 Multiple.

The patents formerly contained in this subclass have been placed in class 242, Winding and Reeling, subclasses 35.5, Bobbin and cop winding, Multiple, and 35.6, Bobbin and cop winding, Reserve-thread uniting, hereinafter established.

In class 242, Winding and Reeling (Division 21), establish the following subclasses and definitions:

Bobbin and cop winding
35.5 Multiple.
35.6 Reserve-thread uniting.

35.5. BOBBIN AND COP WINDING, MULTIPLE. Machines adapted to wind a plurality of bobbins simultaneously and not provided for in the preceding subclasses.

35.6. BOBBIN AND COP WINDING, RESERVE-THREAD UNITING. Means operable in connection with winding machines, brought into operation by failure of the running thread, to unite a reserve thread to the last end of the thread on the winding bobbin.

Search Class—
28—TEXTILES, subclass 34, Warp manipulation, Reaming, Supply replenishing.

The patents contained in subclass 35.5 have been taken from class 242, Winding and Reeling, subclass 44, Bobbin and cop winding, Multiple, hereinbefore abolished, and those contained in subclass 35.6 have been taken for the most part from class 242, Winding and Reeling, subclass 44, Bobbin and cop winding, Multiple, hereinbefore abolished, and subclasses 36, Bobbin and cop winding, Detectors and stops, and 37, Bobbin and cop winding, Detectors and stops, Thread break or exhaust.

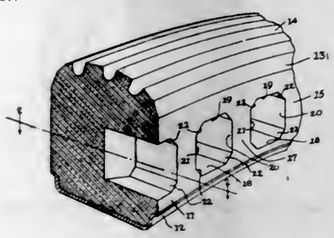
REISSUES



JULY 15, 1924.

15,871. METHOD FOR SEPARATING MIXTURES OF LIQUIDS. ERNEST I. DYER, Beverly Hills, and ARTHUR R. HEISE, Redondo, Calif. Filed Sept. 13, 1923. Serial No. 662,563. Original No. 1,242,784, dated Oct. 9, 1917, Serial No. 845,060. filed June 15, 1914. 11 Claims. (Cl. 196—25.)

1. The method of separating water from emulsified mineral oils which consists in forcing the water and oil mixture under pressure through infusorial earth and then allowing the water and oil to stratify by gravity.

15,872. CUSHION TIRE. WILLIAM A. BRUBAKER, Akron, Ohio. Filed Feb. 1, 1924. Serial No. 690,097. Original No. 1,414,252, dated Apr. 25, 1922, Serial No. 525,553. filed Dec. 29, 1921. 20 Claims. (Cl. 152—1.)

10. A cushion tire comprising an annular base region, an annular tread region, and an annular intermediate region disposed between said base region and said tread region and comprising a central peripherally extending rib and a plurality of fins extending laterally from each side of said rib in peripherally spaced relation with the fins on each side of said rib extending only from those portions of said rib disposed intermediate the portions of said rib from which extend the fins on the other side of said rib and with the spaces between said fins extending from the exterior of said tire substantially to the center line of said tire and with said rib thus relatively narrow.

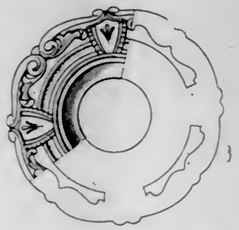
DESIGNS

JULY 15, 1924.

65,155. STATUETTE. ANNE AGNES AVERY, Hollywood, Calif. Filed Apr. 12, 1923. Serial No. 5,791. Term of patent 3½ years.

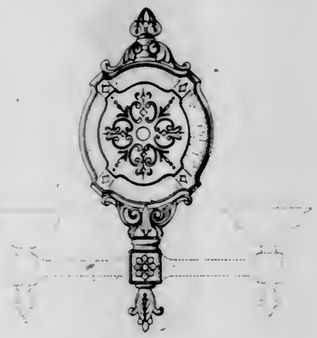
The ornamental design for a statuette, as shown.

65,156. PLUG CLUSTER. REUBEN B. BENJAMIN, Chicago, and CHESTER E. WARNER, Berwyn, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 9, 1922. Serial No. 3,910. Term of patent 14 years.



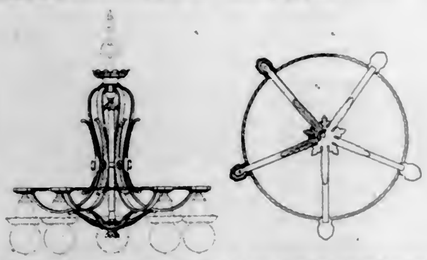
The ornamental design for plug cluster substantially as shown.

65,157. BOTTLE. EDOUARD P. BENOIS, Paris, France, assignor to Coty, Inc., New York, N. Y., a Corporation of Delaware. Filed May 3, 1923. Serial No. 6,043. Term of patent 14 years.



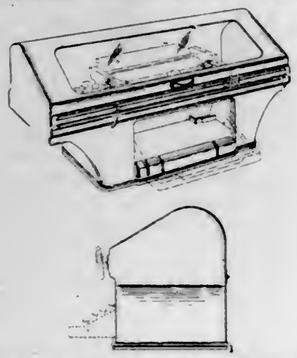
The ornamental design for a bottle substantially as shown.

65,158. HUSK FOR LIGHTING FIXTURES. HUGO E. BOHL, Bayonne, N. J., assignor to Radiant Lighting Fixture Co., Inc., a Corporation of New York. Filed May 7, 1924. Serial No. 9,512. Term of patent 3½ years.



The ornamental design for a husk for lighting fixtures substantially as shown and described.

65,159. BACKPLATE FOR LIGHTING FIXTURES. HUGO E. BOHL, Bayonne, N. J., assignor to Radiant Lighting Fixture Co., Inc., a Corporation of New York. Filed May 7, 1924. Serial No. 9,513. Term of patent 3½ years.

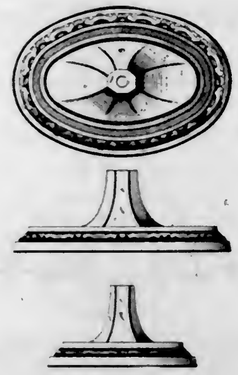


The ornamental design for a backplate for lighting fixtures substantially as shown.

65,160. CHANDELIER. HUGO E. BOHL, Bayonne, N. J., assignor to Radiant Lighting Fixture Co., Inc., a Corporation of New York. Filed May 7, 1924. Serial No. 9,514. Term of patent 3½ years.

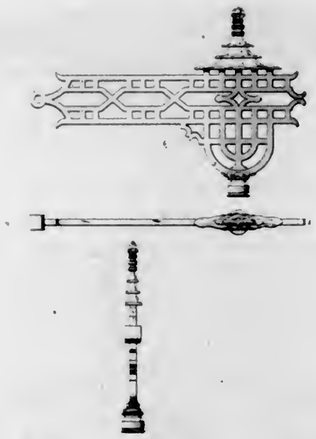
The ornamental design for a chandelier substantially as shown and described.

65,161. HOOD FOR TYPEWRITING MACHINES. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1921. Serial No. 519,524. Term of patent 14 years.



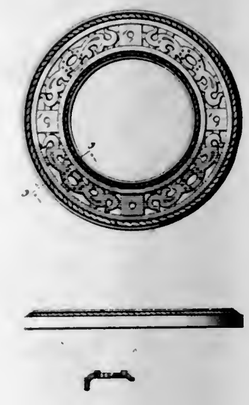
The ornamental design for a hood for typewriting machines, substantially as shown.

65,162. LAMP BRACKET. FRANK COLLINS, New York, N. Y., assignor to Sunset Lighting Fixture Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 9,379. Term of patent 3½ years.



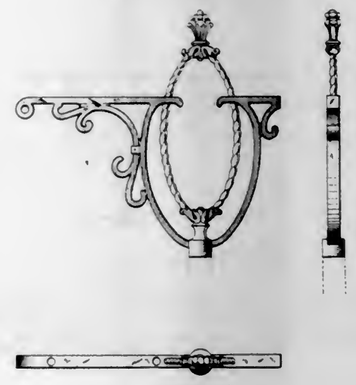
The ornamental design for a lamp bracket, as shown.

65,163. LAMP BASE. FRANK COLLINS, New York, N. Y., assignor to Sunset Lighting Fixture Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 9,380. Term of patent 3½ years.



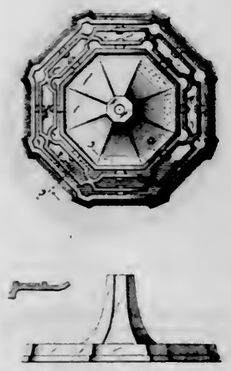
The ornamental design for a lamp base, as shown.

65,164. LAMP BRACKET. FRANK COLLINS, New York, N. Y., assignor to Sunset Lighting Fixture Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 9,381. Term of patent 3½ years.



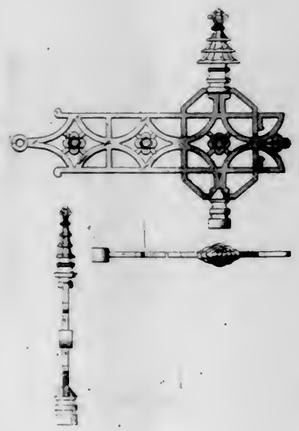
The ornamental design for a lamp bracket, as shown.

65,165. LAMP BASE. FRANK COLLINS, New York, N. Y., assignor to Sunset Lighting Fixture Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 9,382. Term of patent 3½ years.



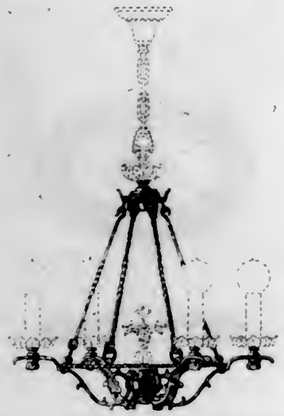
The ornamental design for a lamp base, as shown.

65,166. LAMP BRACKET. FRANK COLLINS, New York, N. Y., assignor to Sunset Lighting Fixture Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 9,383. Term of patent 3½ years.



The ornamental design for a lamp bracket, as shown.

65,167. LAMP BASE. FRANK COLLINS, New York, N. Y., assignor to Sunset Lighting Fixture Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 9,384. Term of patent 3½ years.



The ornamental design for a lamp base, as shown.

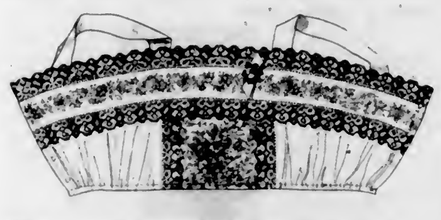
65,168. LAMP BRACKET. FRANK COLLINS, New York, N. Y., assignor to Sunset Lighting Fixture Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 9,385. Term of patent 3½ years.

The ornamental design for a lamp bracket, as shown.

65,169. LIGHTING FIXTURE. LE ROY A. CRUMLEY, New York, N. Y., assignor to The Ferro-Art Lighting Fixture Co., Inc., a Corporation of New York. Filed Feb. 14, 1924. Serial No. 8,630. Term of patent 7 years.

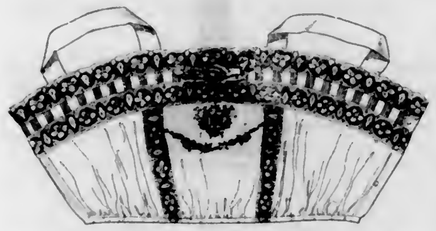
The ornamental design for a lighting fixture, substantially as shown.

65,170. LIGHTING-FIXTURE ARM OR SIMILAR ARTICLE. LE ROY A. CRUMLEY, New York, N. Y., assignor to The Ferro-Art Lighting Fixture Co., Inc., a Corporation of New York. Filed Feb. 14, 1924. Serial No. 8,631. Term of patent 3½ years.



The ornamental design for a lighting fixture arm or similar article, substantially as shown.

65,171. BACKPLATE FOR LIGHTING FIXTURES. LE ROY A. CRUMLEY, New York, N. Y., assignor to The Rogers, Silver Plate Co., a Corporation of Connecticut. Filed Mar. 24, 1924. Serial No. 9,049. Term of patent 7 years.

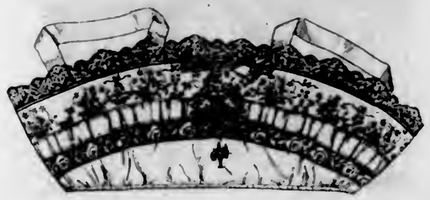


The ornamental design for backplate for lighting fixtures substantially as shown.

65,172. CORSET COVER. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,659. Term of patent 3½ years.

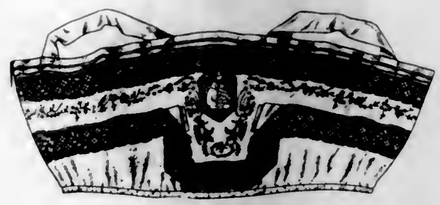
The ornamental design for a corset cover, as shown.

65,173. CORSET COVER. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,660. Term of patent 3½ years.



The ornamental design for a corset cover, as shown.

65,174. CORSET COVER. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,661. Term of patent 3½ years.

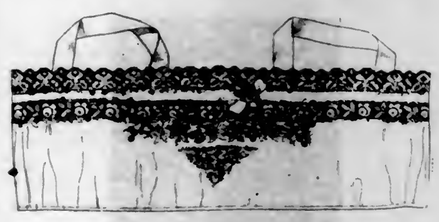


The ornamental design for a corset cover, as shown.

65,175. CORSET COVER. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,662. Term of patent 3½ years.

The ornamental design for a corset cover, as shown.

65,176. CORSET COVER. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,663. Term of patent 3½ years.



The ornamental design for a corset cover, as shown.

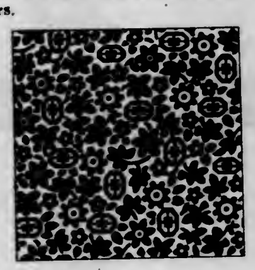
65,177. NIGHTDRESS. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,664. Term of patent 3½ years.

The ornamental design for a night dress, as shown.

65,178. CORSET COVER. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,665. Term of patent 3½ years.

The ornamental design for a corset cover as shown.

65,179. JACKET. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,666. Term of patent 3½ years.



The ornamental design for a jacket, as shown.

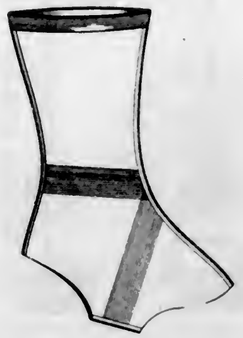
65,180. CHEMISE. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,667. Term of patent 3½ years.

The ornamental design for a chemise, as shown.

65,181. TEXTILE FABRIC. GUSTAVE M. FAUSER, New York, N. Y., assignor to Tingue Manufacturing Company, New York, N. Y., a Corporation of Connecticut. Filed May 31, 1924. Serial No. 9,765. Term of patent 7 years.

The ornamental design for a textile fabric as shown.

65,182. CANDLESTICK OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Apr. 25, 1924. Serial No. 9,397. Term of patent 7 years.



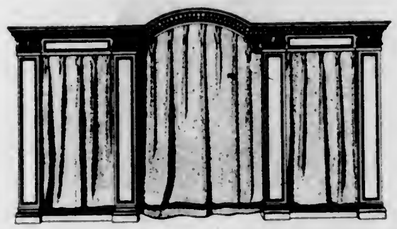
The ornamental design for a candlestick or similar article as shown.

65,183. PILE FABRIC. JAMES GOWANS, Leonia, N. J., assignor to Sidney Blumenthal & Co. Inc., New York, N. Y., a Corporation of New York. Filed May 26, 1924. Serial No. 9,712. Term of patent 7 years.

The ornamental design for a pile fabric, as shown.

65,184. ANKLET. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1924. Serial No. 9,001. Term of patent 14 years.

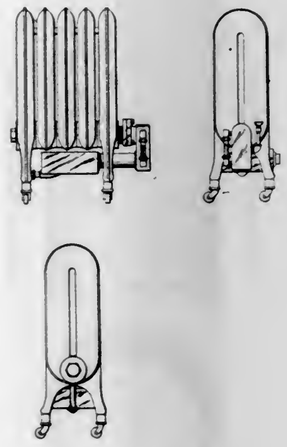
The ornamental design for an anklet, as shown.



65,185. NEEDLE CASE. LEONARD MORGAN HAINES, Studley, England, assignor to William Hall & Company, Limited, Studley, England. Filed Sept. 21, 1923. Serial No. 7,283. Term of patent 14 years.

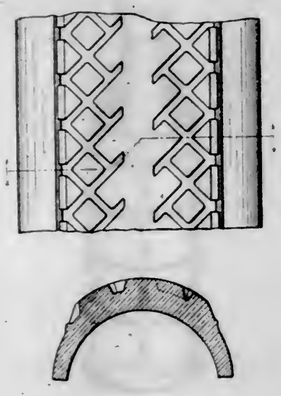
The ornamental design for a needle case, as shown.

65,186. SCREEN. MOSES HIRAM HARRIS, New York, N. Y. Filed Apr. 6, 1921. Serial No. 459,168. Term of patent 3½ years.



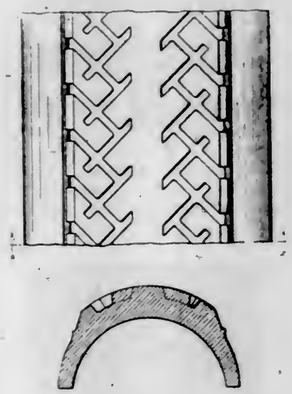
The ornamental design for a screen, as shown.

65,187. BOTTLE. CLAYTON J. HOWEL, Chicago, Ill., assignor to Orange Crush Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 28, 1924. Serial No. 8,467. Term of patent 14 years.



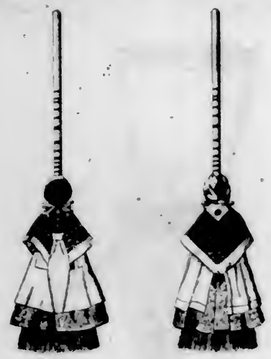
The ornamental design for a bottle, as shown.

65,188. ELECTRIC STEAM RADIATOR. ANSEL C. HULBERT, San Carlos, Calif. Filed Oct. 10, 1921. Serial No. 506,887. Term of patent 3½ years.



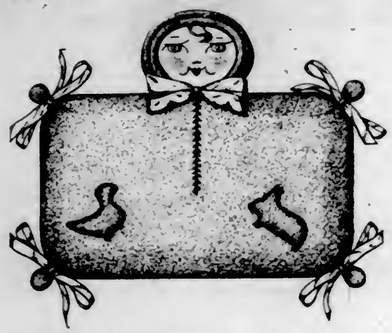
The ornamental design for an electric steam radiator, as shown.

65,189. VEHICLE TIRE. EDISON G. HULSE, Cumberland, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed May 17, 1924. Serial No. 9,632. Term of patent 7 years.



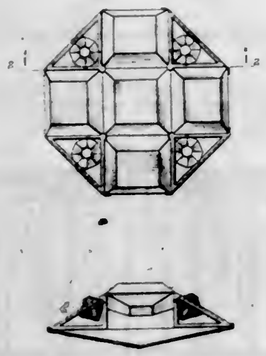
The ornamental design for a vehicle tire, as shown.

65,190. VEHICLE TIRE. EDISON G. HULSE, Cumberland, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed May 17, 1924. Serial No. 9,633. Term of patent 7 years.



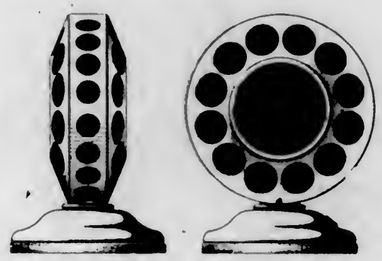
The ornamental design for a vehicle tire, as shown.

65,191. BROOM. MINNIE JENNINGS, Spartanburg, S. C. Filed May 10, 1924. Serial No. 9,548. Term of patent 3½ years.



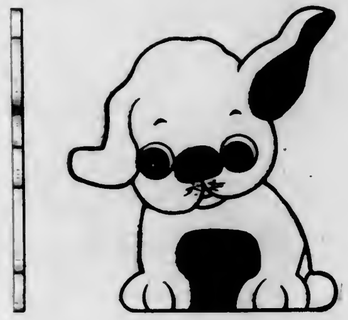
The ornamental design for a broom, as shown.

65,192. PILLOW. KATHERINE C. KLAR, Hartford, Conn. Filed May 15, 1924. Serial No. 9,595. Term of patent 3½ years.



The ornamental design for a pillow, as shown.

65,193. PRECIOUS-STONE SETTING. ATHOS D. LEVERIDGE, Whitestone, N. Y. Filed Apr. 28, 1924. Serial No. 9,427. Term of patent 7 years.

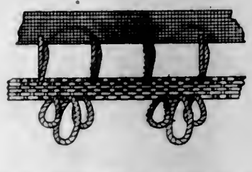


The ornamental design for a precious stone setting as shown.

65,194. CASING FOR A TELEPHONE TRANSMITTER. GEORGE R. LUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1922. Serial No. 3,874. Term of patent 14 years.

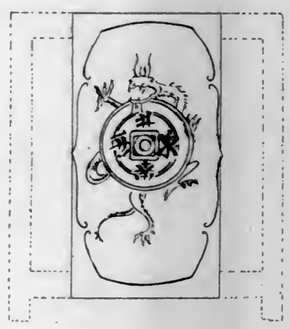
The ornamental design for a casing for a telephone transmitter, as shown.

65,195. TOY DOG. ADA R. JONES, Bozeman, Mont. Filed Mar. 14, 1921. Serial No. 452,346. Term of patent 14 years.



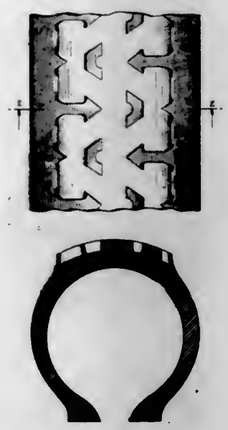
The ornamental design for a toy dog as shown.

65,196. FRAME FOR LAMP SHADES, LANTERNS, OR SIMILAR ARTICLES. NORMAN LIPSKY, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc., a Corporation of New York. Filed May 16, 1924. Serial No. 9,626. Term of patent 3½ years.



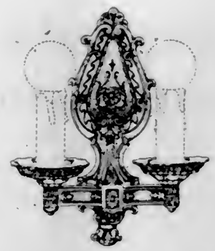
The ornamental design for frame for lamp-shades, lanterns, or similar articles substantially as shown.

65,197. TRIMMING BRAID FOR GARMENTS AND SIMILAR ARTICLES. MAX MITTENDORFF, Wyomissing, Pa., assignor to The Narrow Fabric Co., West Reading, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1922. Serial No. 1,110. Term of patent 14 years.



The ornamental design for a trimming braid for garments and similar articles, as shown.

65,198. PANEL FOR A CHAIR BACK. HAROLD P. NELSON, North Bergen, N. J. Filed Apr. 11, 1924. Serial No. 9,232. Term of patent 3½ years.



The ornamental design for a panel for a chair back as shown.

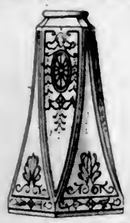
65,199. AUTOMOBILE TIRE. EDWARD D. NEWMAN, New York, N. Y. Filed June 29, 1922. Serial No. 2,894. Term of patent 7 years.

The ornamental design for an automobile tire as shown and described.

65,200. LIGHTING-FIXTURE BRACKET OR AN ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed May 16, 1924. Serial No. 9,618. Term of patent 3½ years.

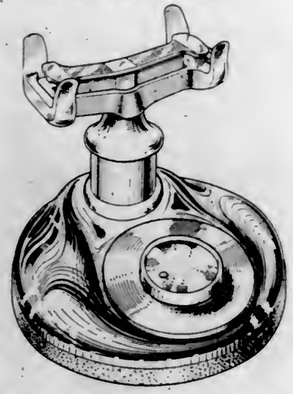
The ornamental design for a lighting fixture bracket or an article of similar nature, as shown.

65,201. BUCKLE. CHARLES ROSENBLUM, Brooklyn, N. Y., assignor to Krischer's Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed May 10, 1924. Serial No. 9,551. Term of patent 7 years.



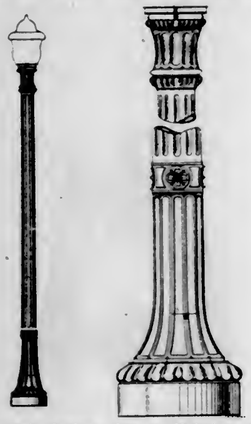
The ornamental design for a buckle as shown.

65,202. LIGHTING-FIXTURE PART OR SIMILAR ARTICLE. BERTRAM A. SEGAR, New York, N. Y., assignor to The Segar Studios Inc., a Corporation of New York. Filed Jan. 31, 1924. Serial No. 8,487. Term of patent 7 years.



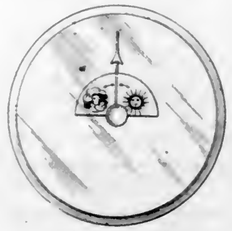
The ornamental design for a lighting fixture part, or similar article substantially as shown.

65,203. SALT SHAKER OR SIMILAR ARTICLE. ALWIN F. SOUTER, Hackensack, N. J., assignor to E. & J. Bass, Inc., a Corporation of New York. Filed Apr. 16, 1924. Serial No. 9,294. Term of patent 3½ years.



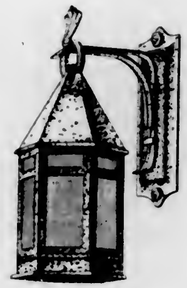
The ornamental design for salt shaker or similar article substantially as shown.

65,204. DESK STAND FOR HAND TELEPHONES. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 28, 1922. Serial No. 4,734. Term of patent 14 years.



The ornamental design for a desk stand for hand telephones, as shown.

65,205. LIGHTING STANDARD. JOHN R. TOWNSEND, South Bend, Ind., assignor to George Cutter Company, a Corporation of Indiana. Filed July 13, 1922. Serial No. 3,065. Term of patent 14 years.

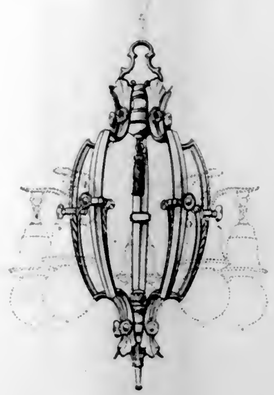


An ornamental design for a lighting standard as shown.

65,206. INDICATOR FOR BAROMETER. JOHANNES WIRTH, Hamburg, Germany. Filed Dec. 11, 1923. Serial No. 7,992. Term of patent 14 years.

The ornamental design for an indicator for barometer substantially as shown and described.

65,207. LANTERN. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,639. Term of patent 3½ years.



The ornamental design for a lantern, as shown.

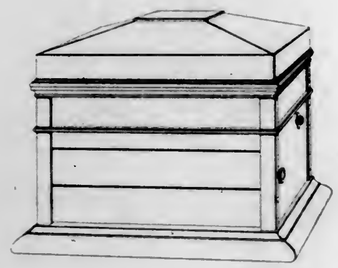
65,208. CANOPY FOR LIGHTING FIXTURES. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,641. Term of patent 3½ years.

The ornamental design for a canopy for lighting fixtures, as shown.

65,209. LIGHTING-FIXTURE BODY. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,642. Term of patent 3½ years.

The ornamental design for a lighting-fixture body, as shown.

65,210. BOBESCHE. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,644. Term of patent 3½ years.



The ornamental design for a bobesche, as shown.

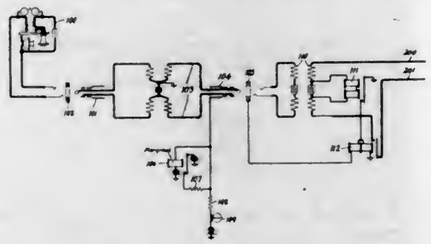
65,211. LAMP BASE. HERMAN H. WOLTER and GUY P. NORTON, Meriden, Conn., assignors to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,646. Term of patent 3½ years.

The ornamental design for a lamp base, as shown.

65,212. PHONOGRAPH CABINET. HULBERT A. YERKES, Forest Hills, N. Y., assignor, by mesne assignments, to Columbia Phonograph Company, Inc., a Corporation of New York. Filed Apr. 23, 1923. Serial No. 5,902. Term of patent 3½ years.

The ornamental design for a phonograph cabinet, as shown.

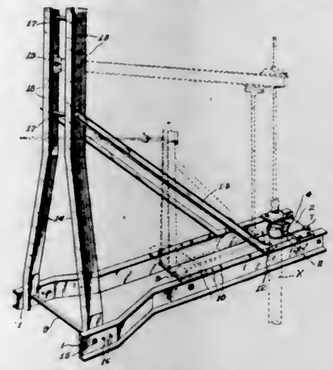
PATENTS



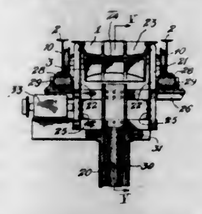
GRANTED JULY 15, 1924.

1,501,032. ACOUSTIC HORN. MAX ABRAHAMS, New York, N. Y. Filed Feb. 28, 1924. Serial No. 695,637. 2 Claims. (Cl. 181—27.)

1. An acoustic horn comprising a base form of textile fabric with a pile surface and having the desired shape and size, said form being impregnated with a water soluble filler giving rigidity to the form.



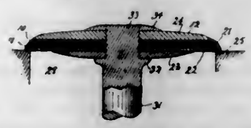
1,501,033. TELEPHONE-EXCHANGE SYSTEM. WALTER P. ALBERT, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 19, 1921. Serial No. 470,767. 13 Claims. (Cl. 179—27.)



1. In a telephone system, a plurality of automatic selective switches, a number of switch controlling mechanisms each including, a plurality of variably operable registers, means for setting the registers of one of said mechanisms to establish a registration, means for operating the selective switches in accordance with said registration to extend a connection, a device, associable with the extended connection and common to said mechanisms, means controlled by said device for rendering ineffective a portion of said registration, a signal, and means controlled by said device for operating said signal.

1,501,034. JACK FRAME FOR OIL WELLS. ROBERT E. ALEXANDER, Tulsa, Okla. Filed Oct. 17, 1923. Serial No. 669,004. 4 Claims. (Cl. 74—5.)

1. In combination with a jack frame for oil wells, a casing clamp including a plate secured to the base of said frame, a jaw member removably secured to said plate, a U-bolt for gripping the well casing, means providing on said U-bolt coacting with said plate, for drawing the U-bolt toward said jaw member.



1,501,035. HOISTING AND CONVEYING DEVICE. DONALD SHIELDS ANDREWS, Cleveland, Ohio, assignor to Andrews Crane Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 5, 1921. Serial No. 519,823. 6 Claims. (Cl. 212—17.)

1. In a hoisting and conveying device, the combination of a track comprising spaced rails; a carriage mounted to travel along said track; a boom supporting mast pivotally suspended from said carriage for swinging movement with respect thereto; and means carried by said mast and engageable with said rails to limit the oscillatory movement of said mast.

1,501,036. POPPET VALVE. MICHAEL J. BOYLE, Chicago, Ill. Filed June 21, 1922. Serial No. 569,989. 11 Claims. (Cl. 123—188.)

1. In combination, an inwardly facing flat valve seat surrounding a gas engine port and a valve for the port comprising a group of centrally connected superimposed spring plates having their margins free, the undermost

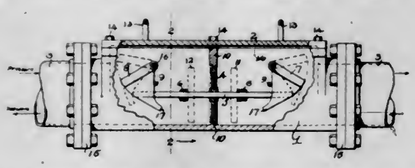


plate being larger than the port for contact of a continuous marginal portion of its undersurface with the valve seat under gas pressure applied to the group of plates in the direction to close the valve, and one of the intermediate plates having a circumferential series of apertures formed in its marginal portion, but not extending to the periphery of the plate.

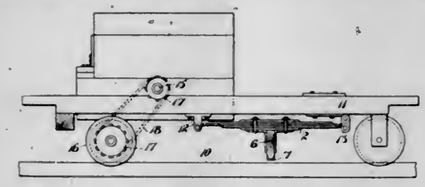
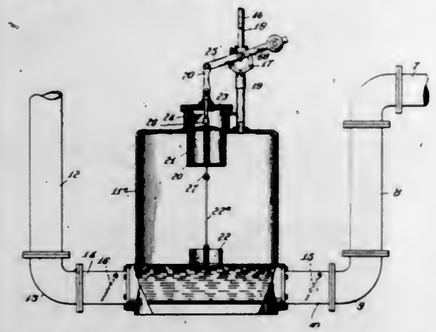
1,501,037. SIFTER TOP FOR CONTAINERS. HENRY PEIRCE BRAWNER, Baltimore, Md. Filed Apr. 17, 1923. Serial No. 632,625. 1 Claim. (Cl. 221—63.)



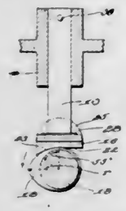
The combination with the closed neck of a container having a central apertured depression, there being an extension of the depression projecting to the margin of the neck, of an apertured valve disk rotatably seated in the depression, a tongue extending therefrom and movable within the extension of the depression, an apertured cap secured to the neck for retaining the disk in the depression, and an ear depending from the periphery of the cap for engagement by the tongue to hold the disk in either of two extreme positions.

1,501,038. PRESSURE AND VACUUM RELEASE VALVE. STEPHEN H. BROOKS, Cleveland, Ohio, assignor to The Oil Conservation Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 29, 1922. Serial No. 564,508. 5 Claims. (Cl. 137—53.)



2. In automatic valves, a suitable casing having a valve opening therein, a double acting valve operable in and across such opening in axial alignment therewith, and means for predeterminedly setting the force limits under which the valve will move away from the valve opening in both directions, from outside the casing.

1,501,039. APPARATUS FOR COMPACTING CONCRETE. EDWARD G. CARR, Oakland, Calif. Filed Oct. 8, 1917. Serial No. 195,473. 1 Claim. (Cl. 94—49.)

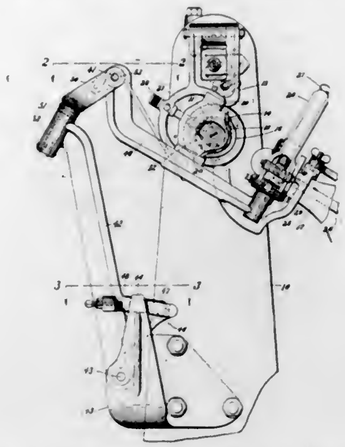


An apparatus for tamping concrete roadways in the course of manufacture, comprising a carriage, a vertically reciprocating tamping bar carried thereby, laminated springs for suspending said tamping bar from the carriage, and means for moving the tamping bar downwardly into engagement with the surface of the concrete mass, said springs acting to lift the tamping bar with such suddenness as to cause a suction to be applied thereby to the surface of the mass.

1,501,040. EJECTOR VALVE. JAMES W. COX, Wilmette, Ill. Filed Apr. 30, 1920. Serial No. 377,958. 3 Claims. (Cl. 103—246.)

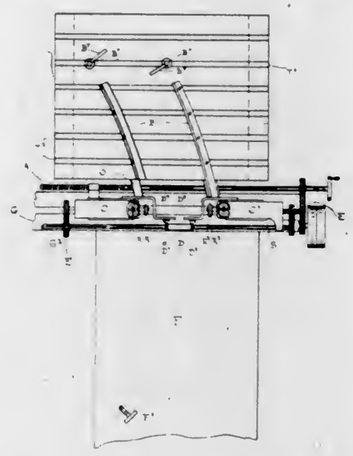
3. In a device of the class described, a main valve casing of two diameters, an actuating piston in the portion of the casing of larger diameter, a valve sliding in the portion of smaller diameter, ports in the annular wall of the casing controlled by said valve, an outlet port in the end of the casing of smaller diameter than the casing, a projection on the face of the valve loosely entering said port whereby the air compressed between said casing, valve and projection cushions the stroke of the valve, an annular chamber surrounding the ports in the annular wall of the casing, there being an opening from said chamber, a piston in the portion of said casing or larger diameter, an opening in the casing for connection to a supply of compressed air, said opening being intermediate the valve and piston, a pilot valve, a connection from said pilot valve to the main valve casing behind the piston, said pilot valve controlling the last said connection.

1,501,041. INTERNAL-COMBUSTION ENGINE. HENRY H. CUTLER, Brookline, Mass. Filed Jan. 25, 1922. Serial No. 531,629. 9 Claims. (Cl. 123—90.)



3. A push-rod for the valve stem of an internal-combustion-engine exhaust-valve having a cam-follower on the lower end thereof, said cam-follower having a plane surface tangential to a downwardly-concaved arcuate surface.

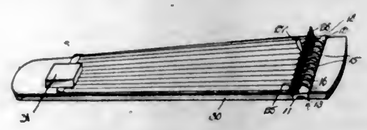
1,501,042. MACHINE FOR OPERATING UPON SHOES. RENÉ E. DUPLESSIS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 24, 1921. Serial No. 439,465. 11 Claims. (Cl. 12—87.)



1. In a machine having a trimming tool for trimming an insole attached to a last, work-supporting means including a last-pin constrained so that its axis remains substantially parallel to a line but movable laterally by the last in every direction in a field operatively adjacent to said tool.

11. In a machine having a trimming tool for trimming an insole attached to a last, a stationary pivot-member, a carrier arranged to swing thereon, a bodily movable pivot member carried by said carrier, a secondary carrier carried by said movable pivot member, and a last-pin carried by said secondary carrier in co-

operative relation to said tool, said pivot members and said last-pin being constrained so that their axes remain substantially parallel during operation.

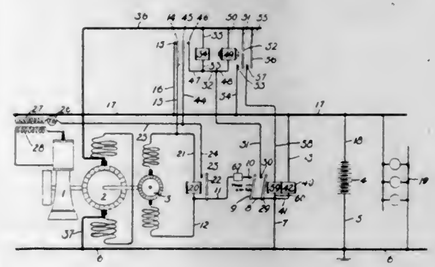


1,501,043. METAL-CUTTING MACHINERY. JOHN ANDERSON DUXBURY, Baildon, England. Filed May 8, 1923. Serial No. 637,457. 2 Claims. (Cl. 164—63.)

1. Sheet metal cutting machinery, comprising adjustable duplex rotary cutters, a front table over which the sheet to be cut is fed to the cutters, a rear table adapted to receive the sheet from the cutters, said rear table being provided with guides adapted to be set to the desired curve against which the cut edges will bear and which will guide the sheet to be cut as desired.

1,501,044. PLAIT HOLDER. MAX DWOIRIN, Chicago, Ill. Filed Oct. 4, 1923. Serial No. 666,609. 3 Claims. (Cl. 68—10.)

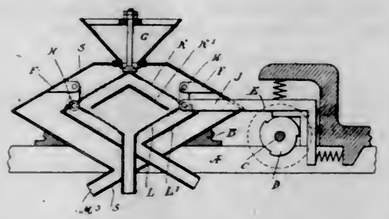
1. In a plait-holder, the combination of a frame adapted to be attached to an ironing board, with a series of plait-holding arms, carried by the frame; means for clamping plaits of a garment in position by means of



said arms; and means for releasing substantially simultaneously, all of said arms from clamping position.

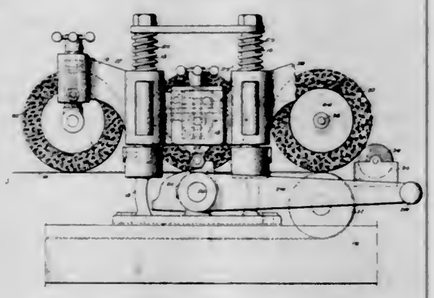
1,501,045. RAZOR-BLADE SHARPENER. GEORGE G. FLOYD, Riverside, Ill. Filed Aug. 16, 1922. Serial No. 582,149. 5 Claims. (Cl. 51—58.)

1. In a razor-blade sharpener, the combination of a stropping-element, a first gear to turn said element, a rotary handle, two offset gear-sectors revolved by said handle, a revolubly-mounted second gear adapted to be intermittently engaged by one of said gear-sectors, a third gear in mesh with said second gear and adapted to be intermittently engaged by the other of said gear-sectors, an operative connection between said third gear and said first gear, and a blade-holder means, whereby turning of the handle in one direction only effects the oscillation of said stropping-element.



1,501,046. AUTOMATIC CONTROL FOR CHARGING SECONDARY BATTERIES. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,449. 2 Claims. (Cl. 290—30.)

1. An electric system comprising an accumulator, a dynamo electric machine for charging said accumulator, a prime mover for actuating said dynamo electric machine, an ignition system, means for starting said prime mover, a circuit including said accumulator and said dynamo electric machine, a relay having two windings cooperating to control the operation of said circuit, one of said windings being normally in circuit with said accumulator and also adapted to be energized by said dynamo, and the other of said windings adapted to be



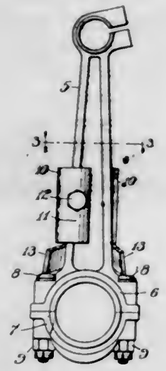
energized only by said dynamo, a circuit including said accumulator and said starting means; a circuit including said dynamo electric machine and said ignition system; and a main control relay for said circuits.

1,501,047. **SIEVING SCREENING AND SEPARATING DEVICE.** CHARLES EDWARD VINCENT HALL, Sheffield, England. Filed Sept. 16, 1922. Serial No. 588,533. 4 Claims. (Cl. 83—56.)

1. In a device for separating and grading grain, or other comminuted material, an outer casing, a vibrating member mounted within and suspended from said casing, said vibrating member consisting of a plurality of inclined foraminated plates arranged in spaced parallel planes, and along which the material falls by gravity, non perforated division plates mounted between said foraminated plates, a plurality of delivery ducts communicating with the spaces between said plates and terminating outside of said casing and means to subject said vibrating member to a combined horizontal and vertical vibratory oscillation.

1,501,048. MACHINE FOR STIPPLING. CHARLES G. HAMPSON, New York, N. Y. Filed June 13, 1921. Serial No. 477,009. 14 Claims. (Cl. 91—48.)

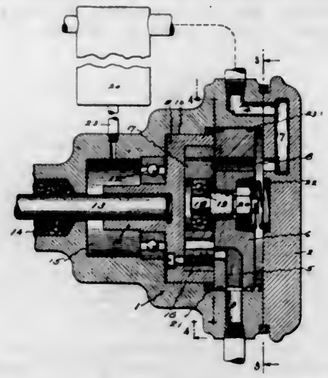
14. In a stippling machine, the combination of two rollers, each provided with a work face formed of a soft sponge, one of said rollers constituting a color applying roller for coating the material to be stippled and the other roller constituting a means for stippling the coated material.



1,501,049. **PROCESS FOR PLATING STAINLESS STEEL AND ARTICLES PRODUCED THEREBY.** ALEXANDER HARPER, Bristol, Conn. Filed Dec. 24, 1921. Serial No. 524,700. Renewed July 17, 1923. 11 Claims. (Cl. 204—8.)

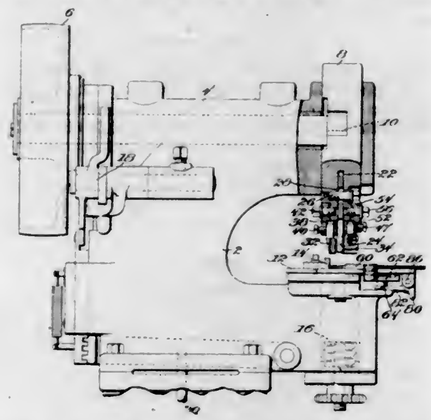
1. The process of finishing the hardened and smooth surface of an article composed of a ferrous alloy containing between nine per cent (9%) and sixteen per cent (16%) of chromium and carbon in quantity less than seven tenths per cent (.7%) comprising subjecting the surface of such an article to the action of an

acid that will render such surface relatively rough and then depositing a different metal upon such relatively rough surface by an electro-plating process.



1,501,050. BOLT-HOLDER TOOL. JAMES S. HARRIS, Morgantown, Ind. Filed July 16, 1923. Serial No. 651,761. 8 Claims. (Cl. 81—13.)

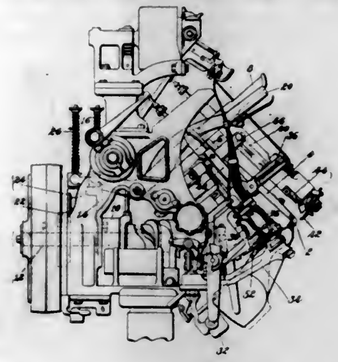
1. A bolt holder for connecting rods of explosive engines, comprising a member arranged to be removably attached to the connecting rod above the bolts, and means carried by said member held into engagement by said member with the bolts to maintain the same in position during the assembling of the connecting rod bearing.



1,501,051. ROTARY PUMP-SEALING MEANS. EBENEZER HILL, South Norwalk, Conn., assignor to The Hill Compressor & Pump Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1923. Serial No. 670,702. 12 Claims. (Cl. 230—30.)

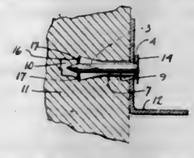
1. A rotary pump having a casing containing a chamber, co-acting pumping members rotatably mounted in said chamber, a sealing ring removably located in the chamber and encircling the pumping members, a plate

axially movable in the chamber, and means whereby said plate is pressed against the pumping members and said ring.



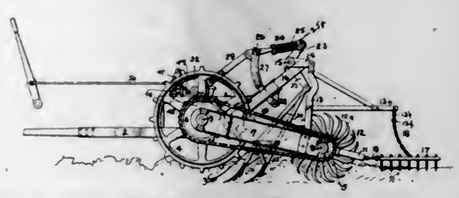
1,501,052. SOLE-FITTING MACHINE. MERTON E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 18, 1919. Serial No. 331,580. 17 Claims. (Cl. 12—40.)

16. A sole fitting machine having, in combination, a tool for operating on the sole and a work table having forepart gage mechanism comprsing gage arms pivoted beneath the table carrying gages overlying the table, means operating on said arms constantly tending to depress the gages, and means for turning the arms on their pivots to remove the gages from the table, whereupon said depressing means lowers the gages to or below the level of the table.



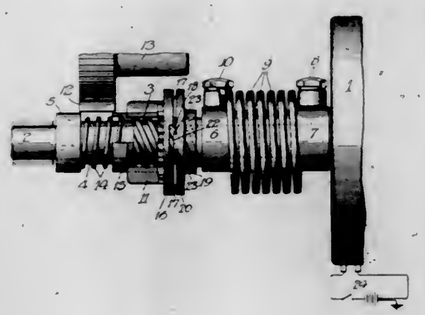
1,501,053. MACHINE FOR SHAPING UPPERS OVER LASTS. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 13, 1919, Serial No. 303,819. Renewed Nov. 23, 1923. 34 Claims. (Cl. 12—4.)

1. In a machine of the class described, the combination with last and upper positioning means, of upper pulling means comprising side gripper jaws having gripping faces arranged to extend rearwardly inward along the inward lateral curve of the edge of the shoe bottom at the rear end of the ball of the shoe, and means controlled by engagement with that portion of the shoe



along which said faces extend rearwardly inward for fastening the margin of the upper substantially at the rear end of the ball of the shoe to hold it after it has been pulled.

1,501,054. NAIL FASTENER. JOHN KARITZKY, Garwood, N. J., assignor to Henry B. Newhall, Plainfield, N. J. Filed Jan. 3, 1923. Serial No. 610,457. 6 Claims. (Cl. 85—2.4.)

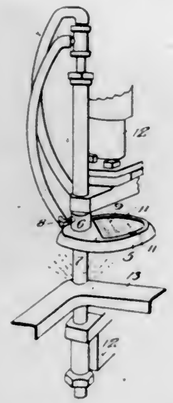


1. The combination of a nail fastener having two sides bent back on themselves to form a shield, said sides being adapted to be expanded in different directions, and a nail adapted to expand said sides first in one direction and a portion of said sides in another direction as the nail is driven into the shield.

1,501,055. PULVERIZER AND MULCHER. HERBERT M. LOFTON, Chattanooga, Tenn. Filed Aug. 20, 1919. Serial No. 318,684. 15 Claims. (Cl. 97—40.)

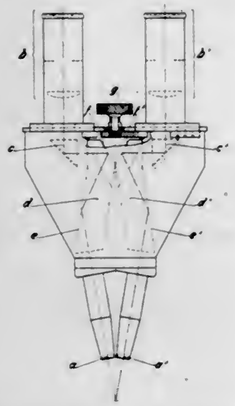
1. In a machine of the character stated, a main frame having a driving shaft and supporting wheels for rotating it, combined with means for mulching and pulverizing the soil, means for raising and lowering the said mulching and pulverizing means as required, the means for raising and lowering the means for mulching and pulverizing consisting of a crank, means for rotating the crank from the main shaft, means for arresting the crank in diametrically opposite positions and disconnecting the means for rotating it, whereby it may be held in lifting or lowering positions as required, and hand controlled means for putting the rotating means into and out of connection with the lifting and lowering crank.

1,501,056. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Feb. 10, 1921. Serial No. 443,772. 26 Claims. (Cl. 74—7.)



1. An engine starter drive including a rotatable driving shaft, a driving member mounted for free movement longitudinally thereof, a control member mounted for automatic longitudinal movement thereof and rotary movement therewith, and clutch means adapted to operatively connect the two members for positive driving when the driving member is stopped in its longitudinal movement, said two members being capable of free angular movement when they are in normal position.

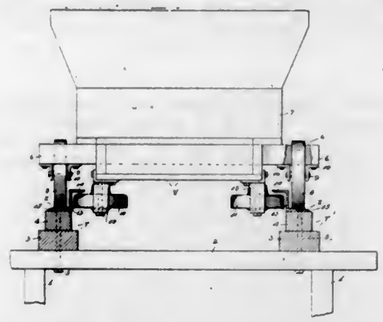
1,501,057. MANUFACTURE OF SOLES FOR SHOES. EVERETT W. MCVICAR, Marlboro, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 8, 1919. Serial No. 316,136. 15 Claims. (Cl. 12—146.)



10. That improvement in methods of making rubber soles which consists in assembling in a mold a rubber compound sole blank and a sole reinforcing blank having a transverse slit in its shank portion, providing a metal device having the measurements of the forward portion of the shank stiffener, treating the metal device to enable it to resist vulcanization to a rubber body, projecting the said device through the said slit and between the said two blanks leaving a portion of the said device projecting rearwardly of the said slit, vulcanizing the sole, and then withdrawing the said device by means of the rearwardly projecting portion to produce a pocket subsequently to receive the forward portion of a shank stiffening element.

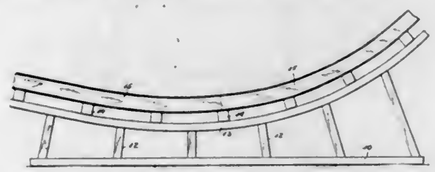
1,501,058. SHIELD FOR ELECTRIC-WELDING MACHINES. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1920. Serial No. 374,668. 10 Claims. (Cl. 219—8.)

1. A protecting shield for electric welding or other machines comprising a dish shaped body having an opening therethrough, a transparent plate forming a cover for said opening, means to secure said cover plate to said body, and means to attach said body to the machine.



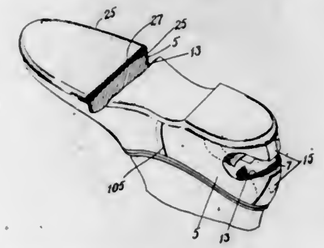
1,501,059. STEREOSCOPIC DOUBLE MICROSCOPE. CARL METZ, Wetzlar, Germany, assignor to Ernst Leitz, Optische Werke, Wetzlar, Germany. Filed June 2, 1922. Serial No. 565,485. 5 Claims. (Cl. 88—39.)

1. In a stereoscopic double microscope embodying a pair of convergent objectives in combination with a pair of parallel eyepieces, an image-erecting prism system between each objective and its eyepiece.



1,501,060. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Feb. 1, 1924. Serial No. 689,866. 9 Claims. (Cl. 104—247.)

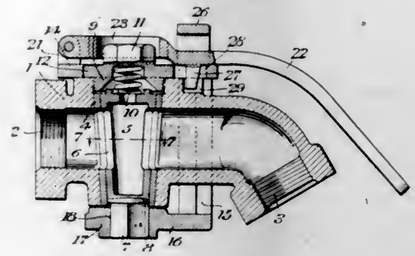
3. In a pleasure railway structure, the combination of a supporting structure, rails in the form of Z-bars having their lower flanges resting on said supporting structure and secured thereto and having their webs extending vertically and their upper flanges extending inwardly, a vehicle having vehicle wheels engaging on



said lower flanges, and safety roller structures on said vehicle adapted to engage with the inner and under sides of said webs and upper flanges respectively.

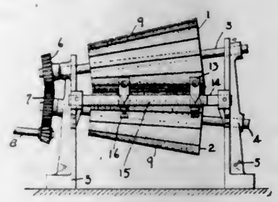
1,501,061. PLEASURE-RAILWAY CONSTRUCTION. JOHN A. MILLER, Homewood, Ill. Filed Feb. 1, 1924. Serial No. 689,867. 4 Claims. (Cl. 238—48.)

1. In pleasure railway constructions, the combination of rigid supporting uprights spaced apart, a flexible rail beam resting on the top of and bridging between said uprights, cross ties engaging with said track beams intermediate said uprights, and rigid rail beams secured to said ties, said track beams flexing between said uprights to yield under load on said rails to thereby cushion the travel of cars over said rails.



1,501,062. ART OF MANUFACTURING FOOTWEAR. CHARLES H. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 25, 1921. Serial No. 464,411. 17 Claims. (Cl. 12—142.)

1. A shoe of vulcanized material comprising an upper and a lining, the upper having a butt-joint at the rear portion thereof across which extends a flap of the lining.

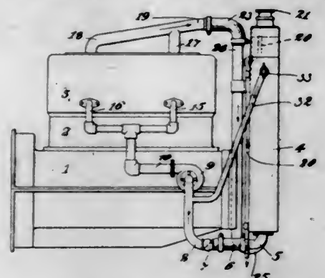


17. The method of making a vulcanized shoe which comprises cutting from vulcanizable material a one piece upper having a notch in that portion thereof which will lie at the rear of the finished shoe and of such shape that when the extremities of the upper are joined the joint will be located at the side of the shoe, joining the edges of the notch, joining the edges of the extremities of the upper and completing the manufacture of the shoe, including subjecting it to vulcanization.

1,501,063. ANGLE COCK. SPENCER G. NEAL, New York, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 9, 1923. Serial No. 673,749. 17 Claims. (Cl. 251—165.)

1. In a valve device the combination of a valve casing, a rotative valve therein and extending beyond one side of the casing, a valve operating member extending around the casing and connected to the projecting end of the valve, a handle connected to the valve operating member on the opposite side of the valve casing from the connection between the valve and said valve operating member, and means for locking the handle to hold the valve in open or closed position.

1,501,064. COIL-BENDING DEVICE. GEORGE BANCROFT ROESCH, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed June 18, 1921. Serial No. 478,543. 14 Claims. (Cl. 140—105.)



1. In an apparatus for shaping filamentary material, co-operating rollers adapted to form bends in a filament fed therebetween and means for feeding said filament between said rollers at different points of their engagement to vary the distance between the bends.

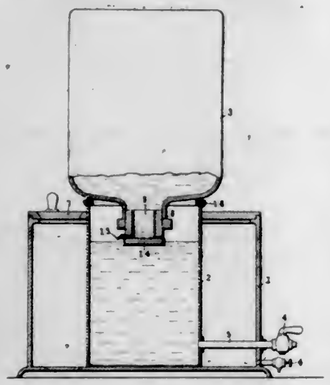
1,501,065. COOLING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Dec. 7, 1920. Serial No. 428,885. 2 Claims. (Cl. 123—174.)

1. In a cooling system for internal combustion engines, a force feed water circulating system of small heat radiating capacity serially including a water jacket, a water outlet conduit from said jacket, a water container to which said outlet is connected, and a return conduit including a pump between said container and jacket, in combination with an air cooled element of large radiating capacity above said water container, interposed between it and an outlet for escape of air, steam and hot

water; and a reservoir interposed between the air cooled element and the air outlet, arranged to trap water

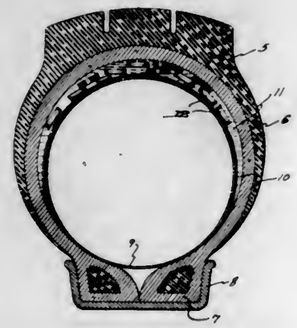
driven through the air cooled element in the operation of the device, and means for returning the trapped water to the cooling water circuit.

1,501,066. CLASP FOR RUBBER APRONS. EUGENE W. RUTHERFORD, New Haven, Conn., assignor to The Shoe Hardware Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 25, 1924. Serial No. 688,372. 2 Claims. (Cl. 241—19.)



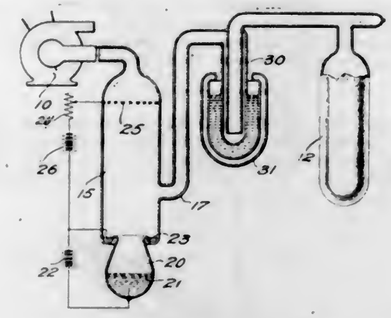
1. A clasp for holding the shoulder straps of an apron at their place of crossing, comprising a single piece to provide a central body member, and four members extending from and formed integral respectively with the four sides of the body member, two of the members being oppositely disposed to each other and folded over opposite one face of the central member to form an open slot therewith for the retention of one of the straps, and the other two of the four members being oppositely disposed to each other and folded over opposite to the other face of the central member to form an open slot therewith for the retention of the other strap.

1,501,067. FILING GUIDE CARD. ADOLF H. SCHAFFERT, Rochester, N. Y., assignor to Yawman & Erbe Manufacturing Co., Rochester, N. Y., a Corporation of New York. Filed Mar. 8, 1923. Serial No. 623,617. 1 Claim. (Cl. 40—23.)



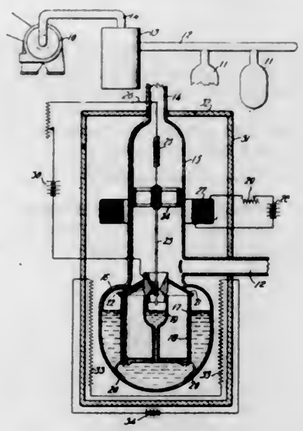
The combination with a guide card, of a label holder comprising two substantially co-extensive portions of sheet metal, the lower parts of which are positioned on opposite sides of the card, and means extending through the card for securing said parts each to the other, said portions being bent at the top of the card forwardly to form an offset and then rearwardly and upwardly to form a label receiving recess therebetween, the forward one of said portions having an opening therethrough near the upper edge to expose a label positioned in the label receiving recess.

1,501,068. LIQUID COOLING AND DISPENSING APPARATUS. WILLIAM A. SCHATZ, Astoria, N. Y., assignor to Rotax Co., Inc., New York, N. Y., a Corporation of New York. Filed May 4, 1921. Serial No. 466,784. 6 Claims. (Cl. 225—40.)



1. In a cooling and dispensing apparatus, in combination, a liquid vessel open at the top and having a draw-off at the bottom, a bottle for the liquid supported in inverted position on said vessel, a stopper for the neck opening of said bottle having hinged connection with the latter and including a buoyant valve member without the bottle neck for automatically sealing the liquid in said vessel from the liquid in said bottle when the liquid in said vessel rises to said valve, and an air-tight joint between said bottle and said vessel at the supporting connection therebetween.

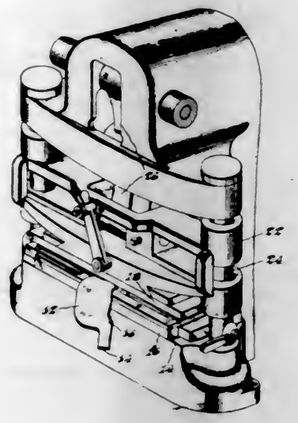
1,501,069. PUNCTUREPROOF TIRE. JOHN H. SMITH, Detroit, Mich. Filed July 3, 1922. Serial No. 572,409. 2 Claims. (Cl. 152—13.)



1. A tire having a casing and an air-containing portion within the casing, a wall spaced from the interior of the casing, a heavy viscous liquid arranged within such space and adapted to solidify upon contact with air, and a plurality of members of soft rubber within the liquid.

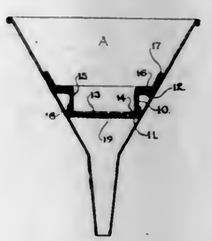
1,501,070. VACUUM PUMP. HOMER C. SNOOK, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1920. Serial No. 405,621. 25 Claims. (Cl. 230—13.)

1. The method of pumping which comprises vaporizing a pumping medium and producing a flow of particles of said medium in response to an electric field applied thereto.



1,501,071. VACUUM PUMP. HOMER CLYDE SNOOK, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 5, 1921. Serial No. 505,576. 27 Claims. (Cl. 230—13.)

1. In a pump, a pumping chamber having an inlet and an outlet, a pumping material, means for maintaining said material in molten condition and means for producing an arc having as one of its electrodes a small portion of said molten material, said arc being so positioned as to produce a vapor jet in said chamber traversing the mouth of said inlet.

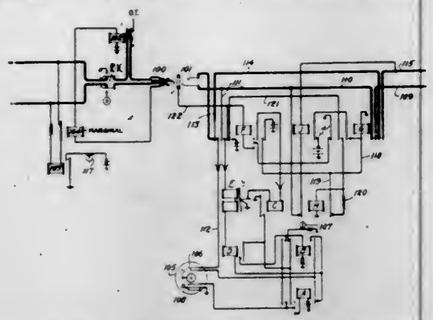


1,501,072. PREPARATION OF SHOE PARTS. HARRY R. STANBON, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 27, 1921. Serial No. 487,929. 23 Claims. (Cl. 164—93.)

1. The method of preparing shoe upper parts which comprises perforating a piece of shoe upper stock and at the same time punching a pair of jig holes therein in predetermined relation to the perforation, and dieing

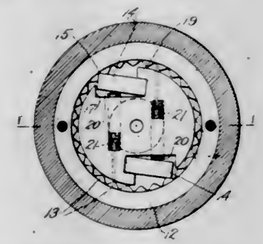
out a shoe upper part from the stock by a cut positioned relatively to the perforation as determined by the jig holes.

1,501,073. FUNNEL STRAINER. AQUILA MOORE STEAD, Cordele, Ga. Filed Apr. 17, 1922. Serial No. 553,340. 3 Claims. (Cl. 210—158.)



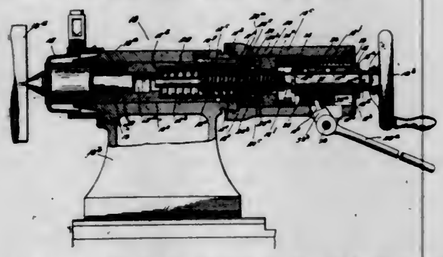
1. A strainer attachment for funnels comprising a shell like body member, a straining medium in the bottom thereof and a circular resilient gasket at the top thereof adapted to snugly engage the funnel for making a liquid tight joint, said shell like body consisting of outer and inner ring members secured together in telescoped relation and having their upper ends formed with outwardly extending flanges clampingly engaging said gasket.

1,501,074. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. RAY L. STOKELY, Floral Park, Long Island, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 462,868. 23 Claims. (Cl. 179—27.)



13. In a telephone exchange system, the combination with telephone lines automatic switches, groups of trunks, an operator's position, a lamp and an impulse

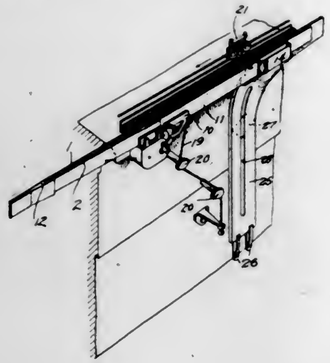
sender common thereto, a relay for automatically connecting the impulse sender to a trunk when the same is



taken for use by an operator, and means automatically actuated as soon as any automatic switch encounters a busy trunk group for lighting said lamp.

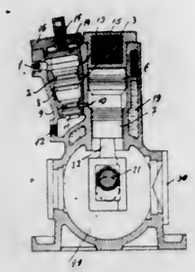
1,501,075. DRILL. THOMAS E. STURTEVANT, Dover, N. J., assignor to McKiernan-Terry Drill Company, Dover, N. J., a Corporation of New Jersey. Filed Dec. 17, 1919. Serial No. 345,520. 18 Claims. (Cl. 121—7.)

1. Rotating mechanism for hammer drills, comprising in combination with a ratchet ring, of a pawl carrying head rotatable within said ring and provided with a seat in one side thereof, a pawl loosely fitting in said seat, a shoulder at one edge of the seat overstanding one end of the pawl to prevent outward displacement of the adjacent end of the pawl, and means at the other edge of the seat serving to guide the adjacent end of the pawl outwardly into engagement with the teeth of the surrounding ring.



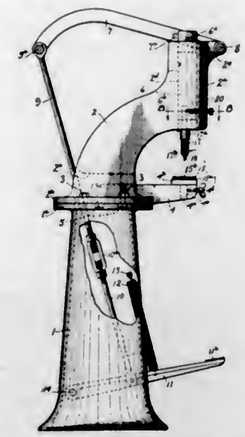
1,501,076. FOOTSTOCK. HERBERT E. TOWNSEND, East Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed May 31, 1923. Serial No. 642,495. 14 Claims. (Cl. 82—31.)

1. In a foot-stock, in combination with a work-holding member axially slidable on the foot-stock body, adjustable heavy resilient means to actuate said member for exerting comparatively heavy pressure when holding heavy work, and light resilient means to actuate said member for exerting comparatively light pressure when holding light work.



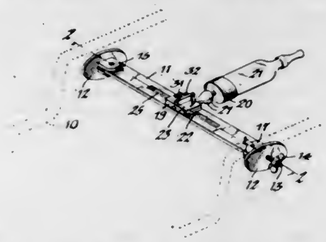
10. In a foot-stock, the combination of a work-holding member axially slidable on the foot-stock body, and resilient means for exerting pressure against said member to hold the work, comprising spring members of different resiliency and means to cause said spring members to exert their pressure successively.

1,501,077. CONVEYER. CHARLES L. VAN INWAGEN, Jr., Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1920. Serial No. 429,255. 13 Claims. (Cl. 214—1.)



1. In a ticket distributing system including guides and spur guides, a ticket hoist comprising a pivoted hoist arm, means for holding said hoist arm in and raising it to its normal position, means for lowering said hoist arm and means for energizing said raising means by lowering said hoist arm.

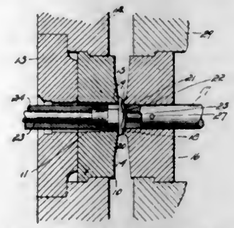
1,501,078. HIGH-SPEED COMPRESSOR. JOHANN HEINRICH HERMANN VOSS, New York, N. Y. Filed Nov. 2, 1921. Serial No. 512,269. 2 Claims. (Cl. 230—32.)



1. In a stage compressor, in combination, a low and a high pressure cylinder, a stepped piston in said cylinders, means for reciprocating said pistons, a valve case connected with said cylinders, suction and delivery valves in said case, and means for supplying fluid to, and discharging fluid from said valve case, said low pressure cylinder being provided with an insulating jacket, and said high pressure cylinder with a cooling jacket.

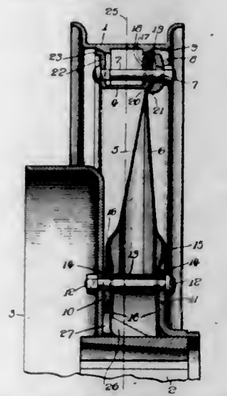
1,501,079. BRAKE-RELINING MACHINE. ROBERT A. WATERS and CHRISTIAN V. LUCIUS, Canton, Ohio. Filed June 29, 1921. Serial No. 481,234. 8 Claims. (Cl. 218—1.)

1. In a brake reliner, in combination with an anvil, an overhanging guide head, and a vertically movable plunger in the latter; a tool including a rivet driving stem and a split rivet carrying sleeve removably mounted on said plunger in cooperative relation to said anvil, a cooperating anvil block removably mounted on said anvil, and means for operating said plunger and regulating the length of the stroke thereof.



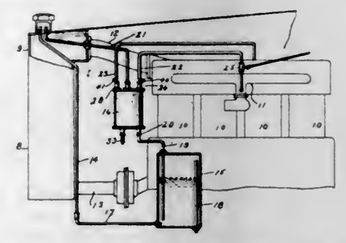
1,501,080. NURSING-BOTTLE HOLDER. MORRIS W. WICKHAM, Buffalo, N. Y. Filed Nov. 14, 1921. Serial No. 514,926. 1 Claim. (Cl. 248—65.)

A device of the character described, comprising a pair of brackets adapted to be attached to opposite walls of a baby-carriage or the like, each of said brackets being provided on its outer side with a screw-shank carrying a clamping nut, one of said brackets having on its inner side a substantially upright pivot-pin, a combined bottle-support and child-retaining member comprising a rigid cross bar mounted at one end on said pin to swing in a substantially horizontal plane and provided at its free end with means for securing it to the other bracket, and a bottle-holding device mounted on said cross bar.



1,501,081. MEANS AND METHOD FOR TRIMMING BLANKS. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 1, 1921. Serial No. 481,846. 8 Claims. (Cl. 10—27.)

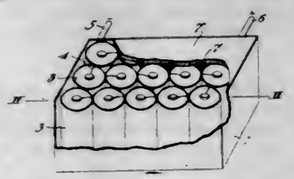
2. A die having an opening therethrough with cutting edges around the outer edge thereof, a punch, the axis of the die and punch being coincident, and a supplemental punch movably mounted within said punch,



the end of the punch and supplemental punch both being concaved to correspond substantially with the shape of the convex face of the head of the blank.

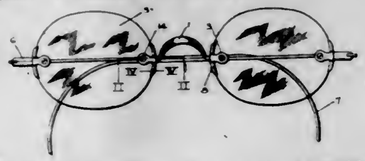
1,501,082. DEMOUNTABLE-RIM DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor, to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 4, 1920. Serial No. 401,107. 6 Claims. (Cl. 301—23.)

1. In devices of the class described, the combination with a felloe of outwardly open channel form, of a wheel body of the disk type having its peripheral zone bent laterally over and closely fitting one flange of the felloe, a rim encircling said flange, a wedge interposed between the rim and flange and resting against the inwardly bent zone, and means for urging the wedge inward.



1,501,083. LIQUID-FEEDING DEVICE. ROBERT K. WINNING, Milwaukee, Wis., assignor, by mesne assignments, to Weeks Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 22, 1920. Serial No. 418,826. 13 Claims. (Cl. 123—25.)

1. In combination with an internal combustion engine having an intake manifold and a radiator provided with an overflow pipe, a supplemental tank connected to said

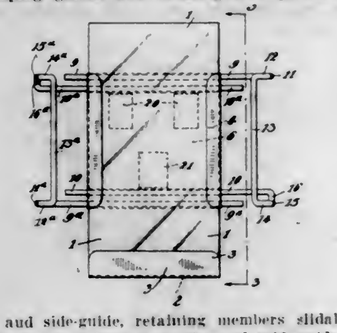


overflow pipe, an elevating tank in communication with supplemental tank, a return pipe connecting the elevating tank to the radiator, a vacuum pipe connecting the elevating tank to the intake manifold, a pressure pipe connecting the elevating tank to one of the cylinders of the engine, and valves controlling the vacuum pipe and the pressure pipe.

1,501,084. DRY-CELL BATTERY AND PROCESS OF ASSEMBLING THE SAME. FRANK H. WRIGHT and FREDERICK A. KELLER, New York, N. Y., assignors, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed May 25, 1922. Serial No. 563,618. 10 Claims. (Cl. 204—53.)

1. A battery comprising a casing, a plurality of cells therein, sealing material completely encasing said cells, and a reinforcing member of moisture-proof material in the portion of the sealing material under the cells.

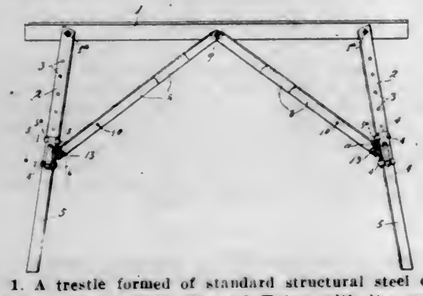
1,501,085. LENS MOUNTING. WILLIAM J. WRIGHTON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 18, 1922. Serial No. 554,950. 7 Claims. (Cl. 88—42.)



3. As an article of manufacture, a lens attaching clip comprising a lens edge engaging portion and lens face engaging ears carried thereby, said ears having fastener receiving apertures formed therein, and an adhesive liner for the edge and face engaging portions of the clip, said liner having a permanent inherent resiliency, whereby when a lens is secured within the strap by the adhesive the inherent resiliency of the adhesive will permit the lens to yield relative to the strap, without loosening and prevent breakage thereof by temporary fracturing strains.

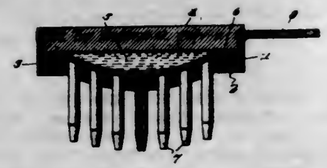
1,501,086. GASOLINE-CLEANING COMPOSITION. JOSEPH ZIMMERMAN, Dayton, Ohio. Filed June 15, 1922. Serial No. 568,651. 1 Claim. (Cl. 87—5.)

A cleansing composition consisting of olive oil soap and water, two quarts; denatured alcohol, one and one half quarts; carbon tetrachloride, three eighths of a quart; and caustic soda and water, one eighth quart.



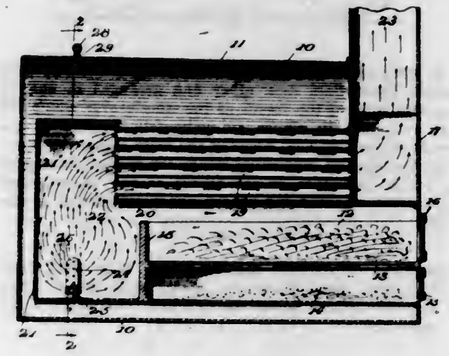
1,501,087. DISPLAY HOLDER. CARL JOHN ANDERSON, Ann Arbor, Mich., assignor, by mesne assignments, to Extenso Rack Corporation, Ann Arbor, Mich., a Corporation of Delaware. Filed Jan. 24, 1924. Serial No. 688,153. 5 Claims. (Cl. 211—14.)

1. In a display holder, a guide plate including a body portion, consisting of a plane sheet of metal having securing tabs punched and bent rearwardly thereof, and parallel edge portions bent forwardly, across and rearwardly to form edge-clamping guides; a shelf or support member, consisting of an L-shaped piece of sheet metal, including a shank with parallel edges slidably engaging said clamping guides and covering said punched body



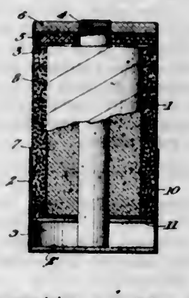
portion; and side-guide, retaining members slidably engaging the top and bottom portions of said guide plate.

1,501,088. TRESTLE FOR SUPPORTING A SCAFFOLD. HERMAN L. ANDERSON, Minneapolis, Minn. Filed Apr. 23, 1923. Serial No. 633,847. 2 Claims. (Cl. 304—6.)



1. A trestle formed of standard structural steel comprising a horizontally disposed T bar with its central web disposed vertically and downwardly, a pair of supporting angle bars pivotally bolted through said web adjacent each end of said bar and alined at opposite sides thereof, said angle bars being bent outwardly adjacent their pivots to diverge downwardly and being provided with spaced holes through one side thereof, an extension angle bar fitting in and adjustable in each of said angle bars, latching means fitting into said holes to hold the latter bars in adjusted position, means extending between the bars of each pair of first mentioned angle bars, and a pair of bracing angle bars pivoted at each side of said web of said T bar adjacent its central portion the bars of each pair extending downwardly in opposite directions to one of the first mentioned angle bars and pivotally secured thereto, said bracing bars being adapted to be disconnected at one end and collapsed into close fitting relation with said T bar and with the supporting and extension angle bars when the trestle is in folded condition.

1,501,089. FOUNTAIN BRUSH. JOSEPH F. ANDREWS, Memphis, Tenn. Filed Apr. 6, 1923. Serial No. 630,254. 1 Claim. (Cl. 15—131.)

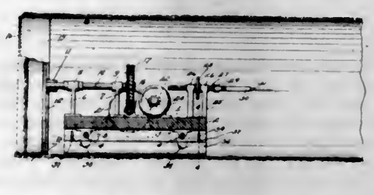


A body provided with a reservoir adapted to contain a treating medium, including a cap detachably secured to said body and forming the top closure for said reservoir, and a flexible, convex, apertured diaphragm forming the bottom closure of said reservoir, an absorbent pad clamped between said cap and said diaphragm, and preventing passage of the medium between said cap and said body, and normally preventing passage of the medium through the apertures of said diaphragm, and longitudinally channeled bristles secured to said diaphragm and communicating with the apertures therein, whereby pressure of said bristles against said diaphragm may force said medium through the bristles, substantially as described.

1,501,090. STEAM BLOWER. HUGH McC. BARR and GEORGE EDGAR, Pensacola, Fla. Filed May 2, 1921, Serial No. 465,983. Renewed Dec. 10, 1923. 1 Claim. (Cl. 110—79.)

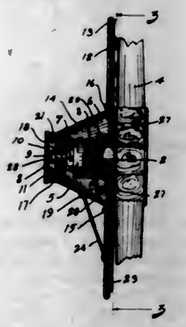
A cleanout device of the character described comprising in combination with the back connection or combustion chamber of a furnace or boiler, a blower head mounted upon the bottom of the back connection or combustion chamber in spaced relation thereto and being curved to conform to the curvature of the bottom wall, a conduit for conducting steam from a source of supply to the blower head, a valve located exteriorly of the furnace or boiler for controlling the flow of steam through the conduit, and a valved intake connection for the conduit between the valve and the blower head, whereby a cleaning fluid may be supplied to the blower head when desired.

1,501,091. WATER-ACTIVATED RESERVE CELL. RAYMOND C. BENNER, Bayside, and HARRY H. THOMPSON, Flushing, N. Y., assignors, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed June 12, 1922. Serial No. 567,736. 7 Claims. (Cl. 204—38.)



1. A dry cell comprising a container, a material therein capable of rapidly absorbing excitant liquid, and a cup adapted to serve as a measure for said liquid and as a bottom closure for the cell.

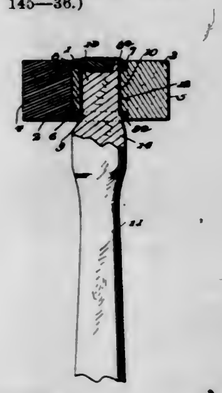
1,501,092. RAILWAY RAIL. HENRY B. BENT, Harrisburg, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1922. Serial No. 601,370. 3 Claims. (Cl. 238—145.)



1. A railway rail having a head, guard, and intermediate groove, and a hard steel insert in the bottom of said groove, said rail and insert having interengaging portions whereby the insert is secured in possition without the use of securing devices.

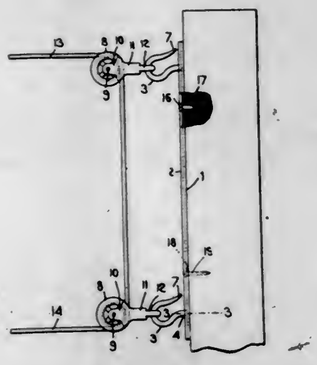
1,501,093. COAL-CUTTING MACHINE. JOSEPH W. BLOWER, Columbus, Ohio. Filed Mar. 20, 1922. Serial No. 545,148. 2 Claims. (Cl. 262—7.)

1. In a machine of the class described, the combination with a wheeled truck, of a tubular saw rotatably supported by the truck, a vertically adjustable U shaped trough connected beneath the truck, a bracket having spaced arms mounted on said truck, a threaded shaft journaled in said arms, a hand wheel mounted on the shaft between said arms and radially extending arms pivotally secured to said shaft anchoring the shaft in the tunnel to cause the rotattion of the hand wheel to advance the truck and tubular cutter.



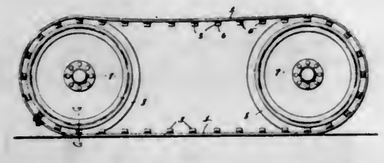
1,501,094. -ADVERTISING DISK FOR AUTOMOBILE WHEELS. EDWARD FRANKLIN BRAUCHER, Denver, Colo. Filed Feb. 9, 1924. Serial No. 691,648. 3 Claims. (Cl. 40—129.)

2. An advertising disk adapted to be applied to an automobile wheel, said disk being circular and provided with a central opening, a conical housing secured to the disk, said housing having a transverse wall near its



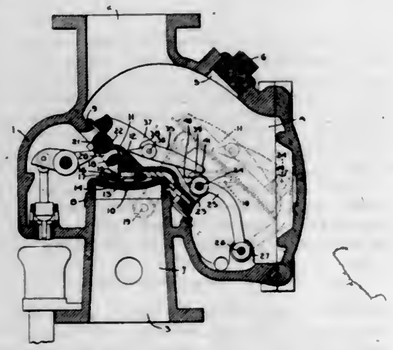
outer end, an opening in said wall for the reception of a ball-bearing, a plurality of rollers secured to said housing and disk, and a threaded cover secured to the outer end of the housing.

1,501,095. HAMMER. GEORGE F. BROCK, Hancock, Mich. Filed May 23, 1923. Serial No. 640,948. 2 Claims. (Cl. 145—36.)



1. In a hammer, a head comprising two complementary sections, one of said sections being provided with a socket and the other section having a portion received in said socket, the lapped portions of the sections having alined openings extending transversely therethrough, thus providing an eye for the hammer head, and a bushing interfitting said eye and holding said sections in assembled relation.

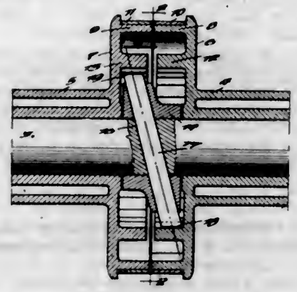
1,501,096. CLOTHESLINE HANGER. ROLAND CAVICCHI, Quincy, Mass. Filed Oct. 27, 1922. Serial No. 597,298. 4 Claims. (Cl. 254—190.)



1. A clothes line hanger comprising a bracket having a base adapted to be secured to a support, a hook having a shank rotatably mounted in said bracket and a pulley provided with a pulley block having an eye embracing said hook thereby providing a universal support adapted to permit the pulley to operate with the line in any desired position, the point of said hook lying in such proximity to said base as to prevent the eye of the block from being removed from the hook when the end of the latter is over the bracket, but located at a sufficiently greater distance from the shank thereof than the distance from said shank to the edge of said bracket, whereby the eye of the pulley block can be readily applied to said pulley when the point thereof is swung beyond the edge of said bracket.

1,501,097. ENDLESS TRACK FOR TRACTORS. AURIN M. CHASE, Syracuse, N. Y. Filed Jan. 13, 1921. Serial No. 437,038. 1 Claim. (Cl. 305—10.)

A track or belt comprising endless flexible belts or webs spaced apart from each other and arranged to run on opposite sides of the treads of the wheels over which the belt runs and in planes approximately tangent to the treads of such wheels, whereby the belts engage the traction surface, and supporting means for the belts arranged to extend crosswise of the treads of the wheels, such supporting means being spaced apart lengthwise of the belts.



1,501,098. LOCKING MECHANISM FOR DRY-PIPE VALVES. EZRA E. CLARK, Newtonville, Mass. Filed July 12, 1922. Serial No. 574,489. 5 Claims. (Cl. 169—22.)

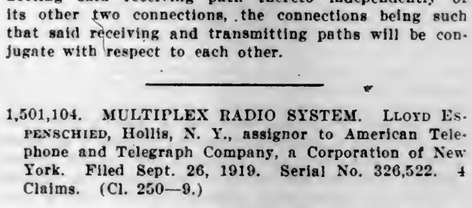
1. A dry pipe valve comprising a casing having a waterway therethrough and provided with a water valve seat and an air valve seat, a valve structure including an air valve and a water valve, link mechanism connecting said valve structure to said casing and acting upon unseating of the valves to guide the valve structure to open position outside of the waterway and locking members carried respectively by said link mechanism and the movable valve structure arranged to engage when the valves are swung to open position and thereby to prevent closing of said valves.

1,501,099. HOISTING MECHANISM. OMAR E. CLARK, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed May 25, 1923. Serial No. 641,415. 3 Claims. (Cl. 254—185.)

1. An automatic reversible hoist including a driving shaft, drums loosely rotatable with respect to the shaft, reversely disposed clutch elements carried by the drums, and a clutch member that extends transversely of the shaft and has portions on opposite sides of the same that respectively, alternately and automatically engage

with the clutch elements of the drums to rotate one drum in one direction and the other drum in the other direction when the shaft is correspondingly rotated.

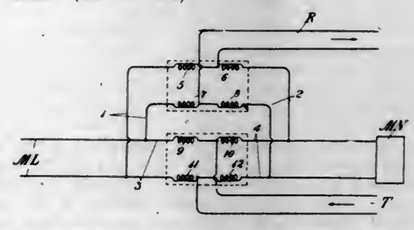
1,501,100. STAMP HOLDER. JOHN JAMES COFFEY, Bethlehem, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Oct. 10, 1922. Serial No. 593,579. 6 Claims. (Cl. 101—28.)



1. A stamp holder comprising a body provided with a slot adapted to receive a line of dies therein, a centering plate secured to each end of said body, each of said plates having two arms at its lower end which are arranged on opposite sides of the central longitudinal plane of said die receiving slot, whereby said holder may be centered on round stock.

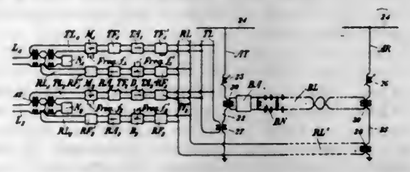
1,501,101. PROCESS OF MAKING PEAT BRIQUETTES. FRED T. DOW, Bangor, Me. Filed Mar. 27, 1919. Serial No. 285,578. 1 Claim. (Cl. 44—37.)

The process of producing peat briquettes which consists in grinding or macerating undried peat and forming while still moist into relatively small pieces or fragments, drying the peat in its fragmentary form to remove the water therefrom, heating the dried peat in such fragmentary form to a temperature sufficient to cause the binding ingredient in the peat to become available for binding purposes and then pressing the heated peat while in such fragmentary form into briquettes of the desired size and maintaining the heat and pressure for an appreciable length of time.



1,501,102. ILLUMINATED SIGN. LINDSAY DUNCAN and CURTIS P. UPTON, San Francisco, Calif. Filed Oct. 23, 1922. Serial No. 596,383. 1 Claim. (Cl. 40—130.)

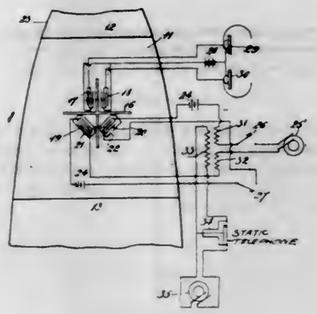
A sign composed of characters having V-shaped sides, two electric lamps so disposed that one of them will project its rays against one side of the characters and the other one will project its rays against the other side of the characters, in combination with means for alter-



nately energizing and deenergizing the lamps, at a predetermined periodicity, whereby an apparent oscillating motion is given to the characters of the sign.

1,501,103. CONJUGATE SIGNALING CIRCUITS. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,519. 8 Claims. (Cl. 178—44.)

1. In a signaling system, a transmission circuit, an artificial line for balancing said circuit, a transmitting path, a receiving path, and a pair of bridge paths, each bridge path having three connections only, two connections of each bridge path being so arranged as to connect the bridge paths in parallel between said transmission circuit and artificial line, the third connection of one of said bridge paths connecting said transmitting path thereto independently of its other two connections, and the third connection of the other bridge path connecting said receiving path thereto independently of its other two connections, the connections being such that said receiving and transmitting paths will be conjugate with respect to each other.



1,501,104. MULTIPLEX RADIO SYSTEM. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,522. 4 Claims. (Cl. 250—9.)

1. In a radio system, an antenna arrangement, a plurality of paths for superposing different transmitting frequencies upon said antenna arrangement, selective devices in each of said paths for maintaining frequency separation therebetween, a plurality of paths upon which different receiving frequencies may be impressed from said antenna arrangement, selective devices in each of said last mentioned paths for selecting to each path its proper frequency, means for balancing said antenna arrangement, whereby all of said transmitting paths may

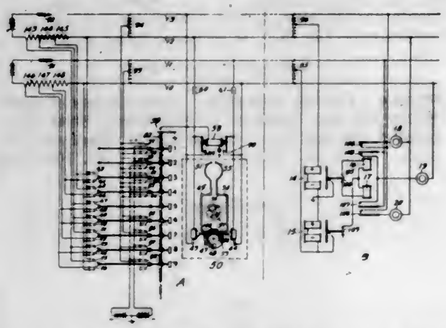
be maintained substantially conjugate with respect to all of said receiving paths, a plurality of signalling circuits, and means for associating each signalling circuit with a transmitting path and corresponding receiving path.

1,501,105. SUBMARINE SIGNALING. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Mar. 23, 1918. Serial No. 224,288. 2 Claims. (Cl. 177—386.)

1. In the art of submarine signaling, means for producing and for detecting compressional waves in water, comprising a condenser having its dielectric and armatures of materials having their densities of the same order of magnitude as water; and said condenser being in operative relation to said water.

1,501,106. UNIVERSAL CONTACT BOX FOR WIRES. ERNEST GAILLEMIN, Vincennes, France. Filed Mar. 21, 1921. Serial No. 454,239. 2 Claims. (Cl. 173—340.)

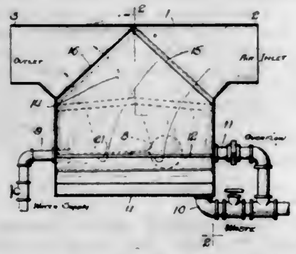
1. An electric fitting comprising a body having slots and openings at an angle thereto, bifurcated members fitted in said slots and carrying pins, means passed through said openings and into the bifurcations of said members to engage wires disposed in said bifurcations, and a cover slidably mounted on said body and having an insulating member.



1,501,107. METHOD OF CONNECTING INSULATOR PARTS. MINOR F. H. GOUVERNEUR, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Apr. 27, 1922. Serial No. 556,981. 3 Claims. (Cl. 18—47.5.)

1. A method of connecting parts of an electric insulator, said method involving coating with water-proofing material the surfaces to be connected, filling the space between the surfaces thus coated with a hydraulic cement, allowing said cement to set, elevating the temperature of the cement sufficiently to cause the surfaces thereof which are in contact with said water-proofing material to absorb at least a portion of said water-proofing material, and applying water-proofing material to the exposed surface of said cement.

1,501,108. PROCESS OF CALCINING CARBON AND PRODUCTS THEREOF. VICTOR C. HAMISTER, Cleveland, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed July 15, 1921. Serial No. 485,065. 16 Claims. (Cl. 176—133.)

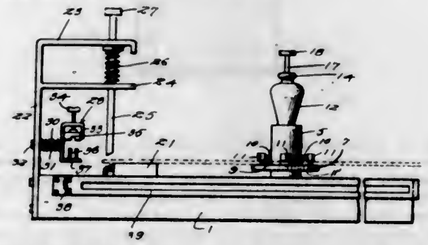


1. Process of calcining lampblack or like low-ash material, which comprises mixing the material with a fluid carbonizable binder to form a plastic mass, heating and tumbling the mixture under conditions adapted to expel volatile matter and form hard rounded nodules, and then heating the nodulized material to a red heat while tumbling it to expel additional volatile matter.

1,501,109. SWITCHING SYSTEM. JOHN B. HARLOW, Upper Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,406. 9 Claims. (Cl. 177—386.)

1. In a switching system, a phantom circuit, a selecting station associated therewith, a receiving device associated with each physical circuit of the phantom circuit, a source of current connected to each physical circuit, a plurality of selectable stations also associated with the phantom circuit, a plurality of vibration responsive devices at each selectable station, means at the selecting station for selectively and simultaneously supplying different combinations of current polarities to the phantom circuit, and means at each selectable station individually responsive to the application of a particular combination of currents at the selecting station to selectively associate said vibration responsive devices in pairs with the physical circuits.

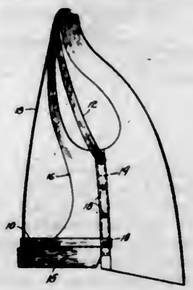
1,501,110. AIR WASHER. BURT S. HARRISON, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1922. Serial No. 534,272. 4 Claims. (Cl. 183—24.)



1. An apparatus of the class described constructed to include a plurality of alternating narrow parallel air inlet and outlet passages, communication being provided between these passages at their lower ends due to the

pressure of the air upon the water surface at said lower edges, vertical partitions extending along the lower ends of the air inlet passages and downwardly to below the normal water level.

1,501,111. PRODUCTION OF CARBON. ALICE MARION HART, London, England, assignor, by mesne assignments, to Edmund R. Cummins, Worcester, Mass. Filed July 7, 1922. Serial No. 573,479. 9 Claims. (Cl. 44—1.)



1. A process of carbonizing carbon containing materials, for the production of carbon, consisting in treating the materials to be carbonized with a metallic salt of a nature to prevent immediate combustion of the material but permit carbonization thereof under heat, and then subjecting the mass to heat in the presence of air.

1,501,112. SAW SET AND JOINTER. JOHN D. HARTWIG, Olean, N. Y. Filed Jan. 17, 1924. Serial No. 686,868. 3 Claims. (Cl. 76—48.)

1. A device of the class described comprising a base, a carriage longitudinally adjustable on said base, a post extending upwardly from said carriage, the upper end of said post being hollow and terminating into an internally threaded neck portion, means on the outer face of said post for supporting a saw blade, fingers extending radially from the upper end of said post and adapted to engage the upper face of said saw blade for holding the same against upward movement on said post, means for normally holding said fingers in an inoperative position, and a bolt adapted to be threaded into the internally threaded neck portion of said post for holding said fingers in an extended operative position.

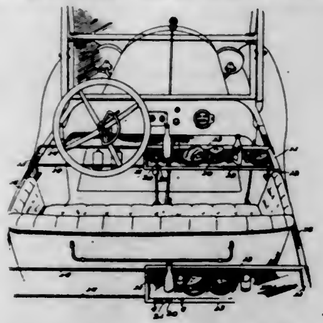
1,501,113. WEARING APPAREL. DAVID H. HODES, New York, N. Y. Filed Jan. 27, 1922. Serial No. 532,135. 8 Claims. (Cl. 2—102.)

8. A skeleton vest comprising front sections merging above into a collar piece, detachable fasteners arranged along said collar piece, said front sections being provided along the rear edges thereof with resilient supporting means, detachable fasteners arranged in vertical series along the resiliently supported rear edge of each of said front sections, a strap connecting the lower ends of said resiliently supported edges of said front sections, a strap connecting the upper end of the resiliently supported edge of each front section to said collar piece, and a detachable back provided with suitable fasteners for releasably engaging the fasteners on said collar piece and on each of the resiliently supported rear edges of said front sections.

1,501,114. CORN-POPPING MACHINE. WILLIAM GARFIELD HOWE, Des Moines, Iowa. Filed June 18, 1923. Serial No. 646,116. 14 Claims. (Cl. 53—4.)

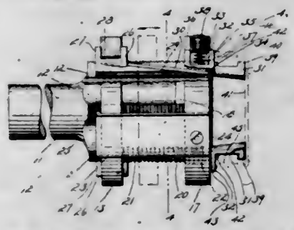
1. In a corn popping machine, a casing, corn popping mechanism therein, means for supplying corn to said popping mechanism from outside the casing, means for causing said corn popping mechanism to discharge the popped corn into the lower part of the casing, said casing having a discharge opening adapted for discharge into the mouth of a sack, and means independent of the popping mechanism for moving the popped corn to position to be discharged through said opening.

1,501,115. PROTECTIVE ARRANGEMENT FOR ELECTRIC DISTRIBUTION AND TRANSMISSION SYSTEMS. PHILIP VASSAR HUNTER, Purley, England. Filed Jan. 20, 1921. Serial No. 438,728. 6 Claims. (Cl. 175—294.)



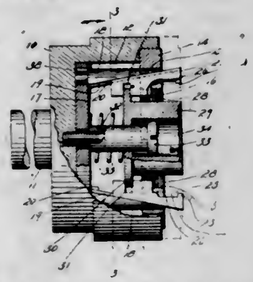
1. A protective arrangement for a three phase four-conductor electric distribution or transmission system wherein two of the four conductors constitute the split conductors in one phase, comprising two transformers one at each end of the split conductors, which are connected through the opposed primary windings of the transformers, relays operated by the secondary windings thereof, circuit breakers in all three phases controlled by the relays, and balancing transformers having at least two windings, one of which is in circuit with one split conductor and one with one unsplit conductor, so that the circuit breakers are operated on the occurrence of a fault in the system.

1,501,116. SERVING TRAY FOR AUTOMOBILES. ARTHUR MONTGOMERY INGE, Memphis, Tenn., assignor of one-fourth to William J. Bacon, one-fourth to L. D. Bejach, and one-fourth to Tyler McLain, all of Memphis, Tenn. Filed Mar. 15, 1922. Serial No. 543,884. 1 Claim. (Cl. 45—51.)



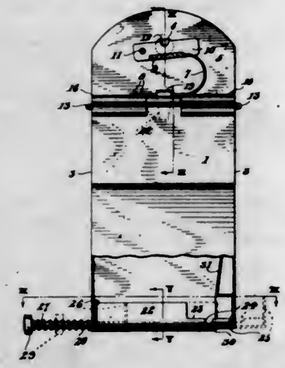
A serving tray for automobiles having a rectangular body provided with rolled side edges forming tubular channels, and with flanged ends one of which has a down-turned engaging lip, a U-shaped supporting frame including side rods slidably disposed within the tubular channels of the tray, and a cross bar on the outer ends

of the side rods, the latter of which is downwardly deflected to form an engaging lip and relatively engaging means carried by the inner ends of the side rods and the tray to secure the supporting frame in the extended position against complete withdrawal of the side rods from the channels, said means including gravity latch



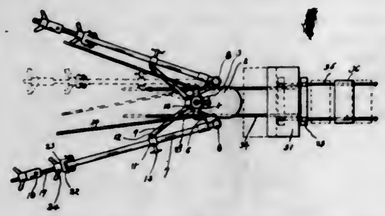
members pivotally mounted intermediate the ends thereof within slots in the inner ends of the side rods said members having upper inturned hooks arranged to enter slots in the upper surfaces of the rolled side edges of the tray and having their opposite ends weighted and adapted to enter lower slots of the side edges of the tray offset longitudinally with respect to the said upper slots thereof, as described.

1,501,117. TAP AND CUTTER. CHARLES G. JOHNSON, Worcester, Mass. Filed June 13, 1922. Serial No. 568,014. 17 Claims. (Cl. 10—128.)



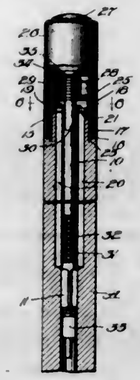
6. In a device of the character described, a tap; a cutter connected therewith; means for moving said cutter radially relatively to said tap, comprising inclined planes held in a fixed position relatively to said tap; and means for adjusting the endwise position of said inclined planes.

1,501,118. DIE AND CUTTER. CHARLES G. JOHNSON, Worcester, Mass. Filed June 13, 1922. Serial No. 568,015. 19 Claims. (Cl. 10—87.)



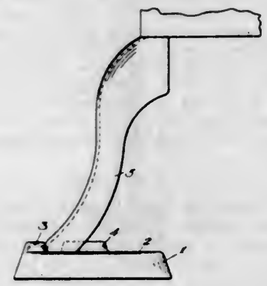
10. In a device for threading the exterior of an article and cutting a groove around the outside thereof adjacent to the threaded portion; a die; a cutter movably connected therewith; and means actuated by the movement of the die for moving said cutter radially relatively to said die so that said cutter will project inwardly beyond the threaded portion thereof.

1,501,119. MATCH BOX. STEPHEN KAMENEC, Derry, Pa. Filed Mar. 29, 1923. Serial No. 628,523. 2 Claims. (Cl. 206—24.)



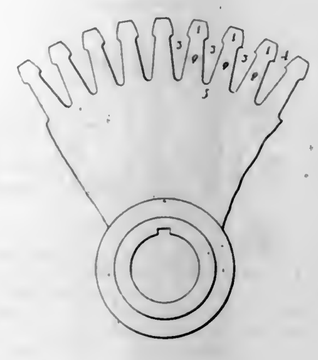
1. In a match dispensing apparatus, a receptacle, the lower end of the receptacle tapering to form a transverse U-shaped pocket open at one end, a drawer longitudinally slidably mounted in the pocket and open at its upper side for the deposit of matches from the receptacle and adapted to be projected through the open end of the pocket, the drawer being substantially U-shaped in cross section with the sides thereof adjacent the projected end cutaway to facilitate removal of matches therefrom, means carried by one end of said drawer and projecting through an aperture in the closed end of said pocket for manually operating said drawer, and means associated with said last mentioned means and said closed pocket end for returning said drawer to its inoperative position.

1,501,120. TRACTION APPARATUS. EDUARD H. KAERER, Milwaukee, Wis. Filed Mar. 17, 1921. Serial No. 453,148. 4 Claims. (Cl. 128—84.)



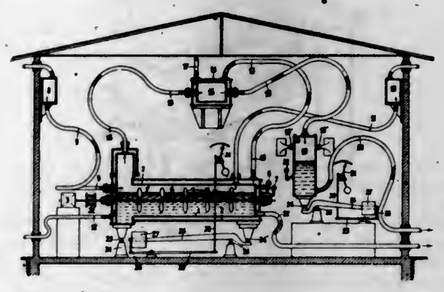
1. A traction apparatus comprising a body portion having a base adapted to rest upon a support, a seat carried by said base portion, a pair of traction bars pivotally joined to said base portion at spaced points approximately aligning with the hip pivot points of the patient, means for adjusting the angular position of said traction bars and locking them in such adjusted position, means carried by the traction bars adapted to rest upon the support, removable pins adjustably carried by said traction bars and adapted to be strapped to the feet of a patient, and movable means for retaining the patient against longitudinal motion, said means being movable with respect to said body portion and seat and pivotally attached with respect to said seat, whereby a plaster cast may be formed about the legs of the patient while they are in an extended position and whereby the patient and cast may be readily removed from the machine by removing said pins and moving said retaining means out of the way.

1,501,121. PENCIL. CHARLES R. KEERAN, Chicago, Ill., assignor, by mesne assignments, to Autopoint Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 3, 1921. Serial No. 489,481. 1 Claim. (Cl. 120—18.)



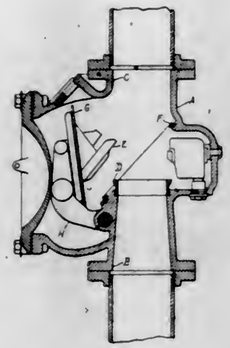
A pencil having a body the upper end of which is externally recessed, a cap overlying said body end and formed with cylindrical walls which are disposed in the recess, a collar surrounding the cap walls also disposed within the recess so as to lie flush with the body, an inseparable slip connection between the collar and cap, screw threads formed on the collar, a head having screw threads adapted to connect with the collar, and means extending from the head into the interior of the pencil body for actuating propelling mechanism therewithin, substantially as described.

1,501,122. LEG REST FOR FURNITURE. ORTON C. LITTLE, Menasha, Wis. Filed Dec. 3, 1921. Serial No. 519,651. 4 Claims. (Cl. 45—137.)



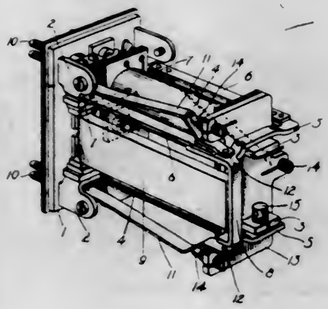
1. A leg rest comprising a circular base portion having a flat surface adapted to rest upon the floor in a position of stability thereon, and also having upwardly tapering sides and a flat top surface provided with a pair of upward projections shaped to fit respectively against the inner and outer surfaces of a leg and spaced apart to receive between them the base of the leg.

1,501,123. TOOTHED WHEEL WITH RESILIENT TEETH. FREDRIK LJUNGSTRÖM, Brevik, Lidingon, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Feb. 2, 1920. Serial No. 355,640. 1 Claim. (Cl. 74—41.)



In toothed wheels, wherein all the teeth are made in one piece and are resilient by means of the tooth spaces being deeper than required by the normal tooth profile, the combination of spiral cut teeth with webs integral with the wheel and being narrower in peripheral direction than the teeth at the taper between the tooth and the web.

1,501,124. DEVICE FOR INDICATING THE LEVEL OF LIQUID IN HIGH-PRESSURE VESSELS. STEPHAN LÖFFLER, Charlottenburg, near Berlin, Germany. Filed Apr. 2, 1923. Serial No. 629,523. 6 Claims. (Cl. 265—61.)



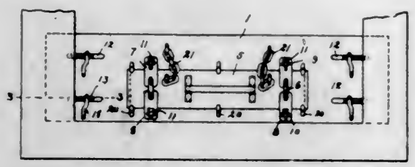
1. The combination with a vessel adapted to resist high pressure, means for introducing material into said vessel, means for supplying energy to said vessel to promote a change in the material contained therein, of a balance system supporting said vessel, said balance system constructed and arranged to be in equilibrium with the weight of the vessel and a definite amount of material therein, and means for translating the relative movement of the vessel and the balance due to variation in the amount of material in the vessel to indicate the quantity of material therein.

1,501,125. VALVE FOR AUTOMATIC SPRINKLER SYSTEMS. ALBERT J. LOEPSINGER, Providence, R. I., assignor to General Fire Extinguisher Company, New York, N. Y., a Corporation of New York. Filed Apr. 4, 1919. Serial No. 287,469. 8 Claims. (Cl. 169—22.)

1. A valve of the character described, comprising a casing provided with a converging inlet and a straight course thence to the outlet, and a clapper adapted to move out of said course in opening; the outlet being larger than the converged cross-section of the inlet.

1,501,126. POLARIZED RELAY. NOEL H. LYSONS, Montreal, Quebec, Canada, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,486. 7 Claims. (Cl. 200—93.)

1. A polarized relay comprising a permanent magnet, a plurality of cores, a winding for each core, a plurality of armatures, and a yoke magnetically connecting the armatures movable lengthwise and in a plane substantially parallel to the pole face of the permanent magnet.

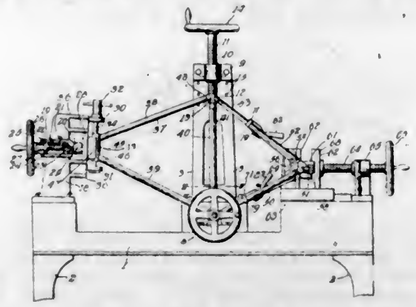


7. A relay comprising a pair of electro-magnets, tensioned armatures controlled thereby, adjustable contacts associated with the armatures, a member interconnecting the armatures, an adjusting member mounted on one of the cores for varying the air gap between the armatures and the cores, and a resilient member for varying the tension on the armatures.

1,501,127. HAIRPIN. RUSSELL L. MCLEARN, Wilkinsburg, Pa. Filed Mar. 30, 1923. Serial No. 628,832. 1 Claim. (Cl. 132—50.)

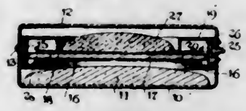
A hair pin of the class described having a small V-shaped bend in one limb and a large V-shaped bend in the other limb, the point of the large bend engaging the depression formed by the small bend when the pin is in closed position.

1,501,128. GRAIN DOOR. JACOB MATTSON, Duluth, Minn. Filed Feb. 11, 1924. Serial No. 691,938. 1 Claim. (Cl. 20—30.)



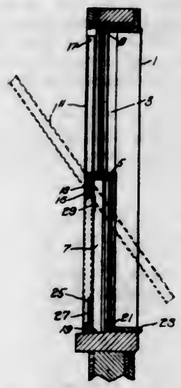
A door section of the character described comprising a main rectangularly shaped body portion, a rectangularly shaped opening substantially centrally of the body portion, vertically spaced reinforcing strips upon one side of the section and disposed longitudinally thereof, the lowermost strip being flush with the lower edge of the section, said lower strip overlapping the lower edge of the opening while the uppermost strip also overlaps the upper edge of the opening, vertically disposed reinforcing strips the ends of which abut against the opposed edges of the horizontal strips and overlapping the ends of the opening, vertically spaced slots at either end of the section spaced slightly above the upper edges of the horizontal strips said slots having fastening bolts therein, box like housings about the ends of the bolts which extend through the section upon the reinforced side thereof, the upper edges of the reinforcing strips forming the lower walls of the box like housings and the outer faces of the housings and strips being flush, and a door for said opening within the section being suspended adjacent the opening.

1,501,129. METHOD AND MEANS FOR BUILDING TUBULAR FRAMES. AUGUST D. MEISELBACH, Shelby, Ohio, assignor to Margaret Meiselbach, Shelby, Ohio. Filed July 31, 1922. Serial No. 578,707. 11 Claims. (Cl. 29—176.)



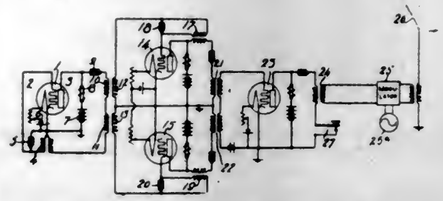
1. In a machine for use in making a tubular frame, the frame including two separated connections and a third connection, the third connection spaced from and connected to the separated connections by tubular members, means for rigidly holding the two separated connections, and means for pressing the third connection toward the other two, the pressing means being adapted to equalize the pressure on the two separated connections.

11. The herein described method of making tubular frames which consists in rigidly clamping the frame parts and placing the tubular members thereof under



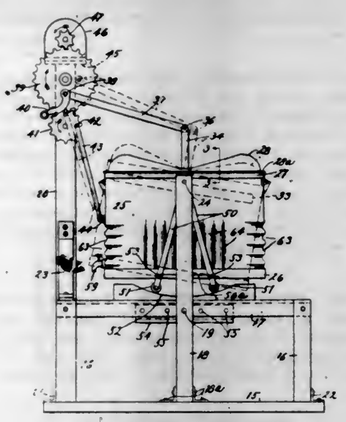
compression, and while the members are thus held, spot welding the several connections to make the frame rigid and while the frame is still clamped blowing air through the parts thereof to rapidly cool the several joints.

1,501,130. VANITY CASE. SIMON MORRISON, Brooklyn, N. Y. Filed May 24, 1923. Serial No. 641,223. 20 Claims. (Cl. 132—83.)



1. A vanity case comprising a box, a cover hinged thereto, an intermediate support, having pivotal connections with the box, detents on said intermediate support for holding the box and cover in closed position, and manual means for simultaneously releasing said detents to separate the box, cover, and intermediate support, substantially as set forth.

1,501,131. WINDOW-SCREEN CONSTRUCTION. FRANKLIN A. MOSMAN, Cambridge, Mass. Filed Feb. 10, 1922. Serial No. 535,455. 5 Claims. (Cl. 156—14.)

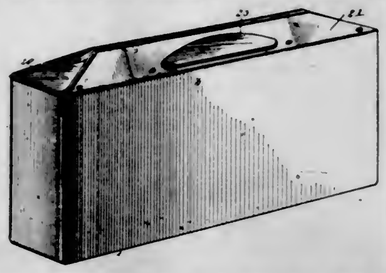


2. A window screen construction comprising a pair of guides extending substantially the length of the window frame each provided with a central longitudinal slot, means entered through said slots pivotally connecting said guides to said frame and located at the upper ends of said slots when the guides are seated on the window sill that the latter may be lifted to swing into and out of the frame, a screen slidably mounted in said guides and adapted to be inserted into or removed therefrom when the guides are in their out positions, and means for securing said guides against swinging movement in said frame.

1,501,132. SIGNALING SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor to Western Electric Company, New York, N. Y., a Corporation of New York. Filed May 4, 1921. Serial No. 466,630. 20 Claims. (Cl. 250—8.)

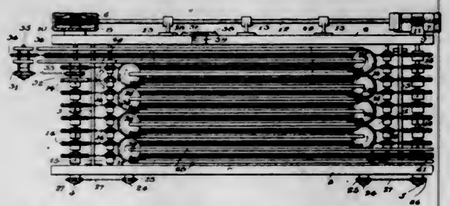
1. A signaling system comprising means for transmitting a carrier wave modulated by trains of waves of different frequencies alternately recurring at a definite rate and means at the receiving station for actuating a translating device by the joint action of said wave trains at a rate different from said recurrent rate.

1,501,133. CLOTHES-WASHING MACHINE. BERTHA ORTELL, St. Paul, Minn. Filed Jan. 6, 1923. Serial No. 611,165. 4 Claims. (Cl. 68—21.)



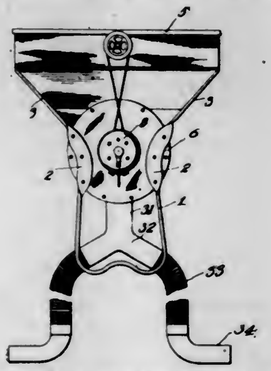
1. In a machine of the class described, a main frame, a wash boiler pivotally suspended in the frame and adapted to be oscillated in a vertical plane, a cover for the boiler, an agitator pivotally suspended within the boiler and adapted to be oscillated in a vertical plane, means on the main frame operatively connected with the boiler and the agitator for oscillating them simultaneously, and a boiler supporting device comprising two A-frames rotatable on the boiler pivots, one at each side of the boiler, a number of transverse bars having their ends secured in the oppositely disposed A-frames and adapted to support the under side of the boiler, rollers on the lower ends of the A-frames, a segmental track secured in the main frame for said rollers to roll on, said track being concentric with the pivot of the boiler.

1,501,134. SUIT BOX. CLAYTON EARL OSBURN, Davenport, Iowa. Filed Oct. 13, 1923. Serial No. 668,323. 3 Claims. (Cl. 229—16.)



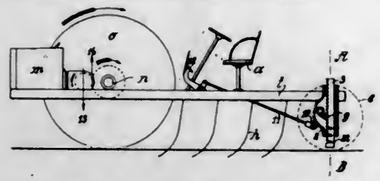
1. A suit box including relatively foldable side sections having telescoping side and end flaps, the flaps

along one side of said sections having extensions doubled upon one another and forming upstanding flaps at oppo-



site sides of the box, said last mentioned flaps being slotted intermediate their ends and constituting a handle.

1,501,135. CANNERY EXHAUSTER AND COOKER. FREDERICK WM. PICHT, Seattle, Wash., assignor to Wright & Smith Machine Works, a Corporation of Washington. Filed July 18, 1923. Serial No. 652,367. 1 Claim. (Cl. 126—272.)

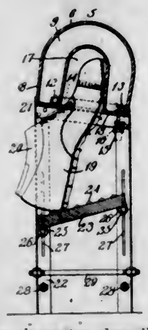


In a cannery exhauster and cooker comprising a box adapted to receive and contain water, a pluralify of alternately oppositely movable chains in said box. a plurality of rotating platforms at the ends of said chains, guide-tongues adjacent said platforms for elevating cans from said chains to said platforms, means for rotating said platforms for carrying said cans from a chain moving in one direction to a chain moving in an opposite direction, and a unitary means for operating and driving said chains and platforms.

1,501,136. POWDER BLOWER. CLAUDE F. REDMON, LILLARD K. REDMON, CLAUDE G. REDMON, and JOHN T. REDMON, Paris, Ky., assignors of one-fifth to Wade Hampton Whitley, Paris, Ky. Filed Nov. 11, 1922. Serial No. 600,438. 2 Claims. (Cl. 43—148.)

1. In a device of the character described the combination of a blower, a container feeding into the blower, means for diverting a portion of the air from said blower into said container and means within said container for agitating the contents thereof.

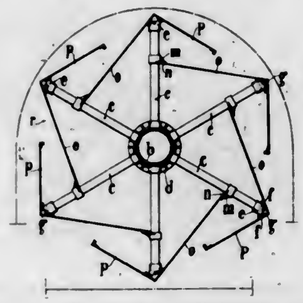
1,501,137. IMPLEMENT RAISING AND LOWERING MEANS. EMIL REZLER, Gungbunzlau, Czechoslovakia. Filed Mar. 9, 1921. Serial No. 450,927. 5 Claims. (Cl. 97—50.) (Granted under the provisions of the act of March 3, 1921, 41 Stat. L., 1313.)



1. In a motor plow or cultivator, in combination, a plow frame, a two wheeled axle to which the front end is pivoted, a motor on the front end of the frame directly geared to the axle, a steering wheel, an adjustable and releasable connection between the steering wheel and the rear end of the frame, the position of the motor with respect to the wheeled axle being such that on the reversing of the motor from front driving to rearward driving the coaction existing between the moment of the motor and the moment of the reaction tooth pressure suffice to turn the frame upwardly a limited extent, while on reversing of the motor from rearward driving to front driving the moment of the frame alone suffices to return the frame downwardly.

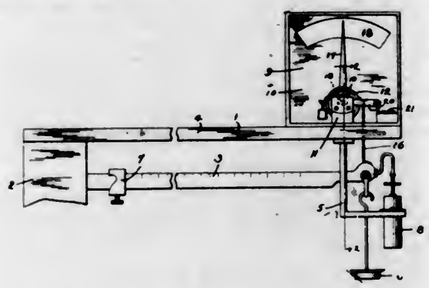
1,501,138. LINE COUPLING. HORACE M. ROUNDS, Tacoma, Wash. Filed Oct. 5, 1923. Serial No. 666,868. 2 Claims. (Cl. 24—126.)

1. A line-coupling including a cup-shaped container the lateral wall of which is formed with a depthwise-extending slot that is of such shape and size as to permit the passage of the body of a line; a line-end-capping ferrule which is shaped to bear upon and turn freely in the container and the lateral wall of which closes the slot therein at least partially and which is capable of ready insertion therein and ready removal therefrom, together with the line, at the will of the operator, to permit the free coupling and uncoupling of the ferrule with and from its container, the line passing through the slot in the latter; and a container-bail the arch of which overlies the mouth thereof and to which the other line-end is fastened.



1,501,139. DEVICE FOR SOFTENING SHOES. FRANCOIS N. SAVARD, Avon, Mass. Filed Sept. 15, 1922. Serial No. 588,467. 9 Claims. (Cl. 34—18.)

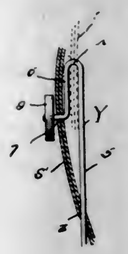
3. A device of the character described comprising, in combination, a heating unit provided with a chamber for a heating medium located within the interior thereof



and a recess in the side thereof, and a support for a shoe located adjacent to said heating unit, said shoe support being adjustably mounted so as to vary the distance between the same and said heating unit and also to incline said support at an angle to a horizontal plane.

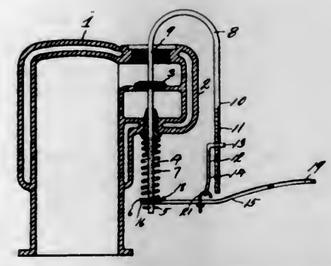
1,501,140. DRYING APPARATUS FOR PULVERULENT MATERIAL. PAUL SCRIVE, Paris, France. Filed Dec. 29, 1921. Serial No. 525,698. 13 Claims. (Cl. 34—7.)

1. In a rotary drying apparatus having an inclined axis for pulverulent materials, constituent elements of the drum composed of longitudinal buckets, a drum constituted by the assemblage of several of the said buckets, their concavity facing the axis of the drum, these buckets being arranged in a geometrically similar manner relatively to the said axis, and providing between them equal intervals, means for securing the buckets on the axis of the drum.



1,501,141. SCALE. WALTER S. SMITH, Columbus, Ohio. Filed Dec. 30, 1920. Serial No. 433,967. 7 Claims. (Cl. 265—59.)

1. In a scale, a frame, a movable beam carried by said frame, of means for amplifying the motion of said beam to facilitate weight readings, comprising an indicator structure formed to include an oscillatory indicator member, a resilient regulator for said member normally serving to maintain the latter in a neutral position when said beam assumes a balanced position, and a connection between the free end of said beam and said indicator structure, said connection serving to cause said indicator member to oscillate in unison with the movable beam.



1,501,142. STICKPIN. ARCHIE C. STAFFORD, Watertown, N. Y. Filed June 7, 1923. Serial No. 643,839. 1 Claim. (Cl. 24—155.)

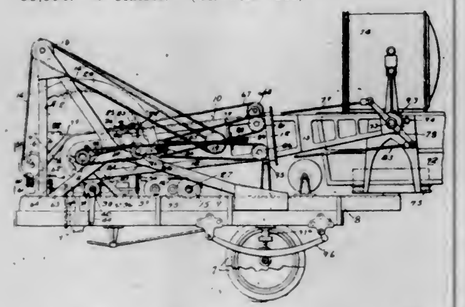
A pin fastener comprising a pin member having a relatively long shank terminating in a pointed end, the opposite end of said member being formed with a return bend spaced from the shank portion and relatively short, the free end of the return bend being extended laterally and outwardly relative to said return bend and the shank portion, and a head mounted on the laterally extending end in spaced relation with the return bend, whereby the shank portion of the pin may have the pointed end inserted through a piece of fabric to which it is desired to secure the pin until said pin reaches

the end having the return bend, the pin being moved through the fabric and in the opposite direction to draw the return bend through the opening made by the shank portion in the fabric, and the laterally extending end portion may be subsequently drawn through the opening in the fabric to position the head carried by the pin against the outer surface of the fabric, the return bent and shank portion cooperating in the rear of the fabric to prevent casual displacement of the pin from the fabric.

1,501,143. VALVE-SPRING COMPRESSOR. FRED C. STAKE, HOLLIE B. KINYOUN, and JOHN P. REYNOLDS, Crook, Colo. Filed June 15, 1923. Serial No. 645,622. 3 Claims. (Cl. 29—86.3.)

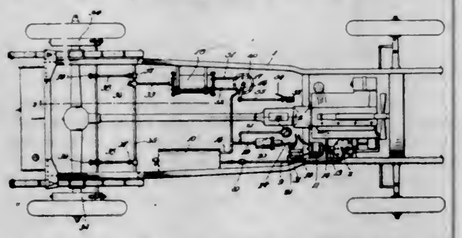
1. A valve spring compressor for internal combustion engines, said compressor comprising a U-shaped member having substantially parallel arms, one of said arms being adapted to hook over a portion of the engine, the other arm being threaded and adapted to extend downwardly to the side of the engine, a bracket threaded on said threaded shaft, a lever pivotally connected to said bracket intermediate the ends of the lever, and a bifurcation carried by one end of said lever and adapted to receive the lower end of a valve stem beneath a valve spring.

1,501,144. AIR-CLEANING DEVICE FOR AUTOMOTIVE MOTORS. LOUIS E. STONE, Ashland, Ky. Filed Dec. 3, 1923. Serial No. 678,357. 9 Claims. (Cl. 183—110.)



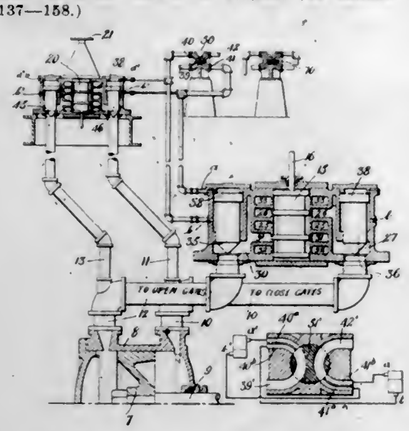
1. The method of purifying the intake air of a carburetor, which consists in passing the air from the front to the rear of a separator, setting the air into

whirling motion in the separator, discharging the dust laden air freely to the atmosphere at the rear end of



the separator, and causing the pure air to double back through the interior of the incoming column and be discharged at the front of said separator.

1,501,145. OBSERVATION APPARATUS. JOSEPH B. STRAUSS, Chicago, Ill. Filed Apr. 3, 1916. Serial No. 88,596. 4 Claims. (Cl. 189—15.)

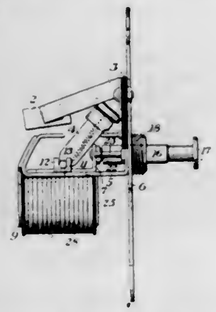


1. A portable observation apparatus comprising a motor truck, a transmission mechanism therefor, a rotating and extensible arm mounted on said motor truck, mechanism for acting upon said arm to extend it, and mechanism for lifting said arm, and operative connections between both of said sets of mechanism for said arm and the transmission mechanism of the truck.

1,501,146. AIR BRAKE FOR AUTOMOBILES. JOHN T. STROTHER, Nocam, Va. Filed Dec. 4, 1923. Serial No. 678,518. 4 Claims. (Cl. 303—50.)

1. In an air brake apparatus for automobiles, the combination of a reservoir, a brake cylinder, means for maintaining pressure in the reservoir, a controlling valve disposed between the reservoir and the brake cylinder, a piston within the brake cylinder, operative connections whereby movement of said piston in one direction will apply brakes and in the opposite direction will release brakes, a supply pipe reaching from the reservoir to one side of the controlling valve, supply and exhaust pipes leading from the brake cylinder to the opposite side of the controlling valve, and means for operating said valve.

1,501,147. FLUID-PRESSURE CONTROL SYSTEM. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa. Filed Jan. 21, 1919. Serial No. 272,381. 33 Claims. (Cl. 137—158.)

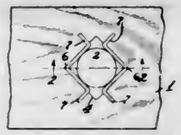


1. In a regulating system for a hydraulic turbine, a plurality of control valves, means for closing certain of said valves and opening others, and a single operating valve controlling said means.

9. In a regulating system for a hydraulic turbine the combination with hand operated regulating means, and automatically operated regulating means, of fluid operated means for rendering one of said regulating means effective and rendering the other regulating means ineffective.

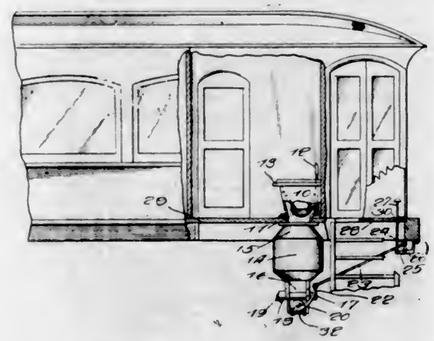
17. In a regulating system for a hydraulic turbine the combination with a governor proper, comprising a cylinder and a fluid pressure operated piston therein, of a regulating valve located separately from the governor, means responsive to said regulating valve for controlling the flow of fluid through said turbine and a rod moved by said piston and serving to transmit the motion thereof, to said separately located regulating valve.

21. The combination with a hydraulic turbine and a plurality of sources of fluid pressure and regulating means actuated thereby of fluid pressure operated valves for shifting from one source of fluid pressure to another, and a hand operated valve forming a remote control for said fluid pressure operated valve.



1,501,148. ELECTRICAL SWITCH. GEORGE C. TERHORST and GEORGE W. TERHORST, Pittsburgh, Pa. Filed June 28, 1922. Serial No. 571,352. 15 Claims. (Cl. 200—89.)

2. The combination with an electrical switch having manual means for opening and closing said switch, said means being connected to the switch when the latter is open, of means independent of the electric current for automatically disconnecting said manual means upon the closing of said switch, substantially as described.



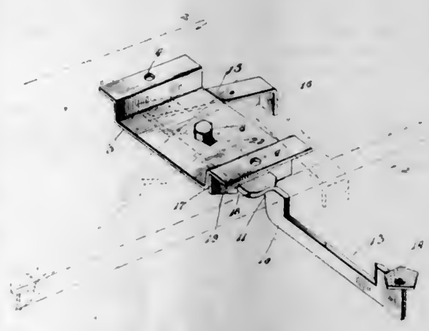
15. In an electrical switch the combination of fixed contacts, a snap member carrying circuit closing means, means for manually operating said snap member comprising two telescoped members, one of which is manually operable, means connecting the other of said members with said snap member, means for operatively connecting said members together, means independent of the electric current for automatically disconnecting said members from each other while in switch closing position, and magnetic means for moving said snap member to switch opening position independently of the manually operable member, substatially as described.

1,501,149. LOCKING MEANS FOR CARRIAGE BOLTS. FREDERICK H. THOMPSON, Chicago, Ill. Filed Apr. 12, 1922. Serial No. 551,973. 2 Claims. (Cl. 151—32.)

1. In combination, a body of wood having a hole therethrough, said hole having a squared recess at one surface of the wooden body, angular metal members lining said recess, and a carriage bolt, the squared portion of which contacts with said angular metal members.

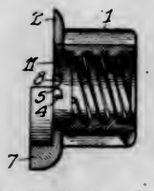
1,501,150. TOILET FOR PASSENGER CARS. CHRISTOPHER A. THOMAS, East Macon, Ga., assignor of one-third to Ebb Warren, Macon, Ga. Filed Mar. 31, 1923. Serial No. 629,031. 3 Claims. (Cl. 4—8.)

1. In a passenger car having a floor, a toilet bowl mounted upon the floor and extending therethrough and having a valve, a container disposed below the bowl and into which the bowl discharges, a valve hinged to the lower end of the container and normally open, manually operable means for closing the valve and holding it closed comprising an eccentrically mounted cam disposed below the valve and engaging transversely across its surface with the valve, means for rotating the cam including a rod passing downward through the floor and operatively connected to the cam, and means for locking the rod in a depressed position and with the cam in its locking position.



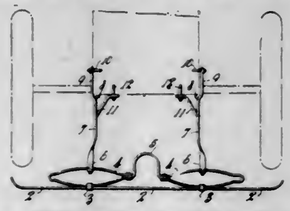
1,501,151. HYDRAULIC JACK. SYLVESTER V. THOMPSON, San Diego, Calif. Filed Jan. 27, 1922. Serial No. 532,162. 2 Claims. (Cl. 138—9.)

1. A hydraulic jack, including a casing, a cylinder portion at the upper end and an enlarged reservoir base portion at the lower end thereof, a plunger reciprocably mounted in the cylinder portion thereof, another plunger reciprocably mounted in the lower enlarged end of said casing parallel with said first mentioned plunger, a means for reciprocably operating said first mentioned plunger, a check valve interposed between said reservoir and the chamber of said other plunger for controlling the flow of oil to said chamber, a second check valve interposed between said chamber and the cylinder portion of said casing for controlling the flow of liquid thereto, a third check valve interposed between said cylinder portion of said casing and said reservoir for



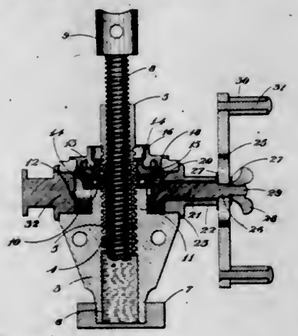
controlling the discharge of the liquid from said cylinder and means for operating said latter valve, said means consisting of a rod extending through the wall of the enlarged reservoir base portion of said casing, and a lever pivotally mounted intermediate its ends within said reservoir, its one end being connected with the inwardly extended end of said rod, its other end being adapted to engage the valve member of said last mentioned check valve with the inward shifting of said rod.

1,501,152. SHOE CLEANER. EDGAR H. TRICK, San Antonio, Tex. Filed Mar. 7, 1923. Serial No. 623,480. 4 Claims. (Cl. 15—237.)



1. A device for the purpose set forth comprising a scraper, a bracket to be secured to the under side of a running board, means for pivotally mounting the scraper upon the bracket for movement in a plane parallel with the running board, a push arm secured to the inner end of the scraper and projecting laterally therefrom toward the outer edge of the running board when the scraper is retracted whereby it may be actuated to project the scraper, said arm being adapted to impinge against the bracket to limit the retracting movement of the scraper, and means at the outer end of the bracket for locking the scraper in its projected position.

1,501,153. ENGINE-STARTER PINION. HENRY E. VAN NESS, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Feb. 11, 1921. Serial No. 444,103. 2 Claims. (Cl. 74—7.)

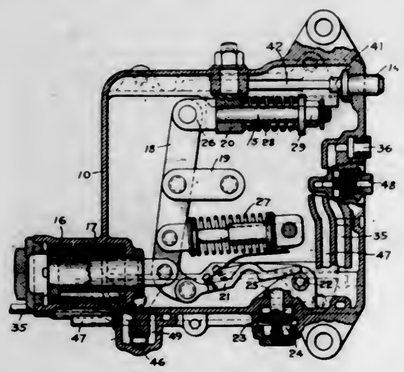


1. An engine starter pinion comprising a body portion having a central bore and provided on one end with transverse grooves having outwardly directed sharpened wedges in the middle portion of the base of the grooves, such grooves having straight but inclined sides to form undercuts at the base thereof, and a disk portion having inwardly extending radial lugs adapted to fit into the grooves and onto the wedges which split the lugs and spread the mass thereof against the sides of the grooves and into the undercuts, whereby the disk portion and body portion are held tightly together against displacement both longitudinally and rotarily.

1,501,154. AUTOMOBILE FENDER. FRANK WAGNER, Vancouver, British Columbia, Canada. Filed Dec. 15, 1923. Serial No. 680,917. 4 Claims. (Cl. 293—55.)

4. An automobile fender comprising the combination with a flexible resilient front bar, elliptic springs connected to the rear side of the bar, means for removably connecting the after sides of said springs to the chassis of the car, and a U-shaped spring having its ends secured to the adjacent ends of the elliptic springs, substantially as shown and described.

1,501,155. LIFTING JACK. JAMES M. WILLS, Ottawa, Ontario, Canada. Filed Mar. 16, 1922. Serial No. 544,381. 2 Claims. (Cl. 254—102.)

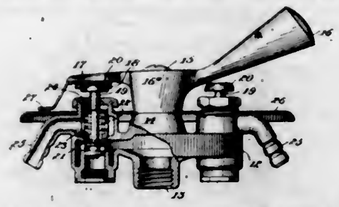


1. In a lifting jack, a body member, an exteriorly-threaded lifting sleeve having threaded engagement therein and interiorly threaded, a threaded lifting screw engaged therein and having independent spiral movement therein during the adjustment of the parts in operation and movable with the sleeve when the screw is not engaged with a stationary object, means for rotating the lifting sleeve to move the same upwardly, and means embodying an operating bevel gear rotating with said sleeve and through which said sleeve moves.

1,501,156. FLEXIBLE COVERING MATERIAL AND METHOD OF MAKING SAME. JOHN A. WILSON, Elizabeth, N. J., assignor to Duratex Corporation, Newark, N. J., a Corporation of New Jersey. Filed Nov. 12, 1923. Serial No. 674,313. 13 Claims. (Cl. 154—46.)

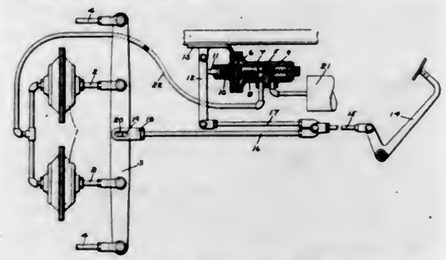
1. A flexible water-proof covering material comprising a burlap base, a layer of rubber cement applied to said base, a facing sheet secured to said base by said rubber cement and a surface coating of pyroxylin applied to said facing sheet.

1,501,157. ELECTRIC COUPLING FOR CARS. HARRY F. WOERNLEY, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 5, 1919. Serial No. 308,844. 6 Claims. (Cl. 173—332.)



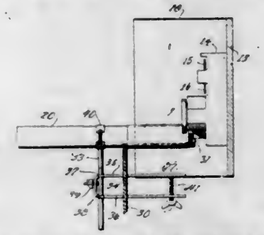
1. In an electric coupling for cars, the combination with a movable carrier having a plurality of electric butt contacts connected to respective circuits, of a lever, means for operatively connecting said lever to said carrier, a movable fulcrum member connected to said lever, a spring acting on and compressible by the movement of said fulcrum member, and means for actuating said lever to project said carrier forward to engage the contacts of a counterpart contact carrier with said fulcrum member as a fulcrum and cooperating with the means connecting the lever with the contact carrier for actuating said lever and fulcrum member to compress said spring.

1,501,158. HYDRAULIC DISTRIBUTING VALVE. CHARLES A. XARDELL, Utica, N. Y. Filed June 15, 1923. Serial No. 645,572. 4 Claims. (Cl. 277—57.)



1. A hydraulic distributing valve comprising a hollow body provided with a plurality of spring-closed stop-cocks

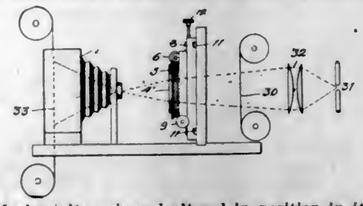
or valves having valve stems provided with heads and outlet leads or nozzles controlled thereby, said body



having a single inlet nipple, combined with a handle lever pivotally mounted on said body and provided with a valve-opening cam.

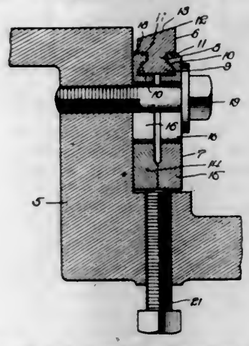
1,501,159. AUTOMOTIVE BRAKE. JOHN R. BARTHOLOMEW, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1922. Serial No. 592,238. 5 Claims. (Cl. 188—106.)

1. In an automotive brake, the combination with a fluid pressure brake, of manually operable means adapted upon initial movement to apply the fluid pressure brake and means for applying the brakes mechanically upon a further movement of said manually operable means only in case the fluid pressure brake fails to act.



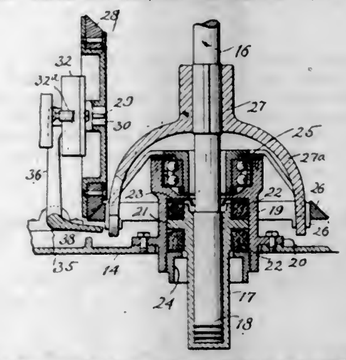
1,501,160. CONNECTER FOR ELECTRIC WIRES. GUSTAVE M. BOREN, Chicago, Ill. Filed Mar. 17, 1922. Serial No. 544,426. 8 Claims. (Cl. 173—273.)

1. A connecter for electric wires comprising a bracket, a wire supporting arm carried by the bracket, contacting members carried by the arm, and means for adjusting the contacting members with relation to the terminal posts of an insulating plate within a fuse box.



1,501,161. MEANS FOR DISTORTING IMAGES OF PICTURES OR NATURAL OBJECTS. HEBEWARD LESTER COOKE, Princeton, N. J. Filed Aug. 3, 1921. Serial No. 489,506. 2 Claims. (Cl. 88—24.)

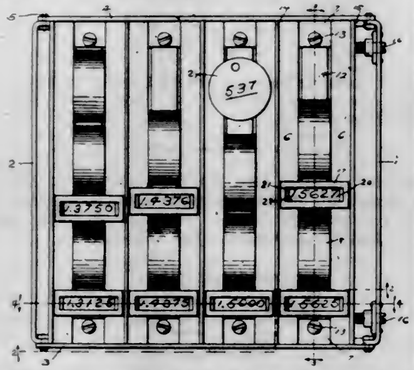
1. In combination, an optical device arranged to form a distorted virtual image of an object, a photographic device in operative relation to said optical device for reproducing said virtual image, and means for changing the position of said optical device relatively to said object, to alter the distortion in the image, said means comprising mechanism whereby said optical device may be



rotated about its axis and altered in position in its own plane, and means whereby the said plane may be changed in position.

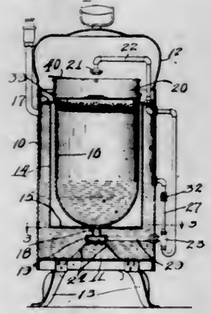
1,501,162. KNIFE AND HOLDER. HARRY A. CUMFER, Chicago, Ill., assignor to Guyton & Cumfer Mfg. Co., a Corporation of Illinois. Filed Jan. 30, 1922. Serial No. 532,651. 3 Claims. (Cl. 164—58.)

1. A device of the character described comprising a relatively long knife blade having a groove in both of its sides in the same plane forming abrupt shoulders at its upper edge and opposite outwardly inclined shoulders; a pair of duplicate clamping members, each having a head to fit in the respective groove on opposite sides and bolts passing thru said members to wedge the heads thereof into the grooves.



1,501,163. EXTRACTOR DRIVE MECHANISM. ARTHUR R. CURTIS, Cleveland, Ohio. Filed Nov. 18, 1918. Serial No. 262,965. 11 Claims. (Cl. 74—26.)

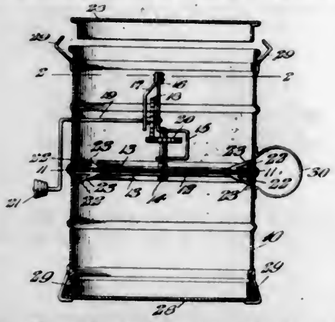
1. In a centrifugal machine, a high speed shaft having a mounting which permits the shaft to gyrate, and which yieldingly opposes lateral movement thereof, a driving member surrounding the shaft and a member



connected to the shaft and having a driving connection with the driving member in a plane in which the center of gyration of the shaft is located or substantially located.

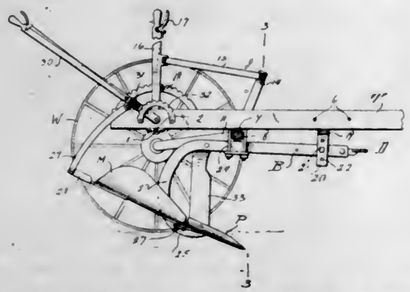
1,501,164. MEANS FOR STORING STANDARD MEASURING DEVICES. PHILIP J. DARLINGTON, Boston, Mass. Filed Oct. 6, 1923. Serial No. 667,059. 10 Claims. (Cl. 206—16.)

1. Means for storing standard measuring devices comprising a frame, and units, each consisting of a pair of side rails fastened together with a space between them and a supporting rail suspended below the space between the side rails, mounted in the frame.



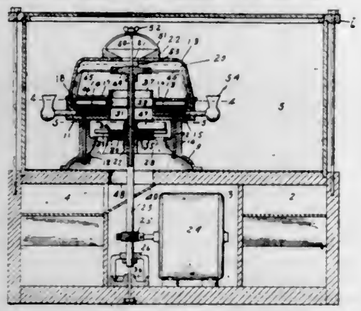
1,501,165. COFFEE URN. NICHOLAS J. ERZIG, Chicago, Ill. Filed Aug. 8, 1923. Serial No. 656,350. 4 Claims. (Cl. 53—3.)

1. A coffee percolating urn including a boiler, a coffee extract container, a permeable retainer for coffee grounds, a connection from said boiler to said container, said connection being adapted to supply first hot water and then steam, and means for causing the steam to circulate continuously the coffee extract through said permeable retainer.



1,501,166. FLOUR SIFTER. IRVING W. FARQUHARSON, Media, Pa. Filed Feb. 28, 1924. Serial No. 695,687. 5 Claims. (Cl. 83—60.)

1. A sifter comprising a body having an annular bead intermediate the open ends thereof, a screen extended transversely of the body and bearing in said annular bead an annular guide fixed to the inner wall of said body above and below said screen, an agitating device arranged upon opposite sides of said screen in parallelism therewith, means carried by said agitating device for tracking upon said upper and lower guides, a vertical shaft rotatably mounted within said body and penetrating said screen and supporting said agitating devices, a horizontal operating shaft projected through



the body side wall, meshing gear wheels operatively connecting said vertical and horizontal shafts, and a removable closure for each end of said body.

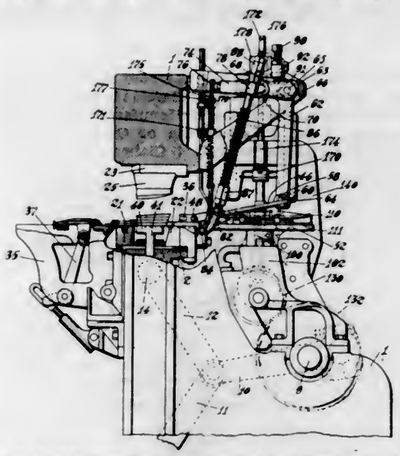
1,501,167. DITCHER. CHARLES F. HOLYBEE, Hotchkiss, Colo. Filed Jan. 15, 1923. Serial No. 612,775. 4 Claims. (Cl. 37—98.)

1. In a machine of the character described, a tongue, a cross member mounted beneath the tongue, a pair of rearwardly extending beams adjustably pivoted on said cross member and connected at their forward ends by a draft element, the rear ends of said beams extending downwardly and carrying a plow, cranked axle sections carrying ground engaging wheels at one end and having their other ends disposed between said beams and the tongue and clamped to the former, rocker arms on said axle section, and means connected with said rocker arms for rocking the axle sections independently.

1,501,168. CORN-POPPING MACHINE. LUTHER J. ISENHOUR, Indianapolis, Ind. Filed Aug. 27, 1923. Serial No. 659,646. 16 Claims. (Cl. 53—4.)

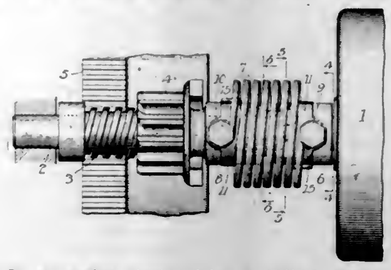
1. In a popping machine, a popping chamber, a horizontally disposed heating element in said popping chamber having an axial discharge opening, and means for moving the contents of the popping chamber towards the axial center of the popping chamber for discharging the same from the popping chamber.

1,501,169. PROCESS OF MAKING DRAWING INSTRUMENTS. ADOLF W. KEUFFEL, Montclair, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 24, 1922. Serial No. 556,192. 6 Claims. (Cl. 76—101.)



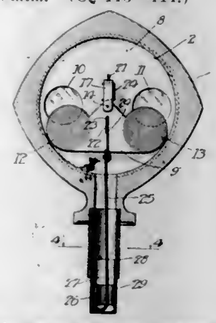
1. The process of making a drawing instrument upper leg consisting of cutting a cylindrical metal blank to the length of upper leg desired, tapering the same to size required by means of a screw machine, cutting out a curved shoulder at the larger end, brazing a separately made shoulder member to said curved shoulder and cutting a groove in the lower end of the said leg adapted to receive a tongue of a lower leg.

1,501,170. MEASURING TOOL. FREDERICK W. KORB, Cleveland, Ohio. Filed Dec. 20, 1923. Serial No. 681,756. 4 Claims. (Cl. 33—169.)



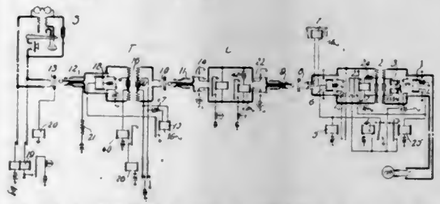
1. A measuring tool of the character described comprising an elongated sleeve having one end tapered, an annular radial rib at the other end of said sleeve, an instrument slidable in the sleeve and adapted for extension beyond the tapered end a distance equal to the depth of an opening being measured, and spring means integrally formed with the sleeve to retain said instrument in any adjusted position.

1,501,171. MACHINE FOR OPERATING UPON WHEELS. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 14, 1919. Serial No. 303,698. 127 Claims. (Cl. 12—42.)



1. In a machine for compressing and breasting heels in a continuous operation, means for compressing a heel, means for feeding the heel to the compressing means, means for ejecting the heel from the compressing means, means independent of the feeding means for transferring the heel from ejected position to breasting position, and means for breasting the heel while in said position.

1,501,172. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed May 10, 1922. Serial No. 559,732. 6 Claims. (Cl. 74—7.)

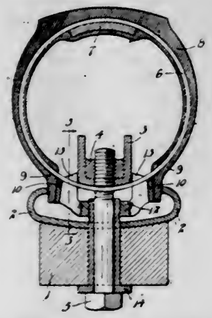


1. In an engine starter drive, a helical drive spring whose coils have a greater height than width in cross section, an anchoring means for an end of such spring, in combination with means for supporting the first coil at such end in such manner as to avoid lever action on such anchoring means and consequent flexure thereof.

1,501,173. TEMPERATURE INDICATOR. OSCAR W. MOORE, Chicago, Ill. Filed Mar. 10, 1922. Serial No. 542,599. 1 Claim. (Cl. 116—114.)

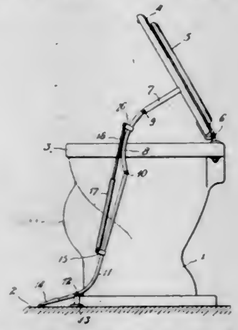
A device of the class described comprising a casing, indicating mechanism mounted therein, a tubular extension depending from said casing, a U-shaped thermostatic lamina in said extension and having one arm extending upwardly into cooperative relation with said indicating mechanism, a ferrule in said tubular extension and through which passes said arm of the thermostatic lamina, said ferrule serving to hold the remaining arm of the thermostatic lamina against the wall of said tubular extension.

1,501,174. SWITCHING SYSTEM. LOUIS A. MORTIMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1920. Serial No. 412,490. 13 Claims. (Cl. 179—46.)



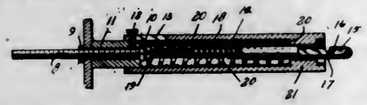
11. In a signaling system a plurality of relays selectively responsive to currents of different frequencies, means to interconnect the input and output circuits of said relays whereby surging is adapted to occur and a retarding device to prevent surging.

1,501,175. COWL COVER. ARTHUR H. NANN, Muncie, Ind. Filed Feb. 24, 1923. Serial No. 620,974. 4 Claims. (Cl. 296—136.)



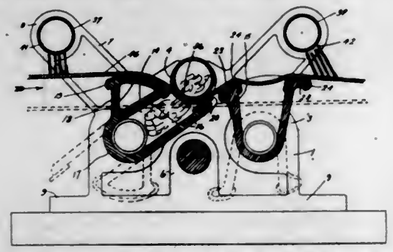
2. A cowl cover of the character set forth, comprising a top sheet of sufficient length to extend from the windshield of an automobile and overlie the front face of the radiator, means carried by the rear end of the sheet for engagement behind the windshield, side wall sheets of less length than the top sheet and depending from its opposite sides, the front ends of the side walls being inturned and secured to the overlying front end of the top sheet, and a stretcher bar extending transversely of said overlying front end and mounted in the overlapped portions of said end and side walls.

1,501,176. RESILIENT WHEEL AND TIRE STRUCTURE. DE WITT NELSON and CHARLES H. BURROWS, Minneapolis, Minn. Filed Aug. 17, 1922. Serial No. 582,409. 24 Claims. (Cl. 152—8.)



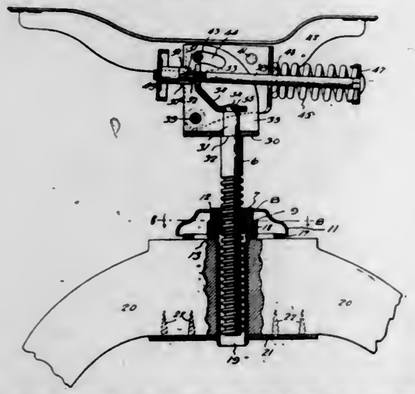
20. A resilient wheel structure comprising a rigid peripheral member, a resilient hoop surrounding and spaced from said member substantially in the plane thereof, an annular helical spring surrounding and spaced from said member and enclosing and contacting said hoop, and means also enclosed by said spring and engaging the interior of its convolutions adjacent said member for tensioning and supporting said spring from said member.

1,501,177. BASIN-COVER APPLIANCE. BERNHARD OZWIRK, Cleveland, Ohio. Filed Sept. 14, 1920. Serial No. 410,094. 3 Claims. (Cl. 4—251.)



1. A device of the character described comprising in combination, a basin, a cover therefor, means including articulated members for lifting said cover and adapted to permit its gravitational return to position upon said basin and control mechanism for retarding the action of said means, said mechanism including a pair of relatively movable parts pivotally attached one to each of two of said members.

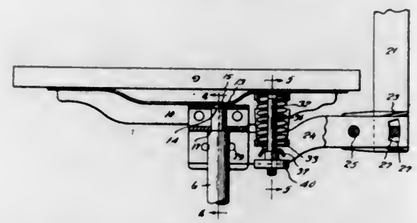
1,501,178. TAG-STRINGING DEVICE. CHARLES S. PATTERSON, Lewiston, Me. Filed June 11, 1925. Serial No. 644,715. 3 Claims. (Cl. 93—91.)



1. A tag threading device including a support, a shaft secured to the support, a tubular member on the shaft and contacting with one side of the support, means for holding the tubular member into engagement with the support, a tubular body portion movable over the shaft, a coiled spring within the body portion for normally holding the body portion to the limit of its outward movement, a knife formed at the outer end of the shaft, a tubular member disposed over the knife, a coiled spring for normally holding the tubular member to a position to cover the knife, and said last mentioned tubular member having an eye formed therein.

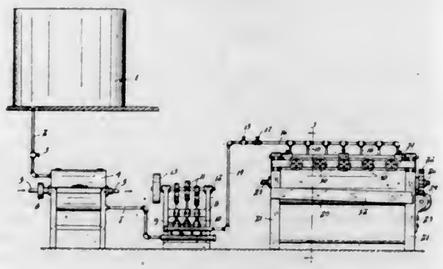
1,501,179. FELT WASHER. JAMES PEACOCK, EDWIN MCCLELLAN, and FREDERICK F. DORITY, Ottawa, Ontario, Canada. Filed Oct. 12, 1920. Serial No. 416,478. 40 Claims. (Cl. 92—50.)

1. A felt cleaning device having spaced washing members, and a suction cleaning means between the washing members.



1,501,180. TILTING CHAIR. CLIFFORD H. PETERS, Lakewood, and EDWARD D. BUMP, Cleveland, Ohio, assignors to The Bettcher Stamping & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 27, 1922. Serial No. 547,112. 5 Claims. (Cl. 155—77.)

1. In a tilting chair, the combination of a post, a yoke secured to the upper portion thereof, a cross member



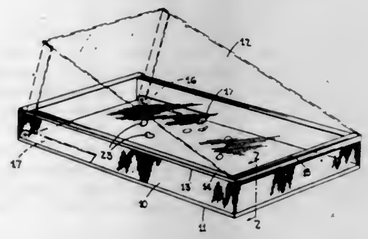
located within the arms of the yoke, said cross member being fastened to said arms and to the top of the post, a seat-frame cradle pivoted to the arms of the yoke, a bolt extending lengthwise between the arms of the yoke and having a rocking bearing against the cross member, and a spring in compression between the bolt and the cradle.

1,501,181. CHAIR. CLIFFORD H. PETERS, Lakewood, and EDWARD D. BUMP, Cleveland, Ohio, assignors to The Bettcher Stamping & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 24, 1922. Serial No. 556,249. 5 Claims. (Cl. 155—77.)

1. A chair comprising a seat and its support, a pair of horizontally extending arms pivoted to the support at their front ends, and extending rearwardly beyond the seat, a back mounted on the rear ends of said arms, a hanger secured to the under side of the seat, a pair of springs standing vertically upon said hanger, a cap on the upper ends of the springs, a bolt extending downwardly from said cap and through the hanger, and a cross-connection between the lower end of the bolt and the arms.

1,501,182. PROCESS AND APPARATUS FOR TREATING MILK. CHRIS M. PETERSON, Minneapolis, Minn. Filed Jan. 9, 1924. Serial No. 685,154. 10 Claims. (Cl. 159—12.)

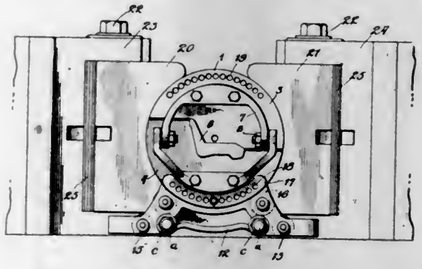
1. The method of drying milk or other fluid or semi-fluid material comprising placing the milk under pressure, forcibly projecting the milk under pressure in a series of minute jets against a heated surface to form a thin film on said surface, retaining said film on said surface until the same is dried, and then removing said film from said surface.



1,501,183. METHOD OF MAKING CHROMIUM STEEL AND CHROMIUM IRON. NAPOLEON PETINOT, New York, N. Y. Filed July 18, 1922. Serial No. 575,804. 5 Claims. (Cl. 75—1.)

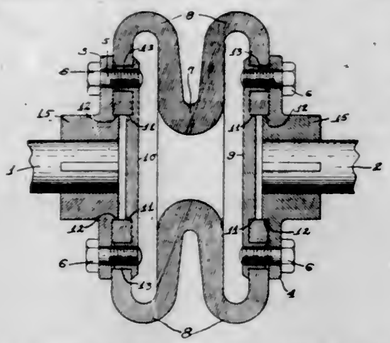
1. A method of making chromium steel or chromium iron comprising the addition to the molten iron bath of a ferro-chromium-silicon alloy containing sufficient silicon to protect the chromium from oxidation.

1,501,184. PROCESS OF MANUFACTURING ALLOY STEELS IN ELECTRIC FURNACES. NAPOLEON PETINOT, New York, N. Y., assignor to United States Ferro-Alloy Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 16, 1922. Serial No. 601,407. 6 Claims. (Cl. 204—64.)



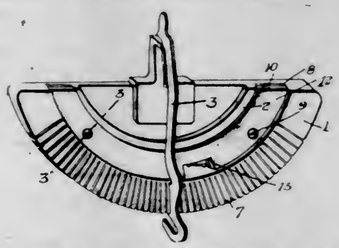
1. A process of making alloy steels in electric furnaces comprising the formation of a bath of iron having a low carbon content in an electric furnace, then forming a slag with the impure ore of the metal to be reduced, and then carburizing the slag.

1,501,185. GAME. FREDERICK PORTMAN, Vernon, British Columbia, Canada. Filed Sept. 5, 1922. Serial No. 586,318. 2 Claims. (Cl. 46—49.)



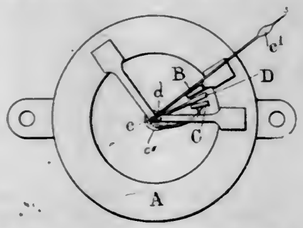
1. A game apparatus comprising a game box, a cover member hinged to said box, means carried by said box to support the cover member in raised position, game pieces adapted to rest in said game box, said cover member being adapted to be charged with static electricity to attract the game pieces to the under side of said cover member when the latter is in closed position, cushion strips for the edges of the cover member, said cushion strips being carried on the upper edge of the sides and ends of the box and edge protecting members secured upon the cover member around the edges thereof.

1,501,186. METHOD AND MEANS FOR MAKING COMPROMISE ANGLE BARS. CHARLES A. PSILANDER, Easton, Pa., assignor to William Wharton Jr. & Co., Incorporated, Easton, Pa., a Corporation of Pennsylvania. Filed July 1, 1922. Serial No. 572,242. 28 Claims. (Cl. 153—25.)



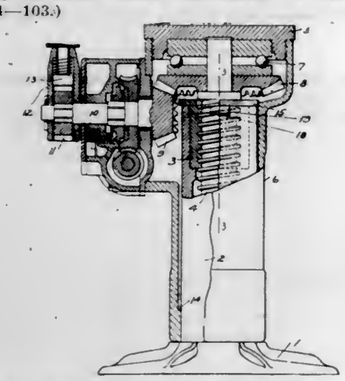
1. The method of shaping ordinary splice bars to adapt them for use as compromise bars to connect rails of different section, which consists in centering a splice bar in endwise disposed co-acting offsetting dies capable of selective rotative movement, establishing the requisite differential adjustment to control the character and degree of offset, and completing the operation by subjecting the dies conjointly to a single application of pressure.

1,501,187. FLEXIBLE COUPLING. CHARLES L. RAYFIELD, Chicago, Ill. Filed Sept. 3, 1921. Serial No. 498,280. 2 Claims. (Cl. 64—96.)



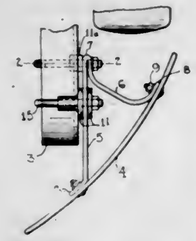
1. A shaft, a disk keyed on said shaft, a shoulder on said disk, a plate, a shoulder on said plate, bosses on said plate having screw threaded holes therein, bolts through said disk extending into said bosses whereby said plate is held adjacent to said disk with the shoulders aligned, and a flexible member secured between the disk and plate by said bolts, the thickness of said flexible member being greater than the height of said bosses.

1,501,188. TYPEWRITER. JOHN COATSWORTH REDDICK, Toronto, Ontario, Canada. Filed Dec. 23, 1922. Serial No. 608,757. 6 Claims. (Cl. 197—183.)



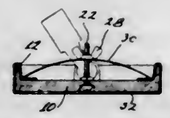
1. In a typewriter provided with type bars, two members located in the path of travel of the type bars having respectively an unyielding type bar contact surface and a yielding type bar contact surface located in advance of the unyielding contact surface.

1,501,189. ELECTRICAL MEASURING INSTRUMENT. JOHN W. RECORD, Bowdon, England. Filed June 26, 1922. Serial No. 570,804. 2 Claims. (Cl. 171—95.)



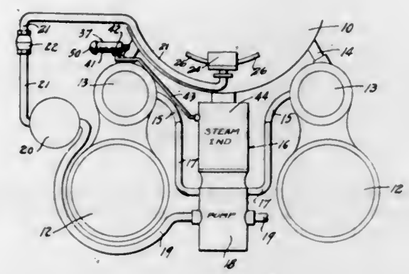
1. An electric measuring instrument with a fixed element, a movable indicator carrying element and an intermediate floating element, to which a movement is imparted from the fixed element and which in turn imparts the movement it has received and an additional movement to the pointer carrying element.

1,501,190. POSITIVE STOP FOR LIFTING JACKS. CHARLES WILLIAM RIPSCH and JAMES C. DAWLEY, Dayton, Ohio, assignors to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed July 12, 1921. Serial No. 484,200. 8 Claims. (Cl. 254—103.)



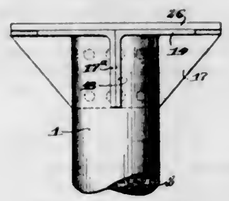
1. In a mechanism of the character described, a standard, a nut mounted in said standard, a lifting element screw threaded into said nut, a housing carried by said lifting element embracing said standard and having a shoulder near the lower end thereof, and a flange secured to said nut and said standard and projecting beyond the edge of said standard into the path of said shoulder.

1,501,191. BUMPER FOR VEHICLES. JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 20, 1923. Serial No. 675,924. 7 Claims. (Cl. 293—55.)



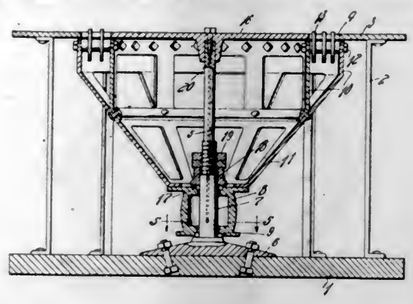
7. In a bumper, an impact member, a supporting arm therefor, two anchoring devices, one arranged at the inner end of said supporting arm and the other being in the form of a strap adjustable on the supporting arm, and a second supporting arm secured by the first named anchoring device and extending outwardly with reference to the first mentioned arm free from the strap.

1,501,192. SANDER AND POLISHER. WILLIAM SEVERNS, Chicago, Ill. Filed June 27, 1921. Serial No. 480,569. 1 Claim. (Cl. 51—187.)



A floor polishing device, comprising a base formed with an upstanding flange and a central integral lug, an arc-shaped spring plate, threaded bolts fixed to said base and at their upper ends passing through apertures in said spring plate, wing nuts on said bolts adapted to engage the upper surfaces of said spring plate to flatten the same and to grip a finishing material between the plate edges and the inner faces of the flange on said base, and a handle-receiving socket pivoted to the central lug on said base and projecting freely through a central slot in said spring plate.

1,501,193. FEED-WATER-HEATING SYSTEM FOR LOCOMOTIVES. JOHN R. SHANNON, Lowell, Ariz. Filed June 14, 1922. Serial No. 568,207. 1 Claim. (Cl. 122—442.)

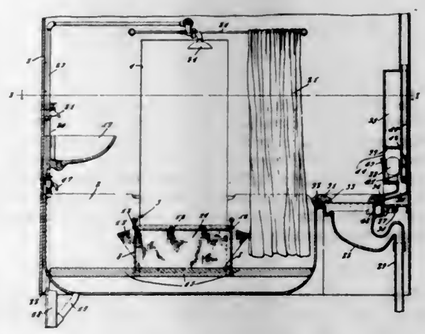


The combination with a locomotive embodying the usual boiler, smoke box, cylinders and chests for the cylinders, of a feed water heater disposed within the smoke box receiving water from and discharging water to the boiler, a steam pump connected with the intake end of the feed water heater, a connection between the intake end of the pump and the exhaust channel of the steam chest, and a steam supply for the steam end of said pump including a connecttion between the live steam line to the chest and the pump embodying a valve opening to permit passage of the steam from the steam line to the pump at a predetermined pressure within the steam line.

1,501,194. COLUMN CAP. ARTHUR L. SMITH, Chelsea, Mass., assignor to The A. L. Smith Iron Works, Chelsea, Mass., a Corporation of Massachusetts. Filed Dec. 19, 1921. Serial No. 523,294. 6 Claims. (Cl. 189—42.)

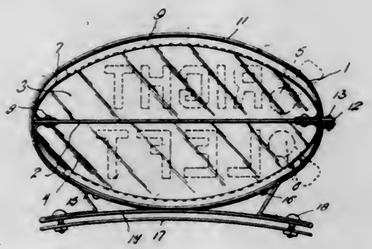
1. A column cap comprising a plurality of three walled brackets formed from structural iron and arranged with one wall of each bracket in contact with a wall of the other, and with the third wall of each of said brackets lying in a common plane, and means for securing together said contacting walls.

1,501,195. BRICK SCRAPER. MARIO BELLALBERO, New York, N. Y. Filed Nov. 17, 1923. Serial No. 675,373. 2 Claims. (Cl. 125—26.)



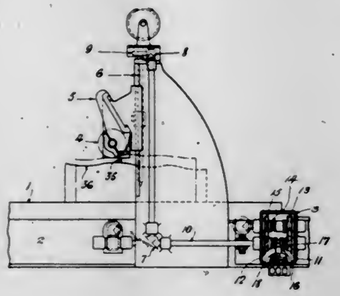
1. A machine of the class described comprising a rotary member, radial shafts carried thereby, discs rotatably mounted on the shafts, a platform having an opening therein through which the discs extend and means for rotating the member.

1,501,196. MANIFOLD GASKET. WALTER J. BLIFFERT, Milwaukee, Wis. Filed Apr. 16, 1923. Serial No. 632,447. 3 Claims. (Cl. 48—180.)



3. A manifold gasket adapted to be positioned between adjacent flanges of the intake system of an internal combustion engine, said gasket having an aperture corresponding to the bore of the intake system and having a curved lip projecting upwardly into said aperture, said lip being concaved on one side, and said gasket having a hole passing therethrough from the outside to the aperture and opening on the concaved side of said lip.

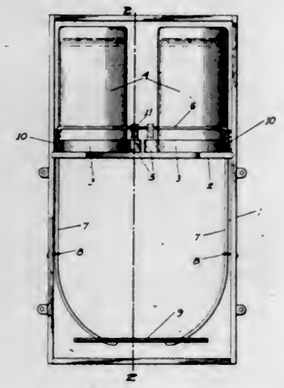
1,501,197. BATHROOM UNIT. GEORGE FRED BLUME, Philadelphia, Pa. Filed Sept. 11, 1923. Serial No. 662,093. 3 Claims. ((Cl. 4—146.)



1. A bath room unit including, in a single structure, a hopper, a lavatory, and a bath tub interposed between the hopper and lavatory and constituting a support for the user of the hopper and lavatory.

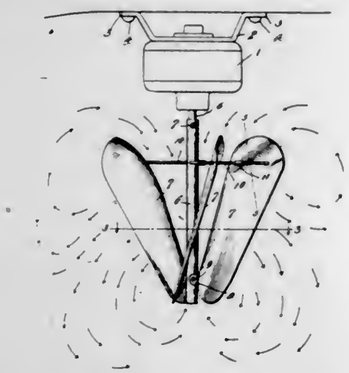
1,501,198. VEHICLE DIRECTION INDICATOR. DANIEL CHARLES BROCKMAN, Phippsburg, Colo., assignor of one-half to James L. Whiteley, Phippsburg, Colo. Filed Mar. 17, 1924. Serial No. 699,878. 3 Claims. (Cl. 40—132.)

1. A vehicle direction indicator comprising a substantially elliptical shaped casing open at its front and back respectively, a partition extending longitudinally through the center thereof providing a pair of compartments, a substantially semi-elliptical shaped band arranged in each compartment, said band having its side edges extending inwardly from the edges of the casing forming a support, signal plates arranged in the front and back openings of said casing and resting against the side edges of said semi-elliptical band, and means removably supported on said casing for engaging the outer edges of the same and said signal plates.



1,501,199. CLUTCH-CONTROLLED GEARING. ALEXANDER STIRLING BURNETT, Reddish, and THOMAS COLLINS, Manchester, England, assignors of one-half to Francis Shaw and Company, Limited, Manchester, England. Filed May 28, 1923. Serial No. 642,059. 5 Claims. (Cl. 74—59.)

1. In clutch controlled gearing comprising fixed and relatively moving elements, the combination with the moving element of a lever, toggle links adapted to be broken to rock said lever in both directions, cams to reciprocate said toggle links, movable elements mounted so as to be capable of movement into and out of the path of said toggle links and means to actuate said movable elements, substantially as described.

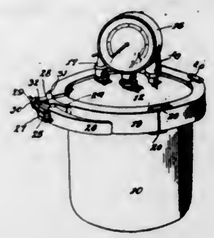


1,501,200. HEN-MARKING DEVICE. JANE CAMPION, Chico, Calif. Filed July 11, 1923. Serial No. 650,798. 4 Claims. (Cl. 119—45.)

1. A hen marking device including a plurality of independent trays mounted a common distance from the ground, independent fluid containing vessels supported in inverted positions in said trays, open cups formed with the trays and projecting beyond the side edges of the vessels, a dipper arranged to be moved into position for partial immersion into one at a time of the cups, and

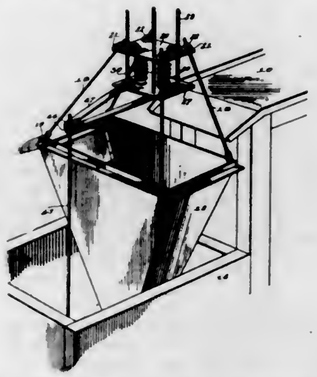
means actuated by the weight of a hen for causing the dipper to be moved to deposit a certain amount of the fluid onto the hen.

1,501,201. VENTILATING FAN. LAURENCE A. CATES, Grand Island, Nebr. Filed Dec. 8, 1922. Serial No. 605,562. 6 Claims. (Cl. 170—167.)



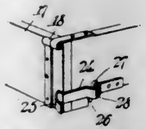
1. In a fan of the type described, a rotating supporting member, a plurality of equi-distantly spaced fan blades secured to said supporting member, the said blades diverging outwardly away from the supporting member towards their upper ends, and the longitudinal axis of the blades extending at an angle to the similar axis of the supporting member.

1,501,202. STEEL AND PROCESS FOR PRODUCING SAME. ARCHIBALD H. COPLAN, Ottawa, Ontario, Canada. Filed Feb. 7, 1922. Serial No. 534,831. 4 Claims. (Cl. 75—1.)



1. The process of producing steel which consists in melting scrap iron in a furnace; substantially completely removing the carbon by the use of an oxidizing slag; adding such proportion of ferro-chrome, the carbon content of which has been reduced to approximately 3%, as will give the steel a carbon content not exceeding 0.15% and a chromium content of 1.25% and adding 2% nickel to the steel, substantially as described.

1,501,203. COOKER. ORRIN WILKSAN CROSSLEY, Oklahoma City, Okla. Filed Mar. 18, 1922. Serial No. 544,857. 1 Claim. (Cl. 220—61.)



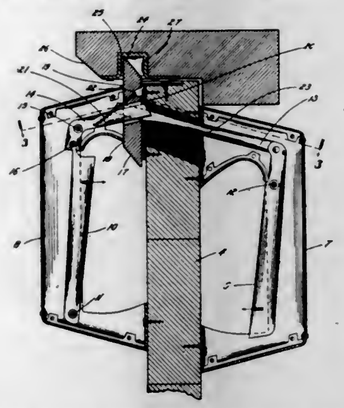
The combination of a cooker body provided with an outstanding annular rim having parallel upper and lower faces, of a cover constructed to fit snugly within the upper end of the body and having an annular flange with a beveled upper face and a lower face adapted to conform with the upper face of said rim, a channelled ring constructed in four sections, each of said sections having upper and lower annular ledges with their inner faces shaped to correspond respectively with the beveled upper face of said flange and the lower face of said rim, and a cylindrical wall rigidly connecting said two ledges and being integral therewith, links on top and bottom of said ledges respectively and having pivotal connection with the adjacent ends of some of said sections, and adjustable means for connecting the free ends of two of said sections; said means including brackets secured at said free ends of the ring sections, ears on said brackets, a lever pivoted between the ears of one of said brackets to swing in the plane of the ring, a pivot pin on said lever and a bolt pivoted thereon, and a nut threaded on said bolt and adapted to engage with the ears on said other bracket, whereby upon swinging said lever against the ring, the latter will be contracted to effect a sealed joint between the body and the cover.

1,501,204. CLASSIFYING APPARATUS. FRED DE MIER, Picher, Okla. Filed Mar. 7, 1923. Serial No. 623,515. 3 Claims. (Cl. 210—51.)

1. In combination, a receptacle, means for resiliently supporting the receptacle including supporting rods, a fixed supporting plate carried thereby, a carrier plate slidably mounted on the supporting rods, connecting means between the carrier plate and the receptacle, spring means between the carrier plate and fixed supporting plate for maintaining the carrier plate and consequently the receptacle in predetermined position, said receptacle having a discharge outlet and a valve controlling said outlet and an arm carried by said valve, a bracket mounted on the receptacle and pivotally supporting said arm, and operating means for said valve including a yoke carried by the fixed supporting plate and a rod connected at one end to said yoke and at its other end to said operating arm.

1,501,205. DUMP BED AND BODY. WILLIAM O. DIXON, Dexter, Mo. Filed July 9, 1923. Serial No. 650,441. 2 Claims. (Cl. 298—23.)

1. In a device of the class described, a body, a gate hinged to said body, spring clamp plates attached to said body and projecting beyond the end thereof, inturned fingers at the free ends of said plates adapted to engage behind said gate when the latter is in closed position, outwardly bent portions on said plates, a rock lever on said body, arms on said lever normally resting beneath said bent portions, and means for rocking said lever.



1,501,206. PLASTIC CONTAINING CELLULOSE ACETATE. HENRY DREYFUS, London, England. Filed Aug. 5, 1920. Serial No. 401,380. 4 Claims. (Cl. 106—40.)

1. A composition of matter containing cellulose acetate and benzene alkyl sulphonamide which is liquid at ordinary temperature and forms a jelly at low temperatures.

1,501,207. MANUFACTURE OF CELLULOSE DERIVATIVES. HENRY DREYFUS, London, England. Filed Sept. 12, 1921. Serial No. 500,159. 22 Claims. (Cl. 260—152.)

22. In a process for the production of cellulose ethers by treatment of a cellulosic body not soluble in alkali, with etherifying agent in presence of alkali, grinding the cellulosic body in presence of benzol and of water, grinding the ground cellulosic body in presence of benzol, and of water, with alkali to be used as base, and subjecting the ground material to etherification.

1,501,208. DOOR LOCK. STANLEY R. FERGUSON, Abernethy, Saskatchewan, Canada. Filed Aug. 1, 1921. Serial No. 488,989. 4 Claims. (Cl. 292—173.)

1. A door lock of the character described comprising primary and secondary outer casings, handle members pivotally mounted in the said primary and secondary outer casings, a latch member engageable with a pocket

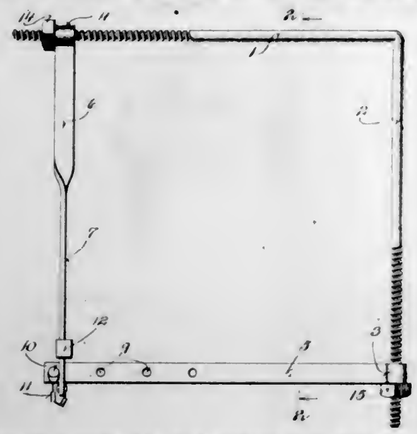
in the door frame and reciprocal in the said primary outer casing, means slidable through said latch member and engaging the said latch member with the said handle member.

1,501,209. CLOSURE FOR BOXES. EDWARD B. FLAGG, West Hartford, Conn. Filed Oct. 17, 1922. Serial No. 595,055. 1 Claim. (Cl. 221—64.)

A box of cylindrical form, having a circular central opening and also having a segmental portion leading from said opening, a cover for the box of practically cylindrical form and of tin, having a pendant central pivot portion extended into said opening, also having a slot through its top and furnished also with a series of perforations, the cover being turnable on the box so as to cause the slot to register with the segmental portion in the cover or to cause the perforations to register with said segmental portion.

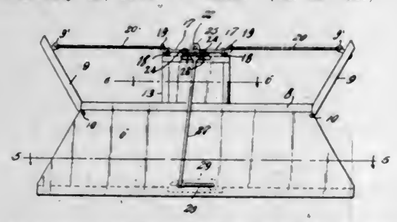
1,501,210. PULP AND JUICE SQUEEZER. DAVID I. FLATT, Colorado Springs, Colo. Filed Feb. 17, 1923. Serial No. 619,700. 3 Claims. (Cl. 100—49.)

2. An appliance for squeezing juices or oils from a pulp in a filtering sack or cloth, comprising an integral body consisting of a handle member at one end and of two rounded blunt prongs at the opposite end with a rounded recess in the fork of said prongs provided to hold the top or neck of said sack or cloth.



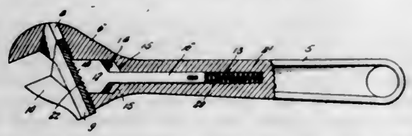
1,501,211. PEEP SIGHT FOR SHOTGUNS. ALEXANDER FORIN, Edmonton, Alberta, Canada. Filed Feb. 9, 1922. Serial No. 535,305. 2 Claims. (Cl. 33—47.)

1. A peep sight for shot guns comprising a wire bent into inverted U-shape and adapted to straddle the barrel of the gun, the central portion of said wire being bent to form a subsidiary U-shaped portion constituting the peep sight, and resilient means attached to the end of one of the legs of the U-shaped wire and detachably engageable with the end of the other for holding the same in position on the barrel.



1,501,212. CONCRETE-FORM CLAMP. JOSEPH J. FRONSOE and JOHN ROGALSKI, Milwaukee, Wis. Filed Dec. 13, 1923. Serial No. 680,444. 3 Claims. (Cl. 144—291.)

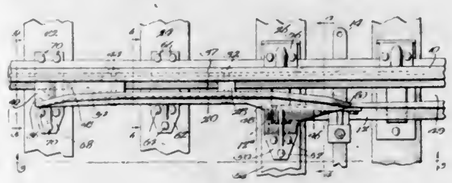
1. A concrete form clamp comprising a pair of members arranged at right angles to each other and having threaded terminal portions, a pair of members slidably received upon such terminal portions and having their



outer ends joined, and nuts threaded upon such terminal portions and bearing against such last mentioned members.

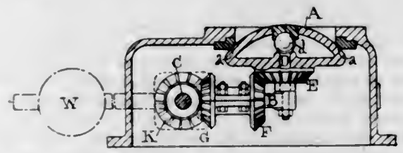
1,501,213. ANIMAL TRAP. VANCE C. GARRISON, Nebish, Minn., assignor to Raymond H. Schumaker, Bemidji, Minn. Filed Feb. 10, 1923, Serial No. 618,231. Renewed May 13, 1924. 1 Claim. (Cl. 43—61.)

In an animal trap, an open ended body having openings in its top, a bait receptacle on top of said body above said openings, spring-closed swinging trap doors for the open ends of said body, pivoted members on top of the bait receptacle having hooked outer ends, flexible members attached to the free ends of the trap doors and adapted for engagement with said hooked outer ends of the pivoted members for holding the trap doors open, said pivoted members being normally swung under the influence of the doors in one direction to disengage said flexible members from said hooked ends, a pivoted platform within said body, and means operatively connected to the platform for releasably holding the pivoted members in an oppositely swung position wherein the flexible members are retained engaged with the hooked outer ends of said pivoted members.



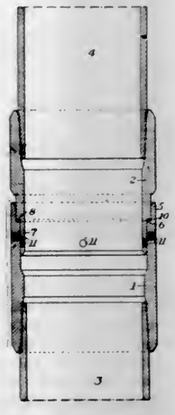
1,501,214. SLIDING-JAW WRENCH. VANCE C. GARRISON, Bemidji, Minn. Filed Feb. 26, 1923. Serial No. 621,195. 1 Claim. (Cl. 81—151.)

A wrench comprising a handle member having a fixed jaw formed thereon and provided at its end with a pocket the side walls of which are disposed parallel with the



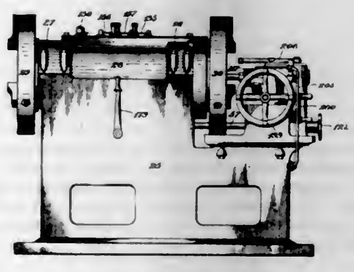
median longitudinal axis of the handle, the said handle member being further provided with transversely disposed grooves which are inclined with relation to the median longitudinal axis of the handle, the handle member being further provided with a channel which communicates at one end with the pocket and which is disposed with its axis in alinement with the median longitudinal axis of the handle, a rod slidably mounted in the channel and fitting snugly therein and being angular in transverse section whereby the said rod is restrained against turning movement in the channel, a spring disposed in the channel and interposed between the inner wall thereof and the inner end of the rod and being under tension to normally hold the rod toward the grooves in the handle member, a head carried by the rod and disposed within the pocket and completely bridging the same transversely, said head being provided with ratchet teeth, a jaw slidably mounted upon the handle member and having at its opposite sides flanges which are slidably received in the grooves, said jaw being provided at its inner edge with teeth adapted to engage in the teeth upon the head of the said rod, the said slidable jaw having a slot which is disposed with its longitudinal axis at an acute angle to the median longitudinal dimension of the handle, a pin secured at its ends to the handle and passing transversely through the slot and manually operable means carried by the rod and projecting through a slot in the handle for releasing the teeth on the head from engagement with the teeth on the jaw.

1,501,215. GUARDRAIL FOR SWITCHES. BENEDICT T. GIBBS, Jr., Chicago Heights, Ill., assignor to Morden Frog & Crossing Works, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1924. Serial No. 696,579. 4 Claims. (Cl. 246—435.)



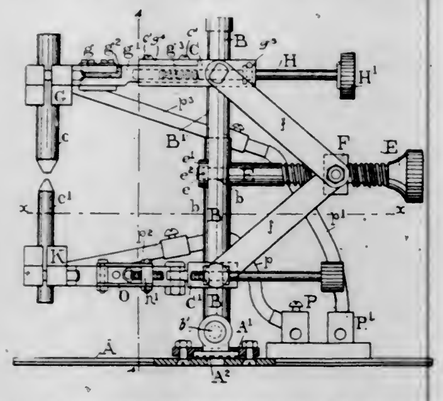
1. As an article of manufacture, a one piece guard rail, having a central straight portion, an angular end portion carrying a foot guard, an opposite end portion provided with a hood for the reception of a switch rail point, and spacing blocks projecting from the guard rail toward a main rail to which it is to be applied.

1,501,216. CHARGING VALVE OR DOOR FOR FURNACES, GAS PRODUCERS, RETORTS, AND SIMILAR STRUCTURES. JAMES H. HARDMAN, Pendleton, Salford, England. Filed Aug. 29, 1922. Serial No. 585,091. 3 Claims. (Cl. 110—174.)



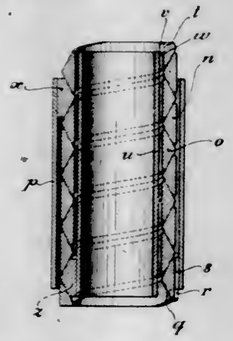
2. In a furnace, gas producer, retort or similar structure the combination with a dome shaped closure door, a supporting lever upon which it is mounted and a rocking shaft of a gear wheel affixed to the door, a bevel wheel loose on the supporting lever gearing therewith, a second bevel wheel loose on the supporting lever and attached to the other wheel and a bevel wheel gearing therewith affixed to a shaft normally held stationary to impart to the closure door a rotary movement as it approaches to and recedes from its seat substantially as described.

1,501,217. RELEASE COUPLING. CHARLES M. HEETER, Butler, Pa. Filed June 21, 1922. Serial No. 569,847. 6 Claims. (Cl. 285—161.)



6. A release coupling comprising two telescoping members, the outer member having an end portion of increased internal diameter to receive the body portion of the inner member, the inner member having an end portion of reduced external diameter to fit the bore of the body portion of the outer member and a shoulder at the base of said end portion, and a packing element adapted to be arranged on the end portion of the inner member against said shoulder, the end portion of the inner member being of greater length than the end portion of the outer member whereby the said end portion enters the bore of the body portion of the outer member and centers the inner member with respect to the outer member in advance of the entrance of the body portion of the inner member into the bore of the end portion of the outer member, substantially as described.

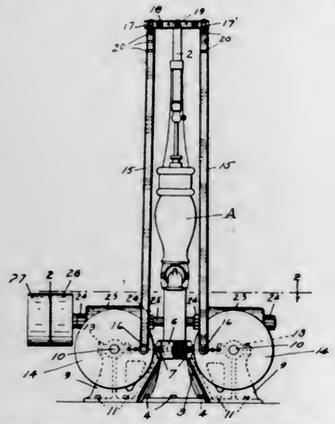
1,501,218. PIPE-THREADING MACHINE. JOHN STEVENSON IMLACH, Ottawa, Ontario, Canada. Filed Nov. 25, 1921. Serial No. 517,635. 20 Claims. (Cl. 10—154.)



1. A pipe threading machine consisting of a frame, a pipe holding spindle supported and rotatably geared in said frame, a head reciprocally supported on said frame, a circular milling cutter rotatably mounted on said head, a cutting off tool frame mounted for movement longitudinally and transversely of said first-named frame, and a means of rotating said pipe holding spindle and said circular milling cutter.

1,501,219. ELECTRIC-ARC LAMP. HARDY JACKSON, Higher Broughton, Manchester, England. Filed June 16, 1921. Serial No. 477,982. 2 Claims. (Cl. 176—51.)

1. An electric arc lamp applicable for use in projection lanterns comprising in its construction a central upright standard, a pivot on which it rocks, a base to which the pivot is connected, two arms slidably mounted on the upright standard, a threaded rod carried by the upright standard, a nut on said rod, toggle levers connecting the arms to the nut by which their relative positions are adjusted, a carbon holder slidably mounted on the upper arm, a pivot connected to the lower arm, a second carbon holder carried by said pivot, a pivot connected to the lower carbon holder and a threaded rod to adjust the lower carbon holder angularly in a plane at right angles to the standard.

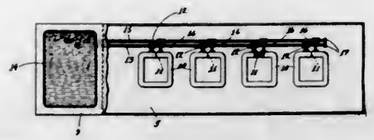


1,501,220. SPRING. ERNEST KREISSIG, Uerdingen, Germany. Filed Jan. 15, 1924. Serial No. 686,288. 5 Claims. (Cl. 267—61.)

1. A spring comprising inner and outer helical members formed with interengaging, cooperating faces, and a pair of members, one for each helical member, fixed to one end of the respective helical member and connected to the opposite end of the latter to permit sliding movement thereof in an axial direction only.

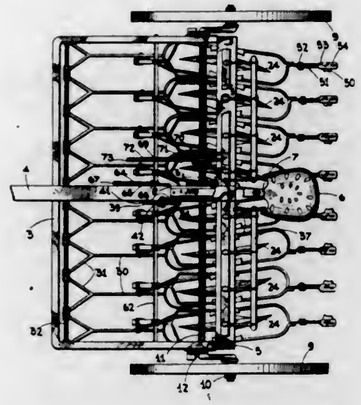
1,501,221. PUMP JACK. CHARLES KUECHLER, Prescott, Wis. Filed Sept. 26, 1923. Serial No. 664,875. 3 Claims. (Cl. 74—14.)

1. In combination with a pump and rod, pump jack mechanism comprising a base member centrally and detachably anchored to said pump, bearing base members integrally connected to the sides of the central base member, said bearing base members each including a shaft bearing, a shaft journaled in said bearing, a casing carried by each of said bearing base members and receiving one end of said shaft, a worm gear secured upon said shaft within said casing, inwardly directed worms



within said casing intermeshing with said gears, a drive shaft connecting said worms, disks mounted upon the outer ends of said first mentioned shafts, lever arms eccentrically connected to said disks upon opposite sides of the pump rod, and a detachable connection between the upper end of said levers and said pump rod.

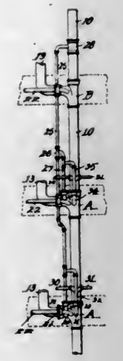
1,501,222. SCREW DRIVER. SAMPSON CISCO LAMP, Dawes, W. Va. Filed May 18, 1923. Serial No. 639,960. 1 Claim. (Cl. 145—50.)



A screw driver having a hollow handle and a hollow shank providing the main screw driver, said hollow shank being notched at its working end, an auxiliary screw driver in said hollow shank and extending into said hollow head, oppositely disposed L-shaped slots in said head, a pin passing through said auxiliary screw driver within the head and having its end portions disposed in said L-shaped slots, a tension spring within said hollow head, said tension spring normally holding the auxiliary screw driver in retracted position with its active end disposed in the notch at the active end of the main screw driver and flush therewith, and said auxiliary screw driver adapted to be moved into active position against the tension of said spring and dispose said pin in the short arms of the L-shaped slots to prevent casual turning movement of the auxiliary screw driver relative to the handle and to dispose the auxiliary screw driver beyond the working end of the main screw driver and at an angle relative thereto.

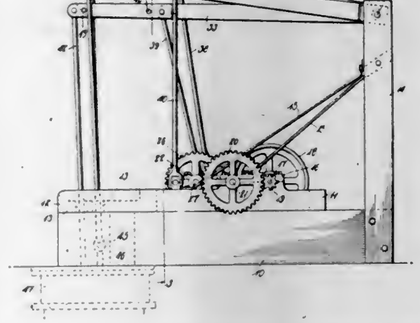
1,501,223. WATER-HEATING SYSTEM FOR STOVES. ROSS LLOYD, Schomberg, Ontario, Canada. Filed Sept. 5, 1922. Serial No. 586,316. 3 Claims. (Cl. 126—53.)

1. A water heating system for a stove comprising a water supply tank, a water distributing pipe, a water return pipe, a water jacket adapted to be mounted on a burner of the stove and in the path of the heat produced by said burner, and heat retaining and directing chambers, said water jacket being supported on the upper end of said chambers, said water distributing and water return pipes being connected with said water jacket so as to assure circulation of the water through said water jacket after leaving the water distributing pipe and previously to reaching the water return pipe, said water jacket having a divisional diaphragm at one side the distributing and return pipe of each jacket being connected upon opposite sides of said diaphragm.



1,501,224. AGRICULTURAL IMPLEMENT. JOHN A. MCDONALD, Westboro, Ontario, Canada. Filed May 16, 1922. Serial No. 561,446. 12 Claims. (Cl. 97—54.)

1. An agricultural implement comprising a main frame, a rear axle having offset ends, ground wheels mounted on the offset end of said axle, said main frame being mounted on said axle, auxiliary frames suspended from said main frame, cultivator discs mounted within said suspended frames for limited turning movement therein, means for turning said discs in series to adjust the discs within said suspended frames and means to exert a resilient downward pressure on the auxiliary frames and arcuate rods for the support of said last-named means and guides for said arcuate rods intermediate their ends.

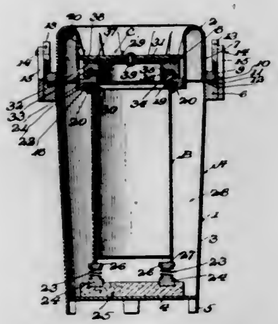


1,501,225. SANITARY PIPE FITTING. ALEXANDER E. MACDONALD, Worcester, Mass. Filed Dec. 29, 1923. Serial No. 683,346. 6 Claims. (Cl. 4—212.)

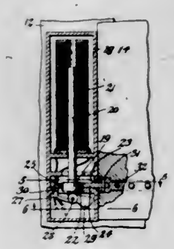
1. As an article of manufacture, a fitting for a soil pipe or the like comprising a main hollow body having a branch extending therefrom for communication with the outlet of a water closet and provided with a side inlet passage communicating with the interior of the fitting for connection with a bath tub, wash basin or the like, the fitting having an air passage adapted to be connected with a vent pipe, and the side passage

having an upwardly extending hollow projection to vent the side passage and communicating with the vent passage within the body of the fitting, whereby the entire fitting can be vented by a single vent pipe.

1,501,226. MULTIPLE BALANCED PUMP JACK. EDWARD A. MALBAFF, Flagler, Colo. Filed Oct. 26, 1923. Serial No. 670,979. 3 Claims. (Cl. 74—14.)



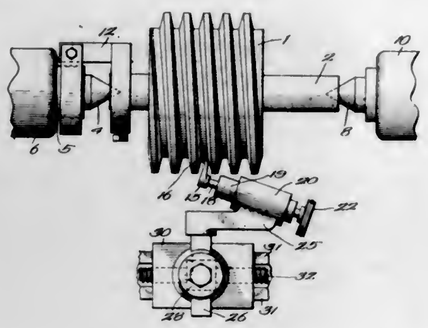
1. A device of the class described comprising a base; upright standards rigid with said base; a plurality of walking beams pivotally mounted on said standards; a power shaft journalled on said base; a crank shaft also journalled on said base; gear connections between said power and crank shafts; crank pins carried by the gears upon said crank shaft; connecting rods connecting said crank pins and the crank portion of said crank shaft with said walking beams; and pump operating rods carried by the ends of said walking beams.



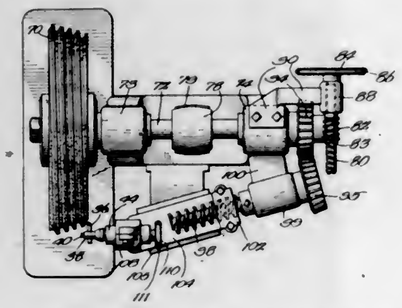
1,501,227. INSULATED CONTAINER. LEWIS F. MARSH, Spokane, Wash. Filed Sept. 14, 1922. Serial No. 588,144. 7 Claims. (Cl. 220—9.)

1. A container of the character described comprising an outer shell consisting of a lower section closed at its lower end and open at its upper end, and an upper section substantially U-shaped in cross section and having an outer side substantially equal diametrically at

its edge with the lower section at the upper edge of the latter, co-operative means carried by said upper and lower sections of the outer shell for locking the outer side of the upper section in superimposed relation to the lower section, an inner receptacle adapted to receive a substance to be maintained at an even temperature and to be received within the lower section of the outer shell when the upper section of the latter has been removed, means arranged between the lower end of the receptacle and the lower end wall of the outer shell for insulatingly supporting the inner receptacle within the outer shell, and means arranged between the inner side of the outer shell and the upper end of the inner receptacle to insulatingly space the inner receptacle from the upper section of the outer shell and to provide an air tight joint between the inner receptacle and the upper section of the outer shell.



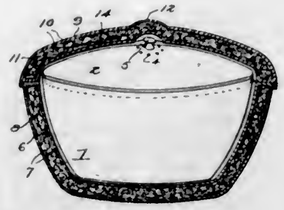
1,501,228. CAR-DOOR-LOCKING DEVICE. WILLIAM J. MARTIN, Buffalo, N. Y. Filed July 18, 1922. Serial No. 575,860. 7 Claims. (Cl. 292—144.)



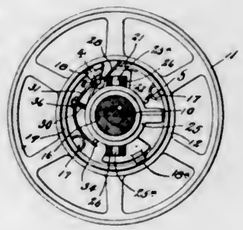
1. A car door lock comprising a locking member, a latch adapted to be engaged by said locking member, electro-magnetic means for disengaging said locking member from said latch, and detent members which automatically engage with said locking member and hold the same in an inoperative position when the locking head is disengaged from said latch and which is automatically disengaged from said locking member by said latch upon moving the latter into a position to be engaged by said locking member.

1,501,229. METHOD OF PRODUCING ABRASIVE ELEMENTS. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1921. Serial No. 507,219. 6 Claims. (Cl. 125—11.)

1. The process of dressing preformed helicoidal and annular surfaces formed on bodies which are rotatable about an axis, said process consisting in causing the point of a pointed scarifying tool to rotate at high speed in an orbit an arc of which lies in the surface to be dressed, and simultaneously causing the work to rotate about its own axis, the tool thereby producing a series of scarfs which, in the aggregate, envelop the surface to be produced.



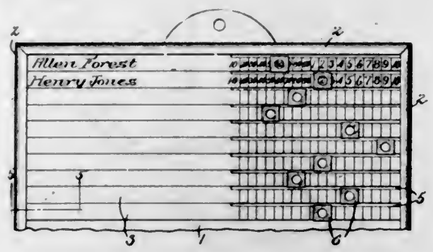
1,501,230. MACHINE FOR PRODUCING ABRASIVE HELICOIDS. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1921. Serial No. 511,795. 8 Claims. (Cl. 125—11.)



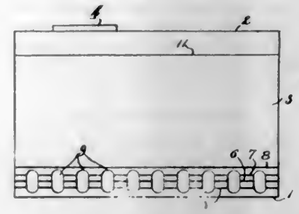
1. A machine for dressing preformed surfaces, having a pointed scarifying tool, means for causing it to revolve about an axis non-coincident with the point of the tool, and a rotatable work holder having an axis non-coincident with the axis of rotation of the scarifying tool, the plane defined by the point of the tool being approximately at right angles to the axis of the work and the point of the tool traveling in an orbit only a part of which lies in the surface to be produced, and the scarfs in the aggregate enveloping the surface to be produced.

1,501,231. BREAD RAISER. IRENE A. PARRY, Seattle, Wash. Filed Apr. 26, 1922. Serial No. 556,768. 1 Claim. (Cl. 220—9.)

The combination with a dough container, including a vessel, a cover having a flange, to engage and seal the edge of the vessel, said cover being formed in the extreme upper portion with vents, and an outer vessel of substantially the shape of the container and cover, said outer vessel comprising a body portion of spaced walls with a heat insulating packing therebetween, and a closure for said outer vessel of spaced parallel walls with a heat insulating packing therebetween, the closure for the outer vessel when applied to the body portion thereof being held above the cover of the container to provide a space between said cover and inner wall of the closure leading from the vents in the cover to the juncture of the closure and body of the outer vessel, whereby to permit gases accumulating in the container to escape at the juncture between the closure and body of the outer vessel.

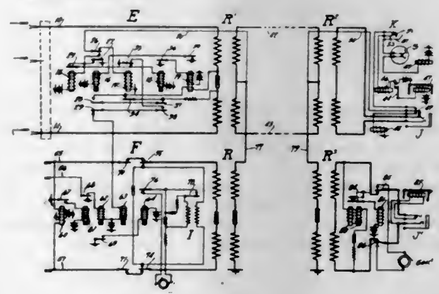


1,501,232. CLUTCH. THEODORE F. PHILIPPI, East St. Louis, Ill. Filed Apr. 13, 1922. Serial No. 552,350. 7 Claims. (Cl. 192—78.)



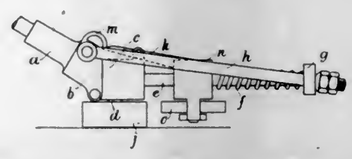
1. The combination of a driven clutch member provided with a circumferentially disposed friction rim, a driving clutch member, a split friction ring carried by said driving clutch member and adapted to operatively engage the rim of said driven member, a radially slidable member mounted on said driving member and operatively engaging one end of said split ring and resilient operative connections between the opposite end of said split ring and said actuating member.

1,501,233. INDEX DEVICE. JAMES H. RAND, North Tonawanda, N. Y. Filed Apr. 14, 1922. Serial No. 552,795. 19 Claims. (Cl. 40—63.)



1. An index device comprising an index strip adapted to be mounted edge to edge with other strips and having a marginal cut-out extending longitudinally thereof to receive a sliding signal.

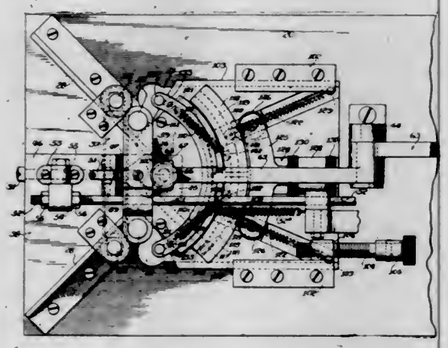
1,501,234. INDEX FOLDER. JAMES H. RAND, North Tonawanda, N. Y. Filed Mar. 2, 1923. Serial No. 622,410. 5 Claims. (Cl. 129—16.7.)



1. A folder for use in filing systems comprising a piece of sheet material doubled to provide a normal fold line defining front and rear folds, the front fold being weakened adjacent to the normal fold line by the provision of apertures therein.

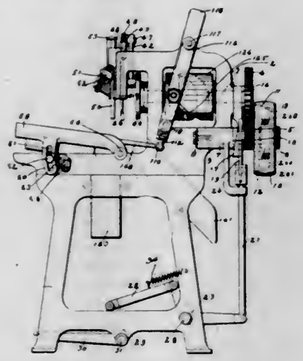
1,501,235. TELEPHONE TRUNK CIRCUITS. ARTHUR J. RAY, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 25, 1921. Serial No. 472,478. 12 Claims. (Cl. 179—27.)

1. In a telephone system, a toll office, an automatic exchange, and an interconnecting toll line, automatic switches in the automatic exchange controlled by a toll switching operator in the toll office to establish a connection over said toll line, repeating coils, a ground return talking circuit superimposed on said toll line by means of said repeating coils, a recording operator's position in the toll office, and other switches in the automatic exchange controllable by subscribers for connecting with said superimposed circuit to call the recording operator.



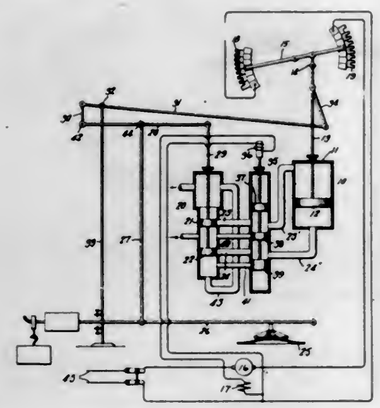
1,501,236. TROLLEY POLE AND THE LIKE. PATRICK ROBBINS, Dundee, Scotland, assignor of two-thirds to James Williamson and George Brander, both of Dundee, Forfar, Scotland. Filed Dec. 17, 1923. Serial No. 681,151. 9 Claims. (Cl. 191—68.)

1. Trolley pole construction for an electrically driven vehicle, comprising in combination a horizontally and vertically pivoted trolley pole, a trolley head thereon adapted to make travelling contact with an overhead conductor, a spring for maintaining the said contact



arranged between a front abutment connected to the trolley pole and a movable rear abutment, means for holding the rear abutment stationary in operative position as long as the trolley head is in contact with the overhead conductor, and means for releasing the said rear abutment to allow the said spring to expand on the trolley head leaving the conductor, the expansion of the spring allowing the trolley pole to fall by its own weight clear of the overhead wiring.

1,501,237. FOLDING MACHINE. CARL G. ROLINE and CHARLES NORRE, Chicago, Ill. Filed Aug. 16, 1922. Serial No. 582,125. 35 Claims. (Cl. 11—2.)

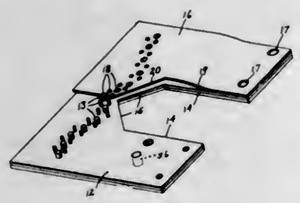


3. A machine for folding round corners embodying means for holding the work, a member for re-enforcing the corner, means for folding the work over said member and upon itself, the last recited means embodying one or more finger like elements having a bodily movement and axial rotation while operating upon the work, means for actuating the last recited means, and means for actuating the said re-enforcing member.

1,501,238. HEEL-BREASTING MACHINE. ISAAC ROSS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 28, 1920. Serial No. 354,590. 50 Claims. (Cl. 12—47.)

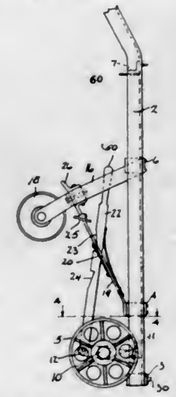
1. In a machine for breasting unattached heels, the combination of a breasting knife, a cutting block relatively to which the knife is moved to breast the heel, a carrier constructed and arranged to support and locate the heel in predetermined position, and means for moving the carrier to cause the breast end of the heel to be presented over the cutting block.

1,501,239. PRESSURE-OPERATING DEVICE. CLAUDE C. RUNNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 27, 1920. Serial No. 419,917. 5 Claims. (Cl. 172—288.)



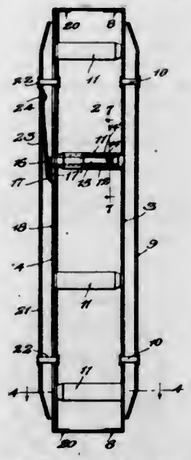
1. The combination with a pressure actuated device of a pressure controlling valve for admitting pressure to and exhausting pressure from the said device, means automatically operated in response to a predetermined condition connected to the said valve for operating the same, fluid passages between the valve and the pressure actuated device, and an electro-magnetically actuated valve governing the passages to admit pressure to and exhaust pressure from the said device independently of the said pressure controlling valve and thereby operate the pressure actuated device independently of the said means.

1,501,240. MANUFACTURE AND OPERATION OF VACUUM TUBES. KARL ROTTGARDT, Dahlem, near Berlin, Germany. Filed Aug. 26, 1921. Serial No. 495,601. 2 Claims. (Cl. 250—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



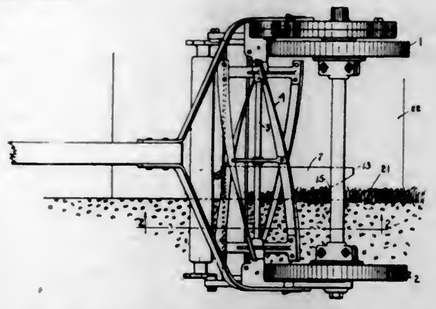
1. The process of manufacturing vacuum tubes having a plurality of metallic electrodes, which consists in introducing a hydrocarbon vapor into the vacuum tube, applying across two of the elements thereof a voltage sufficient to raise at least one of the elements to incandescence, and evacuating the vacuum tube.

1,501,241. PUNCHING DIE. EDWIN C. RUDKIN, Brockton, Mass., assignor to Norman L. Brock, West Bridgewater, Mass., Joseph C. Knight, Brockton, Mass., and Edmond A. Hebert, Holbrook, Mass. Filed Aug. 4, 1922. Serial No. 579,664. 9 Claims. (Cl. 164—93.)



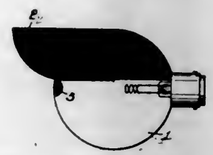
1. A punching-machine element comprising a primary punching die including a die-plate and a group of tubular punches thereon in fixed relation to each other and to the plate and arranged to ornament an edge portion of a blank, the plate of the primary die being provided with means for locating the plate of a secondary punching die with its punches in position to ornament another portion of the blank.

1,501,242. HAND TRUCK. HERBERT B. SABIN, Cleveland, Ohio. Filed Feb. 27, 1922. Serial No. 539,469. 5 Claims. (Cl. 214—65.4.)



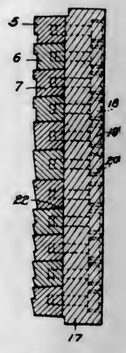
1. In a truck the combination of a frame comprising side members and cross members having handles, a base provided with wheels, said base being pivotally attached to said frame adjacent its lower end, means on said frame for securing a container thereto, and cooperating means on said frame and base for locking the same together in two positions to allow said truck to stand upright and to allow said truck to be tilted over the end of said frame to shift the weight over said wheels before lifting the container.

1,501,243. LOOSE-LEAF BINDER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership having as trustees, F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Jan. 17, 1922. Serial No. 529,838. 7 Claims. (Cl. 129—13.)



7. In a loose leaf binder, a pair of adjustable sections, connecting means for the sections, means to latch the sections together in adjusted position, a slidable member to actuate the latching means, and spring means affixed to one section for effecting constant tension on both the latching means and the slidable member.

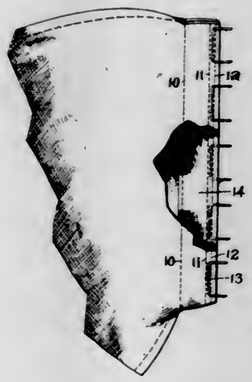
1,501,244. TRIMMER ATTACHMENT FOR LAWN MOWERS. FLOYD L. SCOTT, Houston, Tex. Filed Sept. 13, 1921. Serial No. 500,296. 7 Claims. (Cl. 56—251.)



1. An attachment for grass cutters comprising an elongated plate, the forward end of which is curved downwardly, said plate having a rounded corner at one side and an upstanding deflector to the rear of said curved end, and means to secure said plate to a supporting bar on the cutter.

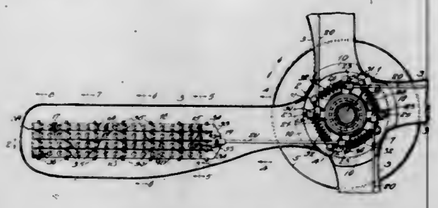
1,501,245. HEADLIGHT BULB. PHILLIP SHERMAN, Toledo, Ohio. Filed Sept. 26, 1921. Serial No. 503,234. 6 Claims. (Cl. 176—34.)

1. An electric light bulb having an integral opaque visor extension on its front top portion.



1,501,246. PROCESS FOR MAKING GLASS-MOLD PLUNGERS. JACOB SODERBERG, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 9, 1921, Serial No. 499,448. Renewed Jan. 24, 1924. 3 Claims. (Cl. 76—107.)

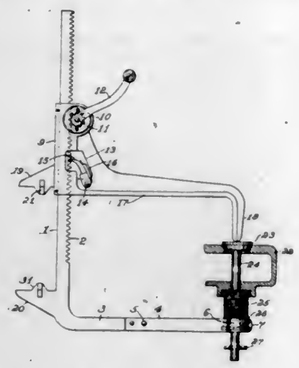
1. A process for making plungers for glass molds for producing lenses having superimposed annular and transverse surfaces, which consists in forming the plunger of a base plate and a plurality of transverse strips substantially rectangular in cross-section by assembling and securing the strips side by side to the base plate to provide a composite plate, machining the front face of such



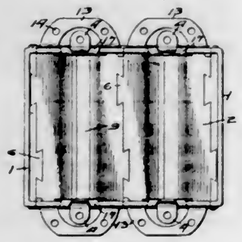
composite plate to provide a series of annular prisms upon the face of the plate, and then removing the strips from the base plate, securing them upon a second base plate surfaced to tilt the strips from the positions occupied in their preceding positions and give them the various inclinations desired for the formation of said transverse surfaces.

1,501,247. POCKET. WILLIAM J. STOTT, Worcester, Mass. Filed Mar. 4, 1922. Serial No. 541,133. 2 Claims. (Cl. 2—15.)

1. As an article of manufacture, an attachable pocket having a hand opening and provided with a continuous row of fastening devices pivotally secured thereto projecting outwardly and extending around said opening, said fastening devices having points capable of lying in the plane of the pocket and of being swung to a plane transverse thereto and adapted to be forced outwardly through the fabric of a pocket to which this article is to be attached and to be bent down on the outer surface thereof to secure this article on the inside thereof.



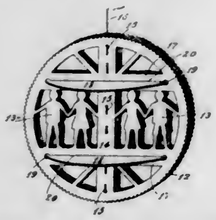
1,501,248. METHOD OF CONTROLLING PROPELLERS. WILLIAM J. H. STRONG, Chicago, Ill. Filed July 15, 1918. Serial No. 244,911. 6 Claims. (Cl. 170—172.)



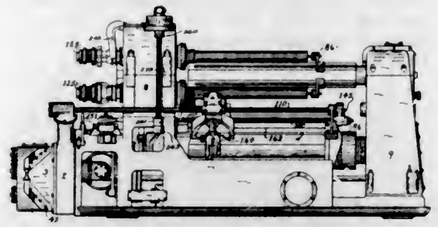
1. The hereindescribed method of controlling the action of propellers which consists in delivering air to the backs of the propeller blades and controlling the quantity of air in inverse proportion to the pressure of the air in which the propeller is operating.

1,501,249. MANIPULATING DEVICE FOR SPRINGS. NICHOLAS SULENTIC, Waterloo, Iowa. Filed Mar. 22, 1923. Serial No. 626,989. 2 Claims. (Cl. 29—86.3.)

1. In a device of the character described, a rack-bar having rack-teeth and having a jaw-projection, a boxing slidable to and fro along said rack-bar and having a jaw-projection opposed to and cooperative with the first-mentioned jaw-protection, a pinion meshing with said rack-teeth and rotatably mounted on said boxing, and a pawl pivotally mounted on said boxing, resiliently-controlled, and meshing yieldingly with said rack-teeth, said jaws being shaped with facing diminished alined projections to adjustingly center a coiled spring therebetween.



1,501,250. EXTENSIBLE SWITCH BOX. FREDERICK A. TEFFT, Toledo, Ohio, assignor to Abraham Smilack, Toledo, Ohio. Filed July 18, 1921. Serial No. 485,741. 3 Claims. (Cl. 247—16.)

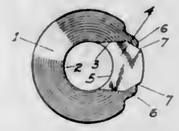


3. In an extensible switch box, end parts and one or more elastic sections, the edges of the end parts and the sections being provided with fantailed tenons extending from the edges of the sections, and fantailed recesses formed in the sections and end parts by depressing edge portions, the said tenons held interlocked in the depressions by the elasticity of the sections.

1,501,251. PAPER ORNAMENT. LARS WM. THORSELL, Waterbury, Conn. Filed Feb. 3, 1922. Serial No. 533,933. 11 Claims. (Cl. 41—11.)

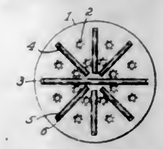
1. In a collapsible ornament, a series of sheets secured together along an axis, said sheets having alined slits, and a stiffening strip to be inserted in said slits for holding the sheets in spaced relation.

1,501,252. THREAD-MILLING MACHINE. GEORGE T. TRUNDLE, Jr., Cleveland, Ohio, assignor, by mesne assignments, to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 1, 1920. Serial No. 393,315. 84 Claims. (Cl. 10—154.)



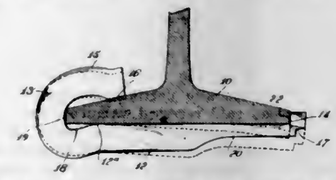
1. A milling machine comprising in combination, a base, a rotatable carrier head thereon, a plurality of work supporting spindles mounted in said carrier head, means to rotate each of said spindles, a milling cutter mounted adjacent one end of said spindles, means to advance said milling cutter into operative position, and means to relatively move said cutter and spindles in a direction parallel to said spindles in timed relation to the rotation thereof.

25. In a milling machine, the combination of a rotatable carrier head, a plurality of work spindles in said carrier head parallel to and positioned at equal distances from the axis thereof, a rotatable spindle for a thread milling cutter, means for indexing the carrier head to bring the work spindles successively into relative relation with the cutter, means for relatively moving said cutter and work spindle axially of the operative work spindle in timed relation to each other, means to move said cutter into and out of operative relation with said cutter, and means for rotating each work spindle through more than one revolution while in said operative relation.



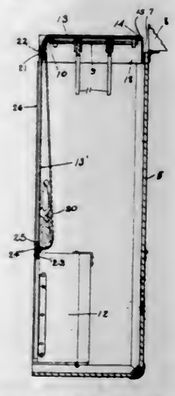
50. In a machine of the character described, the combination of a plurality of work carrying spindles, a cutter spindle, a slide on which the cutter spindle is mounted, a cam, a connection between said slide and said cam for causing a relative longitudinal movement of the spindles, means for causing a relative transverse movement of the work and cutter spindles, and means acting on the work spindles to intermittently advance them and withdraw them longitudinally on their own axis, and means for moving the cutter slide including an adjustable slide permitting the cutter to be positioned to vary its distance with relation to the center of the work spindle.

1,501,253. DEVICE FOR TIGHTENING AUTO WHEELS. RAY C. VAN EMON, Porterville, Calif. Filed Aug. 6, 1923. Serial No. 656,107. 2 Claims. (Cl. 301—68.)



2. A spoke tightening device comprising a main member adapted to be placed about the tenon of a spoke and having an opening leading from the outer periphery to an orifice and through which the tenon passes, a complementary member adapted to be inserted into said opening, and flexible lugs at the outer ends of the opening, certain of the side edges of said complementary member converging toward each other from a point inwardly of the outer ends of the lugs whereby to leave spaces between said lugs and said member into which the lugs may be bent when the complementary member is in position in the opening.

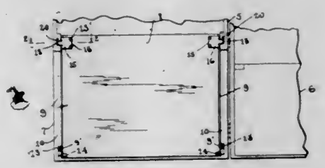
1,501,254. WASHING MACHINE. HENRY M. VAUGHAN, Newton, Iowa. Filed Dec. 21, 1922. Serial No. 608,291. 2 Claims. (Cl. 68—24.)



1. In a washing machine, a tub, an oscillatory body positioned therein and having projecting parts which are grooved along one side only, the grooves on these parts on one part of said body opening oppositely to the like grooves on the opposite part of said body to engage the contents of the tub when the body is rocked in either of opposite directions.

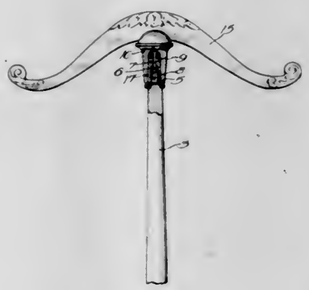
1,501,255. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed May 17, 1922. Serial No. 561,603. 11 Claims. (Cl. 238—330.)

1. A rail anchor comprising a body portion formed at one end with a resilient jaw for engaging one flange of a rail base and at the other end with a pressed offset portion forming a shoulder for engaging the other flange of said base.



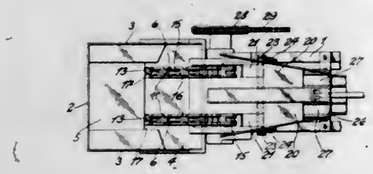
1,501,256. CURTAIN AND LAUNDRY BAG. GEORGE HENRY WHEARY, Racine, Wis., assignor to Wheary-Burge Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 24, 1921. Serial No. 502,968. 4 Claims. (Cl. 190—13.)

1. The combination with a trunk wardrobe section having an open top and front and a garment hanger track and hangers mounted thereon, said trunk section also having opposite side openings in its upper rear and lower



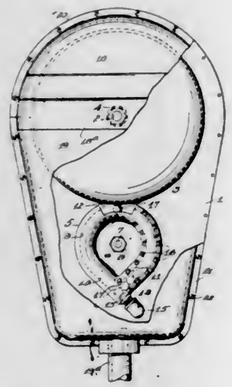
front portions, of a curtain and laundry bag therefor, comprising a fabric extending over the track and covering the open top and front and having looped upper rear and lower front edge portions, the portion of the fabric covering the open front being in the form of a bag having a front opening, means supporting the upper front portion of the fabric, and endwise yieldable bars extending through the looped upper rear and lower front edge portions of the fabric and entering the trunk section opposite side openings for removably connecting the fabric to said trunk section.

1,501,257. TRUNK-SHOE-BOX RETAINING MEANS. GEORGE HENRY WHEARY, Racine, Wis., assignor to Wheary-Burge Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 11, 1922. Serial No. 587,534. 3 Claims. (Cl. 190—13.)



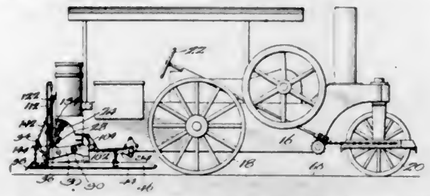
1. The combination with a trunk section provided with a shoe box, of a means for removably securing the shoe box to the trunk section, comprising a valance member mounted on the front edge of the trunk section and extending the height of the trunk and having recesses formed in medial opposite portions thereof, a shoe box positioned between said recessed valance portions, angular locking members mounted on the upper portions of the shoe box and having angular shouldered portions which extend into and lockingly engage the opposite recesses for removably holding the shoe box in its inner upper position, and means for pivotally and removably connecting the lower portion of the shoe box to the valance members of the trunk.

1,501,258. DISPLAY STAND. ARTHUR J. WOLFE, Chicago, Ill., assignor to Decorative Fixture Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1922. Serial No. 599,746. 3 Claims. (Cl. 211—24.)



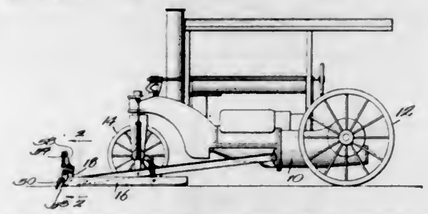
1. As a new article of manufacture, a stand for display of merchandise comprising a standard having at its upper end a head piece of resilient material provided with an incut slot and a cross bore, a clamping bolt adapted to be entered through the cross bore, a display fitting of one character provided with a tongue adapted to be entered into the slot and clamped therein by the bolt, and a display fitting of another character provided with a socket head adapted to have the slotted head piece entered thereinto, adapting the standard for interchangeable use, substantially as described.

1,501,259. NUT-CRACKING MACHINE. ROBERT E. WOODSON, Webster Groves, Mo. Original application filed Dec. 22, 1922, Serial No. 608,408. Divided and this application filed Aug. 3, 1923. Serial No. 655,415. 5 Claims. (Cl. 146—12.)



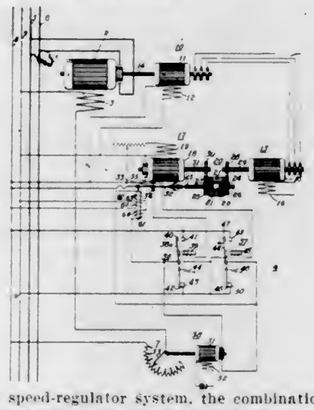
1. In a nut cracking mechanism, an inclined wall for supporting the nuts as the nuts move toward the nut cracking mechanism and having an opening at its upper end, a conveyor for conveying nuts for delivery to said wall, an inclined plate having its lower end near the lower end of said opening and its upper end near said conveyor for receiving nuts delivered thereto from the conveyor and arranged to yield to permit the conveyor to pass, a support on which the lower end of said plate is pivoted near the lower end of said opening, a spring yieldingly supporting said plate in position to receive nuts delivered thereto from the conveyor and permitting said plate to turn on said support, and elements preventing movement of said plate upwardly beyond proper position.

1,501,260. ALARM DEVICE. DAVID A. ALEXANDER, Rochester, N. Y. Filed Feb. 2, 1923, Serial No. 616,580. Renewed Nov. 27, 1923. 10 Claims. (Cl. 116—151.)



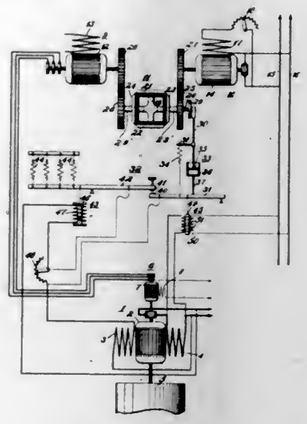
6. In an alarm device, a supporting plate, a striking member, a cylinder mounted on said plate and having an approximately circular path of travel for said striking member and an opening in the cylinder wall, a gong mounted on said plate having a periphery adapted to be engaged by the striking member as the latter passes the said opening, an inlet to the cylinder for fluid under pressure, an outlet from the cylinder beyond the said opening, a housing for the gong and cylinder, and a drain leading from the housing.

1,501,261. ROAD MAINTAINER. WILLIAM T. BEATTY, Flossmoor, FRANK S. DAVIS, Homewood, and FRED D. WILSON, Harvey, Ill.; said Davis and Wilson assignors to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1923. Serial No. 610,346. 36 Claims. (Cl. 37—108.)



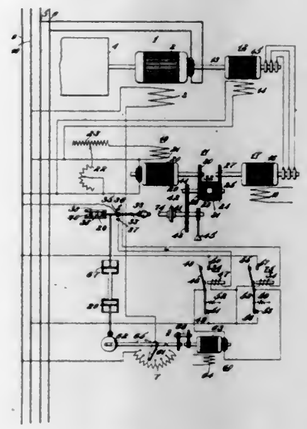
1. In mechanism of the class described, a rigid maintainer blade adapted to extend crossways of a road, separated material retainers extending rearwardly from the blade and a flexible angular plow, with its point secured to the blade, and its sides connected to the retainers.

1,501,262. COMBINATION GRADER-MAINTAINER BLADE FOR ROAD MACHINES. WILLIAM T. BEATTY, Flossmoor, Ill. Filed July 2, 1923. Serial No. 649,045. 10 Claims. (Cl. 37—180.)



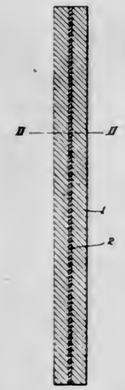
1. In mechanism of the class described, a normally upright blade for ground engagement, a plate hinged adjacent to the upper edge thereof and means for locking the plate in a plurality of selected angular positions with reference to the blade.

1,501,263. SPEED-REGULATOR SYSTEM. CLARENCE A. BODDIE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 6, 1920. Serial No. 401,586. 10 Claims. (Cl. 172—293.)



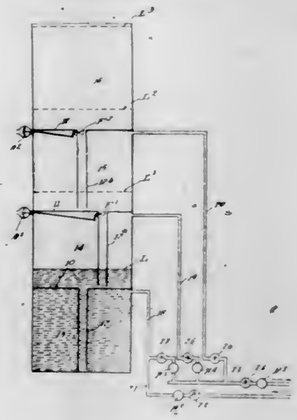
1. In a speed-regulator system, the combination with a motor, and a differential mechanism having one portion thereof operated in accordance with the speed of said motor, of electroresponsive means controlled by said mechanism for maintaining the speed of said motor substantially constant, and for preventing hunting action.

1,501,264. REGULATOR SYSTEM. CLARENCE A. BODDIE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 11, 1920. Serial No. 409,719. 25 Claims. (Cl. 172—293.)



1. In a regulator system, the combination with a motor, a differential gear mechanism operated in accordance with variations in the speed of said motor, and a lever having a resilient and a slowly yieldable connection to said gear mechanism, of means controlled by said lever for governing the excitation of said motor.

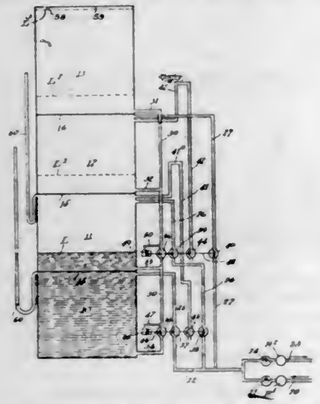
1,501,265. SPEED-REGULATOR SYSTEM. CLARENCE A. BODDIE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 26, 1921. Serial No. 440,043. 10 Claims. (Cl. 172—293.)



1. In a regulator system, the combination with a main motor and a differential gear mechanism operated in accordance with the variations in the speed of said motor, of a contact arm, a yieldable clutch for connecting said arm to the gear mechanism, means for preventing any lost motion between the contact arm and the gear mechanism, means controlled by the contact arm for governing the excitation of the main motor, and means for reacting upon the contact arm proportional to the correction effected upon the main motor.

1,501,266. ARC-WELDING ELECTRODE. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,088. 11 Claims. (Cl. 219—12.)

1. An arc welding electrode comprising a welding metal and a plurality of types of reducing elements incorporated therein.

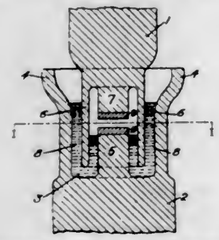


1,501,267. GAS HOLDER. ARTHUR F. BRIDGE, Los Angeles, Calif., assignor of one-fourth to Moreton R. Thompson and one-fourth to Franklin S. Wade, both of Los Angeles, Calif. Filed Dec. 7, 1921. Serial No. 520,533. 6 Claims. (Cl. 48—174.)

1. A gas holder of the water displacement type, characterized by a plurality of gas chambers and a water chamber, each chamber having water passage communication leading from the bottom of one to the bottom of another chamber.

1,501,268. GAS HOLDER. ARTHUR F. BRIDGE, Los Angeles, Calif., assignor of one-fourth to Moreton R. Thompson and one-fourth to Franklin S. Wade, both of Los Angeles, Calif. Filed Dec. 7, 1921. Serial No. 520,534. 7 Claims. (Cl. 48—174.)

1. A gas holder of the water displacement type, characterized by a plurality of separate gas chambers and a water chamber, gas communication to each gas chamber, water communication between the several gas chambers

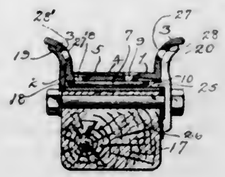


and the water chamber, and means to close the water communication to a chamber when it is filled with gas.

1,501,269. DENTAL MANDREL. JOHN E. CANNING, Denver, Colo.; S. C. Warner administrator of said John E. Canning, deceased, assignor to The Dental Specialty Company, a Corporation of Colorado. Filed Feb. 18, 1922. Serial No. 537,400. 1 Claim. (Cl. 32—13.)

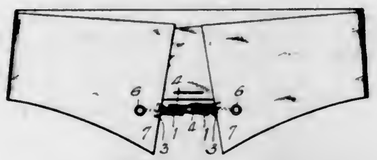
The combination of a spindle having an axial interiorly threaded bore surrounded by a flat concentric shoulder, and a perforated disk engaging said shoulder and having flat surface coacting with the corresponding face of the mandrel and its periphery concentric with the axis of the spindle, a headed screw passing through the perforation of the disk and threaded in the socket of the spindle, and a spring washer located between the disk and the head of the screw and engaging the disk in opposing relation to the shoulder of the spindle.

1,501,270. CONDENSER-TYPE INTERRUPTER. LEWIS W. CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1918. Serial No. 269,092. 17 Claims. (Cl. 200—144.)



1. The combination with a current-interrupting device, of energy-storing means integral therewith for bridging the same.

1,501,271. VEHICLE. AUGUSTUS R. COLSON, Cincinnati, Ohio. Filed May 11, 1922. Serial No. 560,060. 10 Claims. (Cl. 280—22.)



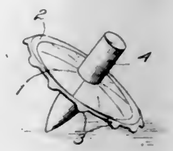
1. A vehicle comprising rigid runners having side recesses respectively therein, a plurality of spaced apart housing supports mounted over said recesses respectively and attached to said runners, a wheel mounted in each housing support and adapted to project slightly below said runners and a frame mounted on said housing supports, substantially as set forth and for the purposes specified.

1,501,272. TIRE RIM. HENRY J. CORBY and ROBERT H. THOMPSON, Dayton, Ohio; said Corby assignor to said Thompson. Filed Aug. 16, 1920. Serial No. 403,941. 2 Claims. (Cl. 301—35.)

1. In a tire rim, an annular channel comprising two beveled rings each provided with a marginal flange, one of said rings being insertable within the other ring with their beveled faces overlapping and in contact, marginal notches in the innermost ring, inward projecting studs in the outermost ring engageable within said notches, and lock means for engaging the stud to interlock the rings including a flexible arm pivoted to the inner face of the inner ring having a projecting boss engaging in an indentation in the inner face of the inner ring to retain the stud engaging lock in adjusted position.

1,501,273. COLLAR FASTENER. JAN CRNOEV, St. Louis, Mo. Filed Apr. 2, 1923. Serial No. 629,343. 10 Claims. (Cl. 24—88.)

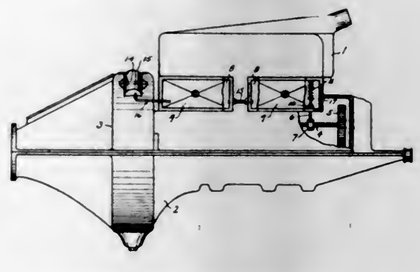
1. A collar holder comprising a coupling member formed with two normally nonaligned coiled wire sleeves, a pin for each sleeve and a coiled head for each pin.



1,501,274. 6, 8-DIMETHYL-2-PHENYLQUINOLINE-4-CARBOXYLIC ACID AND PROCESS OF MAKING SAME. MOSES L. CROSSLEY, Somerville, N. J., assignor to Calco Chemical Company, Boundbrook, N. J., a Corporation of New Jersey. Filed Dec. 29, 1920. Serial No. 433,959. 1 Claim. (Cl. 260—39.)

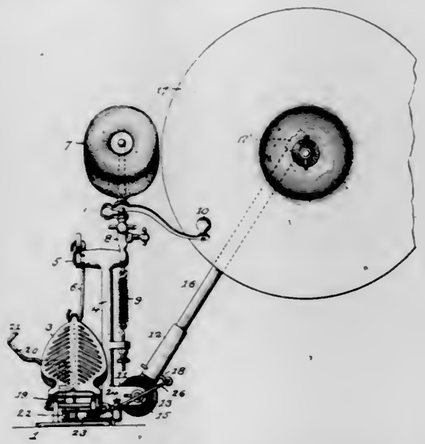
The herein described 6, 8-dimethyl-2-phenylquinoline-4-carboxylic acid, the same being soluble in ethyl alcohol, benzene, ether and carbon tetrachloride, and being capable of forming salts with acids and bases.

1,501,275. ESTER OF 6,8-DIMETHYL-2-PHENYLQUINOLINE-4-CARBOXYLIC ACID AND PROCESS OF PRODUCING THE SAME. MOSES L. CROSSLEY, Somerville, N. J., assignor to Calco Chemical Company, Boundbrook, N. J., a Corporation of New Jersey. Filed Dec. 29, 1920. Serial No. 433,960. 3 Claims. (Cl. 260—39.)



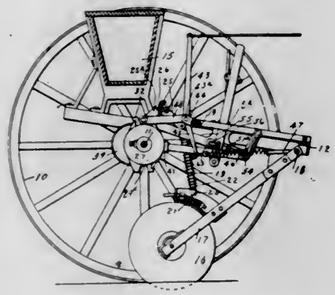
1. The process of producing the ethyl ester of 6,8-dimethyl-2-phenylquinoline-4-carboxylic acid, which consists in commingling substantially 50 parts of the said acid with a mixture of approximately 25 parts of sulphuric acid of a strength of about 100% acid, and substantially 300 parts of ethyl alcohol, heating the resulting mixture, then refluxing it for the desired time, distilling a portion of the alcohol, adding benzene to the residue, and then adding the mixture to water and allowing the mixture to stand cold until hydrolysis is completed, removing any resulting precipitate, extracting the solution with benzene and crystallizing out the ester from the benzene extract.

1,501,276. GAME DEVICE. CURTIS L. CRUVER, Chicago, Ill. Filed Mar. 14, 1921. Serial No. 452,085. 2 Claims. (Cl. 46—56.)



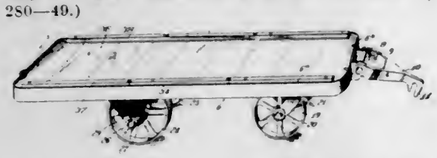
1. A spinning top comprising a spindle having a pointed end, a disk thereon having its major portion circular in shape, an upturned rim about said disk integral therewith, the outer edge of said rim having spaced teeth-like projections thereon, said teeth being directed downwardly with reference to the disk towards the pointed end of the spindle, whereby two teeth and the pointed end of the spindle support the top when at rest.

1,501,277. OILING DEVICE FOR INTERNAL-COMBUSTION MOTORS. SAMUEL P. CUNNINGHAM, Beaumont, Tex. Filed Oct. 31, 1922. Serial No. 598,088. 9 Claims. (Cl. 184—11.)



3. The combination with a motor having a crank case formed with a fly wheel housing, said housing having a port in the upper part thereof, of an oil chamber carried by the housing and enclosing said port, a push rod chamber, a lubricant conduit leading from said oil chamber, and entering the front part of the crank case, said conduit including said push rod chamber, the cylinder wall of the motor having a port which communicates with said push rod chamber.

1,501,278. DRUM AND CYMBAL BEATER. ROBERT C. DANLY, Chicago, Ill., assignor to Ludwig & Ludwig, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1922. Serial No. 548,749. 9 Claims. (Cl. 84—422.)

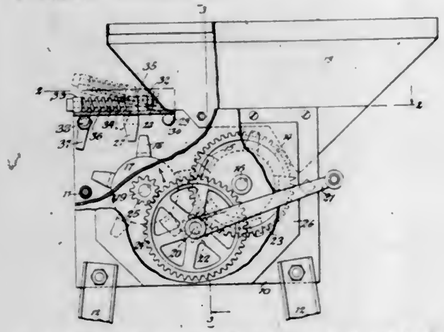


7. In a drum and cymbal beater mechanism, the combination of a floor base having an upstanding post, a main pedal pivoted to said base, a cymbal carrying arm mounted on said post and formed for independent turning movement with relation to said post, a rock shaft journalled in the upper end of said post and operatively connected to the pedal, a carrying stem for a drum beater head secured to said shaft, a lateral carrying arm for a cymbal beater head mounted on the carrying stem of the drum beater head, and an auxiliary pedal mounted on the main pedal and operatively connected to the carrying arm of the cymbal and adapted to impart a turning movement to the same.

1,501,279. DRAFT-OPERATED LIFTING DEVICE FOR SEEDING MACHINES. PAUL L. HATFIELD, Peoria, Ill., assignor to Peoria Drill and Seeder Co., Peoria, Ill., a Corporation of Illinois. Filed Aug. 8, 1919. Serial No. 316,019. 5 Claims. (Cl. 74—14.)

1. In a machine of the character described, in combination, a rotatable driven member, a rockable member, and means for converting the rotary action of the driven member into a variable rocking motion of the rocker member, comprising an eccentric on the rotative member, an arm on the rocker member, a swingable member spaced from said eccentric and arm, provided with pivoting means at its swinging end, a bar connecting the eccentric with the swinging member, a bar connected, one end, with the arm on the rockable member, having a longitudinal slot in its opposed end engageable with the pivot member on the swinging member, to provide a relative shiftable connection therewith, and an adjustable filler member in said slot so related as to length therewith, whereby through adjustment, variable lengths of clearance space are provided to facilitate variation of the length of movement of said bar.

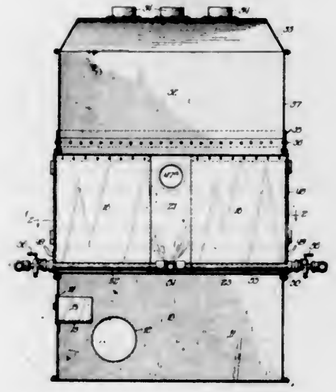
1,501,280. TRAILER TRUCK. JOHN C. W. HINSHAW, Chicago, Ill., assignor to Mercury Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1922. Serial No. 578,095. 3 Claims. (Cl. 280—49.)



1. A truck frame comprising two substantially U-shaped T iron members, longitudinally-extending bars connecting the end portions of each of said members together, and means fixedly connecting said two members together to form a substantially rectangular frame.

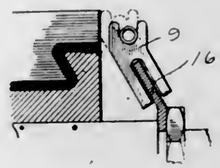
1,501,281. AUTOMATIC CALLING DEVICE. HARRY H. IDE, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1920. Serial No. 372,525. Renewed Mar. 5, 1923. 30 Claims. (Cl. 179—90.)

16. A calling device of the character described including a mounting plate, a supporting tripod secured to said mounting plate and having integrally formed ears extending through the mounting plate, a gear shaft, and an integrally formed arm for said tripod forming a bearing for said gear shaft.



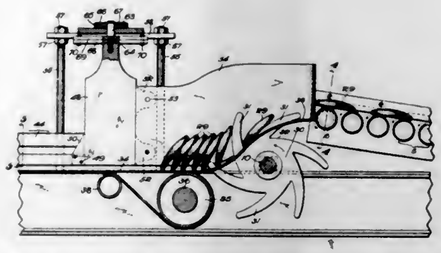
1,501,282. DISINTEGRATOR. STEPHEN A. KOST, Buffalo, N. Y. Filed June 27, 1923. Serial No. 648,149. 2 Claims. (Cl. 83—11.)

1. A disintegrator comprising a casing having an inlet for the material to be disintegrated and an outlet for the disintegrated material, a rotary cylinder arranged in the casing and provided with teeth on its periphery, a comb



arranged above said outlet and having the space between its teeth traversed by the teeth of said cylinder, a plate arranged above said cylinder and pivoted to swing vertically, a guide rod which is mounted on said plate and which carries said comb, and a spring surrounding said rod and operating on said comb for yieldingly holding the same in its innermost position.

1,501,283. GAS-FIRED HOT-AIR FURNACE. WILLIAM C. LANGSTON, Oak Park, Ill., assignor of one-half to Walter I. Coble, Chicago, Ill. Filed Jan. 17, 1923. Serial No. 613,101. 2 Claims. (Cl. 126—116.)

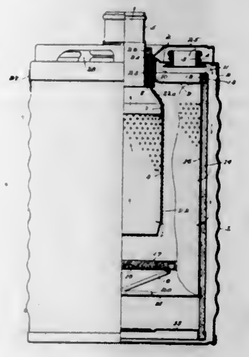


1. A combustion chamber providing a unit adapted to be arranged within and transversely of a main casing for a furnace having an air inlet and outlet, said chamber having communicating radially arranged hollow arms or branches which extend to each of the walls of said casing and are provided with doors at their outer ends, said unit being adapted to be arranged between the inlet and outlet of the main casing so that air entering the casing may pass through the space provided between the radially arranged hollow arms of the combustion chamber, and said radially arranged hollow arms being adapted to have burners arranged therein which extend through the main casing and lengthwise of and within said arms.

1,501,284. SHORT CIRCUITER. EVERETT P. LARSH, Dayton, Ohio. Filed Jan. 10, 1922. Serial No. 528,223. 9 Claims. (Cl. 172—279.)

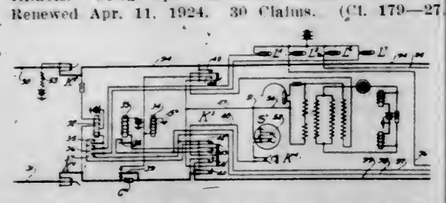
5. In a short circuiting device for commutators, a concavo-convex disc located in spaced relation with the lateral face of the commutator, an expansible and contractible series of contact members controlled by centrifugal influence, said contact members being guided by said concavo-convex disc during the movement under centrifugal influence in a direction inclined to the axis of rotation.

1,501,285. MECHANISM FOR CONVEYING AND STACKING FOOD PRODUCTS. EDWARD E. LAWRENCE, Jamaica, N. Y., assignor to Loose Wiles Biscuit Company, Long Island City, N. Y., a Corporation of New York. Filed May 19, 1922. Serial No. 562,244. 26 Claims. (Cl. 107—45.)



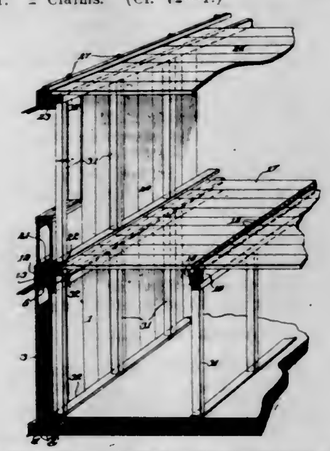
5. In mechanism for conveying and stacking disk-like articles, the combination of stacking means for said articles, a series of rolls to convey said articles to said stacking means, means to impart rotation in one direction to said rolls, means to impart to and fro axial movement to one or more of said rolls to facilitate delivery of the articles to said stacking means.

12. In mechanism for conveying and stacking disk-like articles, the combination of stacking means for said articles having a plurality of stackways provided at their entrance with a longitudinally slotted grid, a transverse shaft below said grid, star wheel like disks upon said shaft adapted to enter the slots of said grid to receive the articles substantially flatwise between said projections and to turn them into and deliver them in upright edgewise position along said stackways.



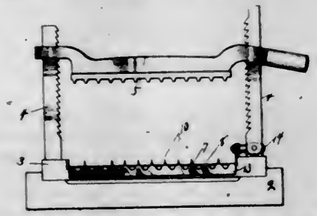
13. In mechanism for conveying and stacking disk-like articles, the combination of stackways having longitudinally extending partitions, a series of levers extending transversely of said mechanism and connecting said partitions for varying the width of all of said stackways.

1,501,286. GAS-MASK CANISTER. FRANK A. LOGAN, Edgewood, Md. Filed Mar. 8, 1921. Serial No. 450,710. 8 Claims. (Cl. 183—44.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



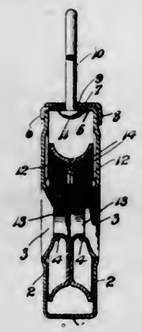
1. A gas mask canister comprising a central, perforated body, means possessing low resistance to breathing and enveloping said perforated body for removing toxic smoke from air or gas mixtures, said canister being sealed against passage of air or gas mixtures to be treated into the interior of the canister without first passing thru said smoke-remover, and means disposed between said perforated body and said enveloping means for removing toxic gases from said air or gas mixture.

1,501,287. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1920. Serial No. 374,886. Renewed Apr. 11, 1924. 30 Claims. (Cl. 179—27.)



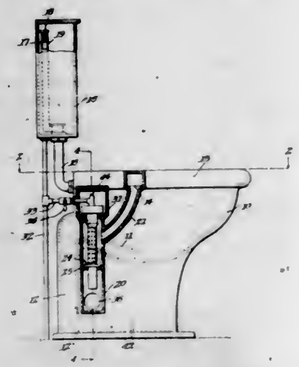
1. In a telephone system, a manual main exchange and an automatic branch exchange, an attendant operator's position at the branch exchange, continuous two way trunk lines passing through said operator's position and connecting said exchanges, and means including said trunk lines for completing interexchange calls originating in either exchange.

1,501,288. CONCRETE STRUCTURE. CHARLES D. MORLEY, St. Louis, Mo. Filed Apr. 5, 1920. Serial No. 371,201. 2 Claims. (Cl. 72—1.)



1. A reinforced concrete structure comprising vertically disposed precast slabs of reinforced concrete constituting hollow walls and column forms, a filling of reinforced concrete in said column forms and integrated therewith, precast reinforced concrete floor slabs, precast concrete beam forms filled with reinforced concrete to constitute beams, reinforcement projecting from said walls, column forms and floor slabs into said beams, said columns and beams constituting the load carrying members of said structure.

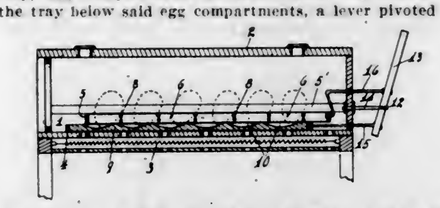
1,501,289. REMOVABLE CLEANABLE MEAT HOLDER OR PLATE FOR SLICING MACHINES. ERNEST MOSER, New York, N. Y. Filed Aug. 4, 1923. Serial No. 655,566. 10 Claims. (Cl. 146—217.)



1. A removable meat supporting plate for slicing machines having a downwardly extending apron at its forward edge, and openings for the passage of pins or prongs.

1,501,290. PULLEY. THOMAS OLINGER, Holland, Mich., assignor, by mesne assignments, to Federal Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Nov. 21, 1921. Serial No. 516,541. 2 Claims. (Cl. 254—192.)

1. A pulley construction comprising a hanger of sheet metal having substantially parallel sides connected at their lower ends by an integral bottom cross piece, each of said sides at its upper end being bent toward the other side substantially at right angles to make overlapping sections at the upper end of the hanger, a tongue on the end of the under section passing through and clinched against the side opposite to that from which said under section is turned, said sections having alined openings therethrough, a hook swivelly mounted in and passing through said openings, and a pulley wheel rotatably mounted on and between the sides of the hanger.

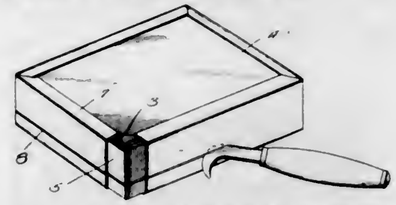


1,501,291. VENTILATING WATER-CLOSETS. EDWARD H. RAPER, Mapleton, Iowa, and CHARLES E. RAPER, Sheridan, Wyo. Filed June 9, 1923. Serial No. 644,381. 11 Claims. (Cl. 4—72.)

1. The combination with a water closet bowl and the waste pipe of the closet, of a ventilating chamber communicating with the bowl, means for creating suction through said chamber to withdraw foul air from the bowl comprising a perforated tube mounted within the chamber, means for causing fluid to flow through said tube, and a siphoning trap connecting said chamber and the waste pipe.

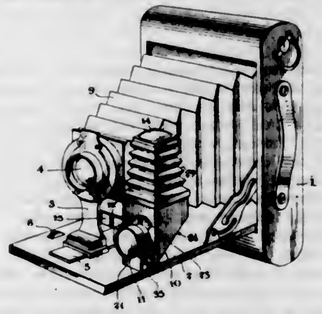
1,501,292. EGG-TURNING DEVICE. SEWARD SMITH, Oakland, Calif. Filed June 10, 1922. Serial No. 567,278. 2 Claims. (Cl. 119—44.)

1. In combination with an incubator, an egg turning device comprising a tray, a frame superimposed on said tray, egg compartments in said frame, depressions in the tray below said egg compartments, a lever pivoted to



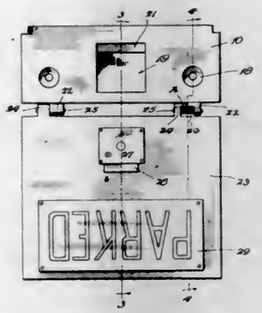
the incubator, a link secured to said frame and to said lever, and a link secured to said tray and to said lever.

1,501,293. METHOD OF COATING METALS, FLUX THEREFOR, ETC. RICHARD STAACK, North Bergen, N. J., assignor to Richard Staack Lead Coating Works, a Corporation of New Jersey. Filed Feb. 8, 1923. Serial No. 617,842. 25 Claims. (Cl. 148—7.)



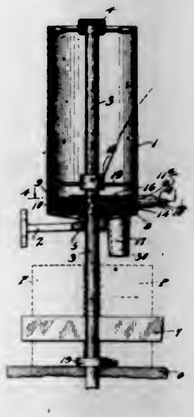
1. The method of covering metal with a protective metal coating, which consists in cleansing the metal to be coated, drenching the cleansed metal with a flux containing phosphorus, and uniting with the drenched metal a protective metal in molten condition containing phosphorus.

1,501,294. METHOD FOR MAKING BOXES. JOHN J. TYER, Greensboro, N. C. Filed Feb. 24, 1923. Serial No. 621,025. 5 Claims. (Cl. 217—2.)



1. A method of making a shouldered box and lid therefor consisting in forming a closed hollow member from a plurality of separable parts, applying a single adhesive strip around the sides of the hollow member and engaged with the top and bottom thereof to hold the parts assembled, and making an incision through the binding strip and certain of the parts to separate the hollow member into a shouldered box and lid.

1,501,295. FOCUSING VIEW FINDER. WILLIAM EARL WILSON, Mount Rainier, Md. Filed Oct. 5, 1921. Serial No. 505,573. 18 Claims. (Cl. 95—44.)

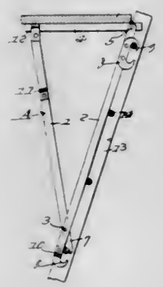


1. The combination of a camera lens board and camera bed, a focusing device comprising a relatively movable part carried by the lens board, and a relatively fixed part of the device carried by the camera bed.

1,501,296. THEFT SIGNAL. LUDWIG R. ZEPKA, Cleveland, Ohio. Filed Dec. 20, 1922. Serial No. 608,008. 5 Claims. (Cl. 40—2.2.)

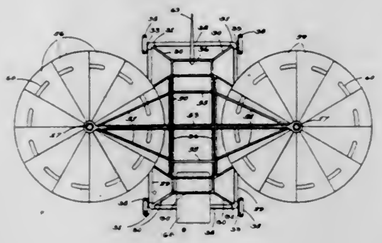
2. A theft signal for motor vehicles including a base block shaped to fit a wind shield rail, a signal plate associated with the block and adapted to abut one face of the block projecting beyond the lines thereof in active position, and means for locking the signal plate active.

1,501,297. SALTING MACHINE. JOHN F. ANDERSON, Oakland, Calif. Original application filed Sept. 18, 1917, Serial No. 191,922. Divided and this application filed Jan. 24, 1921. Serial No. 439,468. 7 Claims. (Cl. 221—108.)



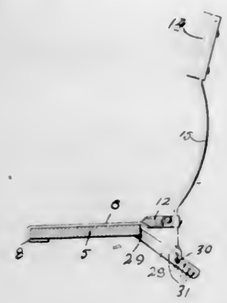
1. A device of the character described, comprising a container having a discharge opening therein, a measuring disk within said container adjacent said discharge opening and having peripheral pockets, means for imparting a step-by-step rotation to said disk, and a scraper located contiguous to said discharge opening and positioned to engage the periphery of said disk.

1,501,298. LADDER BRACKET. CYRUS W. ARMITAGE, Canby, Minn. Filed July 3, 1923. Serial No. 649,272. 1 Claim. (Cl. 304—35.)



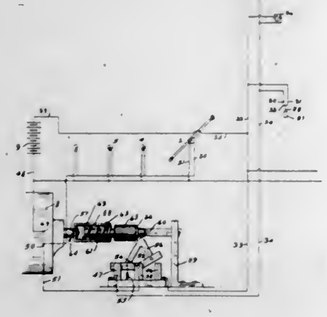
A device for the purpose indicated, comprising triangular side frames consisting of converging side bars and a transverse bar connecting the side bars at their

diverging ends, one of the side bars being extended and formed with a return hook and the adjacent end of the other side bar being extended to provide a hook similar to the first hook but oppositely disposed with respect to



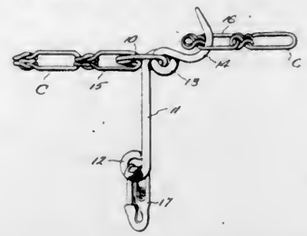
the latter, a clip member formed with oppositely facing hooks and secured to one of the side bars adjacent said transverse bar, and a platform spanning the transverse bars.

1,501,299. FLYING MACHINE. WILLIAM ARMSTRONG, Drinkwater, Saskatchewan, Canada. Filed Mar. 23, 1923. Serial No. 627,241. 15 Claims. (Cl. 244—19.)



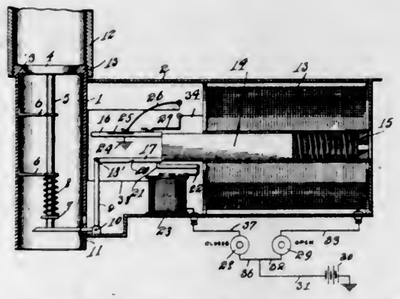
1. A flying machine including parallel main rectangular frames; connections between said parallel main rectangular frames; side frame members extended outwardly from said parallel main rectangular frames; planes mounted in said side frame members; a main supporting rod extended through said parallel main rectangular frames and co-operating with said side frame members to support said planes; a body suspended on said main supporting rod between said parallel main rectangular frames; a lower frame depending from the suspending means for said body; landing wheels resiliently mounted beneath the last mentioned frame; sleeves rotatably mounted on said main supporting rod to either side of the parallel main rectangular frames; driving connections between said sleeves and said planes; means within said body for operating said sleeves; driving connections between the last mentioned means and said sleeves; means for tilting the parallel main rectangular frames and parts carried thereby; operating means for the last mentioned means carried in said body.

1,501,300. BACK REST. ALBERT J. BAYLES, Melrose Park, Ill. Filed Oct. 31, 1922. Serial No. 598,152. 3 Claims. (Cl. 155—133.)



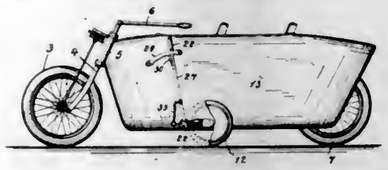
1. In combination, a back rest, a pair of plates adjustably clamped to said back rest between its ends, a hook shaped member pivotally connected to one of said plates, and means for adjustably holding said back rest in a rigid position.

1,501,301. BRIDGE SIGNAL. JOHN S. BAY, Denver, Colo. Filed Feb. 11, 1924. Serial No. 691,982. 5 Claims. (Cl. 246—121.)



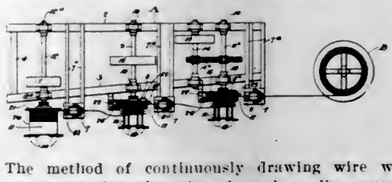
5. In a railway bridge signal system, in combination, a bridge, a railway track, a plurality of signal posts located along the side of the track on each side of the bridge, one of said signal posts carrying an arm rotatably mounted thereon, a signal lamp in each end of said arm, means for causing said arm to rotate, a source of electrical energy, means comprising electrical conductors for connecting the lamps to the source of power, means for alternately making and breaking the circuit to the lamps while they are rotated, an open electric circuit extending from the source of electrical power to the bridge, means for closing said circuit when the water exceeds a predetermined level, said means comprising a float-operated switch, means for closing said circuit in case the bridge burns, said means comprising a thermal circuit closer, and means for disconnecting said portion of the circuit extending to the bridge after the signals have started to operate.

1,501,302. CHAIN LOCK. CLARK W. BEAUCHAMP, Somers, Mont. Filed Oct. 15, 1923. Serial No. 668,748. 3 Claims. (Cl. 24—69.)



1. The combination with a link chain: of a locking device for coupling adjacent chain ends together comprising a single locking lever having pivotal connection at a point intermediate its ends to an end link of the chain and provided with a lever arm at one side of the pivotal connection and a hook at the other side of the pivotal connection arranged at right angles to the lever arm, said hook being arranged for engagement with the other end link of the chain to draw the same into overlapping relation with the first end link, and means to latch the arm to the chain adjacent said second end link.

1,501,303. VALVE. THOMAS R. BERRY, Lead, S. Dak. Filed Aug. 29, 1922. Serial No. 584,968. 1 Claim. (Cl. 137—139.)



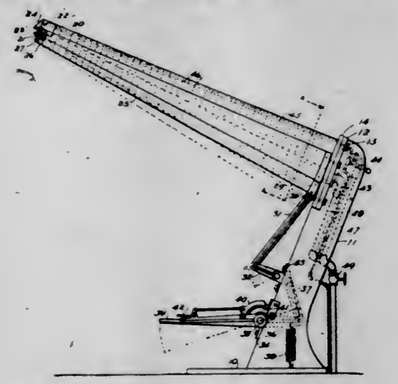
In combination a valve casing, a valve therefor; means for normally holding the valve in a closed position, a lever having one end thereof engageable with the valve, a solenoid including a core movable therein, a spring for normally holding the core in an extended position; a rod extended from the core and connected with the lever so that upon energization of the solenoid the core will be moved inwardly and the rod actuated to swing the lever for opening the valve, a spring pressed catch, said rod provided with a notch adapted to be engaged by the catch when the valve is in an open position, an electro-magnet associated with the catch which when energized will attract the catch so as to disengage from the notch of the rod, a primary circuit including a switch, a source of electrical energy, the solenoid, a spring contact, a contact rod attached to the core of the solenoid and provided with an insulating strip, said contact rod and said source of electrical energy being grounded, said spring contact being only engaged with the insulated portion of the contact rod when the core of the solenoid is in a retracted position and the valve opened, an auxiliary circuit including the source of electrical energy, a second switch, the electromagnet, a second spring contact, and the contact rod, said second contact being only engaged with the insulated strip of the contact rod when the valve is in a closed position so that the electromagnet is always de-energized at this time.

1,501,304. MOTOR VEHICLE. REINHOLD BOEHM, Berlin-Johannisthal, Germany, assignor to Alfred Morgan, Berlin, Germany. Filed Oct. 12, 1920. Serial No. 416,487. 17 Claims. (Cl. 208—78.)

1. In a motor car, the combination with the body, and a front and rear wheel disposed in tandem, of a transverse shaft mounted on the body of the car intermediate the wheels and adapted to automatically rock about the longitudinal axis of the vehicle independently of the latter, side supporting wheels eccentrically mounted on said shaft and means to rock said shaft about its axis whereby the side supporting wheels are moved towards and from the ground.

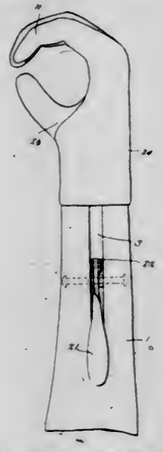
1,501,305. METHOD OF DRAWING WIRE CONTINUOUSLY. ERNST BOLEY, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,282. 18 Claims. (Cl. 205—14.)

1. The method of continuously drawing wire which consists in drawing the wire through a die, wrapping the drawn wire upon a draw block, forming a plurality of taut and a plurality of loose coils thereon and feeding portions of the wire from said loose coils through a second die while drawing other portions of the wire through said first die, and wrapping the wire after drawing through said second die on a suitable block and thereby forming a bundle or coil of the drawn wire.



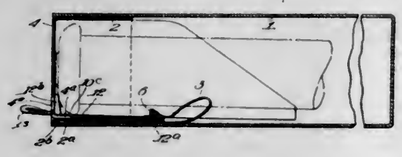
1,501,306. BAILER. ALEXANDER BOYNTON, San Antonio, Tex. Filed May 8, 1922. Serial No. 559,363. 15 Claims. (Cl. 166—19.)

1. A bailer comprising a body having discharge means, a gravity actuated sleeve mounted on said body and adapted to close said discharge means, said sleeve provided with a slot having a branch, a locking pin carried



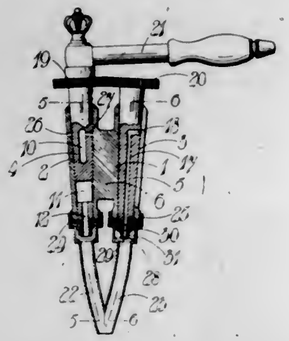
by said body and adapted to be received in said branch to lock the sleeve over said discharge means, said pin being adapted to limit the forward movement of said sleeve on the body, and a bailer bottom connected to said body and limiting the forward movement of said sleeve and cooperating with the pin in this respect, the rear portion of the bailer bottom being rabbeted to snugly receive the forward portion of said sleeve whereby to provide a seal between the sleeve and the body.

1,501,307. GARMENT FORMER. CECIL H. BOYDLE, Louisville, Ky. Filed Mar. 21, 1921. Serial No. 454,080. 14 Claims. (Cl. 223—17.)



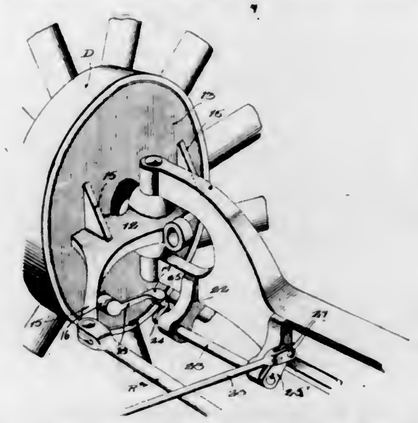
1. In a garment former machine, a heater of frusto-pyramidal form, the cross section of said heater being laterally flattened with oppositely disposed acute angled edges, a fixed envelope element covering one of said edges and the sides of the heater adjacent thereto, a movable envelope element surrounding the remainder of the heater sides and edge, and means to move the movable element away from and toward the fixed element.

1,501,308. ARTIFICIAL ARM. FRANK BURNEY, Jr., Thomasville, Ga. Filed Oct. 8, 1923. Serial No. 667,381. 4 Claims. (Cl. 3—12.)



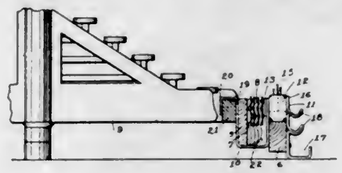
1. An artificial arm including a hollow fore arm portion, a tapered block hingedly connected to and cooperating with one end of the fore arm portion to provide a palm portion, flexible tubular finger portions hingedly connected to the block and having angular incisions at the joint portions thereof, cords extended longitudinally through the fingers and anchored at one end to the outer ends of the fingers, said cords being extended movably through the block and through the end of the fore arm portion, a block slidable within the fore arm portion to which the cords are connected, and means for securing the slidable block in either of two positions.

1,501,309. CONTAINER FOR MUSIC ROLLS AND THE LIKE. CHARLES S. BURTON, Oak Park, Ill. Filed Oct. 4, 1921. Serial No. 505,377. 9 Claims. (Cl. 206—52.)



1. In combination with a tubular box having one end open for inserting and withdrawing its contents, an interior tubular reinforce proximate to the open end; a telescoping closure sliding in said reinforce for opening and closing the box and means engaging the closure to the reinforce for limiting the withdrawal of the closure.

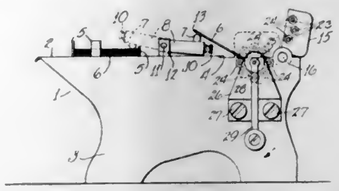
1,501,310. LIQUID-DELIVERY TAP. CORNELIUS CHAMBERS, Shirley, England. Filed Apr. 6, 1923. Serial No. 630,315. 1 Claim. (Cl. 225—26.)



A liquid delivery tap comprising a pair of tap bodies having laterally extending inlet passages in corresponding positions on the sides of the two bodies and outlet passages in their lower ends; a measuring chamber disposed in the side of one of the tap bodies opposite the inlet passage therein, having inlet and discharge openings; a transparent front for said measuring chamber; a pair of plug valves in said bodies having diametral ports, the valve in the measuring chamber body having two ports, one for the inlet and one for the outlet, and the valve in the other body having a single port, which port and said outlet port are arranged in the same angular relation and in different angular positions to said inlet port, so that said single port and said outlet port are opened together when the said inlet port is closed and vice versa; gearing interconnecting said valves so that they move simultaneously and by the same amount, and an operating handle on one of said plug valves.

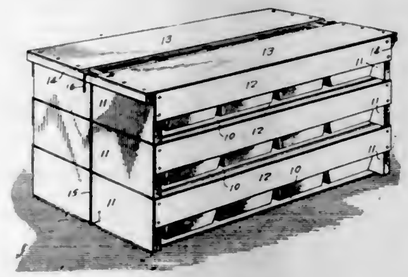
1,501,311. BRAKE. WILLIAM COOPER, New Orleans, La., assignor of one-half to Joseph Albert Marck, New York, N. Y. Filed May 31, 1922. Serial No. 564,693. 2 Claims. (Cl. 188—194.)

2. In a brake mechanism for a steering wheel of a motor vehicle, a brake drum carried by the hub of said wheel, a braking mechanism within said brake drum, a crank member operatively supported from means projecting from the steering knuckle of said steering wheel, said crank arm being adapted to actuate the braking mechanism when rotated in a predetermined direction, lugs extending from the front axle of the associated steering wheel, a shaft rotatably supported by said lugs, a crank arm carried by said shaft and adapted to engage the crank arm carried by the steering knuckle and actuate said braking mechanism when rotated in a certain direction, and means whereby said shaft may be rotated from a remote point.



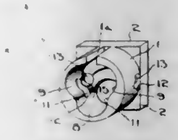
1,501,312. TYPEWRITER ATTACHMENT. REGINALD S. COYSH, Calgary, Alberta, Canada. Filed June 2, 1923. Serial No. 643,116. 3 Claims. (Cl. 197—180.)

1. A typewriter attachment including spaced plates forming pocket walls; a tray member carried by one of said pocket walls; bottom strap members connecting said plates and forming the bottom members of one of the pockets; and attaching members carried by one of said plates and having portions extended for engagement with a typewriter and other portions extended for supporting articles in one of said pockets.



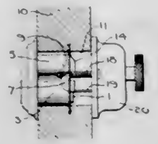
1,501,313. CIGARETTE-MAKING DEVICE. JERE ELLWOOD CROTTY, Chicago, Ill. Filed Dec. 19, 1921. Serial No. 523,423. 1 Claim. (Cl. 131—5.)

A device of the type described comprising a frame, a plurality of papers carried by said frame, a plurality of rollers for forming tobacco into a roll, means for feeding one paper at a time from the pile of papers into the rollers, a spacing roller disposed at one end of said rollers, and being enclosed thereby, a second roller disposed at the other end of said rollers, said frame having a slot, and a pin axially aligned with said second named roller and being carried thereby, said pin projecting beyond each end of said second named roller and being



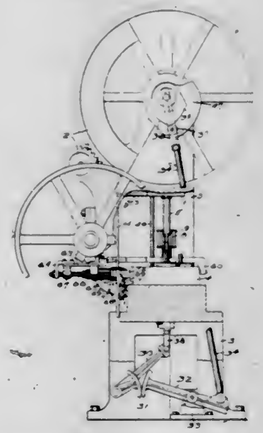
disposed in said slot, whereby said pin will be embedded in a cigarette being formed, and is adapted to lift the cigarette free from the rollers when said pin is swung about the side of the slot as a pivot.

1,501,314. CRATE. ROBERT LEE DAILEY, McRae, Ark. Filed Apr. 7, 1924. Serial No. 704,785. 2 Claims. (Cl. 217—13.)



1. A crate composed of similar superimposed sections and means to hold them together in assembled relation, each of said sections comprising bottom, end and side walls and a cover for the top-most section, the cover and the sections being secured together by a single securing means, the cover consisting of cleats at the ends and strips extending between and above the cleats and spaced apart, said cleats overlapping the adjacent ends of the top section, and said securing means extending from the bottom section to the cover and to the space between the cover strips and having hooked engagement with the cleats.

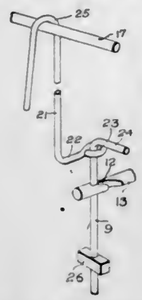
1,501,315. MEANS FOR SECURING LOCKS. PERCY WILLIAM CHARLES DEMENT, Kilbirnie, Wellington, New Zealand. Filed Mar. 21, 1923. Serial No. 626,646. 6 Claims. (Cl. 70—46.)



1. Improved means for use in securing locks of the kind specified, comprising, a lock receiving casing for insertion in a member to be locked, recesses formed in the casing for receiving lugs on a lock at the end of insertion of the lock into the casing, and connecting screws fitted to the casing for retaining the lugs in the recesses, to thereby prevent withdrawal of the lock from the casing.

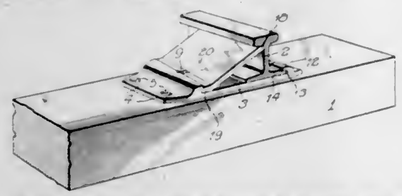
1,501,316. DEVICE FOR PREVENTING THE TURNING OR WITHDRAWAL OF CYLINDER LOCKS. PERCY WILLIAM CHARLES DEMENT, Kilbirnie, Wellington, New Zealand. Filed Mar. 21, 1923. Serial No. 626,647. 5 Claims. (Cl. 70—46.)

1. Means for securing locks of the kind specified, comprising, a plate insertable in a door or the like so as to cross a lock receiving hole in the door, an aperture in the plate so positioned as to register with the hole, and recesses in said plate and adjacent the aperture for receiving and retaining lugs of a lock with which used.



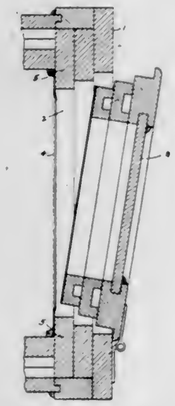
1,501,317. BROACHING MACHINE. AUGUSTUS F. DONALDSON, Toledo, Ohio, assignor to The Bunting Brass & Bronze Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,036. 20 Claims. (Cl. 90—33.)

20. In a bushing broaching machine, a ram, a punch so connected to the ram as to permit free lateral movement of the punch relative to the ram, and having a recess, a bolster plate, a broaching die located in the bolster plate, an arbor extending through the die, means for raising the arbor to raise the bushing within the centering means of the punch, means for operating the punch to force the bushing over the arbor until the arbor engages the punch within the recess, and lowering the arbor to force the bushing through the die while the arbor is held in the recess of the punch, the centering means of the punch being located at a distance above the die substantially equal to the length of the bushing, a stripper member located below the die for stripping the bushing from the arbor, a feeding means for elastically engaging and positioning the bushings over the broaching die.



1,501,318. FLUSH VALVE. EDWARD F. DONNELLY, Malden, Mass. Filed May 15, 1920. Serial No. 381,577. 3 Claims. (Cl. 4—57.)

1. The combination with a flush valve having an outlet provided with a valve seat and an overflow pipe, of a guiding arm extending from the overflow pipe and provided with an open slot having its open end directed away from the end of the arm, a valve for the valve seat, said valve having a stem extending through and guided by

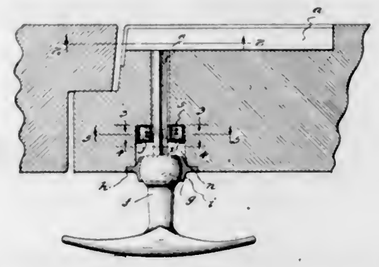


said slot, a handle having a rock shaft journalled in the side of the tank, and a readily-detachble connection between the rock shaft and valve stem which tends to hold the stem at the closed end of the slot.

1,501,319. RAILROAD-RAIL BRACE. JOSEPH R. DOOLEY, Mobile, Ala., assignor of one-half to Cornelius W. Vink, Mobile, Ala. Filed Oct. 11, 1923. Serial No. 667,883. 6 Claims. (Cl. 238—292.)

1. As a new article of manufacture, a railroad rail brace substantially flat and having an angled side tapered with relation to its opposite side and forming a wedge-shaped brace.

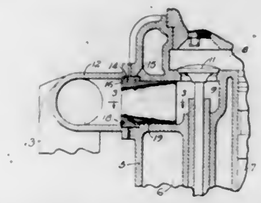
1,501,320. REFRIGERATOR. CARL L. DRACHENBERG, Houston, Tex. Filed Mar. 1, 1923. Serial No. 622,115. 6 Claims. (Cl. 20—69.)



1. In a refrigerator having a door opening, a flexible metallic strip surrounding the door opening and lying closely against the inner side of the refrigerator wall and projecting outwardly beyond the facing of the door opening all the way around, and a door the margins of whose inner face press against said strip all the way around when the door is closed.

1,501,321. DECOLORIZING MEDIUM FOR OILS, FATS, AND OTHER LIQUIDS AND PROCESS OF MAKING SAME. WILHELM EBERLEIN, Ahrensburg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 14, 1919. Serial No. 297,174. 7 Claims. (Cl. 252—3.)

1. The herein described process for the production of a decolorizing medium, which comprises extracting brown coal with an alkali, coating sodium chloride with said extract by mixing the same therewith and heating the coated sodium chloride to a glowing temperature in a non-oxidizing atmosphere.

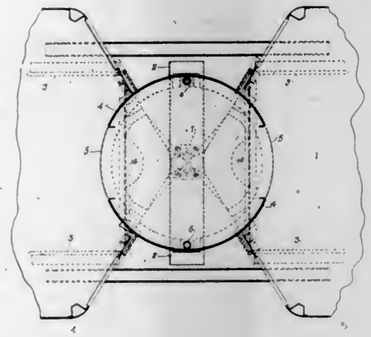


7. The herein described decolorizing medium which consists of sodium chloride upon the surfaces of which carbon is deposited, the same being produced by coating sodium chloride with an alkali extract of brown coal and heating the coated sodium chloride in a non-oxidizing atmosphere to a glowing temperature.

1,501,322. ANTIRATTLING DEVICE. FRANK M. EDGAR and ANDREW CHRISTIAN ANDERSEN, Detroit, Mich., assignors to Ternstedt Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 29, 1923. Serial No. 628,404. 3 Claims. (Cl. 292—169.)

2. The combination of a door lock provided with a roll-back, an outside door handle provided with a spindle which can be detachably engaged with the roll-back, and an anti-rattling device threaded onto the spindle and comprising a pair of relatively rotatable members resisted by a spring resistance, whereby one of the members can be anchored to the door and the other member to the door handle spindle, and the door handle spindle be turned before it is engaged with the roll-back for the purpose of putting the roll-back and handle under yielding stress.

1,501,323. FUEL CONVERTER. WILLIAM A. EDWARDS, Chicago, Ill. Filed Jan. 16, 1922. Serial No. 529,692. 5 Claims. (Cl. 48—180.)

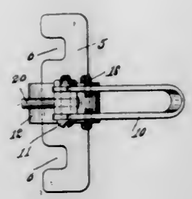


1. The combination with a fuel supply passage, of a tube disposed therein, the exterior of said tube being shaped to fit the walls of said passage and the bore of said tube being of frusto-conical shape, the smaller end thereof being opposed to the flow through said passage, said tube being provided with a duct leading from the passage at the exterior of the tube, to the interior of the tube near the smaller end thereof.

1,501,324. CONTAINER FOR HYPODERMIC NEEDLES. LOGAN EISELE, Nashville, Tenn. Filed Aug. 4, 1922. Serial No. 579,748. 2 Claims. (Cl. 206—43.)

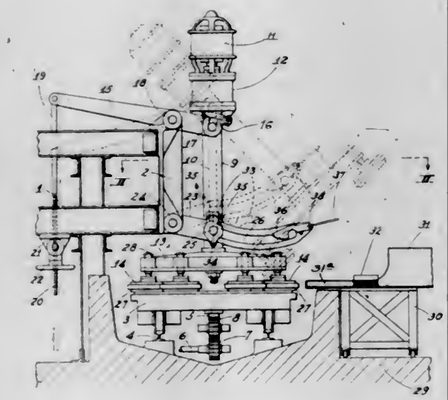
1. In a container for hypodermic needles, a substantially cylindrical end portion open at one end, a tubular neck portion of less area in cross section than the cylindrical end portion, and an elongated tapering portion merging the cylindrical end portion and the neck portion one into the other so that the cylindrical end portion, the tapering portion and the neck portion are substantially axially aligned, said neck portion being of less area in cross section than the hub of a conventional hypodermic needle and of sufficient length to extend beyond the pointed end of a hypodermic needle which has been inserted in the container until the hub of the needle is in abutting relation to said tapering portion.

1,501,325. RAILWAY CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 14, 1923. Serial No. 680,604. 7 Claims. (Cl. 105—4.)



2. In a railway car, the combination with a truck bolster, and two adjacent cars, of a plurality of pivot trunnions and a corresponding plurality of sockets therefor, each car having one trunnion and one socket assigned to it, and a locking device adapted to restrain either trunnion from displacement from its socket.

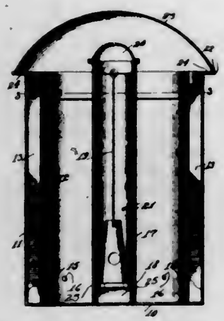
1,501,326. VALVE LIFTER. HENRY G. FEIST, Plantsville, Conn. Filed June 28, 1922. Serial No. 571,389. 5 Claims. (Cl. 29—86.3.)



1. A device for compressing valve springs, comprising a post, a valve spring engaging element slidably mounted

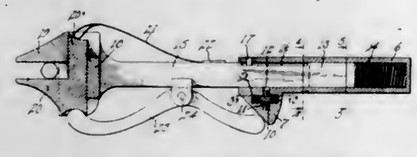
on the post, means for raising said element on the post, and a support associated with the post adapted to engage

the spring engaging element for maintaining the same in an elevated position, to maintain the spring in a compressed position.



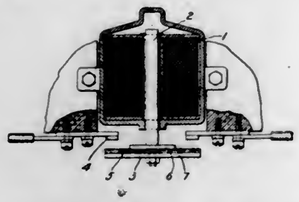
1,501,327. APPARATUS FOR SURFACING PLATE GLASS. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 5, 1923. Serial No. 643,490. 6 Claims. (Cl. 51—110.)

1. In combination in a glass surfacing machine, a framework, a surfacing unit mounted for vertical movement with respect to the framework and for lateral swinging movement about its upper end, and comprising an upright supporting member, a vertical shaft journaled therein, and a runner secured to the lower end of the shaft, driving means for the shaft, releasable means for holding the lower end of said unit against lateral movement, means for carrying the glass to be surfaced laterally beneath the runner, and means for holding the unit in inclined position after said last means are released and the lower end of the unit swung laterally.



1,501,328. SEED-CORN DRIER. JOHN GREELEY, Lake Park, Iowa. Filed July 23, 1923. Serial No. 653,282. 3 Claims. (Cl. 34—21.)

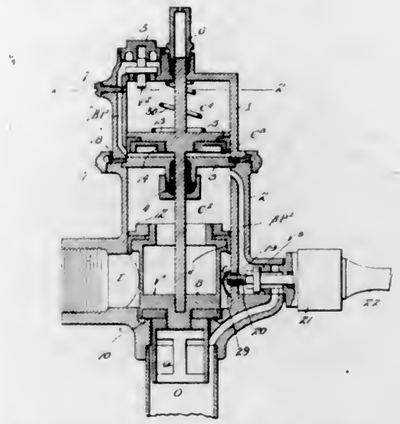
1. A seed corn drier including a receptacle having spaced walls, a heat tube within the receptacle and having heat discharging openings, a heating means in the tube, and a closure for the receptacle formed to condense moisture arising from the corn and provided with



escape openings beyond the outer wall of the receptacle for the products of condensation.

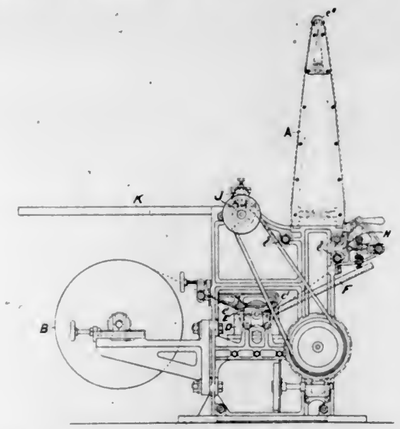
1,501,329. QUICK-ACTING WRENCH. FRIEDRICH HANNS GREVE, La Salle, Ill. Filed Oct. 7, 1922. Serial No. 593,008. 3 Claims. (Cl. 81—128.)

1. In a quick acting wrench, a shank having a fixed jaw thereon, a movable jaw slidable with respect to the fixed jaw, a telescopic handle portion slidable on said shank and being provided with a beveled portion, a lever carried by the shank, one end of said lever being arranged to bear on the movable jaw, and the other end being arranged to be engaged by the beveled portion of the handle and means carried by said handle for locking the handle to the shank.



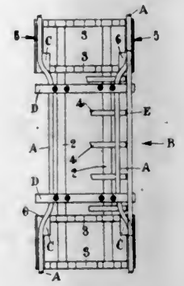
1,501,330. ELECTRICAL CONTACT ELEMENT. BENJAMIN J. GUDGE and PAUL G. GUEST, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1919. Serial No. 296,428. 8 Claims. (Cl. 200—166.)

1. An electrical conducting element comprising a molded body formed partly of carbon and a binder and partly of insulating material, the materials being localized in definite portions of the body.



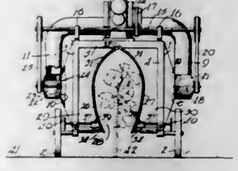
8. A contact for relays comprising a disk-shaped body, one face of which is formed of finely divided carbon and a hardened phenolic condensation product as a binder and the other face and hub portion of which are formed of a comminuted filler and a similar hardened binder, and metallic gauze molded between the materials.

1,501,331. FLUSHING DEVICE. DAVID E. GULICK, San Francisco, Calif. Filed Apr. 26, 1918. Serial No. 231,011. 6 Claims. (Cl. 137—93.)



5. A flushing device comprising in combination a casing divided by a fixed partition into two main chambers, a main discharge outlet axially disposed as to the two main chambers, a main valve to control said discharge outlet, movable means in one of said main chambers dividing it into two sub-chambers, passage means connecting said sub-chambers, movable means dividing the other main chamber into two sub-chambers, passage means connecting said sub-chambers, passage means connecting the last mentioned main chamber with the discharge outlet and a valve to control said passage.

1,501,332. MACHINE FOR SENSITIZING PAPERS AND OTHER FABRICS. BENJAMIN JAMES HALL, Eastcote, England. Filed Mar. 3, 1922. Serial No. 540,823. 2 Claims. (Cl. 34—48.)

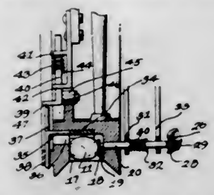


1. In a sensitizing machine, a coating device for applying fluid to the material, a vertical heating chamber having its front and rear sides arranged at an acute angle to each other, a guide roller arranged above the apex of the chamber, front and rear guide rollers arranged adjacent to the lower part of the chamber, and means for drawing the material to be sensitized through the coating device and over the said guide rollers so that it is dried by the heated front and rear sides of the said chamber.

1,501,333. ROPEWAY AND THE LIKE. WILLIAM LINDSAY HAMILTON, Glasgow, Scotland. Filed Apr. 15, 1924. Serial No. 706,708. 11 Claims. (Cl. 104—87.)

1. The combination with a ropeway having a cable track comprising cables suspended in tension between anchorages and auxiliary support by suspension of an auxiliary support capable of being applied to the cables of the track while suspended in tension, having means by which, in the process of application, each cable of the track is caused to be diverted downwardly from its natural curve of suspension at the position of auxiliary support, causing at that position a gap in the continuity of each cable of the track, and having rail portions, one for each gap to complete the continuity of the track.

1,501,334. COTTON PICKER. HERMAN HANSON, Newark, Ill. Filed Aug. 11, 1921. Serial No. 491,423. 3 Claims. (Cl. 56—12.)

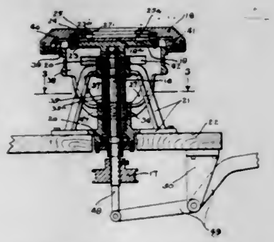


1. A device of the character described comprising a vehicle having a body portion formed with an opening in its lower side extending the entire length of the body, a pair of longitudinally extending partition members hingedly connected along their upper edges to the top wall of the upper side of the body portion, each of said partition members being formed with a plurality of openings therethrough, means for adjustably connecting each partition member adjacent to its lower edge to the adjacent side wall of the body portion, a conduit carried by the vehicle and arranged with its intake end opening through one of the side walls of one side of the body portion adjacent to one end of the wall, a second conduit carried by the vehicle and arranged with its intake end opening through the other side wall of the body portion and at the opposite end of the body from that of the first intake pipe, and a suction creating means arranged in each conduit adjacent to its intake end for drawing detachable adjacent substances, such as the cotton fiber of a standing cotton plant, through the openings in the partition members into the conduits.

1,501,335. POTATO PLANTER. WILLY HARTENSTEIN, Nuremberg, Germany, assignor to Josephine Aman, Rutherford, N. J. Filed Jan. 12, 1923. Serial No. 612,353. 9 Claims. (Cl. 221—127.)

1. A planter for potatoes or the like comprising a movable frame, a hopper thereon for receiving a supply of potatoes, a drum rotating upon the frame and mov-

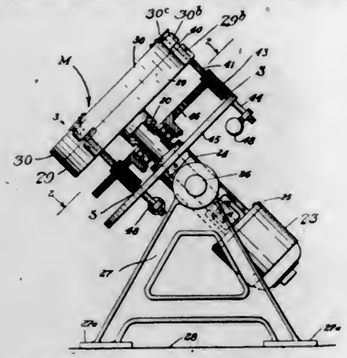
ing through said hopper, said drum having pockets to singly receive potatoes, and means for binding the potatoes in said pockets, said binding means being releas-



able whereby to deposit the potatoes in the ground, and said binding means acting in a direction substantially transverse to the plane of rotation of the drum.

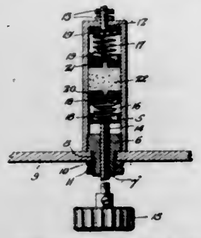
1,501,336. TANNING. FRANZ HASSLER, Hamburg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Sept. 24, 1917. Serial No. 192,925. 4 Claims. (Cl. 149—5.)

4. The process of tanning hides which consists in treating the hides with a slightly acid aqueous solution containing a water-soluble glue-precipitating heat-condensation product of naphthalene sulfonic acid, said heat-condensation product being free from methylene groups and free from hydroxyl groups other than those occurring in sulfonic acid residues, and said product being obtained by treating naphthalene with concentrated sulfuric acid at 130° C. for 8 hours, raising the temperature to 170°–180° C., and heating until the product is completely soluble in water.



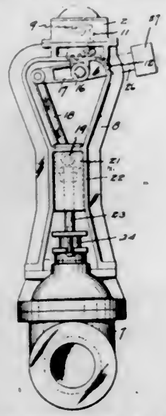
1,501,337. ROTARY CASTING. AUGUSTUS M. HENRY, Brooklyn, N. Y. Filed May 24, 1921. Serial No. 472,169. 14 Claims. (Cl. 22—65.)

1. The art of making articles of annular cross-section by rotary casting, which includes, providing a mould, rotating the mould, and depositing molten iron in the mould, while controlling the time of solidification of the iron, relative to the time required for the iron to be predeterminedly deposited around the mould, so that the iron solidifies in less time than iron similarly cast in a mould having molten iron-contacting surfaces of the usual foundry-sand type, to obtain a very fine, close grain, and yet so that the iron requires a long enough time to solidify, relative to iron similarly cast in a permanent mould having molten iron-contacting surfaces of metal, to prevent chilling.



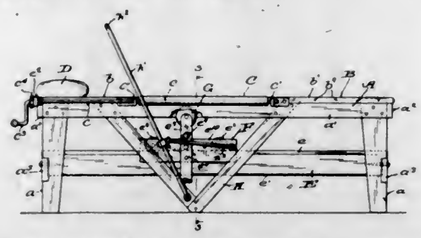
1,501,338. ROTARY CASTING. AUGUSTUS M. HENRY, Brooklyn, N. Y. Filed Oct. 9, 1923. Serial No. 667,524. 16 Claims. (Cl. 22—65.)

1. A method of forming ferrous-metal articles which involves providing a mold having a cavity shaped to correspond with the predetermined external shape of a desired article, rotating the mold and thereafter admitting molten metal thereto, and thus utilizing centrifugal force to form a casting in said cavity while simultaneously applying to the portions of molten metal impacted by centrifugal force against the shaped parts of said mold



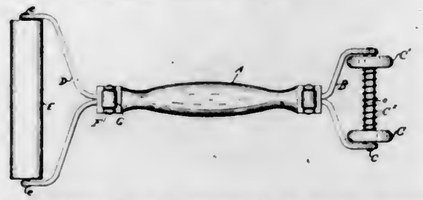
cavity, a material to case-harden the resulting casting as to portions thereof formed by such shaped parts.

1,501,339. RHEOSTAT. SOLOMON RITTER HIPPLE, Williamsport, Pa., assignor to DX Instrument Company, Harrisburg, Pa., a Corporation of Delaware. Filed Dec. 5, 1922. Serial No. 605,048. 8 Claims. (Cl. 219—50.)



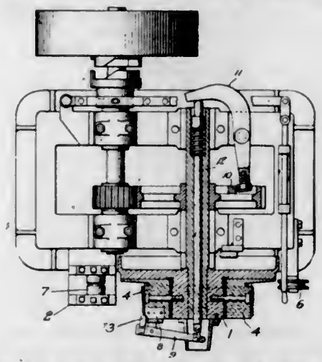
1. A rheostat comprising an insulating casing, differential springs in the opposite ends of said casing, a compressible resistance medium interposed between said springs, and adjusting means at one end of the casing for applying accurately regulated pressure to the springs and the interposed resistance medium.

1,501,340. CONTROL MECHANISM. HORACE L. HIRSCHLER, San Francisco, Calif. Filed May 24, 1920. Serial No. 383,760. 4 Claims. (Cl. 137—139.)



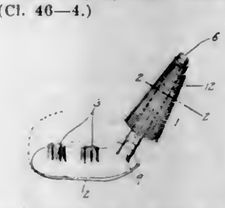
1. A valve control comprising a shaft, means for turning the shaft, and compound means each augmenting the other adapted to connect a valve to said shaft whereby the torque of said shaft is converted into an initially large but subsequently decreasing force applied to said valve in the opening movement thereof.

1,501,341. MASSAGE DEVICE. HALBERT L. HOARD, Fort Atkinson, Wis. Filed Mar. 22, 1919. Serial No. 284,427. 1 Claim. (Cl. 128—57.)



In a massage apparatus, a frame, a flexible support for the body of the patient while recumbent, a carriage longitudinally reciprocable in the frame, massage rollers mounted upon said carriage, and connections to the carriage whereby the latter may be operated to apply massage treatment to the body of the patient.

1,501,342. MASSAGE DEVICE. HALBERT L. HOARD, Fort Atkinson, Wis. Filed June 13, 1919. Serial No. 303,843. 2 Claims. (Cl. 178—57.)

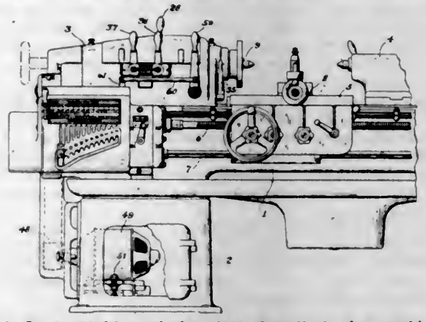


2. A massage device comprising a handle provided with a plurality of pivotally mounted disc rollers at one end thereof, a spring between the said rollers to separate them and permit their axial movement, and a pivotally mounted cylindrical roller at the other end thereof.

1,501,343. MACHINE FOR MAKING WIRE REELS. JOHN A. HOLMQUIST, Woodlawn, Pa. Filed Dec. 30, 1922. Serial No. 609,842. 3 Claims. (Cl. 140—92.2.)

1. In a wire-loop forming machine the combination of a columnar forming-block borne upon the end of a rotary shaft and provided with an interior longitudinal perforation, a beam pivotally mounted upon the free end of said forming-block and arranged within the path of advance of loops delivered from the free end of the forming block, a beam-swinging rod extending through and movable longitudinally within the perforation in the forming block and protruding beyond the free end of the forming block and there engaging the said beam, and a pair of shear blades borne, one by said block, the other by said beam.

1,501,344. PLAYING CLUB. EDWARD L. HUBBARD, Oakland, Calif., assignor of one-half to C. C. Payne, Oakland, Calif. Filed July 3, 1922. Serial No. 572,598. 5 Claims. (Cl. 46—4.)

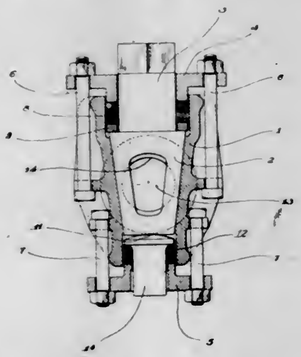


1. In a playing club having a body and hollow neck, a shaft adapted to extend into said neck, a sleeve surrounding said shaft, radial lugs carried by said sleeve and a wire mesh being interposed between the lugs and the neck.

1,501,345. WELL-BORING APPARATUS. SIDNEY H. HUSTON, Houston, Tex. Filed June 1, 1922. Serial No. 565,130. 3 Claims. (Cl. 255—1.)

1. In well boring apparatus the combination with a pipe of flexible members on the outside of the pipe one on each side extending from near the bottom of the pipe up to the ground surface, said members being weakened at or near their lower ends.

1,501,346. LATHE. WALTER E. INGHAM, Newington, and ALEXANDER G. WHITEHEAD, Hartford, Conn., assignors to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 5, 1921. Serial No. 513,139. 35 Claims. (Cl. 82—2.)



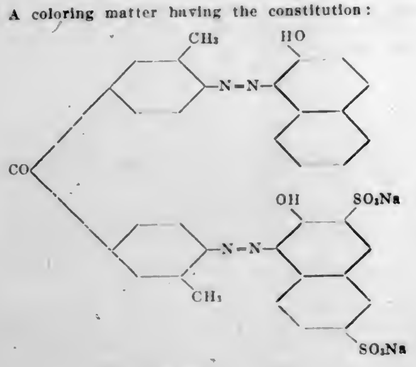
1. In a machine of the class described, the combination of a rotary spindle, a plurality of gears thereon, a shaft adjacent the spindle, gearing including certain of the spindle gears for operatively connecting the shaft

with the spindle, a plurality of back gears adapted to be engaged with other of the spindle gears, the said gearing and back gears being located substantially in the vertical plane of the spindle, and means operatively connected with the shaft for driving the same.

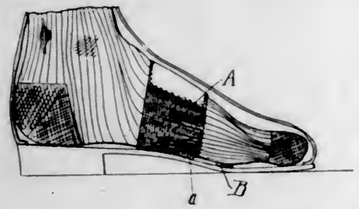
10. In a latue, the combination of a spindle, a driving gear loose thereon, a gear fixed to the spindle, the fixed gear having an internally toothed portion corresponding in contour to the driving teeth of the loose gear and adapted to be engaged and driven thereby, means for sliding the loose gear axially on the spindle into and out of driving engagement with the said toothed portion of the fixed gear, two back gears beneath the spindle, means for raising and lowering the back gears into and out of mesh with the loose and fixed gears, and means for driving the said loose gear.

35. In a machine of the class described, the combination of a bed, an oil reservoir formed therein, a headstock mounted thereon, a spindle rotatably mounted in the headstock, gearing operatively connected to the spindle and extending downwardly into the reservoir, the bed having an opening through the side thereof into the reservoir, a casing supported on the exterior of the bed about the said opening, and a driving unit within the casing operatively connected to the said gearing through the opening, the reservoir being adapted to catch the oil draining from the gearing and spindle and the oil in the reservoir being adapted to lubricate the gearing, spindle and driving unit.

1,501,347. VALVE. OYSTEIN JACOBSEN, Dayton, Ohio, assignor to The Duriron Company, Inc., a Corporation of New York. Filed Nov. 12, 1923. Serial No. 674,194. 3 Claims. (Cl. 25—103.)



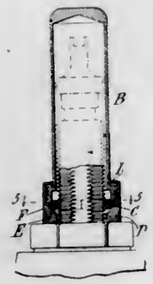
1. In combination in a plug cock, a casing open at both ends and having a tapering seat, a tapering plug provided with a stem projecting from the casing with a packing space between the casing and stem, packing in said space, a follower engaging the packing and applying pressure to seat the plug, a plunger comprising a head opposing the inner end of the valve and a stem projecting from the casing with a packing space between the stem and casing, packing in said space, a follower engaging the packing and applying pressure to said head and causing it to apply pressure to the inner end of the plug, and screw means for forcing the plunger inward.



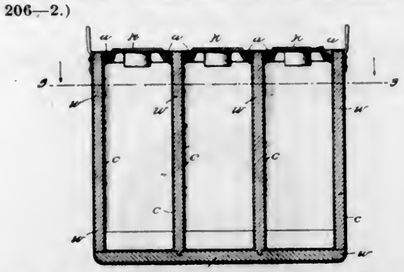
1,501,348. DISAZO COLORING MATTER. ASA WILLARD JOYCE, Newark, N. J. Filed June 7, 1923. Serial No. 644,055. 7 Claims. (Cl. 260—77.)

5. A new coloring matter obtained by combining one molecule of 4.4′ diamino 3.3′ dimethyl benzophenon with one molecule of beta-naphthol and one molecule of 2 naphthol 3.6 disulphonic acid, which coloring matter in the form of a dry powder is of a dark brownish red color, is soluble in water and in concentrated sulphuric acid, and dyes wool and silk from an acid bath bright scarlet shades fast to light, washing, milling and bleaching.

7. A coloring matter having the constitution:

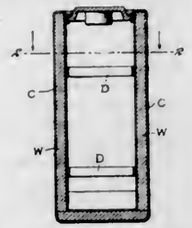


1,501,349. ARCH SUPPORT. GEORGE H. JUNG, Jr., Cincinnati, Ohio. Filed Jan. 7, 1921. Serial No. 435,727. 1 Claim. (Cl. 36—71.)



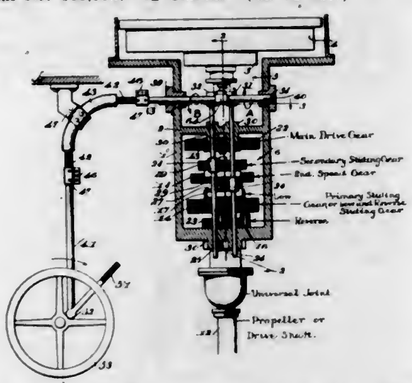
A transverse arch support comprising an elastic band constructed to embrace a foot, an elastic strip secured to the band in such manner as to form a pocket opening in a direction transverse to the band, both band and strip being elastic transversely of the foot as applied, and a pad engaged in the pocket.

1,501,350. DUST CAP. HENRY P. KRAFT, Ridgewood, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 20, 1919. Serial No. 325,097. 13 Claims. (Cl. 152—12.)



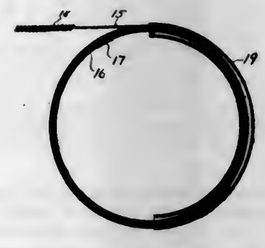
1. In a dust cap for tire valves or the like, the combination of a cap portion, and means for fastening it to a valve or the like comprising a member formed of non-compressible material loosely associated with the cap, and means for contracting said member to engage the valve by a rotative movement of the cap.

1,501,351. CONTAINING CELL FOR ELECTRIC BATTERIES. LAMAR LYNDON, New York, N. Y. Filed Nov. 1, 1919. Serial No. 335,060. 8 Claims. (Cl. 206—2.)



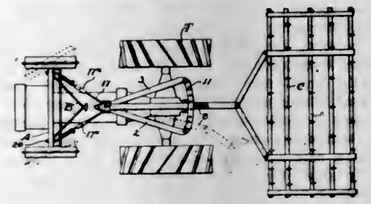
1. A battery container made of wood coated with an impervious acid-resisting substance, a cover adapted to co-operate with said container, and a gasket interposed between said cover and said container formed by a thickening of said impervious, acid-resisting substance.

1,501,352. CONTAINING CELL FOR ELECTRIC BATTERIES. LAMAR LYNDON, New York, N. Y. Filed Dec. 23, 1919. Serial No. 347,014. 5 Claims. (Cl. 204—29.)



1. A battery container made of nonacid-resisting material and covered with a pyroxylin plastic, said pyroxylin plastic being thickened over certain predetermined areas.

1,501,353. GEAR CONTROLLER. JAMES CLARENCE MCDOWELL, Punta Rassa, Fla. Filed June 29, 1923. Serial No. 648,592. 12 Claims. (Cl. 74—39.)



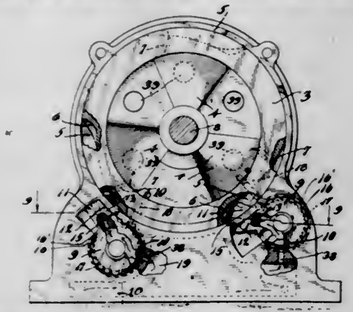
1. A gear controller comprising a selecting rod, bushings in which a portion of the rod has bearing to slide and turn in respect to a shifting rod, a selecting arm fixedly carried by said rod, a shoulder carried by the shifting rod with which said arm is adapted to engage, a guide through which another part of the selecting rod extends said guide having a longitudinal slot and a connected branch slot the ends of which terminate in recesses, a pin carried by the selecting rod working in said slots, and a shifting lever carried by the selecting rod being adapted to move the selecting rod axially so that the pin moves toward said branch slot then turn the rod so that the pin enters in either recess, said moving and turning of the shifting lever correspondingly sliding the arm toward said shoulder then rocking the arm to shift the shifting rod.

1,501,354. PIPE-CLEANING DEVICE. DANIEL G. MARKS, Los Angeles, Calif. Filed Oct. 21, 1922. Serial No. 595,956. 5 Claims. (Cl. 137—30.)

1. A device of the character described comprising a length of resilient wire having one end coiled upon itself and secured in coiled form, and means for rotatably receiving the coiled end.

1,501,355. VEHICLE HITCH. JOHN R. MILLER, Van Nuys, Calif. Filed Feb. 8, 1923. Serial No. 617,732. 6 Claims. (Cl. 280—33.12.)

1. A draft hitch for tractors, comprising a frame having arcuate transverse rear end members, means for attaching the said members to the usual draft lug of the tractor, elastic means at the forward end of the frame for connecting it to the tractor front axle, and a draft link pivotally connected to the front end of the frame and adapted for lateral adjustment and sliding action between the rear members of the frame.



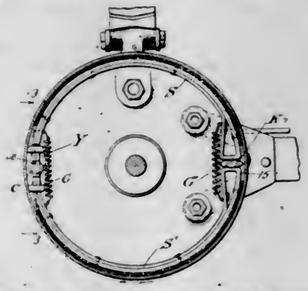
1,501,356. METHOD OF TREATING MOLTEN-METAL COATING BATHS AND BATH PRODUCED THEREBY. EDWIN R. MILLRING, Belleville, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Feb. 8, 1923. Serial No. 617,843. 7 Claims. (Cl. 148—7.)

1. The method of treating molten metal baths to incorporate phosphorus therein, which consists in adding to the bath, an alloy of phosphorus and lead.

1,501,357. ROTARY INTERNAL-COMBUSTION ENGINE. ROBERT ALEXANDER MOORE, New York, N. Y. Filed May 20, 1920. Serial No. 382,732. 11 Claims. (Cl. 123—15.)

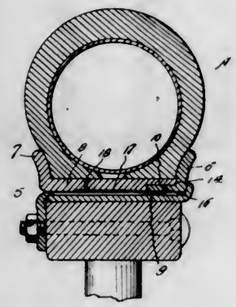
1. In a rotary internal combustion engine, the combination with a casing, of a rotor mounted therein and formed with piston faces, a valve movable into and out of cooperative relation with the faces, the movement of the valve automatically controlling the admission of

the charge, and ignition means including a fixed contact element and a movable contact element, the latter being



mounted upon and carried by the valve so as to be movable therewith and arranged to be brought into engagement with the fixed contact at the proper time.

1,501,358. METHOD OF MAKING RING MOUNTINGS. THOMAS MOUNTFORD, Newark, N. J., assignor to Blancard & Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed July 7, 1922. Serial No. 573,380. 9 Claims. (Cl. 29—160.6.)

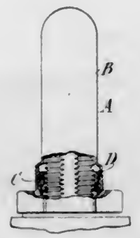


9. The method of producing a ring mounting, which includes, providing an integral metallic blank having a shank portion, transverse frame portions and portions extending longitudinally of said shank portion and beyond said transverse portions, bending said blank to shape said shank portion into a complete one-piece ring-shank, and to position said transverse frame portions to form a horizontal frame for supporting side pieces, and to position said extending portions to form vertical supports for side pieces, and attaching side pieces to said shaped blank by soldering them to said horizontal frame and to said vertical supports, the upper ends of said vertical supports being formed to constitute cramps adapted to cooperate with cramps on the upper edges of said mounted side pieces to support a jewel.

1,501,359. BRAKE SHOE. HENRY W. MUHLEISEN, Los Angeles, Calif., assignor, by direct and mesne assignments, to W. S. Rush & Co., Los Angeles, Calif., a Partnership consisting of W. S. Rush, E. S. Rush, and B. C. Graves. Filed Feb. 9, 1922. Serial No. 535,137. 9 Claims. (Cl. 188—78.)

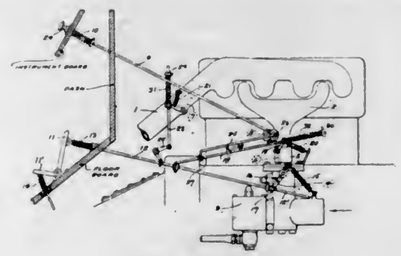
1. In combination, a brake drum, brake shoes within the drum having pivoted ends reversely tapered and arranged in overlapped relation to each other, means associated with the overlapped ends for effecting expansion of said shoes, and means at the opposite ends of the shoes for forcing the same into engagement with the brake drum.

1,501,360. TIRE RIM. FRED T. MURRAY, Cameron, S. C. Filed Mar. 5, 1923. Serial No. 622,717. Renewed May 16, 1924. 1 Claim. (Cl. 301—35.)



A tire rim including a main rim section having a tire receiving base, a radial flange at one edge of the base and a channeled portion at the other edge of the inner surface, the inner edge of the channeled portion being beveled, and a co-operating rim section having a radial flange, an annular recess formed therein and a flange extending laterally on the inner edge of the radial flange having a beveled edge, said lateral flange seating in and co-operating with the channel of the main rim section, said flange being formed on the inner surface with a plurality of slots and resilient members mounted on the main flange and radially movable for engagement in said slots for locking the rim sections together, whereby the lateral flange of the co-operating rim section will seat in the channel and the beveled faces will co-operate for preventing relative radial movement in assembled relation, the edge of the main section fitting in the recess in the co-operating section, and said resilient member being disengageable from said slot upon a relative circumferential movement between the rim sections.

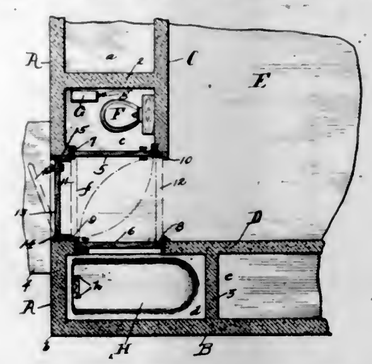
1,501,361. DUST CAP FOR TIRE VALVES. EUGENE V. MYERS, East Orange, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 24, 1919. Serial No. 340,389. 4 Claims. (Cl. 152—12.)



4. In a dust cap or the like, the combination of a cap portion and an internal sleeve threaded to said cap portion and having spring means intermediate its ends and means for positively moving said spring means radially inward upon relative axial movement between said cap portion and sleeve.

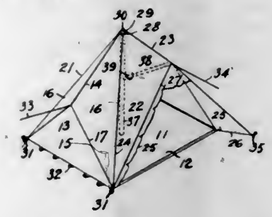
1,501,362. DUST CAP. EUGENE V. MYERS, East Orange, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 19, 1919. Serial No. 345,995. 10 Claims. (Cl. 152—12.)

1. In a dust cap or the like, the combination of a cap portion and a foot portion arranged within the cap portion having a non-rotative engagement with the tire valve or the like and capable of relative axial movement, and a substantially non-compressible clamping device of circular form and normally of larger diameter than the tire valve, positioned between said cap portion and foot portion, and adapted to be moved into clamping position by engagement with means on said portions brought about by a relative axial movement of said portions.



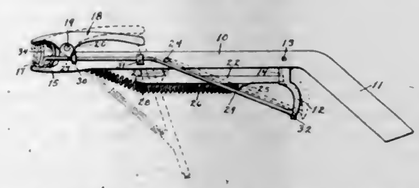
1,501,363. AUTOMOBILE ENGINE BRAKE. RICHARD G. NOBLE, Riverside, Calif. Filed Jan. 21, 1924. Serial No. 687,620. 7 Claims. (Cl. 188—99.)

1. In a gas engine having inhaust and exhaust pipes, and a fuel throttle valve for admitting vaporized fuel to the inhaust, an auxiliary valve in the inhaust pipe between the engine and the fuel throttle adapted for shutting off the inhaust, and a similar auxiliary valve in the exhaust pipe for closing the same, and a common control for all three valves whereby the auxiliary valves are closed after the throttle valve is in idling position.



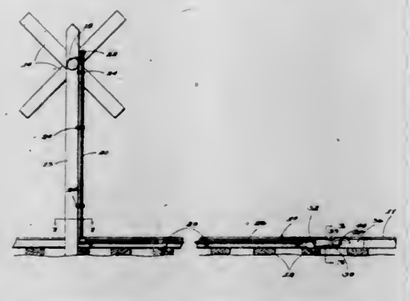
1,501,364. BUILDING CONSTRUCTION. EARLE L. OVINGTON, Santa Barbara, Calif. Filed July 18, 1921. Serial No. 485,452. 12 Claims. (Cl. 20—1.11.)

1. A building construction including a plurality of compartments adapted to intercommunicate, another compartment adapted to communicate with one of said first named compartments, closure frames for each of said compartments, closure members mounted on certain of said frames and each adapted to close two different door openings to establish communication between said first mentioned compartments to the exclusion of the second mentioned compartment, or to establish communication between one of said first named compartments and said second named compartment, one of said first named compartments constituting a normal passageway between



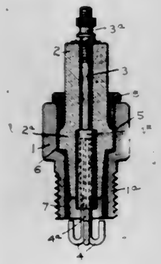
other of said first named compartments, and a door extending athwart the said passageway and adapted to close the same when in normal position.

1,501,365. TENT. HENRY ERNEST LLOYD OWEN and KENNETH HALLIDAY MACARTNEY, Port Arthur, Ontario, Canada. Filed May 5, 1922. Serial No. 558,795. 4 Claims. (Cl. 135—1.)



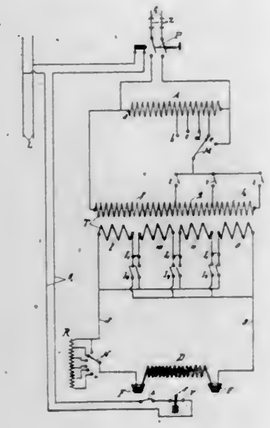
1. In a tent, a wall comprising a substantially vertical lower portion and a pair of sloping upper portions, meeting the lower portion and one another at three ridge lines converging to a common point within the periphery of the wall.

1,501,366. ANIMAL-RINGING TOOL. FRANK PETERSON, Pocahontas, Iowa. Filed May 14, 1923. Serial No. 638,891. 7 Claims. (Cl. 128—332.)



1. A ringing and marking tool, comprising a bar formed with a handle at one end and a rigid jaw member at the other end, a trigger pivoted on said bar adjacent said handle, a jaw lever pivoted on said bar adjacent and adapted to cooperate with the first jaw member, an operating lever pivoted between its ends on said bar, one end of said operating lever adapted for engagement and retention by said trigger, and a spring tending to oscillate said lever when released from said trigger, said operating lever adapted to engage said jaw lever forcibly under the influence of said spring to move said jaw lever toward the rigid jaw member.

1,501,367. RAILWAY CROSSING AND ALARM SIGNAL. WILLIAM W. PHILLIPS, Calgary, Alberta, Canada. Filed Jan. 30, 1923. Serial No. 615,793. 5 Claims. (Cl. 246—294.)



1. A railway signal structure including an audible signal; an operating cable for said audible signal; enclosing and protecting means for said operating cable; guiding means within said enclosing and protecting means; a wheel actuated member having a branch connected with said operating cable; said wheel actuated member having a second member with an arcuate head carried thereon and normally in the path of travel of wheels riding on an adjacent track rail; means to resiliently retain said wheel actuated member in normal position; said audible signal including a gong and a striking hammer; said operating cable being connected directly with said striking hammer; and means connected with said striking hammer to resiliently retain the latter in operative position.

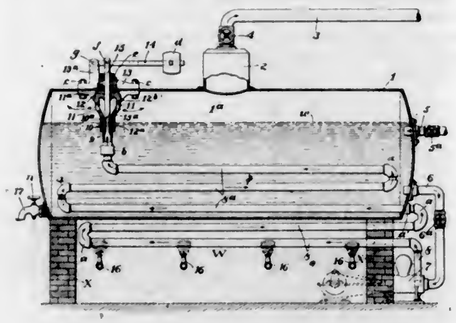
1,501,368. SPARK PLUG. JAMES W. POWELL, Anaconda, Mont. Filed June 6, 1921. Serial No. 475,303. 2 Claims. (Cl. 123—169.)

1. The herein described spark plug comprising a metal body having a reduced externally threaded lower portion, and a socket in its upper end internally threaded; a sleeve of non-conducting material having its upper portion entered in said socket and projecting above the body and having a lower end portion reduced and projecting below the socket; an annular nut confining the sleeve in the socket; a copper lining pressed within the body below the socket; a rod extending axially through the sleeve and provided on its upper end with means for attaching a conductor thereto; and a plurality of copper electrodes having their shanks assembled parallel with and connected to the lower end of the rod by means of a copper sleeve and having their lower ends diverging radially outward and curved upwardly and terminating near the lower edge of the copper lining in the lower end of the body, said copper lining, copper sleeve, and copper electrodes preventing corrosion and carbonizing of the firing points and adjacent parts of said plug.

1,501,369. ELECTRIC TEMPERING. ETTORE RAMONDO, Turin, Italy. Filed Feb. 2, 1921. Serial No. 441,791. 7 Claims. (Cl. 148—10.)

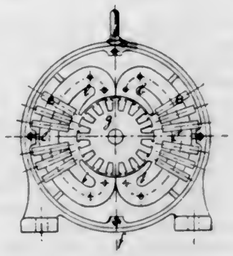
1. In the art of tempering, transforming alternating current, re-transforming the transformed current and simultaneously proportioning the re-transformed current to give an amperage suited to different lengths, cross-sections and weights of the work through which the re-transformed current passes.

5. In electric tempering apparatus, an auto-transformer, means to take therefrom current of different values, a second transformer having a primary winding supplied with such current and a plurality of electrically inter-connectible secondary windings and means to supply current from said secondary windings.



1,501,370. SMOKING PIPE. VERNIE K. RAMSEY, Santa Rosa, Calif. Filed Oct. 20, 1921. Serial No. 508,991. 2 Claims. (Cl. 131—12.)

2. A smoking pipe of the character described comprising a bowl having a reduced end so as to form a seat, a cap fitting on the seat having a plurality of notches along its edge and passages leading from the notches to the inside of the pipe for admitting air into the same, and a clip secured to the cap adapted to operatively engage the bowl for holding the cap to the same.

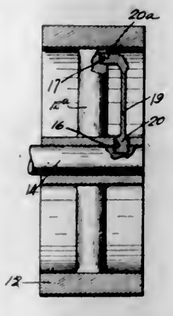


1,501,371. APPARATUS FOR CRACKING AND REFINING OIL. EUGENE A. REILLY and ROBERT M. MCLAIN, Fort Worth, Tex. Filed Oct. 19, 1921. Serial No. 508,825. 5 Claims. (Cl. 196—3.)

1. Apparatus for distilling and cracking oil, comprising a still, a conduit for liquid outside of the still, means for supplying oil under pressure to said conduit, means for heating said conduit, a conduit in the still connecting with the outside conduit, for heating a body of oil in the still, and a spraying device connecting with with the inner conduit in the upper part of the still,

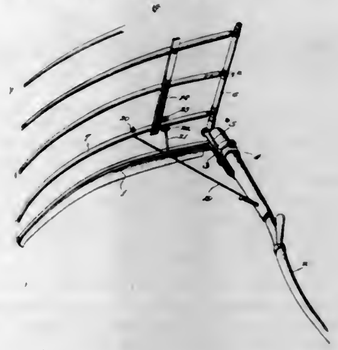
whereby oil may be forced under pressure, heated and serve for heating a body of oil in the still and then sprayed in contact with such body of oil.

1,501,372. MAGNETIC CIRCUIT OF ELECTRICAL MOTORS AND DYNAMOS. HENRY ROBINSON, Hoboken, near Antwerp, Belgium. Filed Aug. 17, 1921. Serial No. 493,080. 3 Claims. (Cl. 171—209.)



1. In dynamos and electric motors, field magnets each composed of a plurality of superposed sheet-iron stampings and having an arc-shaped yoke portion formed at the ends with integral pole-halves themselves provided with integral pole-tips in combination with a plurality of field-coils slipped over said pole tips onto said yoke-portion; and a circular housing having the field-magnets mounted therein; substantially as described.

1,501,373. PAVEMENT AND PROCESS OF CONSTRUCTING THE SAME. FRANK O. RONK, Detroit, Mich. Filed Dec. 1, 1921. Serial No. 519,055. 9 Claims. (Cl. 94—6.)

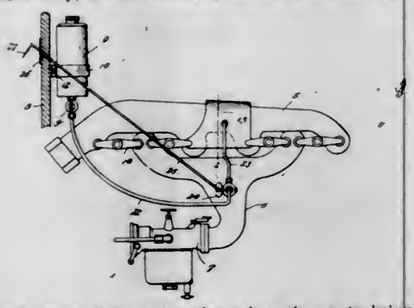


1. A pavement formed of two or more layers containing mineral and bituminous material and secured together by a bituminous elastic cement, the uppermost layer forming the wearing surface and being more rigid than the layer beneath it, and the lower layer being relatively resilient to cushion shocks received by the uppermost layer.

1,501,374. SPRING LOCKING DEVICE. SAMUEL M. SAWYER, Los Angeles, Calif., assignor of one-fourth to Claude C. Luce, Los Angeles, Calif. Filed May 19, 1921. Serial No. 470,855. 1 Claim. (Cl. 74—8.)

The combination with relatively movable members, of locking means for the same including a spring having a threaded connection at one end with one of said members and received at its other end in a recess in the second member.

1,501,375. GRAIN CRADLE. OLIVER O. SCHWOB, Moundsville, W. Va. Filed Oct. 26, 1922. Serial No. 597,052. 4 Claims. (Cl. 56—324.)

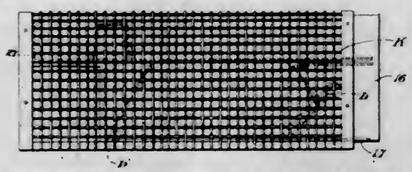


4. In a grain cradle, the combination of a post, a blade, a snath, means for connecting the blade and the post to the snath, a plurality of parallel fingers, detachable couplings connecting the fingers to the post, a connecting bar extending across the fingers parallel with the post and detachably secured to each finger and held against relative movement thereon, a brace secured to the snath at one end and secured at its opposite end to the innermost finger in advance of the said connecting bar, and a bracing coupling adjustably secured at one end in the said finger in rear of the connecting bar and having its opposite end engaged through the blade and provided with oppositely extending lugs engaging against the opposite surfaces of the blade.

1,501,376. PRIMER AND AIR INTAKE FOR GAS ENGINES. LARKIN J. SKINNER, Fletcher, Okla. Filed Mar. 6, 1923. Serial No. 623,130. 1 Claim. (Cl. 123—180.)

An explosive engine starter comprising a tank independent of the tank which is normally employed for supplying liquid fuid to the engine, a valve body applied to the intake manifold of the engine at a point between the point of connection of the said intake manifold with

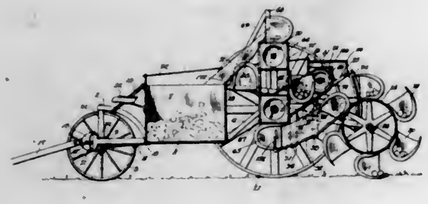
the carburetor and the branches of the said manifold, a pipe for conducting preheated air from the exterior of the exhaust manifold of the engine at a point between the ends thereof and connected with valve bodies, a pipe connected with the first mentioned tank and with the said valve body, a valve turnably mounted in the valve



body and means for turning the valve, the parts being so arranged that the heated air and fuel from the first mentioned tank may be admitted in a mixed condition into the intake manifold and in advance of the mixture which is led into the said manifold from the said carburetor.

1,501,377. VEHICLE SIGNAL. WILSON D. STOUT and FRANK F. STOUT, Los Angeles, Calif. Filed June 21, 1921. Serial No. 479,418. 8 Claims. (Cl. 116—50.)

1. A device of the character disclosed, comprising an elongated casing, a tubular member slidably mounted within the casing, a signal member mounted in connection with the tubular member and adapted to be projected from and retracted within the casing, means for sliding the tubular member within the casing, and means for throwing the signal member into a plurality of positions when in projection from the casing to display corresponding signals.



1,501,378. ANIMAL TRAP. SAMUEL TALISMAN, San Bernardino, Calif. Filed Dec. 29, 1921. Serial No. 525,555. 7 Claims. (Cl. 43—69.)

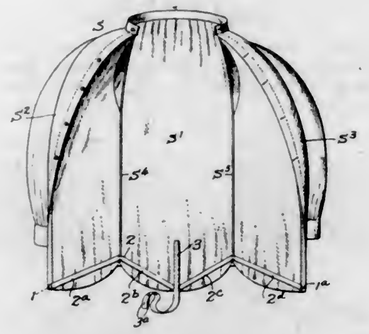
1. An animal trap comprising a cage, and a trap section removably fitted in the cage and including a tilting platform normally urged to a horizontal position, a bait tray swingingly supported in the same plane as the platform and at one end thereof, and doors beneath the platform mounted to swing in one direction only one of said doors allowing the entrance of an animal to the trap section beneath the platform, and the other door allowing the entrance of an animal to the cage from the trap section.

1,501,379. STONE GATHERER. LELAND D. TETER, Livingstonville, N. Y. Filed Nov. 25, 1922. Serial No. 603,200. 5 Claims. (Cl. 55—17.)

1. In a stone-gatherer, the combination of a portable frame including a rear axle, a rotatable gathering instrumentality supported from the frame in rear of the axle, gearing connecting said instrumentality with the axle, a receptacle on the frame in advance of the axle, a chute having its rear end adjacent the top of the gathering instrumentality and its forward end beneath the axle, an elevator having its lower end mounted upon and driven directly by the axle, and a chute extending downwardly and forwardly between the top of the elevator and the receptacle.

2. In a stone-gatherer, the combination of a portable frame including a rear axle, a rotatable gathering instrumentality supported in rear of the axle and geared to the same, a chute rigidly supported on the frame between said instrumentality and the axle and extending under the axle, an elevator mounted on and rising from the axle and driven directly thereby, the elevator being constructed to pass through the lower end of the chute and take material therefrom, and a receptacle on the frame in advance of the elevator and receiving material therefrom.

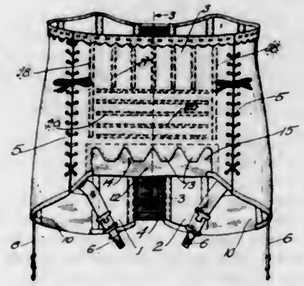
3. In a stone-gatherer, the combination of a portable frame including a rear axle, a rotatable gathering instrumentality supported in rear of and driven from the axle, a chute secured rigidly upon the frame in rear of the axle and extending from a point adjacent the top of the gathering instrumentality to a point beneath the axle, upstanding stops at the lower end of the chute, a receptacle on the frame in advance of the axle, and an elevator mounted on and driven directly by the axle and constructed to pass through the lower end of the chute and between the stops thereat to take material from the chute and deliver it to the receptacle.



4. In a stone-gatherer, the combination of a portable frame, a rotatable gathering instrumentality mounted thereon, a plurality of hangers secured upon the frame, a plurality of parallel bars secured rigidly upon and connected by the hangers and receiving material from the gathering instrumentality, and an elevator disposed over the lower ends of the parallel bars and including series of parallel free rigid fingers arranged to pass between the lower ends of the parallel bars and take up material deposited thereon.

5. In a stone-gatherer, the combination of a portable frame, a rotatable gathering instrumentality mounted upon the frame and comprising a cylindrical drum and series of rigid curved fingers secured rigidly upon the drum, the fingers in each series being parallel and free of each other throughout their extent, a chute supported rigidly upon the frame to receive material from the gathering instrumentality and consisting of a series of inclined parallel bars extending into the path of the said fingers to permit the fingers to pass between the bars, and an elevator disposed over the lower ends of the said bars and including series of similar fingers arranged to pass between the lower ends of the parallel bars and take up material deposited thereon.

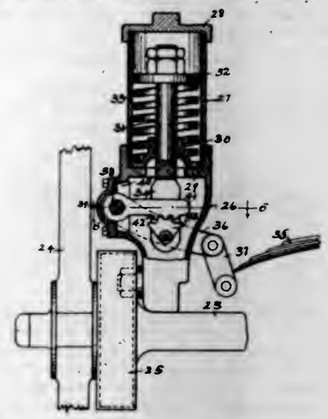
1,501,380. SHIRT. CARL TUTELMAN, Philadelphia, Pa. Filed Jan. 5, 1924. Serial No. 684,633. 6 Claims. (Cl. 2—77.)



1. In combination with a coat type shirt, a tape attached to the lower outer corners and at intervals along the lower edge of said shirt; said tape being of less length

than the length of the lower edge of said shirt; means for fastening the lower corners of said shirt together;

and a crotch strap extending from the center of the back of said shirt and adapted to be attached to said fastening means at the front of the shirt.



1,501,381. CORSET. ELIZABETH VAN DUSEN, Los Angeles, Calif. Filed Sept. 23, 1920. Serial No. 412,107. 4 Claims. (Cl. 2—73.)

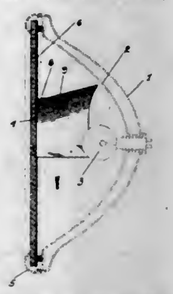
1. A corset comprising a pair of back sections and a front section, the lower portion of the latter being cut away to form a transversely disposed opening and there being inverted V-shaped openings extending upwardly into said front portion from said transversely disposed opening, a section of elastic material positioned in said transversely disposed opening and the inverted V-shaped etxensions thereof, and a series of horizontally disposed reinforcing members arranged parallel with each other in the front section of the corset immediately above said section of elastic material.

1,501,382. SHOCK ABSORBER. WILLIAM H. WHISLER, Houston, Tex. Filed Nov. 28, 1922. Serial No. 603,828. 13 Claims. (Cl. 267—17.)

8. In a shock absorber, a spring and a support therefor, a tension device for the spring comprising a member engaging the free end of the spring and an operating rod connected to said spring-engaging member and having an opening therein, a rack member pivotally mounted on the operating rod, and a pivoted lever having a rack face

projecting within the opening in the rod and meshing with the pivoted rack member.

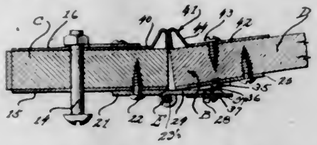
1,501,383. MOTOR FUEL. DALY O. WHITE, Portland, Me. Filed Sept. 28, 1923. Serial No. 665,455. 5 Claims. (Cl. 44—9.)



1. A fuel composed of alcohol and a relatively small addition of NH_4Cl.

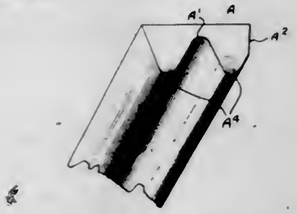
1,501,384. COMBINATION BAIT CUP AND TRIGGER. JOSEPH FRANKLIN WILLS, North Little Rock, Ark. Filed May 14, 1923. Serial No. 638,779. 1 Claim. (Cl. 43—81.)

A combined bait cup and trigger for mouse and rat traps comprising a strip of sheet metal bent downwardly and then upwardly at its inner end for pivotal connection with the bottom of the trap, and bent downwardly near its outer end and then upwardly at its extreme outer end to form the opposite ends of a rectangular bait cup, said strip having a pair of opposed integral wings on its side edges between said ends of the cup, said wings being bent upwardly to form the sides of the cup, thereby providing a deep, tight cup the entire top of which is open for the reception and holding of a comparatively large quantity of finely ground bait.



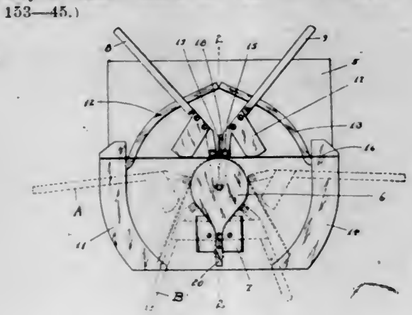
1,501,385. NONGLARE LENS. BERTRAM S. WRIGHT, Sacramento, Calif. Filed Mar. 12, 1923. Serial No. 624,335. 4 Claims. (Cl. 240—48.4.)

1. A lens for headlights including an opaque plate mounted in front of and above the horizontal center line of the lamp of the headlight, said plate having a trans-



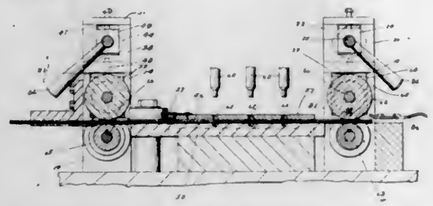
versely central opening extending upwardly from the lower edge thereof, and a hood around said opening extending inwardly of the plate to and about the lamp, said hood being open along the bottom.

1,501,386. GRASS DIVIDER FOR MOWERS. CORAL H. WRIGHT, Joseph, Idaho. Filed July 25, 1922. Serial No. 577,372. 6 Claims. (Cl. 56—314.)



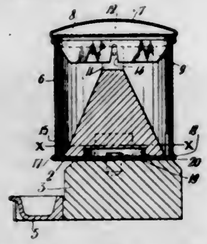
1. The combination with the cutter bar of a mowing machine, of a grass divider therefor including a minor section and a major section, means rigidly connecting the minor section with the outer end of the cutter bar, means hingedly connecting the minor and major sections together for allowing free swinging movement of the major section toward the cutter bar, and means for permitting detachment of the major section from the minor section by a longitudinal sliding movement when undue stress is placed on the major section at the inner face thereof.

1,501,387. PIG. HENRY C. ZENKE, Richmond Hill, N. Y. Filed Oct. 11, 1922. Serial No. 593,737. 3 Claims. (Cl. 22—218.)



3. A pig of type-metal having ribs on which the pig may slide in a feeder, and one or more intermediate grooves between the ribs, forming an extended heat-absorbing surface.

1,501,388. DEVICE FOR FORMING METALLIC OBJECTS. WILLIAM J. BAKER, Newport, Ky. Filed May 5, 1922. Serial No. 558,775. 2 Claims. (Cl. 153—45.)



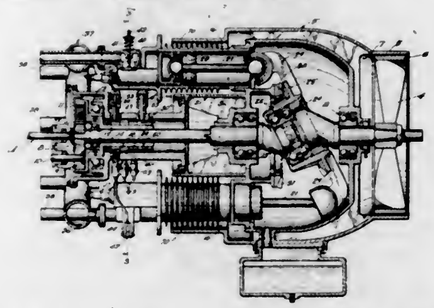
1. In a device of the class described, the combination of a base, a pattern mounted on the base, a track extending about the pattern, levers pivotally mounted between the base and the pattern, rollers mounted on the levers and spaced from the pattern at a distance substantially equal to the thickness of the material to be formed about the pattern, the levers being adapted to be moved about their pivotal mountings whereby to cause the rollers to be moved about the pattern, the track being adapted to support the levers and the material to be formed.

1,501,389. MACHINE FOR FORMING METALLIC STRIPS. WILLIAM J. BAKER, Newport, Ky. Filed May 5, 1922. Serial No. 558,776. 5 Claims. (Cl. 153—2.)

1. In a device of the class described the combination of a mechanism adapted to turn the edges of a strip upon itself, a mechanism adapted to clamp the edges of the strip upon a filler carried by the strip, means to feed the strip and filler thru the first two mentioned mechanisms, and means to perforate the filler and strip.

1,501,390. CONTAINER FOR HOLDING AND DELIVERING POWDER. FRANK ARTHUR BOLTON, London, England. Filed Apr. 14, 1923. Serial No. 632,160. 9 Claims. (Cl. 221—65.)

5. In a container for holding and delivering powder in small quantities, a fixed cylindrical casing having a delivery aperture therein, an inner container rotatably mounted within the fixed casing and having at least one opening at the bottom of said inner container adapted to be traversed across the delivery aperture when the inner container is rotated, an upright cone within the inner container having its base circumference in proximity to the base of said container in order to direct the powder through the delivery aperture when said aperture is traversed by an opening in said inner container, a removable lid to the inner container, a fixed blade extending across the inner container and forming a driving engagement with the lid, a slot in the cone through which this blade passes so as to cause the cone to rotate with the container when the latter is turned by the lid.

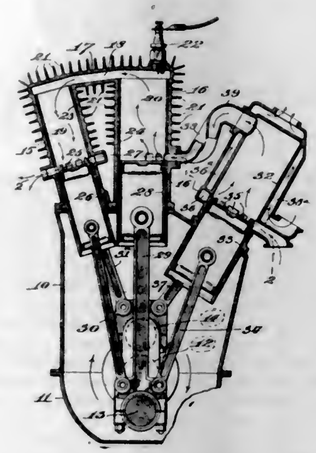


1,501,391. PAPER SHADE ROLLER AND METHOD OF FORMING. HARRY CAMPBELL BRENEMAN, Cincinnati, Ohio, assignor to The Capitol Shade Roller Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 3, 1921. Serial No. 466,498. 1 Claim. (Cl. 93—81.)

The herein described process of forming a window shade roller which consists in rolling upon a mandrel a strip of paper with the grain running parallel to the axis, inserting a uniform marginal portion of the strip radially into a mandrel roll, adhesively coating the paper strip except the insert portion and sufficient to non-adhesively envelop the mandrel, drying the rolls

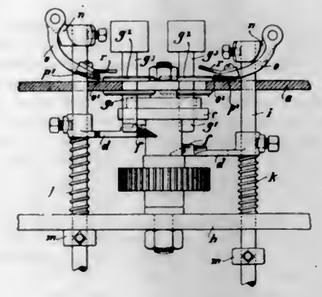
while supported in horizontal rows vertically spaced from one another, and finally surfacing the dried roll with a water-resisting material.

1,501,392. VALVE GEAR FOR INTERNAL-COMBUSTION ENGINES. EVERETT R. BURTNETT and TITUS E. BERRY, Los Angeles, Calif.; said Burtnett assignor to said Berry. Filed May 11, 1920. Serial No. 380,547. 7 Claims. (Cl. 123—43.)



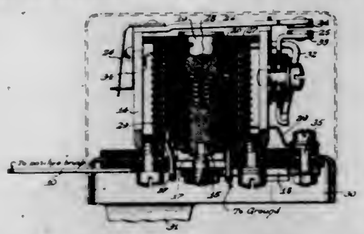
1. An internal combustion engine comprising a drive shaft, cylinders around said shaft, a sleeve on said shaft, an internal gear fixed to said sleeve and surrounding said drive shaft, a pinion on said drive shaft, an idler gear between said pinion and said internal gear, said gearing being arranged to reversely rotate said sleeve with respect to the drive shaft and at a speed less than that of the drive shaft, members on said sleeve, and valves for the respective cylinders controlled by said members.

4. An internal combustion engine including a drive shaft, cylinders around said drive shaft and parallel thereto, a combustible mixture intake valve for the respective cylinders, a second valve for the respective cylinders communicating with the atmosphere, said cylinders and their valves being arranged in a plurality of sets, controlling means for the respective sets of valves forming a six stroke cycle of operation for the engine, said controlling means for each set including a cam on the drive shaft for successively opening the intake valve of the respective cylinders to form the intake stroke of the cycle of operation of the engine, and a second cam on said drive shaft controlling the second mentioned valve for the respective cylinders, said cam being arranged to successively open said second valves of the respective engine cylinders during the fourth, fifth and sixth strokes of the cycle of operation of the engine to provide an exhaust stroke for the products of combustion, an air intake stroke and an air exhaust stroke.



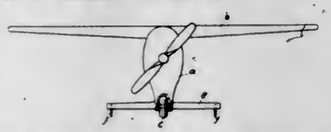
1,501,393. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor of one-half to Homer A. Brunell, Los Angeles, Calif. Filed May 19, 1923. Serial No. 640,167. 4 Claims. (Cl. 123—53.)

3. An internal combustion engine having six cylinders arranged in two radial rows of three cylinders each, the first and second cylinders in each row in the direction of crank rotation being joined at their head ends by a compression clearance common to the chambers in both of said cylinders, there being ports formed in the walls of all of the cylinders, the ports in the first cylinder in each row in the direction of crank rotation being adapted to function for the exhaust of products of combustion from the first and second cylinders in the direction of crank rotation in the respective rows,



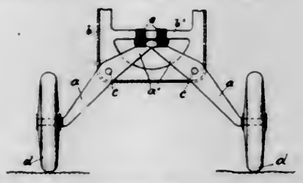
the ports in the second cylinder of each row functioning for the admission of gaseous fuel to the first two cylinders in the direction of crank rotation in the respective rows, and the third or last cylinder in each row functioning for the precompression and pumping of gaseous fuel for the induction function into the second cylinder of the other or opposite radial row of cylinders.

1,501,394. LACE-BRAIDING MACHINE. HERMANN BUSCHER, Langerfeld, near Barmen, Germany, assignor to Max Henkels, New York, N. Y. Filed Jan. 2, 1923. Serial No. 610,472. 3 Claims. (Cl. 96—11.)



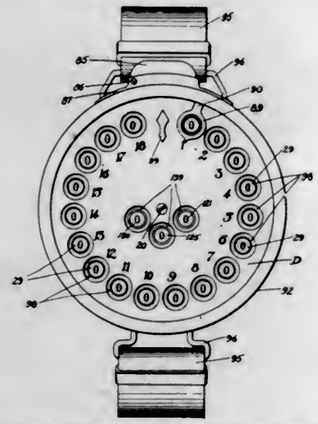
1. A lace-braiding machine comprising: a bobbin-track and bobbin-carriers guided therein, said bobbin-track having enlargements for temporarily arresting bobbin-carriers, constantly rotating drivers for said bobbin-carriers, a pattern-gear controlled rod movable up and down, a guide-member mounted on said rod for guiding a bobbin-carrier into an enlargement of said bobbin-track and out of the path of said drivers, a pawl-like member linked to the upper end of said rod for restoring an arrested bobbin-carrier to the path of the said drivers, a substantially triangular plate on the free end of said pawl-like member for guiding a non-arrested bobbin-carrier past the enlargement of said bobbin-track.

1,501,395. CURRENT REGULATOR. KENNETH CRITTENDEN, Highland Park, Mich. Filed Jan. 16, 1922. Serial No. 529,515. 3 Claims. (Cl. 171—313.)



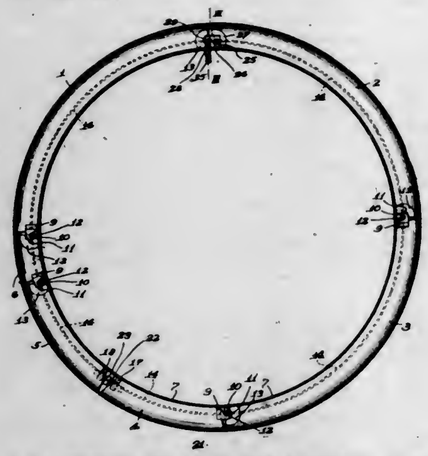
1. A device of the character described comprising a U-shaped frame having an opening in the horizontal member thereof, a fixed core mounted upon said frame with one end secured within said opening and extending therethrough, a movable core within the fixed core and extending through the opening in the frame, a low resistance series coil wound upon the fixed core for connection in a battery circuit, an armature on the frame and extending across an end of the fixed core and connected in a battery circuit to open and close the same, a shunt coil wound upon the fixed core with one end electrically connected to the core and its opposite end grounded, variable resistance means for connection within a field circuit, and comprising a fixed contact member carried by the frame, and a movable contact member carried by the movable core, and a high resistance coil connected in the field circuit in parallel with said variable resistance means.

1,501,396. CARRIAGE FOR FLYING MACHINES. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor to the Firm Dornier Metallbauten Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Apr. 2, 1923. Serial No. 629,412. 3 Claims. (Cl. 244—2.)



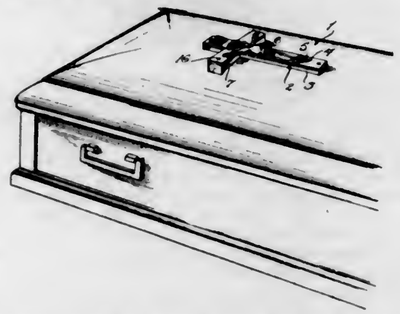
2. Flying machine comprising in combination, a hull, a main bearing plane substantially flush with the upper surface of said hull, a wheel mount forming part of and extending downwards from the bottom portion of said hull, a wheel supported in said wheel mount in the longitudinal axis of said hull, a stump wing or auxiliary bearing plane extending on either side of said wheel mount and supporting means at the outer end of each stump wing.

1,501,397. AIRCRAFT CARRIAGE. CLAUDIUS DORNIER, Friedrichshafen, Germany, assignor to the Firm: Dornier Metallbauten Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Apr. 2, 1923. Serial No. 629,413. 5 Claims. (Cl. 244—2.)



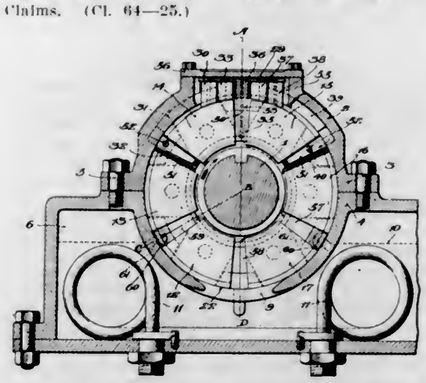
3. Aircraft carriage comprising in combination, a hull, a pair of upwardly converging double-armed levers pivoted to said hull for rocking motion in a plane transversely to the longitudinal axis of said hull, a wheel at the lower end of each lever, the upper ends being inter-crossed and shock absorbing means connected with the upper ends of said levers and adapted to counteract the spreading outwards of said wheels.

1,501,398. SCORE-REGISTERING DEVICE FOR GOLF AND THE LIKE. ALFRED L. EACRETT, Hollywood, Calif., assignor of one-third to James A. Armstrong and one-third to Howard M. O'Malley, both of Los Angeles, Calif. Filed Dec. 22, 1922. Serial No. 608,502. 8 Claims. (Cl. 235—113).



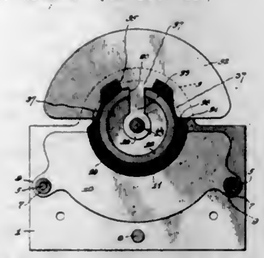
1. A registering device of the character described, comprising a plurality of registering means including dials and ratchet wheels arranged in overlapped and circular formation, a master ratchet wheel having peripheral teeth extending beyond the circle defined by the ratchet wheels, a master pawl for actuating the ratchet wheels and movable circumferentially of the registering means to operatively engage any one of said ratchet wheels, and means engageable with the teeth of the master ratchet wheel for actuating the latter to cause operation of the master pawl.

1,501,399. EMERGENCY TIRE. JEROME W. HANNAN, Wayne, and CLARENCE A. NOTMAN, Detroit, Mich. Filed Aug. 31, 1921. Serial No. 497,106. 2 Claims. (Cl. 152—23.)



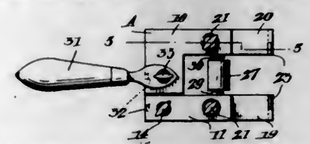
1. An emergency tire comprising a plurality of members adapted to be connected in link formation and anchored about the rim of a wheel, some of said members being of equal length, other of said members being approximately of equal length and of less length than the first mentioned members, and still another member of less length than any of the aforementioned members adapted to be removed to decrease the circumference of the tire, and means connecting the second mentioned members so that the circumference of the tire may be increased or decreased with or independently of the last mentioned member.

1,501,400. BASE FOR CASKET EMBLEMS. JULIUS A. HEINZ, Pesotum, Ill. Filed Nov. 22, 1922. Serial No. 602,668. 1 Claim. (Cl. 40—125.)



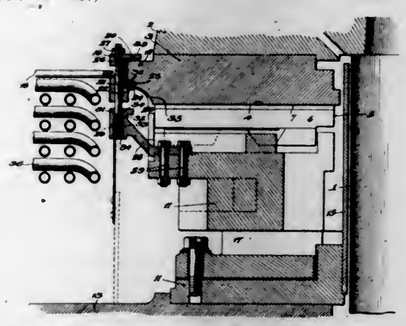
A support for a casket emblem having an outline corresponding to the outline of the emblem to be supported and consisting of intersecting members having flat tops and having dependent elements at their sides and ends to rest directly on the top of a casket, the bottom surfaces of those depending elements which extend longitudinally of the support being rectilinear and the bottom surfaces of those elements which extend transversely of the support being concave to rest upon the arched top of the casket in contact therewith through their entire length, the support being further provided with openings to receive fastening elements whereby to secure an emblem to the support and the support to the top of the casket.

1,501,401. BEARING. HARRY A. S. HOWARTH, Pittsburgh, Pa., assignor to Albert Kingsbury, Philadelphia, Pa. Filed Nov. 5, 1920. Serial No. 421,967. 56 Claims. (Cl. 64—25.)



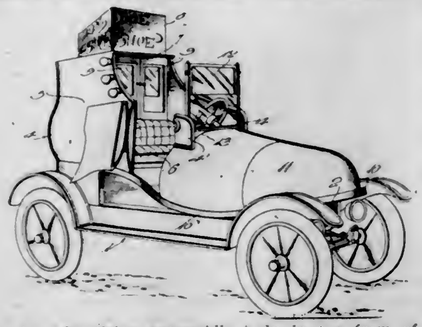
1. In a bearing, a rotatable thrust collar having an oil-carrying surface, a plurality of bearing segments cooperating with a face of said collar, and relatively stationary means for collecting oil from said oil-carrying surface and directing it simultaneously into operative relation with a plurality of segments cooperating with the same face of the thrust collar.

1,501,402. VARIABLE CONDENSER. GEORGE JACOBS, Detroit, Mich. Filed Sept. 22, 1922. Serial No. 589,883. 7 Claims. (Cl. 250—41.)



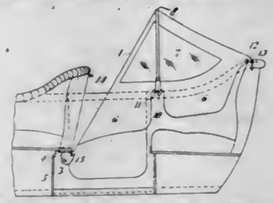
2. A variable condenser comprising a rotary shell having a slot, an insulator on said shell, rotor members having edges thereof extending into said insulator and portions thereof extending into the slot of said shell, means axially of said shell and extending through portions of said rotor members for retaining said rotor members thereon, and stator members having edges thereof extending into said insulator.

1,501,403. BRICKLAYER'S TOOL. WALTER JOHN KIMBER, Ottawa, Ontario, Canada. Filed Oct. 9, 1922. Serial No. 593,355. 5 Claims. (Cl. 72—138.)



1. A jointing and raking tool for bricklayers comprising a body portion provided with a handle and having a slot therein adjacent to said handle, a slot in the outer end of said body portion adapted to slidably engage with interchangeable blades formed with raking or jointing means, thumb screw means for fixedly securing the blades in said slot, similar means for holding the tool handle in position, and interchangeable roller means beneath said body portion.

1,501,404. AIR-SEALING MEANS. ALBERT KINGSBURY, Greenwich, Conn., and HARRY A. S. HOWARTH, Philadelphia, Pa.; said Howarth assignor to said Kingsbury. Filed Feb. 8, 1922. Serial No. 534,970. 35 Claims. (Cl. 64—25.)

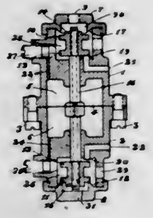


1. In a bearing, in combination with relatively rotatable bearing members and an oil well in which the bearing surfaces of said members are disposed, means cooperating with the periphery of the rotatable bearing member to maintain a radially-narrow layer of oil in contact with the periphery of said member substantially throughout its axial width and prevent churning together of the air and oil.

1,501,405. ADVERTISING AUTOMOBILE BODY. MENDEL KIPPERMAN, Davenport, Iowa. Filed July 11, 1923. Serial No. 650,944. 10 Claims. (Cl. 296—21.)

1. An advertising automobile body in the form of a shoe, with the tip of the shoe forming a motor hood and removable for gaining access to the automobile motor.

1,501,406. WINDSCREEN FOR MOTOR VEHICLES. WILLIAM LAW, Manchester, England. Filed May 11, 1922. Serial No. 560,207. 3 Claims. (Cl. 296—85.)

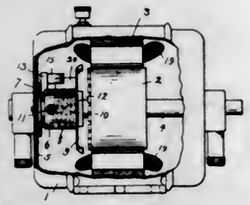


1. A windscreen for the seats of motor vehicles, said wind screen comprising a front screen and side extensions of flexible material, a spring roller to which the lower end of the front screen is attached and on which the screen and side extensions are adapted to be wound, a supporting frame for the windscreen comprising a transverse rod secured to the upper horizontal edge thereof with side rods pivoted to the said transverse rod, and supporting means on the sides of the vehicle whereon the side rods may be loosely stepped, and means for detachably securing the end of each side extension at the rear of the seats being protected, these latter securing means with the spring rollers serving to keep the collapsible supporting frame and front screen and extensions in operative position.

1,501,407. ULLAGE ROD. LOUIS JEAN LE CLAIR, Maidenhead, England. Filed May 13, 1922. Serial No. 560,595. 4 Claims. (Cl. 73—120.)

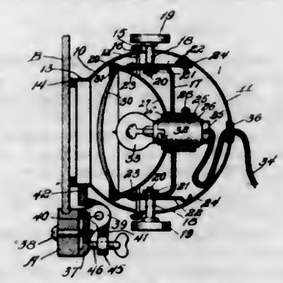
1. An ullage rod formed of a strip of fine mesh wire gauze, of from 80 to 120 per inch mesh and from .0048 to .004 of an inch in diameter, and a stiffening frame secured to the gauze and holding it extended.

1,501,408. PULSATOR FOR MILKING MACHINES. KNUT IVAR LINDSTRÖM and SIMON AXEL EFRAIM STERNER, Djursholm, Sweden. Filed May 22, 1922. Serial No. 562,895. 10 Claims. (Cl. 31—99.)



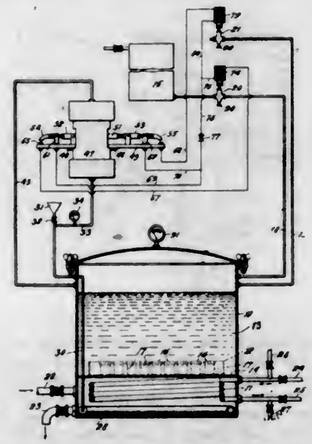
1. In pulsators for milking machines operating with vacuum, the combination of two pairs of valves which are rigidly mounted on a common body, movable longitudinally, means for giving said body and the valves a reciprocating movement, said means consisting of a vibratory diaphragm, connected with the valves, the one valve in each pair serving to control the vacuum supply, and the other to control the supply of atmospheric air, the atmospheric pressure valve in the one pair and the vacuum supply pipe in the other pair being adapted to occupy the closed position simultaneously.

1,501,409. BATHING CAP. DARRELL DEANE LOGAN, Dallas, Tex. Filed June 18, 1923. Serial No. 646,020. 5 Claims. (Cl. 2—68.)



3. A cap of the character described, comprising a crown formed of a single sheet of resilient material, and inflatable sides of resilient material extending over the ears and terminating below the top of the crown.

1,501,410. STARTING MEANS FOR ELECTRIC MOTORS. LEE W. LUND, Duluth, Minn. Filed Sept. 14, 1922. Serial No. 588,163. 2 Claims. (Cl. 172—279.)



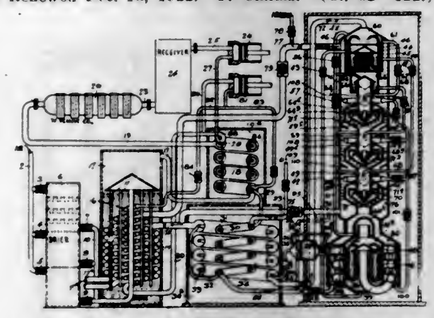
2. A motor control of the character described comprising a non-rotatable reciprocable armature concentric with the rotor of the motor, means cooperatively associated with said armature for making and breaking the starting circuit, said armature being actuated in one direction by the magnetic leakage of the motor and in the opposite direction by a spring, substantially as described.

1,501,411. SPOTLIGHT. SAMUEL W. HYATT, Columbus, Ohio. Filed Jan. 9, 1924. Serial No. 685,268. 9 Claims. (Cl. 240—61.2.)

1. In a spotlight device, a shell member, means for mounting the same upon a windshield, a second shell mounted upon the rear edge of the first named shell for rotation about the axis thereof, a yoke pivoted within the second named shell and having operating handles projecting laterally beyond the second named shell member, a reflector carried by the yoke, and illuminating means carried by the yoke within the reflector.

1,501,412. PRESSURE-CONTROL SYSTEM FOR STERILIZING AND PROCESSING APPARATUS. HARRY INGRAM, Brooklyn, N. Y. Filed Feb. 24, 1923. Serial No. 620,871. 8 Claims. (Cl. 99—2.)

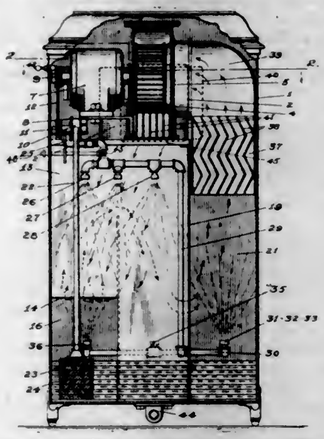
3. In apparatus of the character described comprising a main tank or retort within which products contained in capped tumblers and the like are subjected to high temperatures, means for supplying pressure to the retort to act externally against the caps on the tumblers, an auxiliary tank exposed to the heat of the retort and containing a fluid expansible by said heat and representative of the pressure conditions within the tumblers and means governed by the pressure within said auxiliary tank for admitting pressure to the retort in excess of the pressure generated within the tumblers, said auxiliary tank for regulating the counter-pressure being independent of the treated receptacles as regards its volume and contents and adapted to ensure a preponderance of pressure within the retort for preventing the caps from being blown off.



1,501,413. PROCESS OF RECOVERING TIN. ALAN KISSOCK, Los Angeles, Calif. Filed June 15, 1921. Serial No. 477,788. 3 Claims. (Cl. 204—67.)

1. The process of recovering tin from tin scrap which comprises acting on the tin scrap by an alkaline polysulfide solution to create an alkali thio-stannate solution and electrolyzing the alkali thio-stannate solution to deposit the tin from the solution, and thereby regenerating the solution to produce a polysulfide for use in the first step of the process.

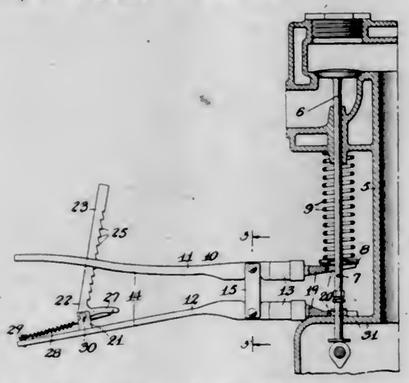
1,501,414. PROCESS FOR PRODUCING MOLYBDATES. ALAN KISSOCK, Los Angeles, Calif. Filed Sept. 19, 1922. Serial No. 589,240. 9 Claims. (Cl. 23—13.)



1. The process of producing a molybdate, comprising subjecting a mixture of molybdenum containing material and calcium containing material to an oxidizing roast, whereby to form a molybdate.

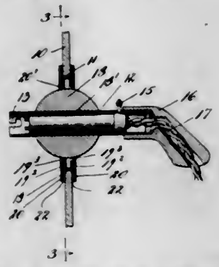
1,501,415. APPARATUS FOR SEPARATION OF AIR INTO ITS CONSTITUENTS. JAMES G. LAFFERTY, Coraopolis, Pa. Filed Mar. 22, 1919, Serial No. 284,309. Renewed Dec. 13, 1922. 17 Claims. (Cl. 62—122.)

1. In apparatus for the separation of liquid air, the combination of a chamber for containing liquid air, a second chamber surrounding the said liquid air chamber for collecting liquid separation products, a rectifying tower disposed above the said chambers and in communication with the said liquid-collecting outer chamber, a cooling chamber disposed above the said tower, and means for removing liquid from the said cooling chamber and for introducing the said liquid into the said tower.



1,501,416. COOLING APPARATUS. ALBERT D. LANE, Oakland, Calif. Filed Dec. 13, 1922. Serial No. 606,753. 6 Claims. (Cl. 183—24.)

1. A portable unit air cooling and humidifying device, comprising a casing provided with air inlet and discharge openings, a plurality of spaced partitions therein dividing the same into a continuous air duct



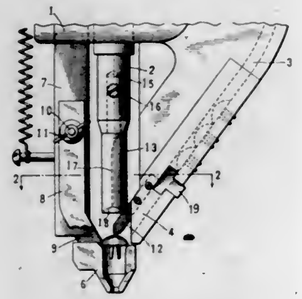
within the casing and connecting the air inlet and discharge openings, a base plate disposed transversely within the upper portion of the casing forming an open topped chamber in the upper end of the casing, and affording a top wall for a portion of said duct, an air blower within the duct and located above said base plate, a liquid circulating pump supported upon said base plate, an electric motor supported on the base plate and connected for operating said pump and blower, a body of liquid within said casing, a system of pipes and spray heads within said air duct and connected with said pump and body of liquid whereby the air in said passage is cooled and humidified, and a cover for said open topped chamber, said pump and motor adapted for exposing on the removal of said cover from said chamber.

1,501,417. VALVE-LIFTING TOOL. THOMAS MANNA, Jersey City, N. J. Filed May 23, 1922. Serial No. 562,961. 3 Claims. (Cl. 29—86.3.)

1. A valve lifting tool of the class described comprising two substantially similar members provided at one end with angular sockets, a link pivoted to said members adjacent to the sockets thereof for movably connecting the same, one of said members being provided adjacent to the other end thereof with a U-shaped part, a substantially L-shaped lever pivotally mounted in connection with said part, one member of the lever being adapted to extend through an aperture in the other of said members and provided with teeth or projections adapted to retain said last named member in predetermined position with reference to the first named member, and fork-shaped jaw members detachably mounted in connection with the sockets of said members.

1,501,418. MEANS FOR SUPPORTING LAMPS. HERMAN H. MEYER, Jr., New York, N. Y. Filed Feb. 21, 1923. Serial No. 620,475. 5 Claims. (Cl. 240—61.)

1. In a device of the character described, the combination with a support having a hole and a lamp support formed with a ball, of a socket therefor, comprising a channelled member formed with bent resilient parts adapted to engage around said ball and means for tightening said resilient parts on said ball.

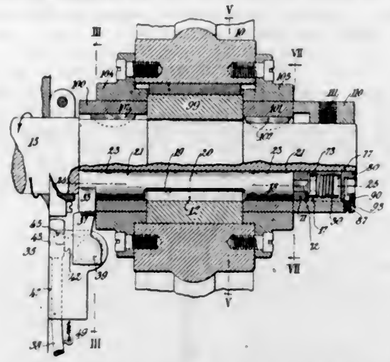


1,501,419. PROCESS OF PRODUCING BORON CARBIDE. EMIL PODSZUS, Friedrichshagen, near Berlin, Germany. Filed Jan. 4, 1921. Serial No. 435,006. 5 Claims. (Cl. 204—63.)

1. The process of producing boron carbide which consists in adding carbon to boron nitrid and then heating the mixture until reduction occurs.

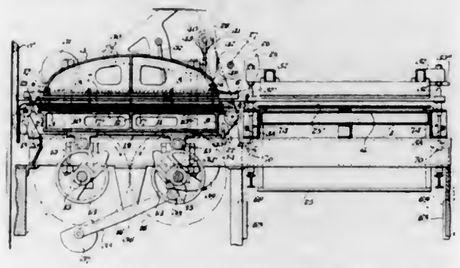
1,501,420. ELECTRODE FOR HIGH-TENSION ARC FURNACES. WERNER SIEBERT, Laufenburg, Aargau, Switzerland, assignor to Nitrum Aktiengesellschaft, Zurich, Switzerland, a Corporation of Switzerland. Filed May 13, 1922. Serial No. 560,730. 2 Claims. (Cl. 204—31.)

1. An electrode for an electric high tension arc consisting of iron which is otherwise pure but contains carbon to an extent not exceeding 0.1%.



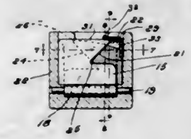
1,501,421. RIVETING MACHINE. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed July 19, 1922. Serial No. 575,946. 1 Claim. (Cl. 1—3.)

In a machine of the character disclosed a rivet guide having a pocket to receive and support the head of a rivet, rivet feeding means including an inclined chute for delivering the rivets to the pocket, a stationary hold-down finger forming the delivery end of one guide wall of the chute and having a projecting portion inclining downwardly to and terminating at a point substantially over the center of the head of a rivet supported in the pocket, and a plunger for operating on the head of a rivet so supported, having a groove in one side to receive the projecting portion of the hold-down finger.



1,501,422. KEY CLUTCH. ROBERT W. STROUT, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Sept. 22, 1922. Serial No. 589,818. 1 Claim. (Cl. 192—29.)

A clutch comprising a driving and a driven part, one of said parts comprising an oscillatory key having a projection adapted to be turned into and out of engagement with said other part, to drive when said driving part turns in one direction and to yield when said driving part turns in the other direction, means for locking said driven part to said driving part, whereby running ahead of said driven part is prevented, and means for controlling the operation of said clutch key and locking means, whereby said locking means or said locking means and clutch key may be rendered inoperative, said control means comprising disks and resilient connections be-

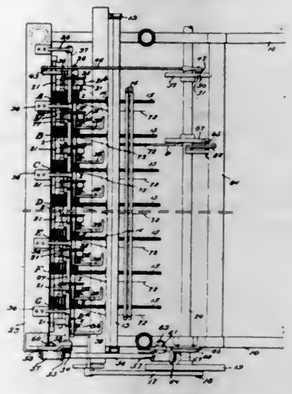


tween said disks and said clutch key and said locking means, said disks being rotatable to tension said resilient connections to turn said keys to declutching position.

1,501,423. INLAID-LINOLEUM MACHINERY. JOHN TAMBERLIN, Philadelphia, Pa., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 2, 1920. Serial No. 421,280. 5 Claims. (Cl. 154—24.)

1. In an inlaid linoleum machine, the combination with sheet punching mechanism comprising a templet and cooperating dies; shape setting mechanism comprising a bed adapted for supporting a backing fabric and devices adapted for forcing shapes from said templet against said fabric, and mechanism for reciprocating said templet between positions in which it registers with said dies and devices respectively, of means for raising said templet relatively to said bed.

1,501,424. HAND-THREADING SHUTTLE. WILLIAM A. TENO, Anthony, R. I. Filed Sept. 7, 1923. Serial No. 661,438. 14 Claims. (Cl. 139—222.)



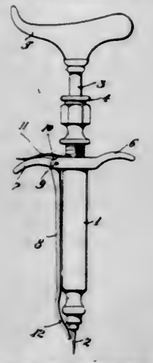
11. In a hand threading shuttle having a bobbin mounted therein, a thread guide plate folded to form a pair of cooperating thread-guiding members having diagonally-disposed thread guiding edges set on converging angles and each arrangement to guide the thread in threading from its upper edge to a point adjacent the axial center of the bobbin.

1,501,425. PROCESS OF COLORING IRON AND STEEL BLACK. WILHELM UTENDÖRFER, Cologne, Germany. Filed Feb. 15, 1922. Serial No. 536,755. 3 Claims. (Cl. 148—7.)

1. The process of coloring iron and steel black consisting in treating the articles to be colored black with a heated solution composed of dissolved salts which result from combining alkali with nitro-phenols, of gallic acid, and of an excess of alkali.

1,501,426. BULLION-FRINGE LOOM. CARL O. WALLISER and ROBERT E. WALLISER, Chicago, Ill., assignors to H. F. Walliser Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 30, 1923. Serial No. 677,698. 14 Claims. (Cl. 139—118.)

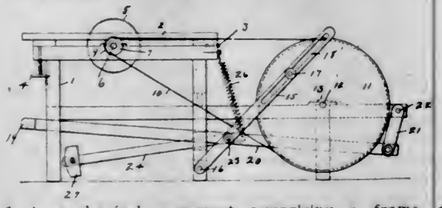
1. In a loom for weaving a plurality of fringes of the character described having groups of warp threads spaced apart and weft threads adapted to be interwoven respectively, with each of said groups of warp threads, weft inserting means and weft twisting means independent of each other and located between adjacent groups of warp threads; and common supporting means for said weft inserting and twisting means between said adjacent groups of warp threads.



1,501,427. COMPOSITION FOR THE DESTRUCTION OF INSECTS, FUNGI, AND THE LIKE AND METHOD OF APPLYING THE SAME. SAMUEL WILSON, Brooklyn, N. Y. Filed Sept. 21, 1922. Serial No. 589,696. 10 Claims. (Cl. 167—6.)

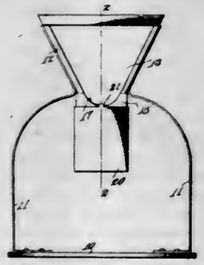
1. A composition for the destruction of insects, fungi or the like, consisting of separate portions containing foam producing and maintaining ingredients and at least one of which contains an insecticide or fungicide, said ingredients being adapted when brought together to form a substantially permanent, adhering foam for holding the insecticide or fungicide in intimate contact with the objects to be treated.

3. A composition for the destruction of insects, fungi or the like, consisting of separate portions containing ingredients for producing and maintaining a foam having an insecticidal or fungicidal gas as its gaseous phase, one at least of said portions containing an insecticide or fungicide, and said ingredients being adapted when brought together to form a substantially permanent, adhering, toxic foam for holding the insecticide or fungicide in intimate contact with objects to be treated.



10. The method of treating objects with hydrocyanic acid for the destruction of insects, which consists in depositing on the objects a substantially permanent, adhering foam containing said acid and produced by combining in the vicinity of the objects foam producing and maintaining ingredients and hydrocyanic acid forming materials.

1,501,428. RETRACTOR. JULIUS WISOFF, Brooklyn, N. Y. Filed May 14, 1921, Serial No. 469,598. Renewed Apr. 2, 1924. 2 Claims. (Cl. 128—17.)

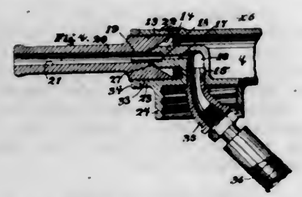


1. The combination of a hypodermic injector, a retractor comprising a blade and a handle disposed at an angle to said blade, projections on said injector, the junction of said handle and said blade being placed between said projections, a pivot pin engaging said retractor and said projections, and a spring to hold the blade folded against the injector.

1,501,429. WOODWORKING MACHINE. ALOIS ANTHONY, Baltimore, Md. Filed Feb. 7, 1922. Serial No. 534,652. 2 Claims. (Cl. 74—14.)

1. A mechanical movement comprising a frame, a shaft revolubly mounted in the upper part of said frame, two wheels mounted in said frame, a treadle having one end pivoted to said frame, two rods each pivoted at one end to said frame and to said treadle and having elongated slots in their upper ends, bolts passing through said elongated slots of said rods and connecting them with the said wheels, and means connecting one of said wheels with said shaft for operating the latter.

1,501,430. COIN HANDLER. OSCAR C. BERNARD, El Paso, Tex. Filed Nov. 1, 1923. Serial No. 672,147. 3 Claims. (Cl. 133—14.)

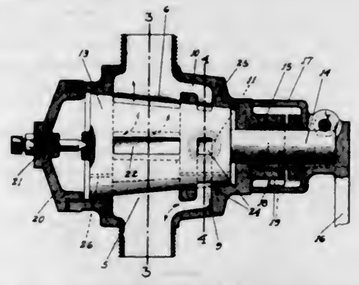


1. A coin handler including a hopper having a depending discharge neck, coin supporting doors pivoted in the upper portion of the neck and having obtuse angularly extending projections disposed through the opposite sides of the neck, and a tube slidable on the neck and having slots receiving the projections therethrough for movement of the latter to swing the doors into and out of coin supporting position.

1,501,431. PARACHUTE AND MEANS FOR LAUNCHING SAME. FRANK E. BEST, Seattle, Wash. Filed Dec. 28, 1921. Serial No. 525,315. 6 Claims. (Cl. 244—21.)

1. The combination with a parachute, of resilient suspension means arranged to be extended when said parachute is launched and capable of lifting the weight of a passenger, and releasable means for retaining said resilient suspension means in an extended position.

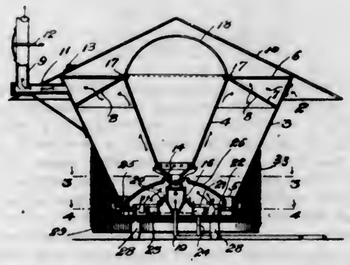
1,501,432. PAINTING, CLEANING, SAND-BLASTING, AND GENERAL UTILITY AIR BRUSH. PURLING ALLEN BLEAKLEY, Los Angeles, Calif. Filed Jan. 17, 1922. Serial No. 529,906. 17 Claims. (Cl. 91—45.)



1. In an air brush having a nozzle and a handle through which compressed air is supplied to the nozzle, under control of a valve; a hand grip conformable to the palm of the hand pivoted on the handle and adapted to act upon the valve to open it against air pressure, when the handle and the hand grip are gripped for that purpose.

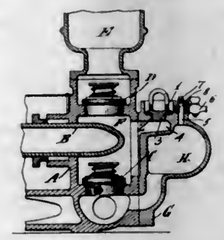
5. In an air brush having a spray nozzle, a handle through which compressed air is supplied to the spray nozzle and a valve to control the flow of air from the handle to the spray nozzle; a hand grip pivoted on the handle at the inlet end of said handle and adapted to act on said valve to open it against air pressure when the handle and the hand grip are gripped for that purpose; an ejector nozzle having a frusto-conical forward end and operable by flow of compressed air from the handle adjcent the outlet from the ejector nozzle; means to supply material to the bore of the ejector nozzle; and a spray nozzle arranged to receive the discharge from the ejector nozzle, and adjustable toward and from the ejector nozzle to decrease and increase the flow into the spray nozzle.

9. In an air brush provided with an ejector nozzle; a spray nozzle into which the ejector nozzle discharges and which is adjustable relative to the ejector nozzle, and adapted to predetermine the delivery of air to the spray nozzle.



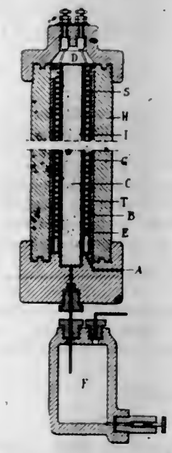
15. In an air brush the combination with an ejector nozzle of a spray nozzle between which and the ejector nozzle there is provided an outlet around the ejector nozzle; said outlet being laterally extended by channels having forwardly converging walls adapted to give a fan shape to the spray issuing from the spray nozzle.

1,501,433. TOILET FLUSH VALVE. FRANK T. BOGARD, Oakland, Calif., assignor to Rodney H. Marchant, Oakland, Calif. Filed Jan. 29, 1923. Serial No. 615,719. 4 Claims. (Cl. 251—104.)



1. A valve comprising a casing, a pair of transversely opposed ports therein, passageways leading outwardly from said ports, an outlet from the casing, by passes leading from the passages to the interior of the casing beyond the ports, an intake leading to the casing, a plug turnably mounted in the casing, and port means in the plug for alternately allowing water to flow from one passage and port to the outlet while allowing water to flow from the intake into the bypass leading to the other passageway.

1,501,434. BROODER STOVE. JOHN W. BRANSON, Wallace, Va. Filed Nov. 29, 1922. Serial No. 604,048. 3 Claims. (Cl. 126—93.)

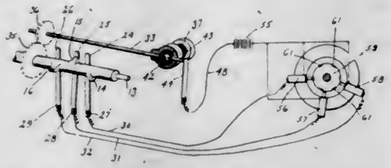


3. In a brooder stove, the combination of a plurality of legs, each leg including a vertical portion provided with a hook at its upper end and with an inwardly-extending horizontal extension at its lower end, a pan resting on said horizontal extensions, a drum above said pan and engaging the hooked ends of said legs, means fastening the hooked ends of said legs to the outer face of said drum, a band on the vertical portions of said legs and bracing the same, and a wire mesh fastened at its upper end to said drum and at its lower end to said band.

1,501,435. PUMP. NELSON E. BRIGHAM, South Hadley Falls, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Aug. 10, 1921, Serial No. 491,098. Divided and this application filed May 15, 1923. Serial No. 639,071. 5 Claims. (Cl. 103—203.)

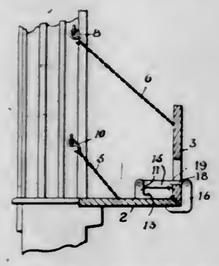
1. The combination with a pump cylinder, of a cylinder head removably secured to said cylinder and forming a suction air chamber, and a priming basin on said cylinder head.

1,501,436. SYNTHESIS OF AMMONIA. GEORGES CLAUDE, Paris, France, assignor to Societe l'Air Liquide (Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude), Paris, France. Filed Mar. 12, 1921. Serial No. 451,765. 8 Claims. (Cl. 23—21.)



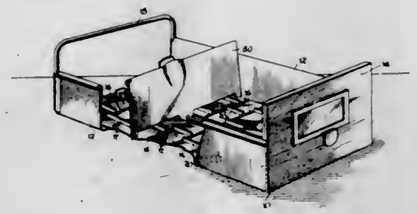
1. The method of carrying out the direct synthesis of ammonia in the presence of a catalyzing material and under the combined effect of high temperature and pressure, which comprises conveying the gaseous mixture prior to the reaction in heat-exchange relation with the reacting gases in the catalyzing chamber, and limiting the transfer of heat from the catalyzing chamber to the gaseous mixture so that the gaseous mixture is delivered to the catalyzing material at a temperature preferably the lowest permitting the commencement of the reaction.

1,501,437. ELECTRICAL SIGNALING APPARATUS. FREDERICK N. CONNET, Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 5, 1920. Serial No. 356,474. 7 Claims. (Cl. 177—337.)



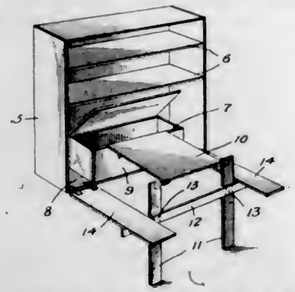
1. In a device as described, an electric circuit having a plurality of branches, a current distributor in said circuit for selectively completing the circuit through

said branches, a circuit closer in the main portion of the circuit comprising a hermetically sealed chamber, terminals in said chamber, means in said chamber for



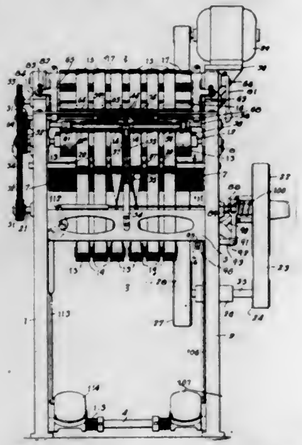
bridging the terminals therein for a limited period of time, and means for operating said bridging means and said current distributor to selectively complete the circuit through one of said branches.

1,501,438. SAFETY DEVICE FOR WINDOW CLEANERS. ANCHEL COHEN, Pittsburgh, Pa. Filed July 26, 1923. Serial No. 653,876. 1 Claim. (Cl. 304—29.)



A device for the purpose set forth comprising a platform, a guard member hingedly connected thereto and formed with a pair of vertically disposed slots, a locking element mounted on said platform and extending through each of said slots, said element including a bar formed with a shoulder and a latch for locking said platform and said member in the erected position, substantially as described and for the purpose set forth.

1,501,439. FILING SYSTEM. COLEMAN F. COOK, Cincinnati, Ohio. Filed Apr. 14, 1923. Serial No. 632,122. 6 Claims. (Cl. 129—16.1.)

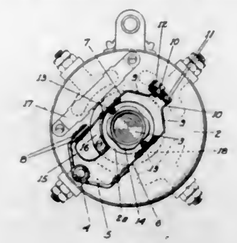


1. In a card index system, a card container having a bottom wall provided with a plurality of pairs of transversely extending slots, the pairs of slots being spaced longitudinally and the members of each pair of slots being transversely spaced from each other and from the sides of the box and being transversely alined, a series of pockets along each side of each slot and obstructions having releasable locking means comprising a gripping arm extending through the slot and engaging the under side of the bottom, the obstructions being selectively engaged with any one of the pockets, in combination with a card having notches corresponding to the obstructions.

1,501,440. COMBINATION CABINET AND TABLE. HANS P. DANA, Tacoma, Wash. Filed July 30, 1923. Serial No. 654,698. 2 Claims. (Cl. 190—12.)

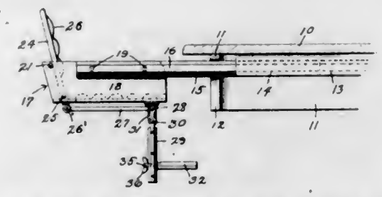
1. The combination with a cabinet of a folding side wall comprising a table top member and bench members hingedly secured to said cabinet, leg members pivotally secured to said table top member, and said table top, bench, and leg members arranged to form a flush closure for said cabinet in the closed position substantially as specified.

1,501,441. TOBACCO STRIPPING AND BOOKING MACHINE. EUGENE M. DEILLER, Irvington, N. J. Filed June 29, 1920. Serial No. 392,622. 4 Claims. (Cl. 131—57.)



2. In a machine of the character described, the combination with a drum, booking belts extending around said drum, a cutter roller, a cutter shaft, a cutter on said shaft to cut out the stem of a leaf as it passes between the drum and belts, and drive means for said belt and cutter roller, of a pair of loose collars rotatable on said cutter shaft and each having a laterally projecting bracket bearing arm, a presser roller journaled between said bracket arms and engaging the cutter roller to smooth out the leaves as they pass into the cutter, and spring means for yieldingly maintaining said presser roller in engagement with the cutter roller.

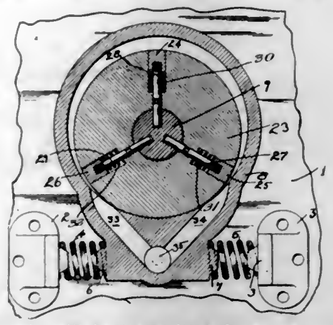
1,501,442. BREAKER MECHANISM FOR DISTRIBUTORS. PAUL E. DEMMER, San Jose, Calif., assignor to D. & W. Specialty Company, San Jose, Calif. Filed Sept. 4, 1923. Serial No. 660,687. 5 Claims. (Cl. 200—30.)



2. A breaker mechanism for distributors including a pair of spaced arms having co-operating contacts at one

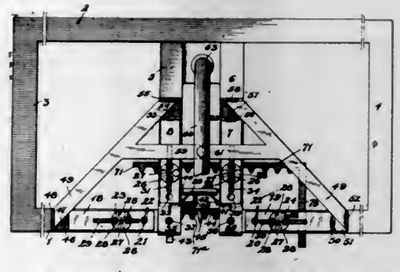
end, said arms being arranged to receive a cam therebetween designed to spread them apart simultaneously, a

yoke to which the arms are attached, and a pivot for mounting the yoke on the casing of the distributor, said pivot being parallel to the axis of the cam.



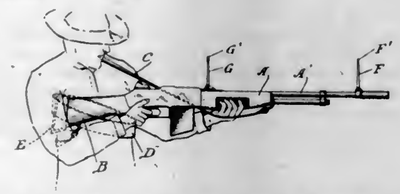
1,501,443. CHAIR ATTACHMENT FOR TABLES. HERBERT R. ELLIS, Fredericksburg, Va., assignor to one-half to Stuart Tunsill, Fredericksburg, Va. Filed June 11, 1921. Serial No. 476,720. 2 Claims. (Cl. 155—79.)

1. In a chair attachment for a table having a top, a pair of supporting bars rigidly fastened in parallel relation to the under side of the table top and having longitudinal dovetail grooves in sides thereof and terminating inwardly of an edge of the table top, a chair of box-like form including a bottom with rigid side boards, supporting bars having their outer ends rigidly fastened to the upper portions of the side boards and formed with longitudinal dovetail ribs on the sides thereof snugly slidably engaging the grooves of the supporting bars, whereby the chair may be positioned by slidable movement under the table top or outwardly of the edge of the latter, at will, said chair further embodying a chair back pivotally mounted near its lower end between the side boards upon a horizontal axis so that the same may be folded outwardly and downwardly from a rearwardly inclined operative position to an inoperative position between the side boards below the upper edges of the latter, brackets rigidly fastened to the under side of the chair bottom near its forward edge, normally upright foot rest supporting levers pivoted near their upper ends to said brackets, and horizontal links pivotally connected at their ends to the lower end of the chair back and the upper ends of the levers beneath the chair bottom, whereby upward swinging movement is imparted to the foot rest upon folding of the chair back forwardly and downwardly between the side boards, thereby providing knee room beneath the table top for persons occupying a separate seat at the table.



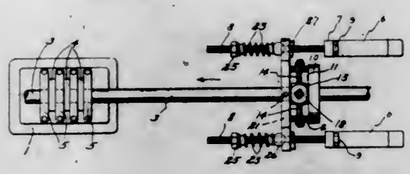
1,501,444. HYDRAULIC BRAKE. WALTER P. ENGLISH and HENRY C. CUTTING, San Francisco, Calif. Filed July 11, 1923. Serial No. 650,772. 10 Claims. (Cl. 188—90.)

1. In a brake for vehicles, the combination with a casing having a passageway connecting two portions of its periphery, a rotary element within the casing secured to an operating shaft, radially movable plungers carried by said element, means to hold them retracted, a spring for extending them the chamber within which said element rotates being eccentric, whereby fluid



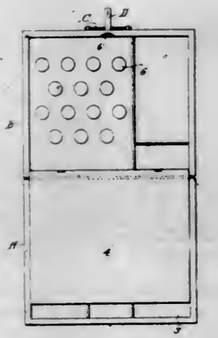
placed therein will be transmitted from one portion of said chamber to another portion thereof through the passageways aforesaid, and means to regulate the flow of said material whereby the shaft may be retarded.

1,501,445. MACHINE FOR ATTACHING SNAP FASTENERS. ADOLPH FRANKEL, New York, N. Y. Filed Feb. 21, 1923. Serial No. 620,389. 13 Claims. (Cl. 218—0.5.)



9. In a machine of the class described, the combination with a support for two edges of an article, hoppers for fastener members, means for receiving said fastener members successively from the hoppers and carrying said members to a position adjacent to the opposite edges of the article, and plungers for simultaneously attaching a male fastener member to one edge of the article and a female fastener member to the opposite edge.

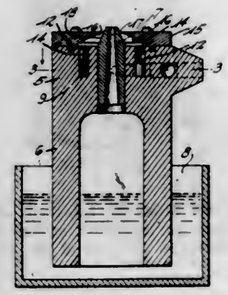
1,501,446. FIREARM. JOHN W. FRENCH, New Rochelle, N. Y. Filed Oct. 27, 1921. Serial No. 510,872. 3 Claims. (Cl. 33—47.)



1. The combination of a gun having a barrel having a pair of sights and a secondary sighting arrangement for marching fire consisting of a foldable front sight located at the front end of the barrel and a foldable rear sight located near the front end of the gun stock the sighting points being equally spaced from the barrel so that the gun may be sighted when the stock is carried below the armpit.

1,501,447. THRUST BEARING. ALBERT P. GEER, New London, Conn. Filed Oct. 10, 1922. Serial No. 593,521. 5 Claims. (Cl. 64—49.)

1. In combination with a shaft and main bearing therefor, an auxiliary thrust bearing comprising a pair of pedestals, threaded spindles, one end of each spindle being supported in said pedestals, the opposite ends of said spindles being free, a plate member supported on said spindle, a large flange on the shaft adjacent said plate and means for absorbing the end-wise thrust of said shaft.



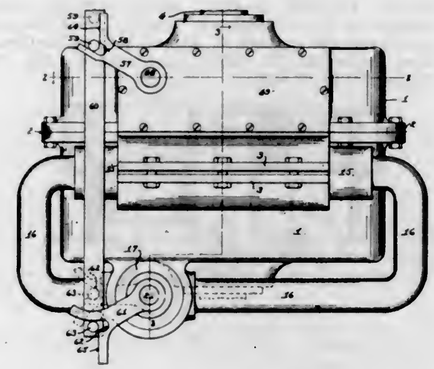
1,501,448. TACKLE BOX. WILLIAM O. GORRELL, Plainview, Minn. Filed Dec. 15, 1922. Serial No. 607,167. 1 Claim. (Cl. 43—31.)

A tackle box comprising body and lid sections hingedly connected together, the lid section having a top and side walls, spaced blocks of soft moisture absorbing material depending from the top wall of the lid section and spaced from the side walls thereof, a cover panel hinged to one of the side walls of the lid section and at the inner surface thereof and adapted to fit snugly within the side walls of the lid section with its edges in close contact with the inner surfaces of all of the side walls of the lid section and thereby forming an air tight compartment within the lid section, the cover panel when in closed position in the lid section having its outer surface flush with the edges of all of the side walls of the lid section whereby the cover panel lies above the upper edges of the side walls of the body section when the lid section is at a closed position over the body section.

1,501,449. METAL-DISINTEGRATING APPARATUS. EVERETT J. HALL, Passaic, N. J., assignor to Metals Disintegrating Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 20, 1917. Serial No. 208,166. Renewed Oct. 30, 1922. Serial No. 598,012. 12 Claims. (Cl. 83—91.)

1. Metal disintegrating apparatus comprising a tank for molten metal, a nozzle for the molten metal immediately above and dipping into the tank, and means for entirely surrounding the stream of metal issuing from said nozzle with an annular jet of disintegrating

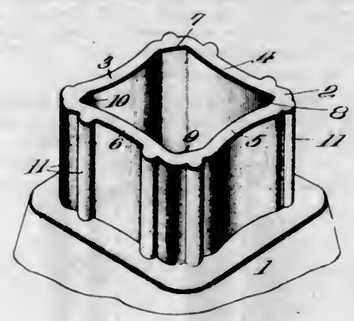
fluid directed on converging lines upon said stream of metal as it issues from the nozzle, whereby the metal is lifted from the tank to the nozzle and disintegrated.



1,501,450. RAZOR. HUGO S. HASSELQUIST, Oak Park, Ill., assignor, by mesne assignments, to Collins Safety Razors, Chicago, Ill., a Common Law Business Trust. Filed Apr. 26, 1920. Serial No. 376,563. 3 Claims. (Cl. 30—12.)

1. In a razor of the character described, the combination of a hollow handle fitted with a blade-guard at one end, a blade-support having a grooved stem in said handle, a grooved member in said handle having a beveled end wall, a split spring-ring in said grooves, and an adjustable retainer having threaded engagement with said stem and having an accessible head by which it may be turned, substantially as described.

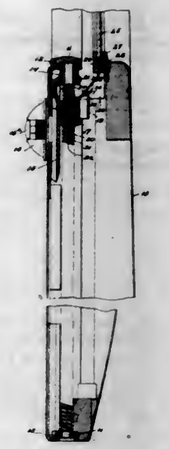
1,501,451. HYDRAULIC BRAKE. CHARLES W. HOOVER, San Francisco, Calif., assignor to Grace E. Elwood, Oakland, Calif. Filed Sept. 4, 1923. Serial No. 660,802. 12 Claims. (Cl. 188—90.)



1. In a hydraulic brake, a pump comprising a working cylinder; a rotor therein; a substantially radially

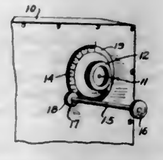
disposed fluid impelling member adapted to be extended from and retracted into said rotor in following said

cylinder; and a latch adapted to engage said member when retracted to hold the same in its retracted position.



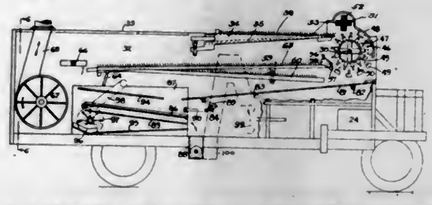
1,501,452. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,738. 10 Claims. (Cl. 22—147.)

1. A feeder for ingot molds comprising four inwardly curved walls connected by four walls of a different contour.



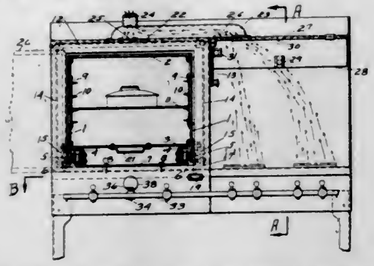
1,501,453. MEANS FOR ADJUSTING WINDOWS OF MOTOR CARS. FRANK HUMER, Detroit, Mich., assignor, by mesne assignments, to Lincoln Motor Company, a Corporation of Delaware. Filed June 12, 1920. Serial No. 388,494. 15 Claims. (Cl. 268—4.)

1. In a construction of the kind described, a hollow panel, a threaded shaft rotatably journaled therein, a threaded collar mounted on said shaft, means for rotating said shaft to move said collar, a window slidably arranged in said panel, a member connecting said window and said collar whereby movement of the latter will raise or lower the window, yieldable means for normally urging said member towards said collar, and means pivotally mounted on the panel for causing lateral movement



of said member and the window against the action of said yieldable means as the window is raised and approaches the upper limit of its movement.

1,501,454. ADJUSTING DEVICE FOR RADIOTUNERS AND THE LIKE. JAMES W. HUNT, Memphis, Tenn. Filed June 8, 1923. Serial No. 644,159. 7 Claims. (Cl. 74—7.)

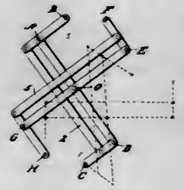


1. The combination with a panel and a dial rotatably adjustable thereon, of a spindle having secured thereto a ring of comparatively small diameter, and means for temporarily mounting and rotating the spindle and ring, said spindle when so mounted being movable axially to bring the ring into frictional engagement with the dial so as to rotate the same.

1,501,455. THRASHING MACHINE AND PARTS THEREOF. OTIS A. INGERSOLL, Martinsburg, N. Y. Filed Aug. 25, 1921. Serial No. 495,378. 3 Claims. (Cl. 130—27.)

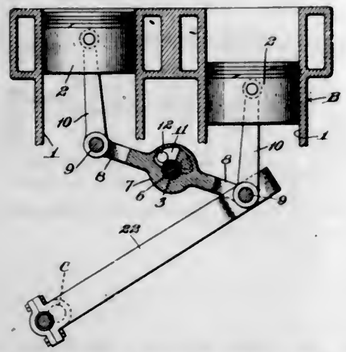
1. A thrashing machine having a thrashing cylinder, a reciprocating means for feeding said cylinder, a reciprocating means for removing the thrashed material from said cylinder and rotatable means for controlling the admission of the material to said cylinder, said controlling means comprising a cross shaped paddle having elongated, axially parallel blades arranged over the thrashing means and one end of the feeding means.

1,501,456. MECHANICAL BAKING OVEN. JOHN JIRASEK, Detroit, Mich. Filed June 15, 1923. Serial No. 645,612. 2 Claims. (Cl. 126—339.)



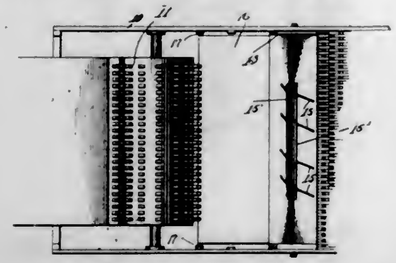
1. A mechanical oven carriage adapted to installation in a baking oven, comprising to metallic box shaped frame, horizontal baking grates installed within the frame, grooved rollers mounted on each side of the carriage frame, being attached to the back half of the carriage, a C-shaped track and guard rail for each set of rollers, means for fixedly attaching said rails to the bottom of the oven, and a draw handle attached to said carriage frame for moving the carriage in and out of the oven.

1,501,457. VEHICLE SPRING. JOSEPH KAESTNER, Burlington, Iowa. Filed Jan. 10, 1923. Serial No. 611,796. 2 Claims. (Cl. 267—47.)



1. A spring of the class described composed of two parallel leaves each having an eye at one end and its other end rectilinear and free with reinforcing spring leaves arranged above and below the main leaves respectively, a bolt connecting the leaves of said spring at one side of the median line thereof so that one end of each leaf is shorter than the other, the longer ends being designed to carry the downward load and the shorter ends to resist the rebound, the reinforcing leaves being one provided at one end with a yoke-like member straddling the superposed leaves and equipped with a roller to travel on one of said leaves, and another of said reinforcing leaves being provided at the opposite end of the spring with a similar roller to ride on opposed faces of the spring.

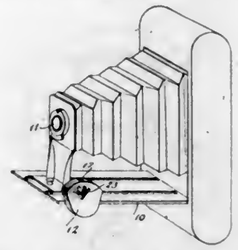
1,501,458. PARALLEL DOUBLE TONGS. VLADIMIR KARAPETOFF, Ithaca, N. Y. Filed July 20, 1922. Serial No. 576,879. 12 Claims. (Cl. 33—1.)



1. A kinematic system comprising two links pivoted together, a pair of arms pivoted to each link at spaced points, each arm having means for defining a point fixed relatively thereto, means for maintaining the arms of the respective pairs parallel, the pivot points of the system and said relatively fixed points being so located that the line joining the point fixed relatively to an arm of one pair to the point fixed relatively to the corresponding arm of the other pair is parallel to the line joining the point fixed relatively to the other arm of said one pair to the point fixed relatively to the corresponding arm of said other pair, in all positions of the system.

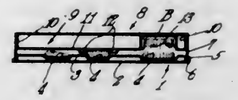
1,501,459. ENGINE. HARRY L. KLINE, Portland, Oreg., assignor of five-twentieths to Frank C. Hendrick and four-twentieths to Oscar G. Larson, both of Portland, Oreg. Filed May 26, 1923. Serial No. 641,704. 2 Claims. (Cl. 123—54.)

1. In combination, a shaft, a sleeve loosely mounted on the shaft, a rock member mounted upon the shaft and sleeve, means for oscillating the rock member, clutching means carried by the rock member and coacting with the shaft for rotating the shaft upon movement of the rock member in one direction, second clutching means carried by the rock member and coacting with the sleeve for rotating the sleeve independently of the shaft upon movement of the rock member in the opposite direction, a driving shaft, and an operative connection between the driving shaft and the first named shaft and sleeve whereby the movements of the shaft named shaft and sleeve upon oscillation of the rock member causes the second named shaft to continuously rotate in one direction.



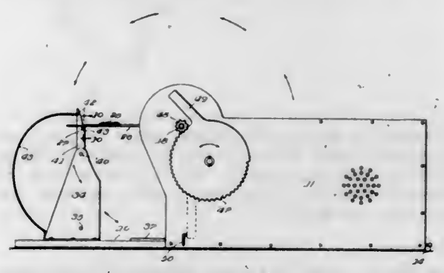
1,501,460. STRAW SPREADER. ANTON A. KLOCKE and JOSEPH WURZER, Dedham, Iowa. Filed Dec. 15, 1922. Serial No. 607,140. 4 Claims. (Cl. 130—24.)

1. A straw spreader for a thrashing machine, in combination with a beater having radial blades, of spreader arms carried by and extending obliquely across and away from the faces of said blades.



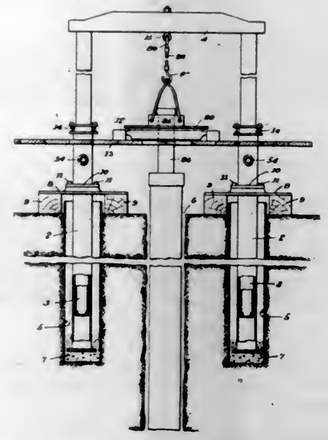
1,501,461. FOCUS RANGE FINDER FOR CAMERAS OR THE LIKE. ABRAHAM KURNICK, Brooklyn, N. Y., assignor of one-half to Louis Kurnick, New York, N. Y. Filed Nov. 20, 1922. Serial No. 602,043. 3 Claims. (Cl. 88—1.5.)

1. A focus range finder forming a unitary attachment for cameras or the like comprising a casing, optical means carried by the casing and adapted to reflect the image of the base line of an object, said optical means having a relatively narrow slot through which said base line image may be observed, indicating means carried by the casing arranged to function proportionately to the movement



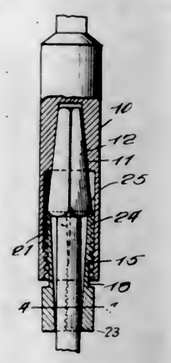
of and for joint consideration with said optical means as the latter is inclined from the horizontal, and means carried by the casing alone sufficient to secure the latter to a camera.

1,501,462. SHIPPING CONTAINER. GEORGE B. MACDONALD, New York, N. Y., assignor to The Fiberloid Corporation, Indian Orchard, Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 30, 1923. Serial No. 677,856. 1 Claim. (Cl. 206—44.)



The combination in a shipping container of a receptacle and a cover therefor, the said receptacle comprising a flat base member, a tray having vertical side walls provided with horizontal flanges that overlie and are secured to the base at the marginal edges thereof, the said tray being provided with depressions in its upper side for positioning articles and supporting the same at a distance above the base, the said cover comprising vertical side walls that engage the vertical side walls of the tray and that abut the upperside of the horizontal flanges thereof and an inverted tray having side walls that interfit the side walls of the cover and that abut the upper wall thereof to retain the face of the tray at a distance from the said cover, the said tray being provided with a depression and guides that are adapted to embrace the articles in the depressions of the first named tray to hold them from displacement thereon.

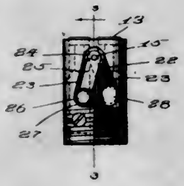
1,501,463. ANIMAL TRAP. MIKE MATEJEWSKI, Norris, Ill. Filed Feb. 19, 1923. Serial No. 620,038. 4 Claims. (Cl. 43—74.)



1. In a trap, a cage having a portion of its top and its front end open, a shaft journaled transversely of the cage at the top of the open front, a spiral spring normally holding said shaft under tension, right angularly disposed door members carried by the shaft and respectively closing the open front and the opening in the top, a sweep arm carried by the shaft, and means normally holding the shaft against rotation, consisting of a spring catch and a bait-carrying-treadle-operated releasing means for releasing the catch, and an outwardly spring pressed auxiliary door pivotally mounted at the bottom of the open front of the cage and co-operating with the first named door.

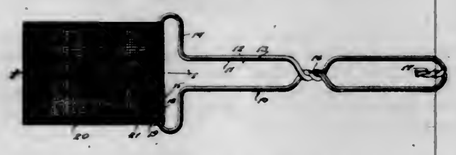
1,501,464. HYDRAULIC APPARATUS FOR HANDLING WELL TUBING. EDGAR W. PATTERSON, Norwalk, Calif. Filed Apr. 9, 1923. Serial No. 630,849. 4 Claims. (Cl. 138—9.)

1. In an apparatus of the character disclosed, a hydraulic jack, a fluid pumping and storage plant connected to said jack for pumping fluid to a proper pressure for raising said jack to raise a well casing and for storing said compressed fluid and utilizing the same for lowering said casing in its well.



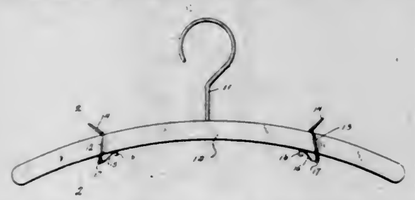
1,501,465. TOOL HOLDER. WILLIAM A. PECK, New Haven, Conn. Filed June 14, 1923. Serial No. 645,315. 7 Claims. (Cl. 279—91.)

1. A tool holder for tools having angular heads connected with the shanks thereof by conical portions, comprising a body formed with a socket to receive and fit the head of the tool and with a tubular extension beyond the socket having its outer end portion internally screw-threaded and its interior relieved inwardly of the screw threads to a diameter greater than the interior diameter of the sleeve at the base of the screw threads, and a segmental sleeve externally screw-threaded to



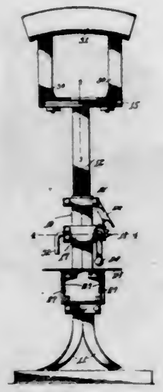
loosely engage the screw threads of said extension, the inner ends of the segments of the sleeve engaging said conical portion of an engaged tool to be spread thereby whereby the threads of the sleeve are firmly engaged with the threads of the tubular extension and the outer ends of the segments of the sleeve clamped upon the shank of the engaged tool.

1,501,466. TWO-POINT-CONNECTER LIGHT PLUG. CLAUD PORTER, De Smet, S. Dak. Filed June 17, 1922. Serial No. 569,131. 6 Claims. (Cl. 173—346.)



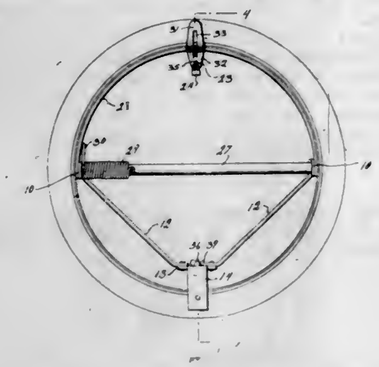
1. A grounding plug comprising an insulating body, a pair of spaced conductors extending longitudinally through said body, a ground contact pin extending transversely of the body in spaced relation to the conductors, and conductor means carried by the pin and movable into and out of engagement with one of said conductors.

1,501,467. FLY SWATTER. JAMES S. RAIRDEN, Waterford, Calif. Filed June 12, 1923. Serial No. 644,926. 5 Claims. (Cl. 43—137.)



1. A swatter comprising a handle and a swatting plane; said handle having a T portion upon which the swatter plane is hinged, and means for yieldingly holding the plane in extended position with regard to the handle, said plane including a double layer of wire mesh, doubled around said T portion.

1,501,468. GARMENT HANGER. FREDERICK M. RAUCH, Washington, D. C., assignor of one-half to Walter J. Brooks, Washington, D. C. Filed Nov. 10, 1923. Serial No. 674,014. 4 Claims. (Cl. 211—13.)

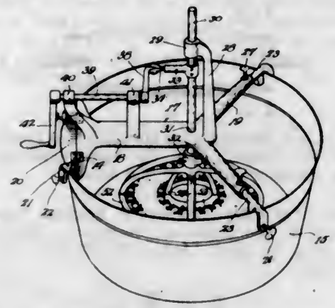


4. A garment hanger having a supporting member, arms extending in opposite directions from the supporting member and a garment retainer disposed on each arm, the retainer when disposed at right angles to the length of the arm being slidable longitudinally of the arm and when canted at less than a right angle to the arm having clamping engagement with the arm, each garment retainer having a garment retaining finger at its upper end.

1,501,469. TIRE-REPAIR STAND. HOWARD B. REX, Henryetta, Okla. Filed Mar. 12, 1923. Serial No. 624,681. 4 Claims. (Cl. 154—9.)

2. A tire repair stand including an upright, a vertically adjustable stem in the upright, a turntable on the upper end of the stem, means on the turntable for disposition within the upper portion of an outer casing of a pneumatic tire, and a platform on the upright for supporting the lower portion of the tire casing so engaged with the turntable carried means.

1,501,470. AUTOMOBILE-TIRE RACK. JOHN SCHWAB, Chicago, Ill. Filed May 6, 1922. Serial No. 558,897. 14 Claims. (Cl. 224—29.)

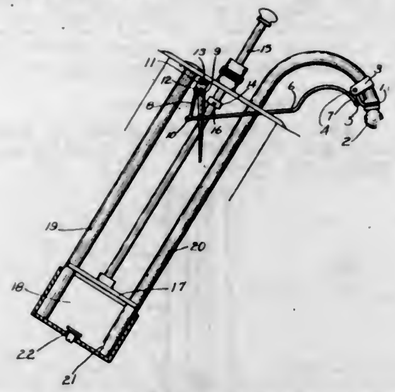


1. In a tire rack, the combination with a tire support adapted to engage beneath a tire to support the same, of means for maintaining a tire in position upon the support shiftable to engage and elevate a tire into position upon the support.

1,501,471. WASHING ATTACHMENT FOR TUBS. HARRY A. SMITH, Mondovi, Wash. Filed May 31, 1923. Serial No. 642,655. 5 Claims. (Cl. 68—15.)

1. In a device of the class described, a supporting member, elements on said member adapted to secure the member to a receptacle, a main shaft mounted to move

in said support, a plunger on said main shaft, and means for communicating to said main shaft a combined



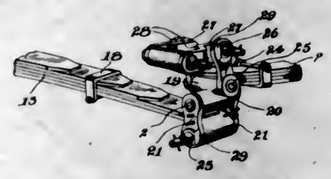
oscillatory and reciprocating movement, said plunger having concentric rings and a series of clips on said rings adapted to hold material to be washed.

1,501,472. PROCESS OF PRODUCING PARAMIDOPHENOL AND ITS COMPOUNDS. CHARLES J. THATCHER, New York, N. Y. Filed Jan. 24, 1920. Serial No. 353,742. 15 Claims. (Cl. 204—9.)

1. In the manufacture of paramidophenol and its compounds, the process of reducing nitrobenzol by electrolyzing the same in sulfuric acid, diluted to a content not exceeding about 78%, until the liquor will crystallize when cooled, cooling to crystallize the liquor, filtering off the mother liquor, dissolving the crystals in water, and neutralizing the excess acid thereof, whereby a paramidophenol compound readily soluble in water is obtained.

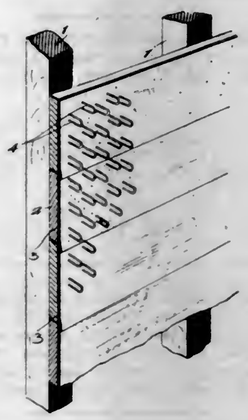
1,501,473. SIRUP-SPOUT CLOSURE. CHESTER A. TINCHER, Seattle, Wash. Filed Aug. 21, 1923. Serial No. 658,573. 4 Claims. (Cl. 225—35.)

1. A closure for sirup spouts having a plate pivotally attached to a collar adjacent the end of the spout, a rod pivotally attached to the plate, a lever attached to the opposite end of the rod, and a collar on the plunger that forces the sirup up through the spout, which will engage the lever and hold the closure open.



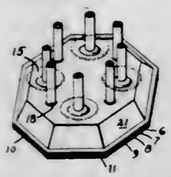
1,501,474. TIMEPIECE HOLDER FOR STEERING WHEELS. GEORGE A. BELL, Belmont, N. H. Filed Oct. 21, 1922. Serial No. 596,007. 3 Claims. (Cl. 224—4.)

2. A holder comprising a cup, adapted to receive a time-piece, and provided with ears projecting oppositely from its mouth, a clamping-screw engaged with one of said ears, an annular confining member pivoted to one of the cup ears, and having a slotted extension, adapted to be confined on the other cup ear by said clamping-



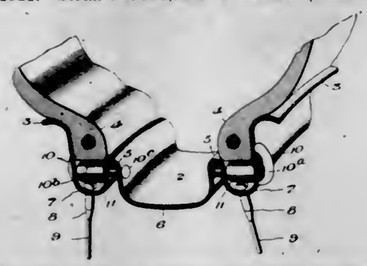
screw, in an operative position, overhanging the margin of the interior of the cup, means for yieldingly pressing the time-piece against said confining member, and means for detachably securing the cup to a steering-wheel spoke.

1,501,475. AUTOMOBILE SPRING SUSPENSION. WILLIAM B. CONNELL, Dallas, Tex. Filed Jan. 6, 1923. Serial No. 611,105. 2 Claims. (Cl. 267—54.)



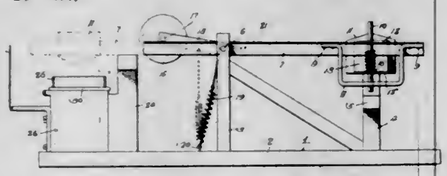
1. In a vehicle, the combination with the usual longitudinally extending side springs and the transverse semi-elliptic spring, of a universal shackle between said springs, one end of said transverse spring being connected with the lower end of said shackle, and a pair of links connected to the rear terminal of the longitudinally extending spring and extending forwardly thereof, said links at their forward ends being connected to the upper end of said shackle.

1,501,476. WALL SHEATHING. CHARLES O. COWAN, Palo Alto, Calif. Filed June 22, 1923. Serial No. 647,081. 5 Claims. (Cl. 72—33.)



5. In a wall construction, a sheathing member, and a plurality of staples extending outwardly from the sheathing member and having the bight portions thereof unobstructed for securing plaster to the sheathing member.

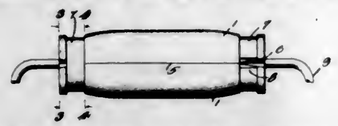
1,501,477. COUNTERSET. HARRY J. CUNNINGHAM and CARL G. A. ROSÉN, San Francisco, Calif., assignors to Tung Foon Company, San Francisco, Calif., a Copartnership composed of Harry J. Cunningham, Carl G. A. Rosen, and John J. O'Donnel. Filed Oct. 22, 1923. Serial No. 670,010. 5 Claims. (Cl. 46—55.)



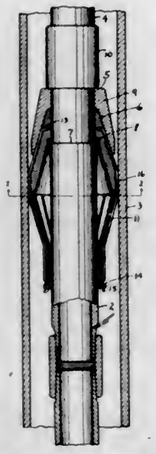
3. A counter set comprising a rack having a perforated base and a chip receiving pin extending upwardly therefrom, and a second rack having a base and a chip receiving pin extending upwardly therefrom and arranged to engage in a perforation of said first base when said latter base is superimposed over the second.

1,501,478. RIM. BURGESS DARROW, Huntington Park, Calif., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 11, 1921. Serial No. 506,953. 5 Claims. (Cl. 152—20.)

4. A unitary rim for pneumatic tires comprising a pair of upstanding bead-retaining flanges, a pair of laterally spaced circumferential gutters formed between the flanges, each of said gutters being adapted to receive a series of spoke nipples, a pair of laterally spaced circumferential lands formed between the gutters, a relatively deep central groove formed between the lands, and a plurality of reenforcing elements extending from the lands to the flanges.



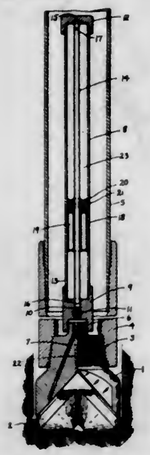
1,501,479. METHOD AND APPARATUS FOR MAKING BRICK. ROY P. M. DAVIS, Mount Union, Pa. Filed Oct. 4, 1922. Serial No. 592,226. 13 Claims. (Cl. 25—45.)



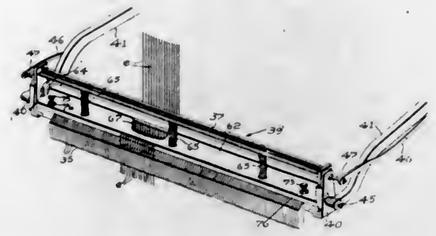
1. The herein described method of making brick consisting in precipitating plastic material into a mold, scraping the excess material from the top of the mold to shape the brick, and then precipitating the preformed brick into a mold of slightly greater transverse and longitudinal dimensions than the first mentioned mold.

1,501,480. HANDLE. JOSEPH W. DYE, Long Beach, Calif. Filed Jan. 11, 1923. Serial No. 612,116. 2 Claims. (Cl. 16—116.)

1. A handle comprising laterally separable sections having abutting inner surfaces, and prehensile spring binders surrounding the sections, the sections being provided with superficial means for holding the binders on the sections, the binders having free ends and being rotatable in said means and on the handle, to space the free ends of the binders from the inner surfaces of the sections, circumferentially of the handle.

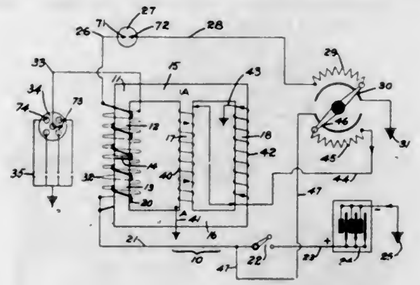


1,501,481. PACKER. CHARLES E. FRAZIER, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex. Filed Nov. 24, 1923. Serial No. 676,732. 7 Claims. (Cl. 166—10.)



7. A well packer for use in a well casing, comprising a supporting tubing, a downwardly flaring cup on said tubing adapted to contact with said casing, means to clamp said cup on said tubing, and rods extending along the outer face of said cup to support and protect the same.

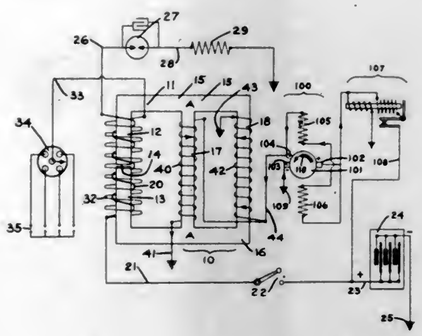
1,501,482. LUBRICATOR. HOWARD R. HUGHES, Houston, Tex. Filed Feb. 27, 1923. Serial No. 621,669. 4 Claims. (Cl. 255—71.)



1. In a rotary earth-boring drill, a drill stem, a drill head thereon, roller cutters mounted on bearings on said head, a lubricator barrel secured to the upper end of said head within said drill stem, said barrel having an opening, for flushing fluid adjacent the lower end thereof, a buoyant piston in said barrel above said opening, a central tube secured to said head within said barrel, said tube having an opening adjacent its upper end, and a passage from said tube through said head to said bearings.

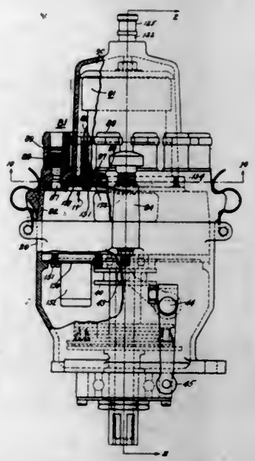
1,501,483. PILE-FABRIC LOOM. HARRY HUGHES, Saxonville, Mass. Filed June 23, 1923. Serial No. 647,282. 9 Claims. (Cl. 139—9.)

1. In a loom for weaving tufted fabrics, means for inserting the pile tufts, comprising in combination, a carrier for yarn tuft presenters, means for supporting a supply of yarn with the ends of the yarn extending from the source of supply to said presenters, means for moving the carrier toward and from the shed relative to the source of yarn supply, and yarn engaging means supported by the carrier and actuated by the tension placed upon the yarn as the carrier is moved towards the shed to grip the yarn and pull it from the source of supply.



1,501,484. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Sept. 3, 1918. Serial No. 252,316. 20 Claims. (Cl. 123—148.)

1. In an ignition system, the combination with a source of current, and sparking devices; of an ignition coil including windings adapted to be connected with the source and sparking devices, and including a core; and provisions for changing the inductance of the coil by varying the reluctance of the material of the core.

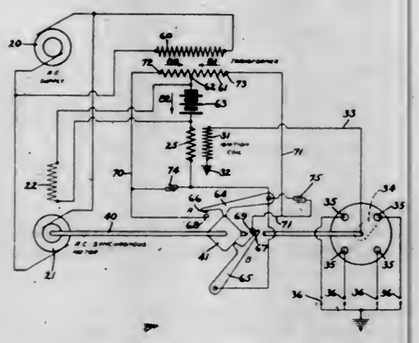


1,501,485. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Original application filed Sept. 3, 1918, Serial No. 252,316. Divided and this application filed Dec. 11, 1919. Serial No. 344,205. 8 Claims. (Cl. 290—41.)

4. In an ignition system for internal-combustion engines, the combination with a generator driven by the engine; of sparking devices for the engine; an ignition coil adapted to be connected with the engine; and means

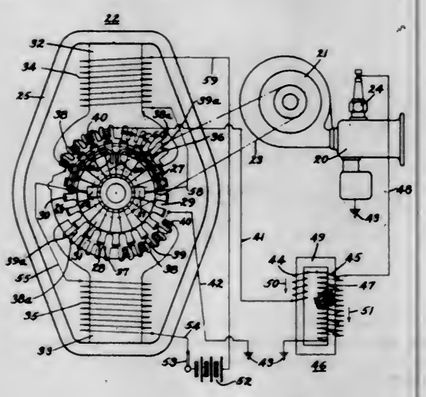
controlled by variations in voltage between certain generator brushes for varying the inductance of the coil.

1,501,486. IGNITION APPARATUS. JOHN H. HUNT and WILLIAM A. CHRYST, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 18, 1920. Serial No. 424,837. 7 Claims. (Cl. 123—148.)



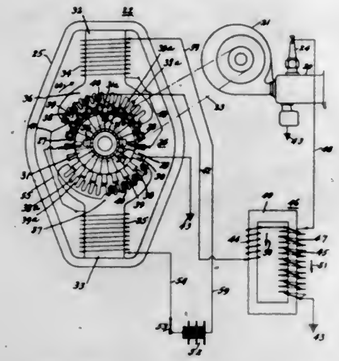
1. In an ignition system, the combination with a current source and an ignition coil having a primary winding and a secondary winding; of circuits connecting the battery with different portions of the primary winding; and means for opening and closing said circuits in recurrent sequence, said circuits having an overlapping closed period, said means including breaker levers each for controlling one of said circuits, and a single cam for operating said breaker levers.

6. In an ignition system, the combination of a distributor head having a series of contacts and a recess adapted to receive an ignition coil; a coil supported by said head in said recess; a member closing one end of



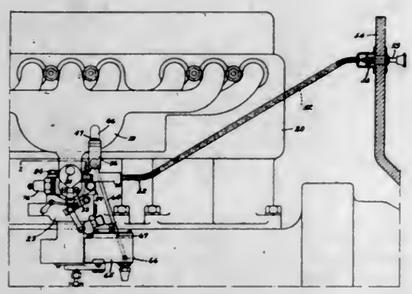
the recess, said member being supported by the coil; a contact supported on the outer surface of said member; and a screw passing through said contact into said member and electrically connecting the coil and contact.

1,501,487. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 19, 1920. Serial No. 425,239. 9 Claims. (Cl. 171—314.)



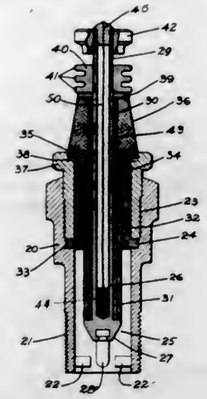
1. In an ignition system, the combination with a source of alternating current; of an ignition coil; a mechanically operated timer; and means mechanically separate from said source for operating said timer in synchronism therewith.

1,501,488. MOTOR AND IGNITION GENERATOR. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed June 16, 1921. Serial No. 478,142. 4 Claims. (Cl. 171—123.)



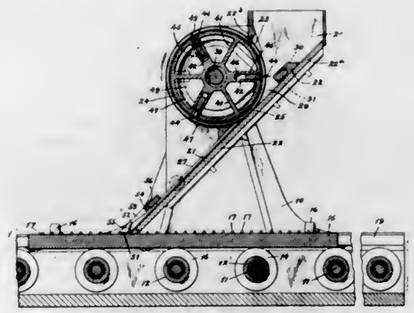
1. In a motor and high frequency generator, the combination with field poles and an armature including windings and an open-slotted core; of a series of pole-face windings distributed over a portion only of the total pole-face area of the field poles, said windings being independent of the armature windings.

1,501,489. REGULATOR FOR IGNITION SYSTEMS. JOHN H. HUNT and JOHN T. FITZSIMMONS, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed July 16, 1921. Serial No. 485,356. 7 Claims. (Cl. 171—119.)



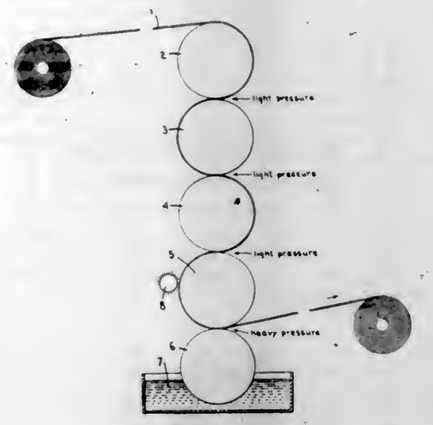
1. In an ignition system, the combination with an electric motor including pole-face windings; of a source of current for said motor; a transformer ignition coil connected with said pole-face windings; a spark plug connected with said ignition coil; and means for maintaining substantially uniform ignition between certain limits of voltage of the current source.

1,501,490. FUEL BURNER. JOHN H. HUNT and HUGH WALLACE, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed May 10, 1922. Serial No. 559,955. 6 Claims. (Cl. 123—122.)



1. In a device for heating an engine intake, the combination with an internal-combustion engine; of an electrically ignited liquid fuel burner communicating with the intake of said engine; means operated by engine suction for supplying the burner with a total fuel air mixture; and means for separating out of said total fuel mixture, when the burner is relatively cool, a relatively rich easily ignitible mixture.

1,501,491. SPARK PLUG. CHARLES F. KETTERING, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Jan. 11, 1918. Serial No. 211,425. 6 Claims. (Cl. 123—169.)

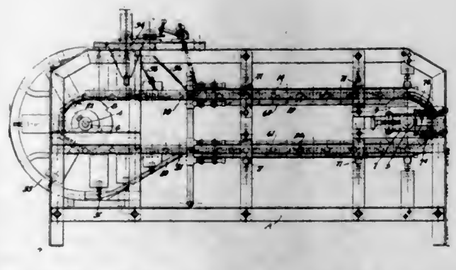


1. In a spark plug, the combination with a plug shell; of an electrode insulated therefrom and having self-contained cooling provisions, including a chamber provided with a chamber lining of metallic amalgam, and a quantity of fluid metal located within said chamber.

1,501,492. METAL-INSERT-FEEDING MACHINE. WALDEMAR D. KMENTT, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1921. Serial No. 497,054. 19 Claims. (Cl. 18—1.)

1. In a machine of the character described, the combination of a hopper for holding small articles in bulk and having a sloping floor, a gravity chute leading therefrom and having a floor sloping in continuation of that of said hopper, and a rotary, back-sweeping member constituting in effect a side wall of said hopper, the upper end portion of said chute being substantially tangent to said rotary member and the two at the point of tangency being so formed as to define a passage of such form in cross-section of the structure as to accommodate an article of determinate form and size only when said article is in a determinate position, said chute having its mouth substantially at said point of tangency.

1,501,493. PROCESS OF IMPREGNATING PAPER. LEONARD C. KOPLIN, Akron, Ohio, assignor to The Thomas Phillips Company, Akron, Ohio, a Corporation of Ohio. Filed July 6, 1921. Serial No. 482,652. 10 Claims. (Cl. 91—68.)

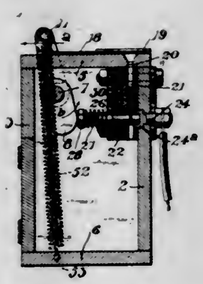


2. The process of manufacturing a tough, durable paper, comprising forming said paper from a stock without any sizing, calendering said paper with a light pressure and then with a heavy pressure and impregnating the paper with a strengthening solution and subjecting it to a heavy pressure calendering.

4. The process of manufacturing paper, comprising calendering the paper so as to leave it open and porous, perforating the surface of the paper and then impregnating the paper with a strengthening solution under heavy pressure.

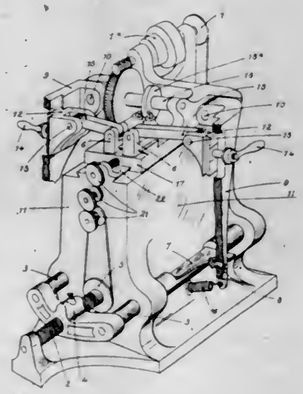
10. The process of manufacturing a tough, elastic paper, comprising calendering a paper made of an unsized manila stock, under light pressure so that it is absorbent, coating the paper while in an absorbent condition with a strengthening solution containing casein and calendering under heavy pressure.

1,501,494. BAKING MACHINE. MANJI MATSUO, San Francisco, Calif., assignor to Kikuye Matsuo, San Francisco, Calif. Filed Mar. 9, 1921. Serial No. 451,012. 6 Claims. (Cl. 107—58.)



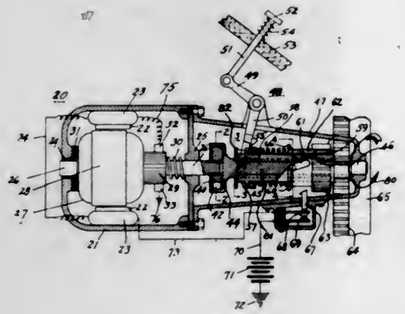
1. The combination of an endless carrier having upper and lower flights and comprising moulds and transverse hinge rods connecting the moulds and having extended terminal portions projecting laterally beyond the same, guiding means located at opposite sides of the conveyor and receiving the ends of the said rods, a container for the reception of dough disposed above the endless carrier and having a valve, valve operating means projecting into the path of the extended terminal portions of the

transverse hinge rods and actuated by the same for operating the valves, and means also engaging the extended terminal portions of the rods for actuating the endless carrier.



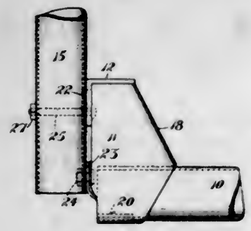
4. In a machine of the character described a main frame, a shaft journalled in each end thereof, one of said shafts being mounted in sliding bearings and said bearings being constant pulled in one direction by spring action, sprockets on each shaft, an endless carrier supported by said sprockets, moulds on the endless carrier, hingedly secured covers on the moulds, a projecting lug on each cover, and a U-shaped cam member supported by the main frame and having a sliding movement therein, said cover lugs engaging the cam and a rigid arm connecting the cam with the slidable bearing to cause said bearing and cam to move in unison.

1,501,495. AUTOMATIC TIME AND COIN-CONTROLLED SWITCH. HAROLD PLUMMER, Oakland, Calif. Filed Oct. 11, 1922. Serial No. 593,859. 4 Claims. (Cl. 194—6.)



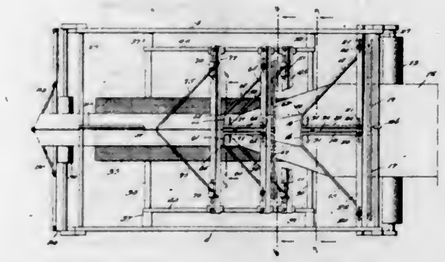
1. The combination with an electric motor and a coin controlled switch therefor of means requiring manual setting of the switch before a coin can be inserted and the circuit closed, and means driven by the motor for resetting the switch and releasing the coin to break the circuit.

1,501,496. AUTOMATIC MACHINE FOR PROFILING TOOLS. MARCEL ULYSSE RAMSAY and DÉSIRÉ MARIE MOEGLEN, Bois-Colombes, France. Filed Aug. 15, 1921. Serial No. 492,299. 3 Claims. (Cl. 82—14.)



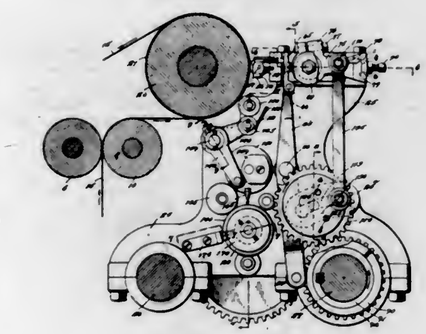
1. An automatic machine for profiling tools, comprising in combination a frame, a work holder, means for rotating said work holder, a tool holder, a template, two longitudinal screws adapted to impart a lengthwise translation to said tool holder and to said template respectively, means for rotating one of said screws, a transmission gear between said screws, a spring controlled lever adapted to pivot on said frame in a transverse plane and cooperating with the profile of said template, a supporting member adapted to slide on said lever, means for securing said supporting member in a determined position on said lever, and a transverse link pivoted at one end on said supporting member and at the other end on said tool holder in order to control the cross feed of the latter.

1,501,497. CONNECTING MECHANISM. ELMER H. SCHWARZ, Fort Lee, N. J., assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 3, 1921. Serial No. 449,457. 5 Claims. (Cl. 172—239.)



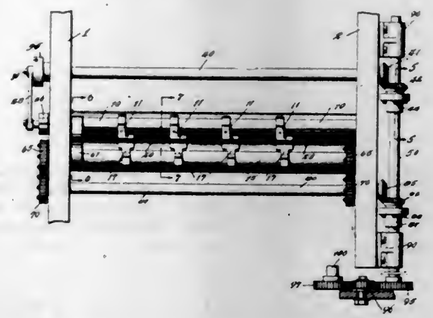
1. In a connecting mechanism, the combination with an overrunning clutch and a driving member having a rotatable shaft connected therewith through said clutch: of a sleeve splined on said shaft; a gear; a pinion adapted to engage said gear; a pin and oblique slot connection between said pinion and sleeve; a spring for normally maintaining said pin and oblique slot in fixed relation; and means for shifting said sleeve.

1,501,498. RISER. ARTHUR M. SMITH, San Francisco, Calif., assignor to Marshall & Stearns Company, San Francisco, Calif., a Corporation of California. Filed May 31, 1922. Serial No. 564,754. 4 Claims. (Cl. 5—206.)



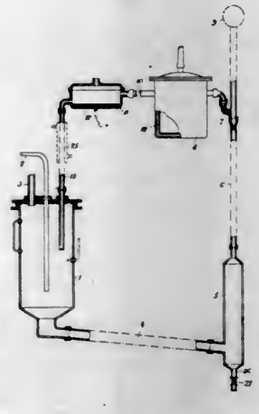
1. In a bed structure, a side rail, a sheet metal riser having its body portion bent into the form of U when viewed in plan, legs integral with the body portion and extending around the rail, the ends of said legs being inturned to engage the sides of a slot formed in the rail.

1,501,499. WEB-FOLDING MACHINE. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a Corporation of New Jersey. Filed Jan. 23, 1923. Serial No. 614,477. 9 Claims. (Cl. 270—93.)



1. A web folding machine having means for longitudinally folding lateral portions inwardly and outwardly upon an intermediate portion of a web, and means for imparting a final longitudinal fold to said intermediate portion of the web.

1,501,500. MECHANISM FOR MAKING IMPRESSIONS UPON TRAVELING SHEETS OR WEBS. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a Corporation of New Jersey. Filed Feb. 12, 1923. Serial No. 618,571. 17 Claims. (Cl. 101—77.)

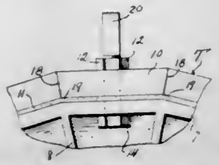


1. The combination with a traveling impression surface adapted to conduct a sheet or web, of a carriage movable toward and away from said impression surface, an oscillating member journalled upon said carriage, and operating mechanism for periodically moving said carriage and oscillating member to cause the latter to contact with and travel in the same direction and at the same speed as the impression surface.

1,501,501. WEB-PUNCHING MECHANISM. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a Corporation of New Jersey. Filed Feb. 19, 1923. Serial No. 620,116. 14 Claims. (Cl. 164—99.)

1. In a machine of the character set forth, the combination of a pair of oscillatory shafts, means for axially oscillating said shafts, and means for intermittently moving one shaft toward and away from the other.

1,501,502. METHOD OF MANUFACTURING ACETALDEHYDE FROM ACETYLENE. ERIK GUSTAF THORIN, Mansbo, Avesta, Sweden, assignor to Stockholms Superfosfat Fabriks Aktiebolag, Stockholm, Sweden. Filed Dec. 3, 1920. Serial No. 428,067. 6 Claims. (Cl. 204—9.)

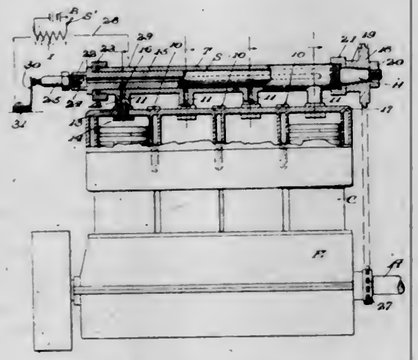


1. Method of manufacturing acetaldehyde from acetylene by using a catalytically acting reaction liquid containing mercury compounds formed by anodic dissolving of metallic mercury in the reaction liquid, which comprises removing the reaction liquid in a cyclic process from the reaction chamber, and while outside said reaction chamber purifying it, and by anodic oxidation enriching the same with mercury compounds and then again introducing said liquid into the reaction chamber.

1,501,503. QUARTZ MILL. EDWIN GUY TROWBRIDGE, Medford, Oreg., assignor to Medford Iron Works, Medford, Oreg., a Corporation of Oregon. Filed Sept. 27, 1922. Serial No. 590,893. 1 Claim. (Cl. 83—9.)

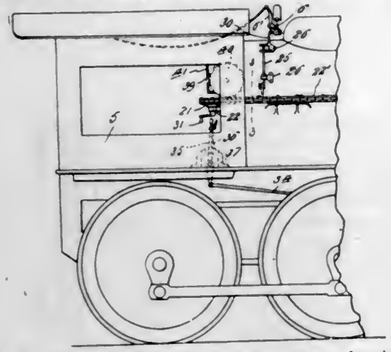
In a quartz mill, a rotary drum comprising heads having facets, staves secured upon the heads at the facets, and means for spacing the staves apart, said means con-

sisting of shims of angular formation insertible between the successive staves at their points of engagement with the heads, the shims including main portions interposed between the staves and other portions located



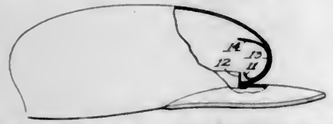
between the staves and the facets thereunder, the engagement of the second named portions beneath the staves resulting in moving them radially outwardly to an extent compensating for the thickness of the shim portions located between the staves.

1,501,504. MOTOR-METER LENS. HARLOW E. TRUAX, Bremerton, Wash. Filed Sept. 22, 1921. Serial No. 502,452. 2 Claims. (Cl. 88—1.)



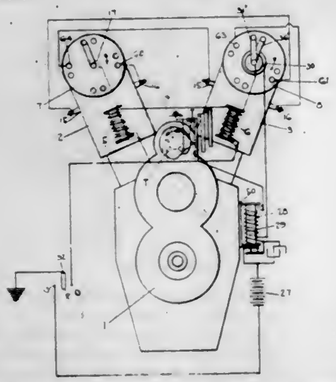
1. In a meter of the class described, a lens having centrally thereof a forwardly protruding vertically arranged ridge having the shape of a segment of a cone whereby light rays passing through the ridge are refracted vertically.

1,501,505. IGNITION MEANS FOR INTERNAL-COMBUSTION ENGINES. PERCY WALTERS, Yonkers, N. Y. Filed Feb. 28, 1922. Serial No. 540,016. 5 Claims. (Cl. 123—143.)



1. In combination, combustion cylinders, a rotary valve comprising a casing communicating with the explosive chamber of each cylinder, a hollow shaft within said casing having ports whereby the interior of said shaft may be brought into communication with the explosive chamber of each cylinder in the order of firing thereof, and means whereby a continuous spark may be maintained within said hollow shaft.

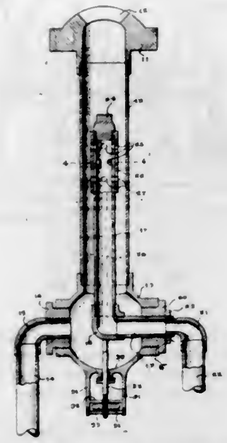
1,501,506. AUTOMATIC WHISTLE-ACTUATING MECHANISM FOR LOCOMOTIVES. ELDON R. WATKINS, Kingman, Kans. Filed July 11, 1923. Serial No. 650,752. 4 Claims. (Cl. 116—58.)



2. In combination with a locomotive wherein the same includes the usual signalling whistle, an endless chain operatively connected to the running gear of the locomotive, abutments upon the chain, and means operatively connected to said locomotive whistle to be engaged by said abutments during the movement of the chain for blowing said signalling whistle.

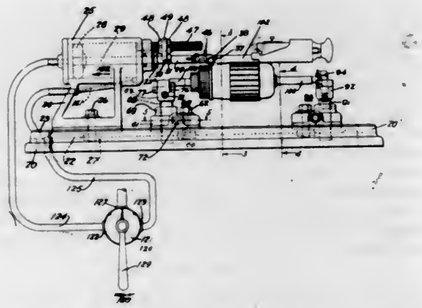
1,501,507. STIFFENER FOR CAPS. CAROLYN E. WETHERBEE, Gardner, Mass. Filed Feb. 28, 1923. Serial No. 621,943. 3 Claims. (Cl. 2—199.)

1. An article for the purpose described comprising a continuous curved body of sheet material adapted to be applied to the front of a cap inside above the visor to hold the cap in position and projecting on a gentle curve outwardly at both ends terminating in a pair of hollow curved conical horns fitting inside the cap.



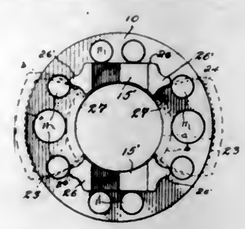
1,501,508. ELECTRICAL SYSTEM FOR AIRCRAFT. LIONEL M. WOOLSON, Dayton, Ohio, assignor, by mesne assignments, to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Nov. 14, 1917. Serial No. 201,974. 17 Claims. (Cl. 123—148.)

1. In an eight cylinder V-type internal combustion engine, in combination, two cylinder-blocks arranged at an angle to each other of substantially one-half the



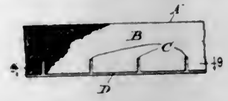
average angle between explosions, and an ignition system including an induction coil, and a cam for affecting said induction coil to build up uniform magnetic flux therein at intervals alternating in the ratio of one to three.

1,501,509. OIL BURNER. EDGAR R. WRIGHT, Glenrock, Wyo. Filed Sept. 17, 1923. Serial No. 663,241. 3 Claims. (Cl. 158—75.)



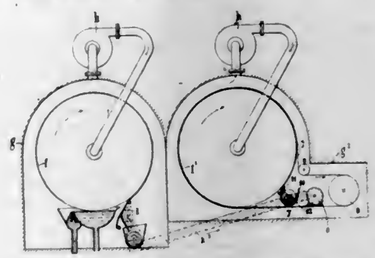
1. An oil burner comprising an elongated casing having a burner opening in one end and a steam inlet pipe in its other end, an oil pipe projecting into the casing and extending axially therein and being closed at its outer end and having laterally disposed openings therein for spraying the oil from the tube, a sleeve valve surrounding the tube and slidable longitudinally thereon and having similar openings adapted to register with the openings in the tube, and adjusting means for the sleeve valve operable exteriorly of the casing for moving the sleeve longitudinally upon the tube and adjusting the openings into and out of register with each other.

1,501,510. ARMATURE-CONSTRUCTING FIXTURE. ROBERT H. AHLERS, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed June 20, 1921. Serial No. 478,815. 11 Claims. (Cl. 29—84.)



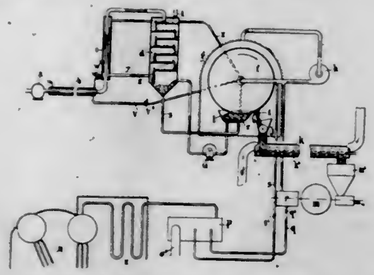
1. In a machine for power operating an armature making tool, the combination with a cylinder and a piston; of adjustable supports for rigidly holding the armature in desired position; and means associated with said piston for engaging the armature making tool in order that the tool will be moved by said piston.

1,501,511. CURB-BOX AND COCK SUPPORT. VICTOR E. BEAGLE, Alexandria, Va. Filed Mar. 23, 1923. Serial No. 627,200. 3 Claims. (Cl. 137—13.)



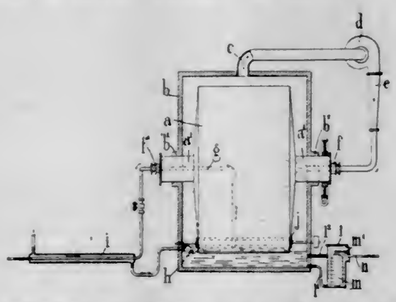
1. As an improved article of manufacture, a support for standard common curb boxes and cocks comprising a box-supporting base plate, a central ferrule element adapted to fit into the base of a box, and having lateral extensions from the sides adapted to lie in the side openings of such a box and engage and support boxes of various sizes, said extensions having channels therein extending from within and beyond the box, adapted to fit snugly the sides and to support the hexagonal ends of a cock, the ferrule being of a size to limit sliding movement of a cock on the medial line of the channels.

1,501,512. BUILDING MATERIAL. OSCAR A. BIGLER, Wyoming, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Mar. 29, 1922. Serial No. 547,700. 3 Claims. (Cl. 108—7.)



1. A building strip having a plurality of lateral lines of bituminous material arranged below the surface extending inward from one edge thereof, a straight continuous line arranged below the surface connecting all of said lateral lines so as to provide areas enclosed on three sides only all so arranged that the said continuous line will form one side of an enclosed area on the next adjacent strip.

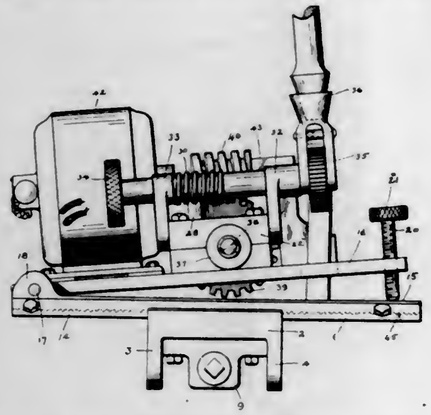
1,501,513. DRYING PROCESS AND APPARATUS THEREFOR. TEODRON BOBERG, Clapham Park, London, England, assignor to Techno-Chemical Laboratories Limited, London, England. Filed Feb. 12, 1920. Serial No. 358,088. 9 Claims. (Cl. 159—12.)



3. The method of evaporating liquids which consists in supplying wet matter to a suitable casing, picking up the matter from the supply in the lower part of said casing on a moving exterior surface of a closed vessel having a heat coducting wall thus raising a thin film of the matter from the supply onto said heat conducting wall, exhausting the vapours from the casing, compressing them mechanically to raise their temperature and returning them to the interior of the moving vessel.

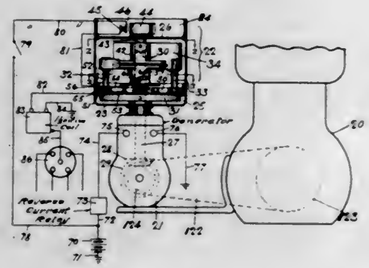
1,501,514. DRYING PROCESS AND APPARATUS. THORN BOBERG, Clapham Park, London, England, assignor to Techno-Chemical Laboratories, Limited, Clapham Park, London, England. Filed May 19, 1926. Serial No. 382,521. 8 Claims. (Cl. 159—12.)

1. A method of drying material to be used for industrial purposes in stages by energy generated from the combustion of fuel, consisting in generating products of combustion, evolving vapour from the moist material upon a drying surface, utilizing part of the energy of said products of combustion to raise the temperature of said vapour by compression, heating the drying surface by applying said compressed vapour thereto and removing partly dried material from said drying surface, and mingling it with products of combustion of which part of the energy has been already utilized in order to complete the drying operation.



1,501,515. METHOD AND APPARATUS FOR EVAPORATING LIQUIDS. NILS TESTRUP, London, England, assignor to Techno-Chemical Laboratories Limited, Clapham Park, London, England. Filed Aug. 9, 1920. Serial No. 402,320. 8 Claims. (Cl. 159—12.)

4. Apparatus for carrying out a method of reducing the temperature difference required for transmitting heat through a partition for vaporizing liquids by the heat of their own vapour raised in temperature by compression, comprising in combination a moving heat transmitting partition, means for applying a thin film of liquid matter thereto, moving mechanism for withdrawing from one side and returning, at a higher temperature and reduced volume, to the other side of said partition vapour evolved from said film and means for dislodging deposited matter from both sides of said partition.

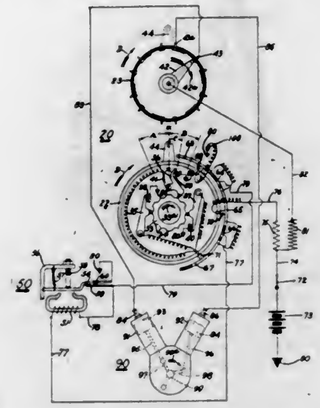


1,501,516. RAIL-DRILLING APPARATUS. HOMER C. ROSTIAN, East Rochester, N. Y., assignor of one-fourth to Jerome N. Marshall, one-fourth to William J. Sheehy, and one-fourth to Emily W. Joyce, all of East Rochester, N. Y. Filed Apr. 2, 1923. Serial No. 629,236. 9 Claims. (Cl. 77—8).

1. In a drilling apparatus for drilling rails, the combination of a bed plate, a runway formed on top of said bed plate, a stationary jaw formed at the front of said bed plate, a movable jaw co-operating with said stationary jaw to embrace the base of a rail and securely clamp said bed plate to the rail, a carriage adjustably mounted to slide in said runway parallel to the rail, a horizontal

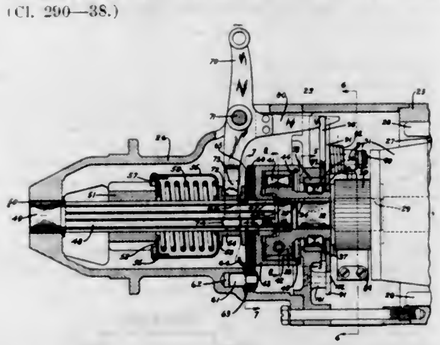
spindle mounted to rotate on said carriage, a chuck carried on the end of said spindle, means adapted to rotate said spindle and means adapted to slide said spindle back and forth in said carriage during the rotation of said spindle.

1,501,517. IGNITION SYSTEM. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Oct. 23, 1918. Serial No. 259,378. 5 Claims. (Cl. 123—117.)



1. In an ignition system for internal combustion engines, the combination with a current source; of an ignition timer including a timer controlling member for controlling the advancing and retarding of the spark; an engine driven member; a switch and a switch operating member mounted to rotate with the engine driven member; centrifugal members mounted on the engine driven member and arranged to actuate the timer controlling member and the switch controlling member; and means for conducting current from a stationary part to the switch, said means comprising collector rings mounted to rotate with the engine driven member, and brushes mounted on the stationary part and cooperating with said rings.

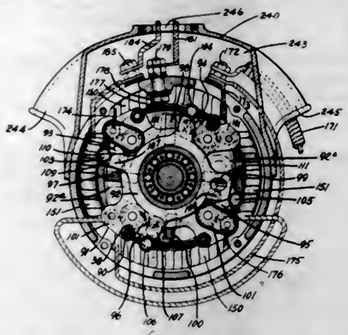
1,501,518. IGNITION-SYSTEM CONTROL. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed May 9, 1919. Serial No. 295,862. 14 Claims. (Cl. 123—148.)



1. In an ignition system for internal-combustion engines, the combination with an engine; a source of current, an ignition coil and a timer; of a device cooperating

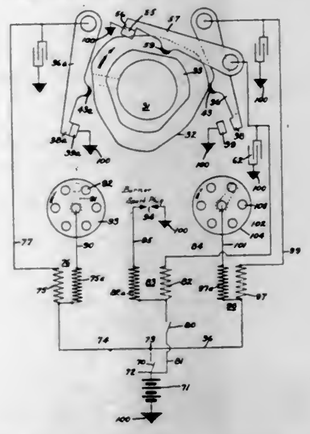
with said source of current and coil for producing a shower of sparks; and a controlling element for adjusting the timer of the ignition and for rendering either the

shower spark producing device or the timer operative to control the passage of current from the current source to the coil.



1,501,519. ENGINE-STARTING DEVICE. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Jan. 28, 1920. Serial No. 354,658. 22 Claims. (Cl. 290—38.)

6. In a starting device for internal-combustion engines, the combination with an engine having a gear, and a motor; of a shaft operated by the motor; a pinion slidably connected with said shaft and normally disconnected from the engine gear; a brake for said shaft; and manual means for releasing said brake and for shifting said pinion into engagement with said gear.



1,501,520. STARTING AND GENERATING SYSTEM. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Mar. 22, 1920. Serial No. 367,631. 2 Claims. (Cl. 290—38.)

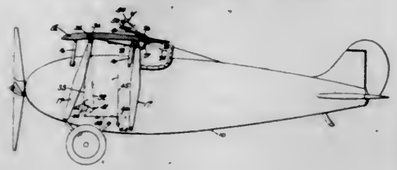
1. In a starting system, the combination with an internal combustion engine and a storage battery; of a dynamo-electric machine operable as a motor to start the engine and having brushes each mounted on a movable brush arm each yieldingly urged toward the motor commutator by a spring; a pivotally mounted brush cam plate provided with projections each cooperating with a brush arm and each provided with a camming surface and with a stop surface normally maintaining a brush out of engagement with the commutator; shiftable gearing for connecting the machine with the engine; means for shifting said gearing including a member cooperating with said brush cam plate to release said brush arms

after the gearing has been substantially connected; and spring means for restoring the gear shifting means and the brush cam plate, causing the said camming surfaces to move the brush arms away from the commutator.

1,501,521. IGNITION SYSTEM. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 8, 1921. Serial No. 435,854. 6 Claims. (Cl. 123—148.)

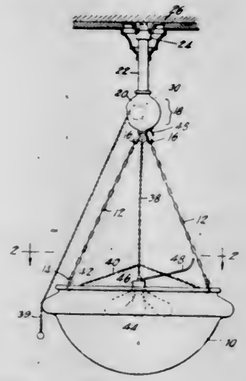
1. In an ignition system for an internal-combustion engine provided with a fuel burner for auxiliary heating purposes, the combination with a current source; of engine ignition apparatus including an engine controlled circuit interrupter; burner ignition apparatus including an engine controlled circuit interrupter; and a common engine driven member including superposed cams for intermittently operating said interrupters, said cams and interrupters being constructed and arranged so that the ignition impulses provided for the engine will be greater in intensity than the ignition impulses provided for the burners.

1,501,522. AIRCRAFT OBSERVATION WINDOW. VIRGINIUS E. CLARK, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 26, 1921. Serial No. 510,549. 2 Claims. (Cl. 244—31.)



1. An airplane wing having upper and lower cambered surfaces spaced apart giving the wing an appreciable

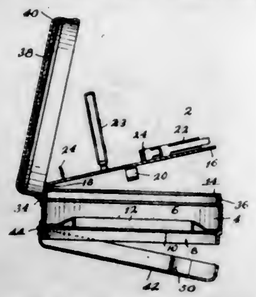
thickness, and having an observation opening cut through both the upper and lower cambered surfaces, and a trans-



parent window for closing said opening, said window being positioned between the planes of the upper and lower cambered surfaces.

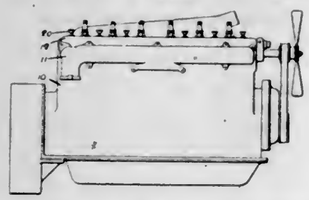
1,501,523. AIRPLANE. VIRGINIUS E. CLARK, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed July 1, 1922. Serial No. 572,233. 8 Claims. (Cl. 244—29.)

1. In an airplane, a wing having a rigid upper surface and a movable lower flap, said flap being operable to increase the lift of the wing, means for actuating the flap, an auxiliary air vane interconnected with said flap, and means for utilizing the air pressure on said vane to balance the force necessary to actuate the flap during flight.



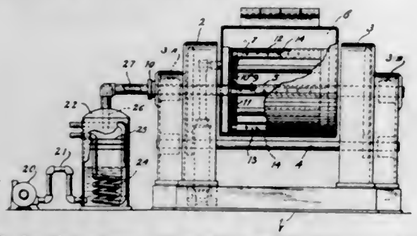
1,501,524. ADJUSTABLE LIGHTING FIXTURE. PHILIP J. COUSINS, Brooklyn, N. Y. Filed Feb. 4, 1922. Serial No. 534,009. 2 Claims. (Cl. 240—78.)

1. A lighting fixture including a fixed pendant, an incandescent lamp, a globe for said lamp, chains carried by said pendant directly connected to said globe and adapted to support it in one position and a flexible member arranged to be manually operated to simultaneously adjust the position of said globe and lamp and relieve said chains of the weight thereof, and means carried by said pendant for locking said flexible member in any desired position of adjustment.



1,501,525. VANITY CASE. CECILE E. CROSWHITE, Kansas City, Mo. Filed Mar. 19, 1923. Serial No. 626,183. 3 Claims. (Cl. 132—83.)

1. In a device of the character described, a tubular body having an inturned margin, an inner lid hinged to and adapted to rest against said inturned margin, a coin receptacle carried by said inner lid, an outer lid hinged

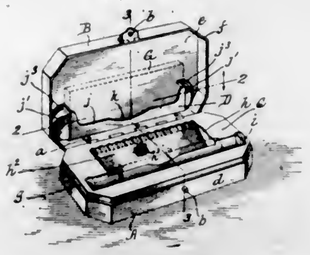


to the tubular body and adapted to close over said inner lid, and a mirror at the inner side of said outer lid.

1,501,526. PRIMING COCK. CHARLES R. SHORT, Dayton, Ohio, and REX C. DARNELL, Detroit, Mich., assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 3, 1920. Serial No. 400,951. 3 Claims. (Cl. 123—187.5.)

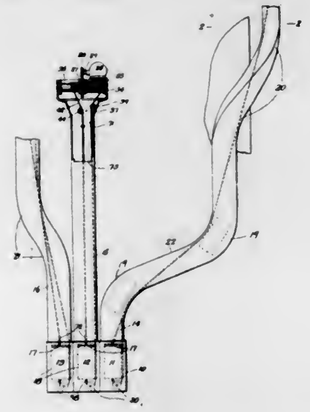
1. In combination, an engine having a passage through a wall thereof, a valve seat within said passage and a priming device, including a stem, removably secured in the aperture; the stem having a portion removed adjacent to and terminating in a valve adapted to engage the valve seat, the stem also being provided with a conduit affording communication between the exterior of the engine and the surface adjacent to the valve.

1,501,527. PROCESS OF MAKING BREAD. WILLIAM A. DARRAH, Chicago, Ill. Filed Jan. 26, 1922. Serial No. 531,977. 7 Claims. (Cl. 99—10.)



5. In the process of making dough the step which consists in forcing air rapidly through a solution containing yeast foods, removing the larger drops of said solution from said air, and passing the air containing traces of said yeast food solution into the dough.

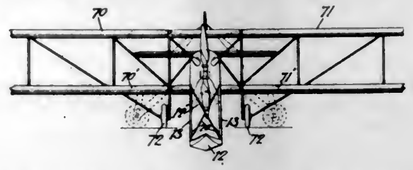
1,501,528. DISPLAY CASE. JOSEPH DAVIS, Newark, N. J., assignor to The Insel Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 14, 1922. Serial No. 543,706. 3 Claims. (Cl. 206—16.)



1. A display case embodying an encasing member composed of parts hingedly connected, and a bottom member fixedly attached to one of said parts, said bottom mem-

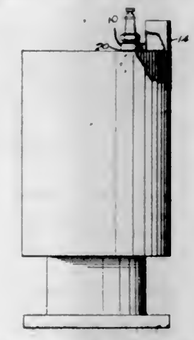
ber being provided with a plurality of recesses positioned adjacent to each other, one of said recesses being

bounded by a wall or panel inclined to the plane of the bottom member and said panel or wall being formed with a socket intermediate the ends of said wall.



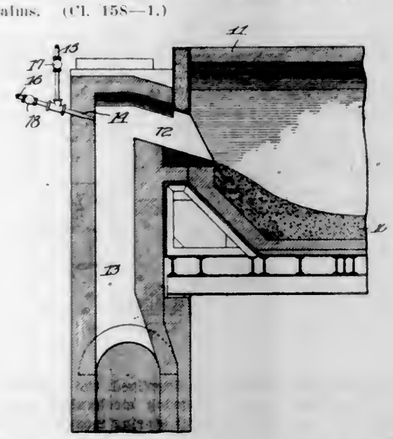
1,501,529. MAIL ELEVATOR. DANIEL A. DORAN, Yonkers, N. Y. Filed May 26, 1920. Serial No. 384,398. 12 Claims. (Cl. 187—4.)

5. An apparatus of the class described comprising a shaft, a mail box adapted to pass upwardly and downwardly through said shaft and normally located at the lower end portion thereof, means whereby mail may be placed in said box when in its normal position, a door at the upper end portion of said shaft and adapted to communicate with said mail box when in its raised position, means for mechanically raising and lowering said mail box in said shaft, an electric motor for operating said means, means for automatically controlling the circuit to said motor to control the movement of said mail box, two pulleys mounted at the upper end of said shaft, cables mounted on said pulleys and the free ends of which are connected with the top and bottom of said mail box, and means for rotating said pulleys in opposite directions whereby said mail box may be mechanically raised and lowered in said shaft.



1,501,530. AIRPLANE. IVAN H. DRIGGS, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 12, 1921. Serial No. 514,468. 4 Claims. (Cl. 244—2.)

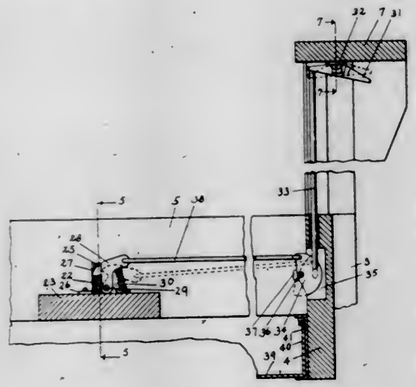
3. In an amphibian airplane having a fuselage and main wings, in combination, retractable float means for landing on water attached to said fuselage, wheel means for landing on land attached to said main wings and



being independent of said float means, and means for folding the main wings together with said wheel means back alongside the fuselage.

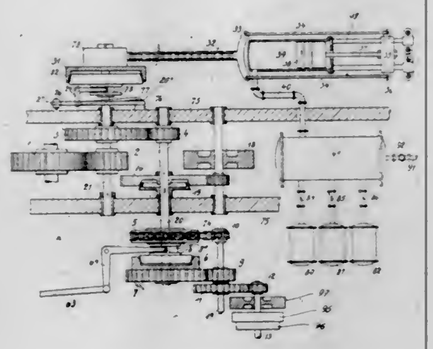
1,501,531. INTERNAL-COMBUSTION ENGINE. WILLIAM B. EARNSHAW, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 15, 1920. Serial No. 417,218. 7 Claims. (Cl. 123—169.)

1. The combination with an air cooled combustion engine cylinder of means for cooling the spark plug, the means comprising a copper plate attached to the cylinder but heat insulated therefrom, said plate being provided with means for attaching the spark plug and also with cooling fins disposed within the current of cooling air.



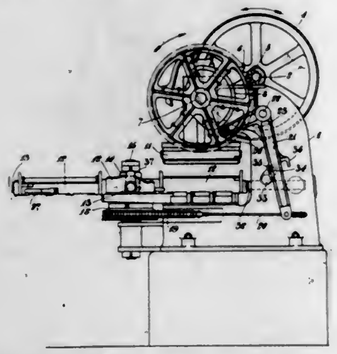
1,501,532. FURNACE. NICKOLAS F. EGLER, Chicago, Ill. Filed Oct. 16, 1922. Serial No. 594,773. 8 Claims. (Cl. 158—1.)

1. The process of operating a reversing open hearth furnace consisting of supplying air to the mixing port, supplying liquid fuel under pressure to a point adjacent



said mixing port, supplying a combustible gas under pressure to said point, mixing the gas and liquid fuel in a confined space, and spraying and directing the mixture into said mixing port.

1,501,533. ADJUSTABLE CHAIR. LOUIS FEASEL, Sturgis, Mich. Filed Nov. 18, 1921. Serial No. 516,083. 3 Claims. (Cl. 155—161.)

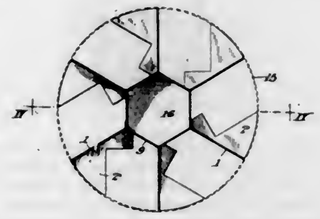


1. In a chair, the combination with a frame comprising side bars, arms, and a supporting bar extending from front to rear, of an adjustable back pivotally mounted on said frame, a downwardly projecting arm on said back provided with a curved lower end having a segmental slot therein, a toothed slide mounted on said bar and having a pin engaging said slot in said arm, an inverted U-shaped housing embracing said slide and having a transverse slot therein, a detent pivotally mounted on said supporting bar at the side of said housing to engage said slide through said slot in said housing, and means for manually releasing said detent.

1,501,534. REVERSIBLE MACHINE. OTTO FORKEL, Berlin-Weissensee, Germany. Filed May 20, 1922. Serial No. 562,543. 18 Claims. (Cl. 74—98.)

2. In a machine of the class described, the combination, with the driving means, reversing mechanism, and the member to be reversed, of power storing means interposed between said driving means and member to be reversed, and means under control by said member to be reversed to throw said power storing means into and out of operation.

1,501,535. ROOFING-TILE PRESS. NILS FREDRIKSSON, Stockholm, and HERMAN ALFRED EDVARD HÄRSTEDT and KARL GUSTAF LINDBERG, Svedala, Sweden, assignors to Aktiebolaget Abjörn Anderson, Svedala, Sweden, a Company of Sweden. Filed July 24, 1922. Serial No. 577,115. 6 Claims. (Cl. 25—70.)



1. In a roofing-tile press the combination of a vertically movable press head, and a plurality of lower moulds capable of turning in unison around a vertical axis so as to be movable one after the other to pressing position below said press head, each of said lower moulds being separately capable of turning around a horizontal axis substantially radial and perpendicular to said first named axis.

1,501,536. FLOWING DEVICE FOR WELLS. LOUIS FRIEDMAN, Muncie, Ind., and DAVID WALLACE, Tulsa, Okla. Filed June 10, 1922. Serial No. 567,262. 5 Claims. (Cl. 162—1.)

1. A flowing device for oil wells including an outer shell closed at its upper end, an outflow pipe extending from the said upper end of the shell, a barrel connected to and depending within the shell having its upper portion closed, one or more pressure tubes within the barrel having their upper ends opening through the upper closed portion of the barrel and into the outflow pipe, and having their lower ends opening through the wall of the barrel and into the shell, and one or more outflow tubes in the barrel having their upper ends opening through the upper closed portion of the barrel and into the outflow pipe.

1,501,537. BOX PARTITION. GEORGE H. FRITZSCHE, Brooklyn, N. Y., assignor to Beautebox, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 18, 1922. Serial No. 595,347. 4 Claims. (Cl. 229—28.)

1. An article of the character described comprising, a plurality of blanks folded so as to form a plurality of pockets, said blanks being adapted for mutual engagement whereby each holds the other in position, and another blank adapted to brace the previously named blanks and serve as a bottom for one of said pockets.

1,501,538. BUILDER'S HARDWARE AND METHOD OF MAKING SAME. RICHARD H. GARDNER, Chicago, Ill. Filed Feb. 11, 1922. Serial No. 535,682. 5 Claims. (Cl. 41—30.)

1. The method of manufacturing builders' hardware which consists in casting the article to be made from a non-corrosive material, then pounding it to make surface depressions, then painting the same with a black paint, or lacquer, then rubbing the device with emery cloth or the like to remove the lacquer from the high surfaces and finally rubbing the device over with transparent wax.

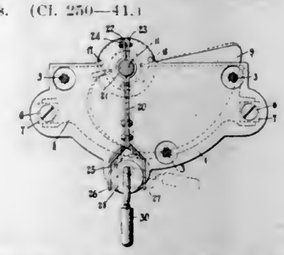
1,501,539. REMOVABLE BRIDGE FOR TEETH. HARRY A. GOLLOBIN, New York, N. Y. Filed June 16, 1922. Serial No. 568,751. 7 Claims. (Cl. 32—12.)

1. A removable bridge attachment including coacting bridge and abutment members, the bridge member comprising a head and shank, and a separate friction spring having a horizontal branch permanently united to the bottom of the bridge member and a free vertical branch extending along the outer face of the head of the bridge member, the head having a groove along its outer face for permitting the free vertical branch of the spring to be forced thereinto.

1,501,540. REMOVABLE BRIDGE FOR TEETH. HARRY A. GOLLOBIN, New York, N. Y. Filed June 16, 1922. Serial No. 568,752. 3 Claims. (Cl. 32—12.)

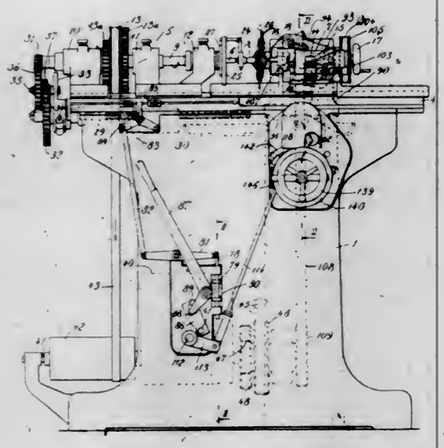
1. A removable bridge attachment including coacting bridge and abutment members, the bridge member having an L-head, and a separate L-shaped friction spring having its horizontal branch permanently united to the bottom of the bridge member and its free vertical branch extending along the outer face of the head, the head having a groove along its outer face for permitting the free vertical branch of the spring to be forced thereinto.

1,501,541. PACKING. CHARLES C. HALL, Kalamazoo, Mich. Filed July 16, 1923. Serial No. 651,883. 2 Claims. (Cl. 154—45.5.)



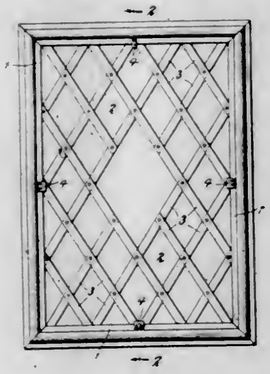
1. A packing comprising a sheet of copper and a sheet of lead crumpled, coated with lubricant, superimposed and rolled together into a scroll so that the lead is at the outside, and compacted.

1,501,542. PACKING. CHARLES C. HALL, Kalamazoo, Mich. Filed July 16, 1923. Serial No. 651,884. 2 Claims. (Cl. 154—45.5.)



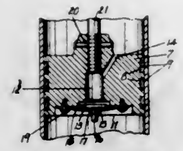
1. A packing comprising a sheet of aluminum and a sheet of copper crumpled, coated with lubricant, superimposed and rolled together into a scroll so that there is copper at the outside, and compacted.

1,501,543. VARIABLE CONDENSER. LLOYD A. HAMMARLEND, New York, N. Y., assignor to Hammarlund Mfg. Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 28, 1922. Serial No. 603,793. 6 Claims. (Cl. 250—41.)



1. In an electric current controlling instrument, primary means including a rock shaft for bringing the instrument into an approximate adjustment, and secondary means including a swinging arm pivoted on and frictionally engaging the rock shaft and a cam operable to swing said arm for turning said rock shaft, to bring the instrument into a more accurate adjustment.

1,501,544. THREAD-GRINDING MACHINE. ANDERS E. LARSSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 16, 1918. Serial No. 222,928. 21 Claims. (Cl. 51—95.)

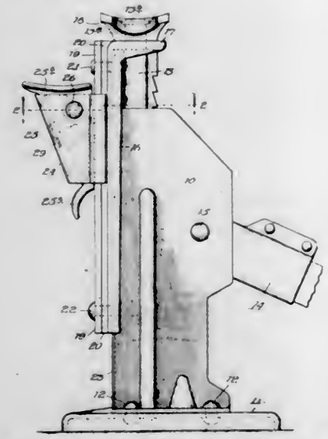


1. The combination in a thread grinding machine, of means including a longitudinally movable headstock and spindle for holding and rotating a blank to be ground, a rotatable grinding wheel for grinding threads on the blank, a rotatable lead screw connected with the headstock for longitudinal movement therewith, a fixed nut engaging the lead screw, gearing connecting the spindle and the lead screw, and means for driving and periodically reversing the spindle and thus reversing the lead screw and the headstock.

1,501,545. COLLAPSIBLE WINDOW GRILLE. NINA H. PIFFARD-FRANCIS, New Rochelle, N. Y. Filed Oct. 26, 1921. Serial No. 510,646. 2 Claims. (Cl. 189—76.)

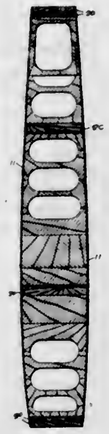
1. The combination with a window sash or frame and a pane of glass having a continuous flat surface permanently set or retained at its edges in said sash, of a paneled frame applied directly in engagement with the flat surface of the window pane and simulating by its panels the individual lights of a leaded window and means on the window sash or frame for detachably securing said paneled frame in position against the continuous surface of the window pane.

1,501,546. AIR PUMP. FRANK B. SHAW, Caledonia, Mich., assignor of one-half to Clyde C. Pierson, Wayland, Mich. Filed Aug. 25, 1922. Serial No. 584,228. 3 Claims. (Cl. 103—225.)



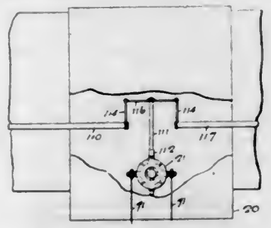
1. A structure of the class described comprising a cylindical metal piston provided with a piston ring and having a recess in its lower end with a central bore extending therefrom and shouldered to provide a downwardly facing valve seat, there being a passage leading from the upper end of said piston to said bore, a metal disk valve having a downwardly projecting stem, and a strap-like valve holder secured within said recess across said valve seat and having a guide opening for said stem.

1,501,547. TOILET ARTICLE. MELDA E. BASSETT, Los Angeles, Calif. Filed Mar. 31, 1923. Serial No. 629,175. 3 Claims. (Cl. 132—78.5.)



1. A toilet article comprising a body having a powder puff of buffed hair protruding from one face thereof, and a transverse extensible handle adapted for concealment within said body.

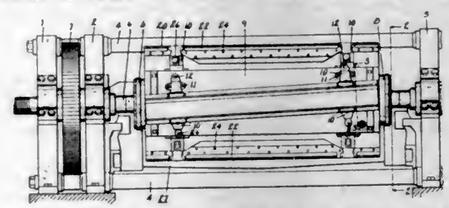
1,501,548. ADJUSTABLE STEP JACK. JOHN W. BATE, Racine, Wis. Filed June 4, 1923. Serial No. 643,248. 3 Claims. (Cl. 254—108.)



1. In a jack, a vertically movable lifting member, a track secured thereto forming a lifting unit, said unit having a series of notches therein, a bracket slidably mounted on said track, a step hingedly mounted on said bracket, a lug on said step, and means for yieldingly holding said lug in engagement with said notches.

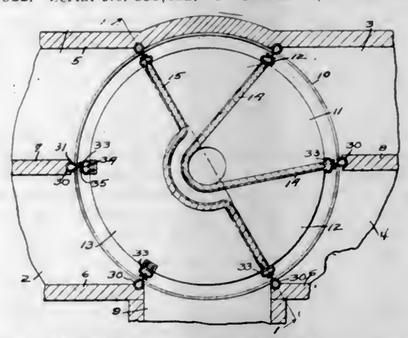
1,501,549. AEROPLANE STRUCTURE. MILTON C. BAUMANN and HOWARD M. RINEHART, Dayton, Ohio, assignors to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed July 28, 1920. Serial No. 399,517. 12 Claims. (Cl. 244—12.)

1. In an airplane, a load supporting or control plane composed chiefly of longitudinally extending substantially I-section wood members positioned laterally in such close relation that the upper and lower surfaces of said members determine the contour of the top and bottom surfaces of the plane.



1,501,550. STANDARD STICK CONTROL. MILTON C. BAUMANN, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 3, 1920. Serial No. 400,975. 14 Claims. (Cl. 244—29.)

1. An aeroplane having braking means adapted to hold ailerons and elevators in adjusted position, and a second braking means simultaneously operable with the first named braking means to hold the rudder in adjusted position.

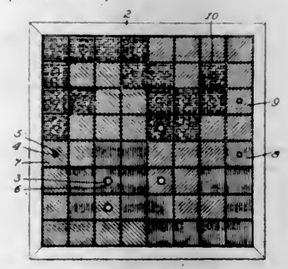


1,501,551. MACHINE FOR CUTTING VENEER. JOHN W. BEIGER, Mishawaka, Ind., assignor to Beiger Veneer Company, Kelso, Wash. Filed Nov. 21, 1923. Serial No. 676,062. 8 Claims. (Cl. 144—214.)

1. In a rotary veneer cutting machine, the combination of a square timber stay log supported by the spindles, pairs of vise-like clamps disposed in diagonal relation on the face thereof, pairs of oppositely facing, obliquely disposed longitudinal jaws supported by the said clamps having inwardly projecting longitudinal lips, oppositely disposed pairs of angle bar supports for the said jaws each with a vertical member secured to the said jaws and the horizontal members disposed towards the other in overlapping relation, and screw clamp means for the said jaws, the same being adapted to hold blocks or beams of timber in such relation as to be

acted upon by the usual cutting knife of the said veneer cutting machine whereby veneer strips are cut from the beams or blocks successively in rotation.

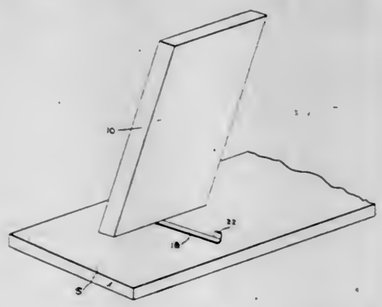
1,501,552. GAS AND AIR REVERSING VALVE. WILLIAM G. BERGMAN, Point Place, Ohio. Filed Nov. 6, 1922. Serial No. 599,482. 10 Claims. (Cl. 137—148.)



10. A gas sealing means for gas apparatus comprising a plurality of nozzle members having slits, means for supplying water under pressure to the nozzle members, and troughs for receiving water from the slits.

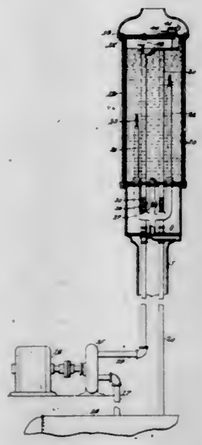
1,501,553. PROCESS OF PREPARING RAW LINEN FOR BLEACHING OPERATIONS. CARL BOCHTER, Gunzburg, Germany. Filed May 12, 1922. Serial No. 560,463. 3 Claims. (Cl. 8—2.)

1. The process for preparing raw linen for the bleaching operations which consists in immersing raw linen in aqueous solutions of bisulphites of alkali metals, separating the linen from the liquid, treating the linen with acids capable of decomposing the bisulphites absorbed by the linen and washing out the acids retained by the linen with water whereupon the bleaching operation is carried out.



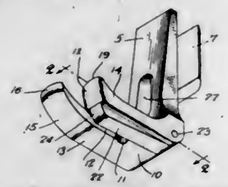
1,501,554. PUZZLE. WILLIAM H. BRUNN, Waterloo, Iowa. Filed June 30, 1923. Serial No. 648,719. 3 Claims. (Cl. 46—41.)

1. A puzzle, comprising a board having a number of pegs fixed thereon in a predetermined arrangement, and a larger number of differently distinguished blocks, some



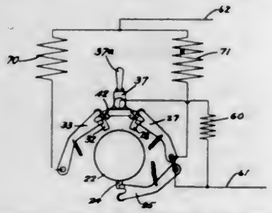
of which have holes to receive said pegs, the unapertured blocks when placed in a certain association with the apertured blocks producing therewith identically contoured and distinguished congeries of blocks.

1,501,555. SUPPORT FOR MOTTOES AND THE LIKE. GEORGE E. BUZZA, Minneapolis, Minn. Filed Feb. 4, 1924. Serial No. 690,435. 3 Claims. (Cl. 40—146.)



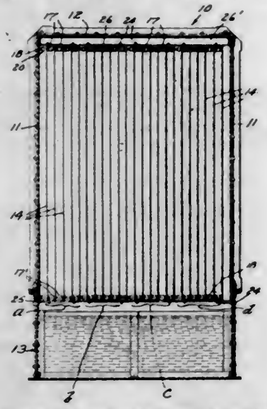
1. A support for mottoes and the like comprising a frame and an arm of resilient material pivotally attached to the lower margin of the frame, the resiliency of said material holding said arm against the frame when swung in position parallel thereto.

1,501,556. GASOLINE VENDER. FRANK D. EWING, Cedar Rapids, Iowa, assignor of one-half to Otis W. Gibson, Cedar Rapids, Iowa, and one-half to W. A. Norton, Marshalltown, Iowa. Filed Dec. 9, 1919. Serial No. 343,626. Renewed Jan. 25, 1924. 6 Claims. (Cl. 221—100.)



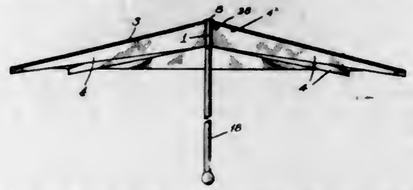
1. A gasoline vender, comprising a receiver having means to prevent the contents from rising beyond a given level, one or more service outlets adjustable at lower levels than said given level, a connected discharge hose, a filling pump and motor, means for actuating the motor, a hose-suspending device, means releasable by the hose-suspending device for actuating the motor, and means connecting said hose-suspending and motor-actuating means, whereby the hanging up of the hose starts the motor.

1,501,557. PRESSER FOOT. HARRY HELLER, New York, N. Y. Filed Dec. 17, 1921. Serial No. 523,147. 4 Claims. (Cl. 112—235.)



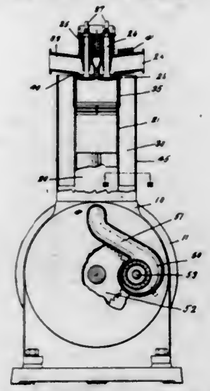
1. A presser foot comprising a shank suited for attachment to a presser foot bar, said shank having a relatively wide front portion extending below the bar and containing a wide elongated opening permitting the passage of light, and a forked plate extending at an angle forwardly from said shank adapted to contact with material entered therebelow.

1,501,558. ELECTRIC MOTOR. JOHN H. HUNT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 26, 1923. Serial No. 665,024. 5 Claims. (Cl. 172—179.)



1. An electric motor comprising in combination, a plurality of field windings; a resistance element; a commutator; a stationary brush; movable brushes each connected with a field winding; resilient means for moving said brushes into engagement with the commutator; and an operating element adapted normally to hold the movable brushes out of commutator engagement but operable to permit the resilient means to move one of the brushes into commutator engagement and at the same time connect the resistance unit in parallel with the commutator engaging brushes.

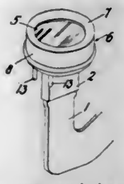
1,501,559. AIR WASHER. EDGAR O. KAUP, Seattle, Wash., assignor to Western Blower Company, Seattle, Wash., a Corporation of Washington. Filed Dec. 3, 1923. Serial No. 678,197. 2 Claims. (Cl. 183—75.)



1. In apparatus of the character described, the combination of a casing, provided interiorly with bar elements, a plurality of corrugated eliminator plates disposed between said bars, U-shaped members interposed between the adjacent plates for retaining the latter in spaced relations with each other to afford tortuous passages between the adjacent corrugated plates, means extending through said plates and the spacing members for detachably connecting them together as a unit, and fastening means engaging said spacing members and the respective casing bars for removably securing a unit within the casing.

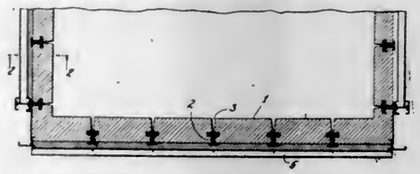
1,501,560. UMBRELLA. OTIS KEAN and ALBERT R. WILSON, New York, N. Y., assignors to Paperbrella Corporation, a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,264. 15 Claims. (Cl. 135—20.)

1. In a device of the character described, the combination of a single cylindrical vertical support, a plurality of frame members comprising rigid flat strips hingedly connected thereto at their inner ends, with their widthwise dimensions vertical, in such manner as to lie side by side in planes parallel to the axis of said support, when closed, and to swing about said support into radiating positions with their inner ends abutting against said support, when opened, and a flexible covering extending over said frame members.



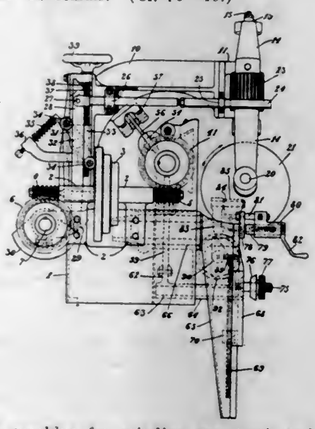
1,501,561. ENGINE CONSTRUCTION. CHARLES F. KETTERING, Dayton, Ohio, assignor, by mesne assignments, to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 21, 1919. Serial No. 305,782. 12 Claims. (Cl. 123—171.)

1. In an engine: a cylinder comprising a barrel portion and a head portion; a superstructure carried by said head portion; and insulating material between the head portion and the superstructure.



1,501,562. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 23, 1919. Serial No. 319,430. 1 Claim. (Cl. 197—102.)

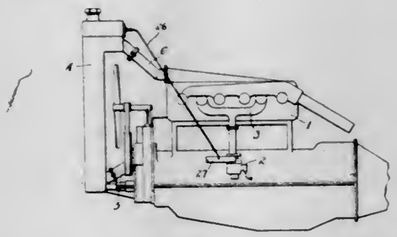
In a typewriting machine, a type-key comprising an open-top cup having a bottom and an upstanding marginal flange, a key-paper loosely contained in the cup and overlying the botom thereof, a cover-glass loosely contained in the cup and resting on the key-paper, a ring having a skirt removably fitting over the marginal flange of the cup from the top and provided at its top with an inturned flange to engage the margin of the cover-glass to hold the cover-glass and the key-paper in the cup, said skirt having a lower marginal portion projecting downwardly below the bottom of the cup and provided with an internal annular groove, a spring-wire expansible



catch-device under the cup and having projections to engage in said groove and having portions between said projections free of said groove and engaging the bottom of the cup, so as to retain the ring on the cup, and a pair of spaced finger-pieces carried by the catch-device and projecting therefrom downwardly under the cup to be squeezed together for contracting the catch-device to disengage said projections from said groove, to enable the ring to be lifted off the cup for changing the key-paper.

1,501,563. WALL FOR BOILER FURNACES. JOHN H. LAWRENCE, New York, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Apr. 1, 1921. Serial No. 457,599. 3 Claims. (Cl. 72—106.)

1. A boiler furnace wall built of brickwork in sections with vertical structural members in the outer portion of the wall and with spaces between the inner portions of the adjacent ends of such sections.



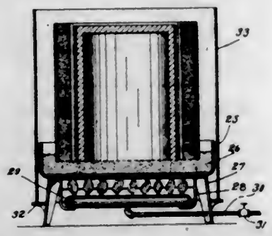
1,501,564. MACHINE FOR GRINDING SAW TEETH AND THE LIKE. JOHAN OSCAR LIFFLANDER, Stockholm, Sweden, assignor to J. & C. G. Bolinders Mekaniska Verkstads Aktiebolag, Stockholm, Sweden, a Company of Sweden. Filed July 13, 1922. Serial No. 574,688. 16 Claims. (Cl. 76—40.)

1. In a machine for grinding saw teeth and the like, the combination of a rotary grinding disk, a holder for the saw blade to be ground, means for producing move-

ment relatively to one another of said grinding disk and said holder, means for successive feeding of the saw blade, driving means, and means adjustable during the operation of the machine for transmitting motion from said driving means to said movement producing means and said feeding means in such manner that on adjustment the movements of each of said two last-mentioned means are simultaneously altered in the same proportion.

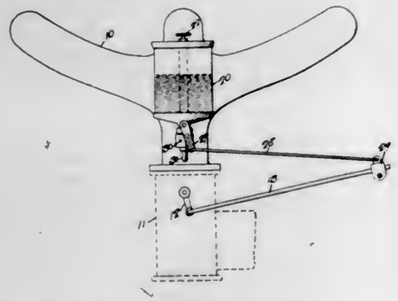
1,501,565. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JOHN P. LIPPERT, East Cleveland, Ohio. Filed Jan. 23, 1922. Serial No. 531,131. 3 Claims. (Cl. 123—25.)

1. The combination with an internal combustion engine, of a radiator operatively connected with the water jacket of said engine, a thermostatically controlled valve positioned in said radiator adjacent the upper end thereof and below the normal liquid level, a housing enclosing said valve, a conduit connected to said housing and extending above the normal liquid level in said radiator, and a second conduit connected with said valve and with the air intake of the engine carburetor.



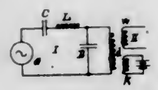
1,501,566. LINING FOR CEMENT-DRYING KILNS. JOHN L. LUNDBERG, Alpena, Mich., assignor to Huron Industries, Inc., Alpena, Mich., a Corporation of Michigan. Filed July 8, 1922. Serial No. 573,530. 7 Claims. (Cl. 34—6.)

4. In a cylinder for drying lime stone, the combination of an outer shell and a plurality of metal cylinder segments some of which have inwardly projecting radially extending webs forming lifters for raising the lime stone and bolts and nuts for detachably bolting said segments through the outer shell so that an individual segment may be removed without disturbing the others.



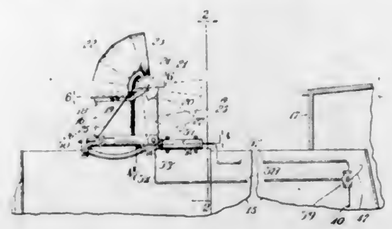
1,501,567. JOINING METALS. THOMAS MIDGLEY, Jr., Dayton, Ohio, assignor, by mesne assignments, to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 29, 1920. Serial No. 354,770. 3 Claims. (Cl. 113—112.)

1. The method of joining fins to an engine cylinder which consists in forming a core containing said fins, and having the inner ends of the fins unprotected; placing the cylinder within the core and in properly spaced relation to the unprotected ends of the fins; damming the lower end of the space between the cylinder and core to



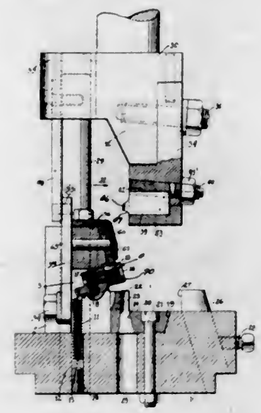
prevent the flow of molten soldering material therethrough; and pouring molten soldering material within said space.

1,501,568. ANILINE INJECTOR. THOMAS MIDGLEY, Jr., Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 15, 1920. Serial No. 417,162. 10 Claims. (Cl. 123—119.)



1. The process of preventing knock in internal-combustion engines which comprises adding aromatic hydrocarbon derivatives containing an NH_2 group to the fuel-air mixture only at such times as the actual compression pressure equals or exceeds the critical compression of the fuel.

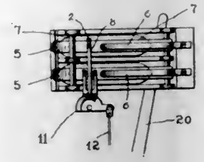
1,501,569. FREQUENCY-MULTIPLIER SYSTEM. MENDEL OSNOS, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hellesches, Berlin S. W. 11, Germany, a Corporation of Germany. Filed Aug. 8, 1922. Serial No. 580,521. 3 Claims. (Cl. 172—281.)



1. An alternating current system comprising a highly saturated iron reactance, a secondary circuit for withdrawing current from the reactance and means for supplying current to the reactance, the reactance being of such size and means for supplying the current to the reactance being so constituted that the time required for the magnetization of the reactance to rise from zero to the knee of the saturation curve is to the time of one-fourth period of the basic wave of the alternating current system substantially as 1 is to the desired multiple of the basic frequency, substantially as described.

1,501,570. LOCOMOTIVE SMOKE DEFLECTOR. FRED. L. PERKINS, San Bernardino, Calif. Filed June 26, 1922. Serial No. 571,015. 3 Claims. (Cl. 110—184.)

1. The combination of a smoke stack, a deflector pivotally mounted on the stack for directing the smoke in a substantially horizontal direction, a drum rotatable with said deflector about its pivotal mounting, a flexible connector extending about said drum, and means for moving said flexible connector in opposite directions for rotating said drum and said deflector for moving the deflector into and out of operative position above said stack.

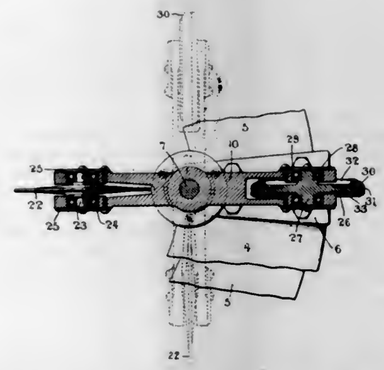


1,501,571. MEANS FOR CASTELLATING NUTS. ERNEST REICH and JOHN J. BOSSHARD, Chicago, Ill., assignors to The Hill Pump Valve Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1919. Serial No. 284,137. 13 Claims. (Cl. 10—72.)

1. In a machine of the class described, a vertically reciprocating punch, a carrier normally holding nut blanks in slanting position, to permit entry of the punch into the nut bore, a die arresting the movement of the nuts when the latter have the longitudinal axis in horizontal position, and wedging means for maintaining said die in proper position.

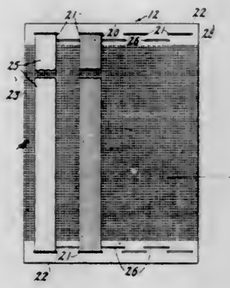
12. A punching machine including a punch, two object engaging members for positioning an object, one of said members having a formation for turning the object to present a new position thereof to the punch, and mechanism for effecting relative movement between the member having the object turning formation and the object engaged thereby to turn the object during the time that the punch is free of the object and to cause an opposite relative movement between said member and the object for the purpose of resetting said member preparatory to another turning movement while the punch is engaged with the object.

1,501,572. SAFETY-SHUTTLE-CONTROL ATTACHMENT FOR TEXTILE LOOMS. JAMES SHAW and WILLIAM H. HARRISON, Paterson, N. J., assignors of one-third to Jere L. Wentz, Passaic, N. J. Filed Aug. 21, 1922. Serial No. 583,150. 4 Claims. (Cl. 139—184.)



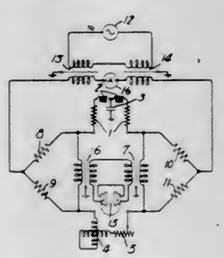
4. The combination of a loom of a plurality of shuttle boxes, means adapted to obstruct a shuttle box immediately after a shuttle is discharged therefrom and to simultaneously open a box to receive a shuttle.

1,501,573. PORCH-FLOOR PROTECTOR. ISAIAH H. TAYLOR, Baltimore, Md. Filed Dec. 31, 1921. Serial No. 526,367. 1 Claim. (Cl. 20—6.)



A protector for porch floors comprising an angle iron having one angle resting on the top of the boards forming the floor and the other angle projecting downwardly and resting against the ends of the said boards, said downwardly projecting angle extending below the ends of said boards, a metal strip disposed under the ends of the said boards and means for securing the angle iron and metal strip in clamping position on the ends of said boards.

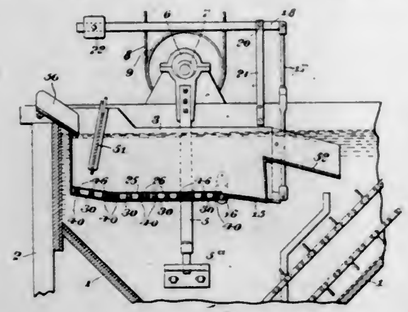
1,501,574. FABRIC-LAYING ATTACHMENT FOR TIRE-MAKING MACHINES. JOHN E. THROPP, Trenton, N. J., assignor to The deLaski & Thropp Circular Woven Tire Company, Trenton, N. J., a Corporation of New Jersey. Filed June 13, 1919. Serial No. 303,965. 3 Claims. (Cl. 154—10.)



1. A device of the character described comprising, a support, a cross head pivoted to swing thereon, a fabric laying roller mounted at each end of the cross head to rotate in a plane substantially at right angles to the plane of swinging movement of the cross head, and means for locking the said cross head with either of said rollers presented to the work.

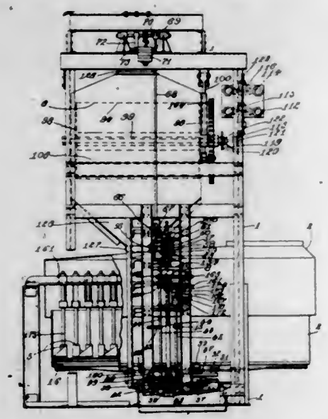
1,501,575. CARBON PAPER. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 27, 1920, Serial No. 354,475. Divided and this application filed Feb. 12, 1921. Serial No. 444,307. 16 Claims. (Cl. 282—28.)

1. A manifolding sheet comprising a carbon-sheet having a perforation, and a narrower overlying sheet connected to the carbon-sheet by a part passing through the perforation and holding said narrower sheet in position over the carbon-sheet to prevent the underlying portion of the carbon face of the carbon-sheet from contacting with a work-sheet.



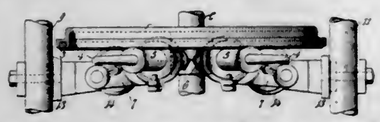
1,501,576. ELECTRICAL TESTING SYSTEM. DONALD F. WHITING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1921. Serial No. 502,286. 10 Claims. (Cl. 175—183.)

10. An impedance measuring bridge for lines having an admittance to ground, comprising a pair of terminals, a source of alternating current, shielded transformer means associating said source with the terminals the shielding of said means being grounded and in condensive relation with the winding of said means, a line of unknown impedance located symmetrically with respect to said terminals, said line having an admittance to ground, an adjustable impedance also located symmetrically with respect to said terminals, transformer means associated with the unknown and adjustable impedances, and current indicating means associated with the transformer means whereby no portion of the current from said source passes through said admittance to ground.



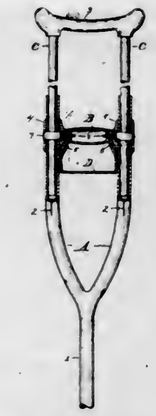
1,501,577. COAL JIG. GEORGE W. WILMOT, Hazleton, Pa., assignor to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed Dec. 23, 1921. Serial No. 524,343. 5 Claims. (Cl. 83—80.)

1. In apparatus of the character described, the combination of a jig pan having a perforated bottom, a plurality of members secured to the said jig pan and situated underneath the said pan in contiguous relation to each other, said members respectively forming with the bottom of the said jig pan chambers and each of said members having openings through the bottom thereof, valves for controlling the passage of water through said open-



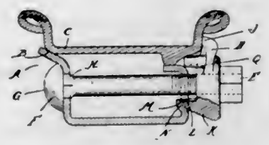
ings, and means for guiding said valves in their movements and retaining them in operative relation with respect to said openings.

1,501,578. MIXING MACHINE. LEVIGNE M. ZEPP, Baltimore, Md. Filed Mar. 10, 1923. Serial No. 624,087. 12 Claims. (Cl. 83—73.)



6. In a mixing machine rotary mixing means, weighing mechanism delivering to the mixing means, means for supplying material thereto, means for opening and closing the supply, and timing mechanism controlling said latter means.

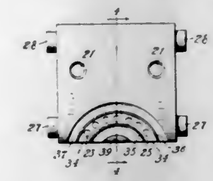
1,501,579. SPINDLE-DRIVING MECHANISM. EUGENE ATWOOD, Stonington, Conn., assignor to The Atwood Machine Company, Stonington, Conn., a Corporation of New Jersey. Filed Feb. 9, 1923. Serial No. 618,014. 8 Claims. (Cl. 118—46.)



1. A spindle driving wheel, its shaft, a friction driving ring rigidly secured circumferentially on the vertical face of said wheel, a laterally swinging spindle having a whorl disposed radially to said shaft, and means for yieldingly holding the spindle whorl against said ring.

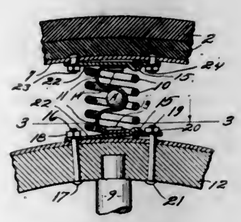
1,501,580. CRUTCH. ROBERT BEAM, Kalamazoo, Mich., assignor to H. M. Lowe, Battle Creek, Mich. Filed Oct. 13, 1921. Serial No. 507,564. 4 Claims. (Cl. 135—50.)

4. In a crutch, the combination with oppositely-disposed slidably fitted side portions, of forked members having aligned openings enclosing said slidably-fitted side portions, each of said forked members having an offset with a centrally-disposed opening, clamping bands encompassing said slidably-fitted side portions intermediate the forks of said members and having stems through the openings of said offsets, a handle adapted to receive the ends of said stems, and means interposed between said handle and said offsets on said stems whereby said handle may be adjustably fitted between said forked members and whereby said slidably-fitted side portions may be adjusted as expedient.



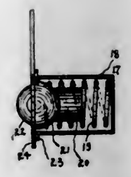
1,501,581. DEMOUNTABLE-RIM-SECURING DEVICE FOR VEHICLE WHEELS. WILLIAM N. BOOTH, Detroit, Mich. Filed June 20, 1918. Serial No. 240,931. 11 Claims. (Cl. 301—24.)

1. The combination with a demountable rim, of a felly forming a seat for said rim and provided with a metallic plate on the side opposite to said seat, said plate having a portion sheared and struck inward to a depth less than the thickness of the plate forming a recess with an inclining face and a shoulder, and means for securing said rim to its seat, comprising a clamping lug provided with a heel for engaging said recess and bearing upon said inclined face, said shoulder forming a stop for limiting and exactly positioning said clamping lug.



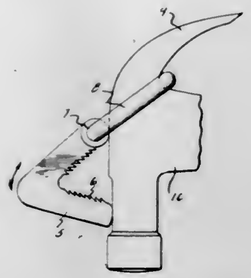
1,501,582. SHEET SEPARATOR. EDWARD CHESHIRE, Berlin Township, Waukesha County, Wis., assignor to Michle Printing Press & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1921. Serial No. 464,432. 22 Claims. (Cl. 271—26.)

1. A separator foot formed with a portion for resting on the sheet, a suction space having a sealing edge wholly disposed above the plane of said portion, whereby a part of the sheet is lifted to engage said sealing edge, and a cavity adjoining said sealing edge on the opposite



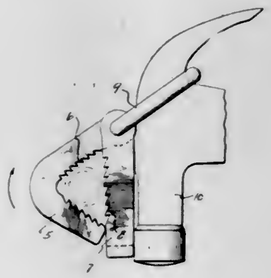
side thereof from said suction space, said cavity being disposed so as to be open to the atmosphere when a sheet is sealed against said edge.

1,501,583. SPRING WHEEL. WALLACE CHILDS, Kansas City, Mo. Filed May 28, 1923. Serial No. 642,034. 4 Claims. (Cl. 152—32.)



4. In a vehicle wheel such as specified and shown: a coil wire spring, a corrugated spring placed in the convolutions of said coil wire spring, one end of each pair of said springs fastened to the inner tire, and the other end of the pairs of said springs fastened to the outer or peripheral tire, and means to fasten said springs together and to each of said tires substantially as and for the purposes specified and shown.

1,501,584. STOP FOR WINDOW SASH. SIBBEL T. COX, Omaha, Nebr., assignor to Ernest A. Wolff, Omaha, Nebr. Filed Sept. 1, 1922. Serial No. 585,803. 1 Claim. (Cl. 292—75.)

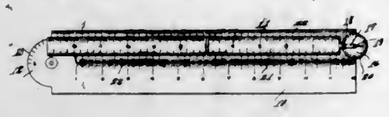


In a stop for a window frame and a slidingly mounted window sash, an apertured strip on the stile of the sash, a plunger on the frame and provided with a socket, a ball in the socket, means on the plunger for moving the ball and socket outwardly of the frame toward said apertured strip, and an elongated, resilient plate having an aperture for receiving a part of the ball, said plate having one of its ends attached and having its opposite end detached from the frame for limiting the movement of the ball and socket outwardly of said frame.

1,501,585. WRENCH ATTACHMENT FOR HAMMERS. ERNEST E. CULLEN, New Baltimore, Mich., assignor of one-half to George E. Vernier, Fair Haven, Mich. Filed May 29, 1922. Serial No. 564,551. 2 Claims. (Cl. 81—98.)

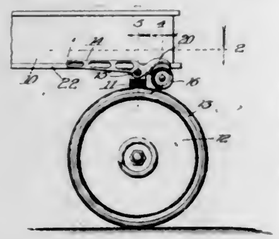
1. A device of the character described having a V-shaped body portion provided with teeth on its inner faces, and a link pivotally secured at one extremity to the body portion and formed as a closed loop of sufficient area to hook over and only exteriorly contact the ordinary hammer head.

1,501,586. TRIPLE-JAWED WRENCH ATTACHMENT FOR HAMMERS. ERNEST E. CULLEN, New Baltimore, Mich., assignor of one-half to George E. Vernier, Fair Haven, Mich. Filed May 29, 1922. Serial No. 564,552. 3 Claims. (Cl. 7—1.)



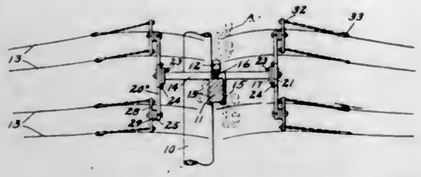
1. A wrench attachment for hammers and the like, having a link adapted to be removably secured upon a hammer head, a jaw portion pivotally mounted upon the link and adapted to rest against the forward extremity of the hammer head, and a V-shaped body portion pivoted upon the link and movable relatively to said jaw portion.

1,501,587. TITANIC OXIDE CONCENTRATE AND METHOD OF PRODUCING THE SAME. CHARLES A. DOREMUS, New York, N. Y., assignor to Titanium Pigment Company, Inc., New York, N. Y., a Corporation of Maine. Filed Nov. 8, 1922. Serial No. 599,656. 14 Claims. (Cl. 23—13.)



1. In the treatment of titaniferous-ferruginous materials to extract therefrom titanic oxide the steps which consist in digesting said materials in hydrofluoric acid, withdrawing the resulting solution from undecomposed portions and treating it to production of titanic oxide.

1,501,588. MEASURING INSTRUMENT. JOSEPH D. ELLISON, Pittsburgh, Pa. Filed Sept. 13, 1922. Serial No. 588,026. 1 Claim. (Cl. 33—98.)

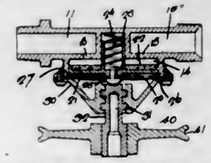


In a rule including a blade having a longitudinally extending dove-tailed slot in one face thereof, a dove-tail block slidable in said dove-tail slot, a protractor carried by said dove-tail block and having its zero and 180° marks coincident with the center line of the blade, an arm pivoted centrally of said protractor and carrying a pointer transversing the scale of the protractor, and a blade fixed to said arm to revolve therewith.

1,501,589. BRAKE FOR COASTER WAGONS. HOWARD J. FERRIS, Harvard, Ill., assignor to Hunt-Helm-Ferris & Company, Harvard, Ill., a Corporation of Illinois. Filed Oct. 22, 1923. Serial No. 670,045. 3 Claims. (Cl. 188—20.)

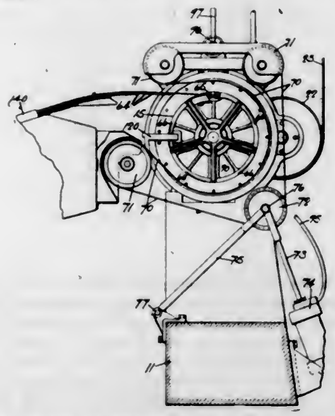
1. A brake for rubber tired wheels comprising a lever, a roller curved to fit the periphery of said wheel and rotatably mounted on said lever, a shoulder on said lever adapted to bear against said roller on the opposite side from said wheel, a rib on said lever, said roller being made of two parts lying one on each side of the rib, and a shaft passing through said rib and carrying said roller parts.

1,501,590. TEMPORARY SUPPORT FOR TELEPHONE WIRES. VICTOR C. FLOYD, Huntington Park, Calif., assignor of one-half to William Glndorff, Los Angeles, Calif., and one-tenth to Guy Cochran, Los Angeles, Calif. Filed June 2, 1921. Serial No. 474,409. 10 Claims. (Cl. 175—376.)



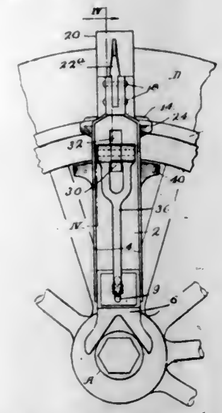
6. In a temporary support for wires, a rail adapted to be supported by a cross arm, transversely disposed arms pivotally connected to the ends of said rail, said cross arms having hinged portions, secondary arms pivotally connected to the hinged portions of said first mentioned arms, wire engaging means carried by said secondary arms, means for locking the first mentioned arms to the ends of the rail, and means for locking the secondary arms to the ends of the first mentioned arms.

1,501,591. HEADBAND FOR USE IN CONNECTION WITH BATHING CAPS. ANNA L. GAGE, Minneapolis, Minn. Filed Nov. 5, 1923. Serial No. 672,776. 4 Claims. (Cl. 2—68.)



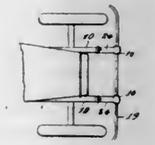
1. A separate head band for use in connection with bathing caps comprising a casing of chamois containing a layer of resilient material, said band having free ends adapted to be fastened together for securing the band in place on the head.

1,501,592. VALVE. HARVEY D. GEYER, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 26, 1920. Serial No. 426,636. 3 Claims. (Cl. 251—31.)



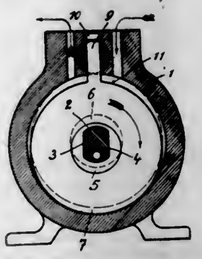
1. A leak proof valve mechanism, including a valve chamber having inlet and outlet openings thereto and a flexible wall, a valve operable within said chamber to open or close said openings on a movement of said flexible wall, means for moving said valve and flexible wall, and means for sealing the valve when at its open position to prevent leakage from said valve chamber independently of the flexible wall.

1,501,593. COILED RIM AND METHOD OF MAKING IT. HARVEY D. GEYER and JOHN W. LEE, Dayton, Ohio, assignors to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 8, 1923. Serial No. 623,592. 7 Claims. (Cl. 144—309.)



1. The method of making a laminated rim including arranging a plurality of relatively thin strips of fibrous material one on top the other but with their ends spaced apart an appreciable distance, applying glue or the like to said strips, coiling a flexible band around the outer periphery of the coil thus formed and securing it in place to prevent the strips from unwinding, allowing the glue to dry sufficiently and then removing the flexible band from the coil.

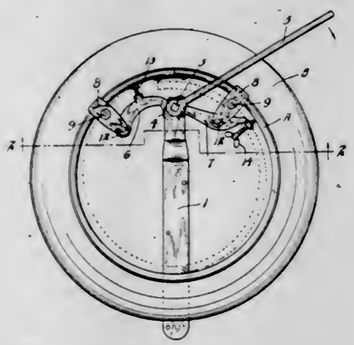
1,501,594. ANTISKID DEVICE. DAVID H. GOOD, Kansas City, Mo. Filed May 3, 1923. Serial No. 636,487. 4 Claims. (Cl. 301—50.)



3. An antiskid device of the character described consisting of an arm having means at one end for engaging the hub of a wheel and antiskid means at its opposite end, jaws associated with said arm to coact with the hub-engaging means in securing the device to a wheel, means associated with the arm to cause said jaws to firmly engage the opposite sides of the wheel, and a fork on the arm for extending between two spokes of the wheel.

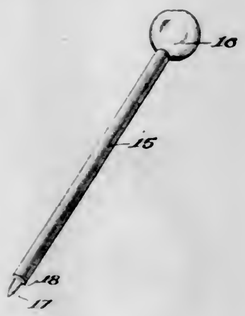
1,501,595. BUMPER. JOSEPH C. GRIFFIN and WALTER JEAN, Los Angeles, Calif. Filed May 7, 1923. Serial No. 637,137. 6 Claims. (Cl. 293—55.)

1. In a bumper for vehicles, the combination of a bumper bar, a head having a transverse slot receiving the bar, and having a seat adjacent one edge of the bar, a supporting bracket carried by the vehicle frame with means for clamping the same to the head adjacent the seat, the end of said bracket and said head having an interlocking connection, and said bracket having a nose for exerting pressure to clamp the bar in the slot.



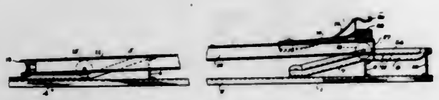
1,501,596. ROTARY BLOWER AND ROTARY ENGINE. MAX GÜTTNER, Schmolln, Germany. Filed July 11, 1922. Serial No. 574,215. 2 Claims. (Cl. 230—30.)

1. In a high speed rotary blower and engine, a casing provided with end walls, a shaft journalled in said casing, a plurality of axially movable pistons arranged in



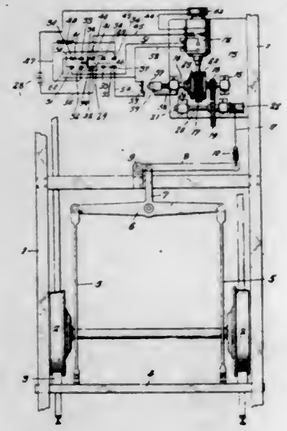
said casing and displaced relative to one another, extensions carried by said pistons pivotally mounted in said casing, eccentrics movable longitudinally on said shaft and coacting with said pistons, removable partitions between the pistons and betwen the latter and the end walls of the casing, and adjustable members adapted to vary the mutual pressure exerted between the partitions, pistons and casing end wall.

1,501,597. RIM BREAKING, CONTRACTING, AND EXPANDING DEVICE. CHARLES O. HALLING, Milan, Minn. Filed June 28, 1922. Serial No. 571,420. 4 Claims. (Cl. 157—1.)



1. A rim breaking, contracting and expanding device having in combination, a pair of rim clamping devices adapted to clamp the rim at each side of the joint thereof, a pair of swinging means pivotally connected thereto, a member swingable about an axis extending substantially at right angles to the plane of the rim, said axis being disposed betwen said clamping members to which said swinging means are also pivotally connected, means on one of said swinging members contacting the rim between the clamping member and the end thereof, and means on the other swinging member adapted to contact the rim on the side of the clamping member away from the joint.

1,501,598. CAN PUNCH. JOHN MARTIN HANSON, Los Angeles, Calif. Filed Aug. 11, 1922. Serial No. 581,139. 1 Claim. (Cl. 164—124.)

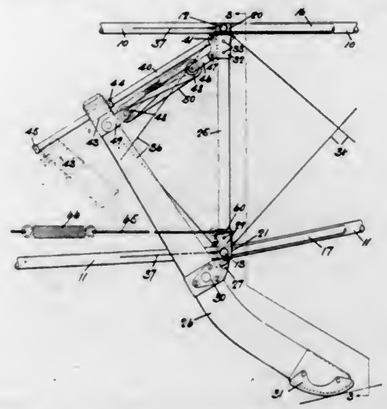


A can punch comprising a shank having a spherical handle on one end and having the other end reduced in cross section and extended to provide a pointed prong and a limiting shoulder at the junction of the shank and prong.

1,501,599. AUTOMOBILE ELEVATOR. ELIZABETH G. HARRIS, Los Angeles, Calif. Filed July 6, 1923. Serial No. 649,889. 4 Claims. (Cl. 254—88.)

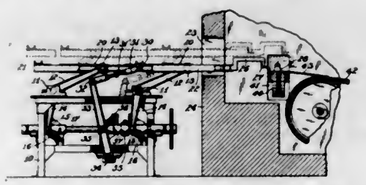
1. In a vehicle elevator, including inclined tracks and a carriage for co-operation therewith, an inclined resilient member secured to the forward end of said carriage, a projection on the forward end of said member, and a cam portion carried by said member intermediate the ends thereof and adapted to be engaged by a portion of the vehicle being raised.

1,501,600. MEANS FOR OPERATING THE BRAKES ON VEHICLES. EDWARD V. HARTFORD, Deal, N. J.; Henrietta P. Hartford administratrix of said Edward V. Hartford, deceased. Filed Apr. 22, 1912, Serial No. 692,488. Renewed Jan. 14, 1920. Serial No. 351,496. 6 Claims. (Cl. 188—162.)



1. The combination in a vehicle, of running gear therefor, brake-applying instrumentalities operating thereon, a high-speed motor for operating said instrumentalities, means automatically controlling the amount of motive power transmitted to the brakes, a storage battery for energizing said motor, a fly wheel carried by the armature of said motor, a brake for said fly wheel, and means for controlling the application of said brake to said fly wheel.

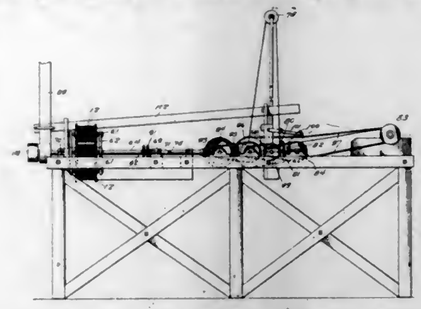
1,501,601. TAIL SKID. ELWOOD H. HERATG, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed June 9, 1922. Serial No. 567,035. 7 Claims. (Cl. 244—2.)



7. In combination, a rigid body, a ground skid having universal mounting upon said body, said skid being yieldably held in normal position when not under load,

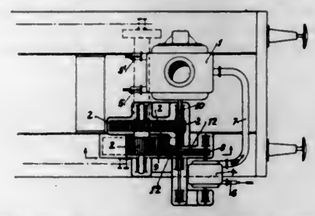
and stop means engaging said skid to prevent excessive deflection thereof in two directions, said stop means

including a rigid member pivotally mounted upon said body and guided by the upper portion of said skid, and stop means on said member for engaging said skid.



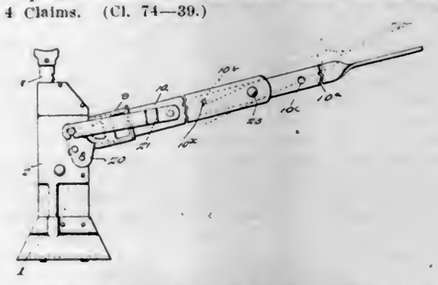
1,501,602. LEER FEEDER. MINOT K. HOLMES, Muncie, Ind., assignor to Hemingray Glass Company, Muncie, Ind., a Corporation of Kentucky. Filed Nov. 20, 1922. Serial No. 602,270. 9 Claims. (Cl. 198—31.)

3. A leer feeder comprising a main frame, a pair of rock shafts journaled on said main frame, a pair of arms carried by each rock shaft, each of said arms being provided with a push frame support, a push frame slidably mounted upon said push frame supports, a main drive shaft, cam mechanism on said shaft, connections between part of said cam mechanism and the rock shafts and connections between another part of said cam mechanism and the push frame whereby rotation of the shaft will produce vertical and horizontal reciprocations of the push frame, and means for relatively adjusting the cam mechanism to adjust the push frame vertically.



1,501,603. MACHINE FOR MANUFACTURING WIRE — CABLE. AMASA G. HOOVENS, Goshen, Ind. Filed May 26, 1923. Serial No. 641,636. 1 Claim. (Cl. 117—20.)

In a machine for making wire rope, a plurality of parallel rotary shafts, a plurality of take off spools carried by each shaft and revolving therewith, means cooperating with said shaft for twisting wire strands fed from the said spools together to form ropes, including a shaft carrying a plurality of pull-out pulleys around each of which one of said ropes pass, an elevated shaft carrying a plurality of guide pulleys around which said ropes pass from the pull-out pulleys, a plurality of stub shafts approximately axially aligned and at right angles to the shafts of the take-off spools, a receiving spool removably mounted upon each end of each stub shaft, an endwise slidable reciprocatory distributor rod common to the receiving spools and carrying a plurality of guide pulleys around which the ropes pass from the last named guide pulleys, and drive means including a power shaft

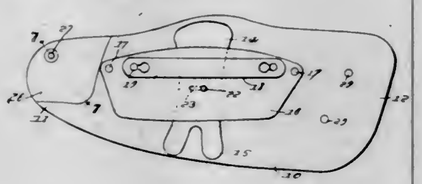


common to and having driving connections with the shafts of the receiving and take-off spools, the shaft of the pull-out pulleys and said distributor rod.

1,501,604. TURBINE-DRIVEN LAND VEHICLE. CONRAD KOHLER, Zurich, Switzerland. Filed Mar. 17, 1922. Serial No. 544,544. 8 Claims. (Cl. 105—38.)

1. A land vehicle, comprising in combination, a main turbine adapted to drive the vehicle under normal running conditions, an additional turbine supplied only with live steam serving to drive the vehicle during the starting period and during the running of the vehicle at speeds below a determined running speed and transmitting its driving power through a larger transmission ratio than the main turbine for the purpose of obtaining a better utilization of the energy inherent to the steam, and means for cutting said additional turbine in and out during the respective running conditions.

1,501,605. LIFTING JACK. GEORGE LANE, Poughkeepsie, N. Y. Filed Dec. 29, 1923. Serial No. 683,473. 4 Claims. (Cl. 74—39.)

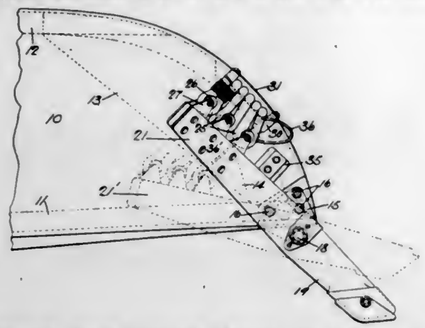


1. A folding handle for lifting jacks comprising a pair of handle members having overlapping parts provided with alining openings, a pivot pin passing through said openings and having a head spaced from one of said members, and spring means interacting between said head and said last named member tending to keep said members pressed against each other, one of said members having a projection spaced from said pivot pin and the other a locking recess to receive said pin.

1,501,606. METAL AIR PROPELLER AND THE LIKE. HENRY LEITNER, London, England. Filed Jan. 21, 1922. Serial No. 530,845. 1 Claim. (Cl. 170—139.)

A screw propeller of the kind described, formed from two sections of sheet metal folded to form the edges of the blade, the said two sections being joined by a longitudinal mechanical seam extending along each side of the blade.

1,501,607. ARCH SUPPORT. FRANK S. LEWIS, Denver, Colo. Filed Jan. 4, 1922. Serial No. 526,923. 2 Claims. (Cl. 36—71.)



1. A foot arch support having a shell provided with longitudinal and transverse spring plates of which the former is upwardly arched to reinforce the shell and the latter terminally upturned to protect the cuboid and scaphoid of the foot, the transverse member having a floating connection with the longitudinal member for adjustment longitudinally of the shell.

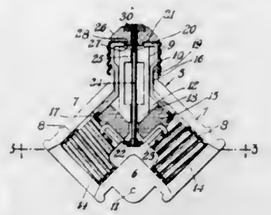
2. A foot arch support having a shell of limited yielding properties provided with a longitudinally disposed arch spring plate provided on the under-surface with spaced studs, and a triangularly shaped retaining element formed with a keyhole slot adjacent the apex for engagement with one of said studs, and a plurality of keyhole slots disposed adjacent the shorter base and arranged in a series in the direction of the length of said shorter base, each slot of said series being a greater distance from the shorter base than the preceding slot for selective engagement with the remaining stud to vary the limit of flexion of the plate.

1,501,608. LANDING SKID FOR AMPHIBIAN AIRCRAFT. ROBERT P. LEWIS, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 30, 1922. Serial No. 532,676. 7 Claims. (Cl. 244—2.)

3. In an amphibian aircraft, in combination, a float having a wedge shape rear end, a fitting attached thereto substantially at its rearmost tip, a tail skid pivoted to the fitting and having its upper part offset so that its path of movement is at the side of said float, and shock

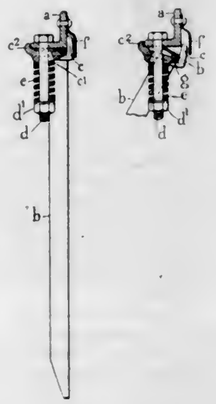
absorbing means extending between the upper part of the skid and the float for holding the skid in its normal position.

1,501,609. VEHICLE-UNLOADING TRUCK. HERBERT J. LINDEN, Johnstown, Pa. Filed Oct. 23, 1923. Serial No. 670,281. 4 Claims. (Cl. 280—1.)



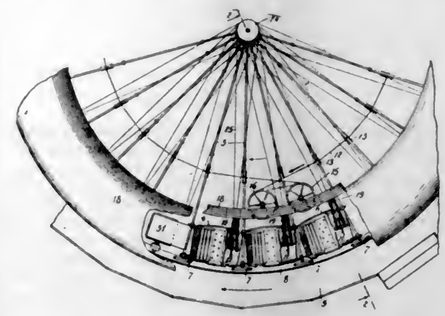
1. A truck for unloading vehicles from freight cars including a wheeled truck frame equipped with a vehicle chassis engaging superstructure, said superstructure being movable into a substantially horizontal plane, to suspend the chassis in a corresponding position, and being collapsible to permit contact of the vehicle wheels with the supporting surface.

1,501,610. APPARATUS FOR POLISHING GRAIN. HOMER TIPTON MCGILL, Stuttgart, Ark. Filed Apr. 28, 1924. Serial No. 709,621. 17 Claims. (Cl. 83—29.)



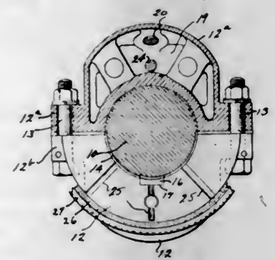
1. In an apparatus of the character described, a hollow rotary polishing drum of open formation, a fan operating within the drum for forcing air outwardly therethrough, and means independent of the fan for forcing air into one end of said drum.

1,501,611. MULTIPLE LAMP SOCKET. SETH G. MALBY, Woodmont, and NATHANIEL WARREN SPAULDING, Ansonia, Conn., assignors to Charles H. Jockmus, Ansonia, Conn. Filed Oct. 29, 1921. Serial No. 511,275. 6 Claims. (Cl. 173—335.)



1. The combination in a multiple lamp socket of a casing having contact shell-receiving openings formed therein, and provided with abutments, with a self-sustaining electrical unit comprising contact shell supports, contact shells associated with said supports and arranged within said openings, a conductor plate engaging said supports and having its ends disposed in a coaxial relation with respect to said shells and adapted to function as central contacts therefor, the supports being arranged intermediate said abutments and said conductor plate, and tensioning means adapted to exert a thrust upon said conductor plate when the same is assembled in the aforesaid combination of elements for maintaining said shell supports in firm engagement with said abutments.

1,501,612. SPRING CLIP FOR TINES FOR SIDE-DELIVERY RAKES AND SWATH TURNERS. WILLIAM EDWARD MARTIN, Stamford, England. Filed July 3, 1923. Serial No. 649,263. 7 Claims. (Cl. 56—400.)

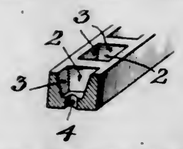


1. In a rake for a side delivery rake and swath turner the combination of a rake head, a bolt passing vertically through and fixed to the rake head, a nut on the lower end of the bolt, a perforated movable clip cut away in front of the bolt, a spring surrounding the bolt and located between the nut on the bolt and the said movable clip, through which latter the bolt passes, a flat tine located between the clip and the rake head, a seating on the clip for the flat tine and lugs fitting in front of the rake head, said clip normally pressing the flat tine against the rake head and so formed that it is adapted to rock on its rear edge when the tine encounters an obstruction, substantially as set forth.

1,501,613. AMUSEMENT RIDE. HYLA FREDERICK MAYNES, Gaines, Pa., assignor, by direct and mesne assignments, to Maynes Corporation, Dover, Del., a Corporation of Delaware. Filed Dec. 18, 1922. Serial No. 607,522. 27 Claims. (Cl. 46—27.)

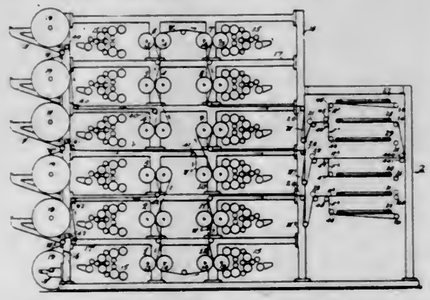
1. In an amusement ride having a travelling passenger car or train, the combination with the car or train of a canopy adapted to be moved into concealing position between the car or train and spectators, means for moving the canopy during the ride into concealing position, and means for connecting the moving car or train with the canopy moving means.

1,501,614. ADJUSTABLE THRUST BEARING. THOMAS SPENCER MILLER, South Orange, N. J. Filed July 7, 1922. Serial No. 573,500. 9 Claims. (Cl. 64—25.)



1. In a device of the character described, a shaft having a threaded portion, a member on the shaft and subjected to pressure tending to move it longitudinally of the shaft, an internally threaded thrust collar engaging the threads of the shaft, a key in the collar having threads adapted to engage the threads of the shaft, and means to press the threads of the key into the threads of the shaft.

1,501,615. OVERLAY FOR HALF-TONE PRINTING. JOHN B. NEALE, Battle Creek, Mich., assignor of one-half to Fred W. Gage, Battle Creek, Mich. Filed Sept. 17, 1921. Serial No. 501,320. 5 Claims. (Cl. 101—407.)

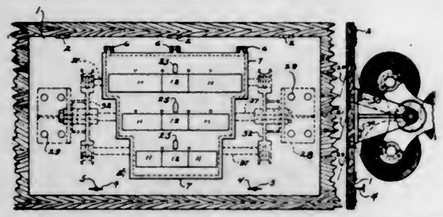


1. For an overlay comprising a body a resilient working surface, and means applied to said surface whereby it is permitted to yield in a direction perpendicular to the printing surface but prevented from stretching or flowing laterally.

1,501,616. FINGER RING. BENJAMIN OGUSH, New York, N. Y., assignor to Katz & Ogush, Inc., New York, N. Y., a Corporation of New York. Filed May 1, 1923. Serial No. 635,921. 1 Claim. (Cl. 63—28.)

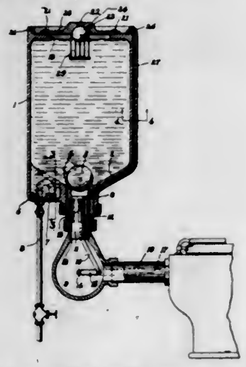
An article of the class described comprising a ring consisting of a single flat strip of material forming an annulus, said strip having a flat inner face, said strip also having a plurality of separated independent recesses in its inner flat face, said recesses converging towards the outer face of the annulus and having inclined faces and terminating at a point intermediate of inner and outer face of the annulus, and gem-holding perforations in registration with said recesses and extending from the outer termination of said recesses to the outer face of the ring.

1,501,617. PRINTING MACHINE. GEORGE E. PANCOAST, New York, N. Y. Filed Jan. 4, 1922. Serial No. 526,999. 14 Claims. (Cl. 270—5.)



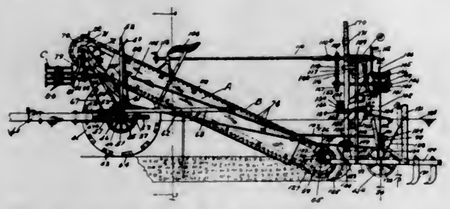
1. In a printing machine, the combination of a plurality of web perfecting mechanisms capacitated to print a plurality of webs in black or in color, or in black and color, a folder at one side of the perfecting mechanisms, and web guides arranged to turn a web and lead it to the folder, or lead the web past or away from the folder for reversal and then back to the folder, said web guides also being arranged so that certain of the webs may have a longer path than others and may be led around outside other webs for positioning them relatively to the other webs.

1,501,618. SAWDUST GRATE BAR. ARTHUR JAMES PARSONS, Mobile, Ala. Filed Apr. 14, 1922. Serial No. 552,498. 4 Claims. (Cl. 126—167.)



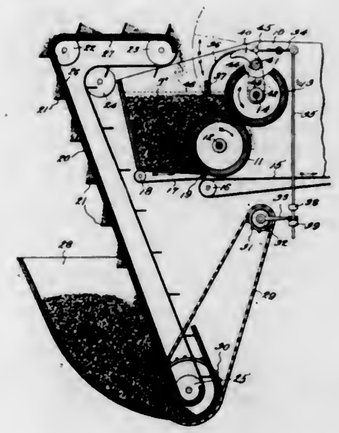
1. A grate bar comprising a body with a plain top surface and having draft perforations arranged in straight rows, the perforations in adjacent rows being relatively staggered, spaced solid reinforcing flanges integral with and depending from the under side of the body and positioned in longitudinal direction of the body between adjacent rows of the perforations, and transverse reinforcing ribs connecting said longitudinally running flanges, said flanges being of sinusoidal formation and forming therebetween an unobstructed draft space throughout the length of the bar.

1,501,619. WRAPPING-PAPER-ROLL HOLDER AND TEARING DEVICE. WILLIAM CLARENCE PICKELL, Highland Park, Mich. Filed Jan. 16, 1922. Serial No. 529,770. 7 Claims. (Cl. 211—32.)



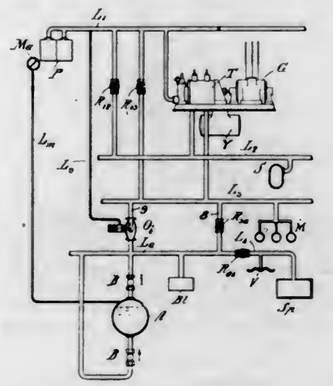
3. Means for holding different widths of wrapping paper wherein the paper is in independent rolled formations and the paper is adapted to be unwound from said rolls, a horizontal support, a holder for a plurality of the rolls of wrapping paper, and a movable member carried by said support flush with upper surface thereof and to which said holder is attached, said support cooperating with said member in normally concealing said holder, and said member being swingable upwardly to a vertical position to expose said holder.

1,501,620. FLUSHING TANK. DUDLEY REED, Canton, Ohio. Filed Nov. 16, 1921. Serial No. 515,493. 2 Claims. (Cl. 4—28.)



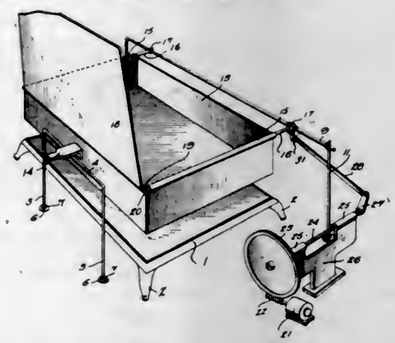
1. A flushing or filling tank connected with a water supply and provided in its bottom with a valve seat, a float ball within the tank and adapted to seat itself upon said valve seat when the tank is empty, a neck beneath said valve seat and a perforated slidable sleeve within said neck arranged to engage said ball to unseat the same, said sleeve having a saddle at its upper end for engagement with the ball.

1,501,621. DITCHING MACHINE. ANDREAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Filed June 23, 1923. Serial No. 647,369. 28 Claims. (Cl. 37—101.)



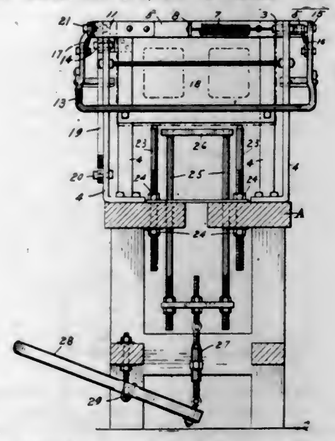
1. The combination in a ditching machine, of a suitably mounted forwardly inclined elevator, means for receiving material from the elevator and delivering same to either side of the machine selectively, a curved shovel arranged rearwardly of and in spaced relation to the rear end of the conveyor, and means for simultaneously raising and lowering said shovel and the lower end of the elevator.

1,501,622. TOBACCO-FEEDING APPARATUS FOR CIGARETTE MACHINES. FÉLIX RUAU, Lynchburg, Va., assignor to United Cigarette Machine Co., Inc., Lynchburg, Va., a Corporation of Virginia. Filed Dec. 13, 1921. Serial No. 521,979. 14 Claims. (Cl. 198—37.)



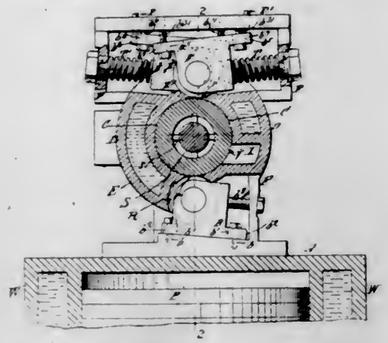
1. A tobacco feeding apparatus comprising a tobacco hopper, means including a feed roll for feeding tobacco from said hopper to a cigarette machine, means for delivering tobacco to the said hopper, and mechanism controlled by the quantity of tobacco in the said hopper for maintaining the quantity of tobacco therein substantially uniform.

1,501,623. STEAM-ACCUMULATOR APPARATUS FOR STEAM PLANTS. JOHANNES KARL RUTHS, Djursholm, Sweden, assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed Nov. 1, 1919. Serial No. 335,114. 7 Claims. (Cl. 60—94.)



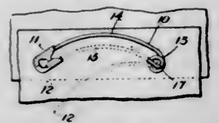
1. In a steam plant the combination of a steam generator, a main conduit connected therewith, a secondary conduit receiving steam from the main conduit and adapted to supply steam to a steam consumer, means whereby a lower pressure is maintained in the secondary conduit than in the main conduit, a steam accumulator connected with the secondary conduit and adapted to supply steam to a steam consumer, and means controlling the supply of steam from the secondary conduit to the accumulator, said means being actuated by the pressure in the main conduit and operating to increase the steam supply to the accumulator when said pressure in the main conduit rises above a predetermined value, while decreasing the steam supply when the said pressure falls below a predetermined value.

1,501,624. CORN-POPPING MACHINE. WARREN SADORUS, Sadorus, Ill. Filed Mar. 10, 1924. Serial No. 698,324. 5 Claims. (Cl. 259—91.)



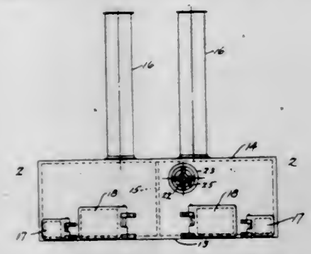
1. In a device of the character described, a pan, a supporting member arranged on each side of said pan, an arm projecting from one side of said pan and adapted to rest upon one of said supporting members, rods arranged at each end of said pan and projecting from the other side thereof, said rods pivotally connected with the other supporting member and adapted to slide thereon, and means for reciprocating said pan on said supporting members.

1,501,625. MOLDING METHOD AND APPARATUS. GEORGE J. SAFFERT, New Ulm, Minn. Filed Oct. 27, 1923. Serial No. 671,140. 9 Claims. (Cl. 25—41.)



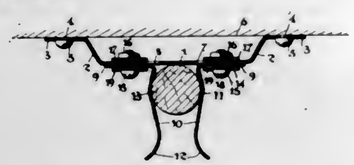
1. An apparatus of the class described, comprising a holder consisting of slidably cooperating side and end walls, spring means normally holding said walls indrawn, lever mechanism adapted to be actuated to separate said walls against the tension of said spring means, and lifting means slidably supported below said holder, for the purpose set forth.

1,501,626. INTERNAL-COMBUSTION ENGINE. HERMAN AUGUST GUSTAV SIEKMANN, West Hoboken, N. J. Filed Sept. 28, 1922. Serial No. 591,164. 14 Claims. (Cl. 123—190.)



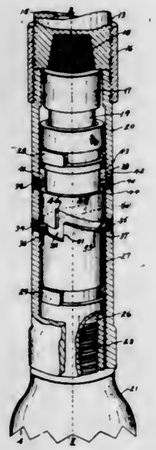
1. In an internal combustion engine, a valve casing, a rotary valve body therein, and rollers arranged to overlap from opposite sides of the axial centre of said valve body.

1,501,627. SAFETY PIN. NATHANIEL L. SILVERMAN, deceased, late of Boston, Mass., by Jacob J. Silverman, administrator, Boston, Mass., assignor to David R. Silverman, Boston, Mass. Filed May 4, 1923. Serial No. 636,718. 3 Claims. (Cl. 24—150.)



1. A safety pin of the class described comprising a round wire, a portion of which is bent to form an arcuate body portion, a portion coiled to form a spring, and another portion bent to form a reverse curve and arranged approximately parallel to said body portion whereby said safety pin is compelled to assume a position flat against the article it is engaged with: a sheath fast to the free end of said body portion; and a piercing point formed at the free end of said reverse curve.

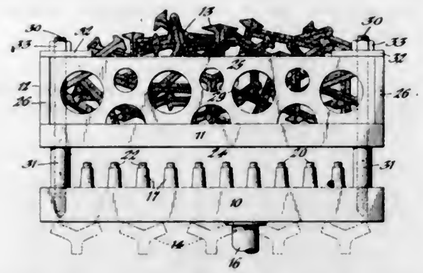
1,501,628. OVEN. FRANK SKACH, Chicago, Ill. Filed Apr. 15, 1922. Serial No. 553,049. 2 Claims. (Cl. 107—55.)



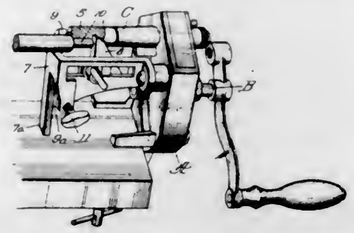
2. In a double compartment baking oven, a door between said compartments, and operating means for said door comprising, a pivot for said door, an operating shaft eccentric to said pivot, interconnecting means between said shaft and door for raising and lowering same about said pivot, said interconnecting means including an integral eye on said door and an arm rigid with said shaft and operatively engaging within said eye, and means for controlling the angular positions of said door about said pivot.

1,501,629. HOLDER. JOHN C. SMITH, Memphis, Tenn. Filed Sept. 4, 1923. Serial No. 660,725. 1 Claim. (Cl. 24—237.)

A holder for the purpose set forth comprising a body member consisting of a substantially rectangular intermediate portion and a pair of angle-shaped end portions, said end portions being oppositely disposed with respect to each other and each extending inwardly from one terminus of said intermediate portion, a pair of oppositely disposed clamping members arranged against the outer face of said intermediate portion and each including a forwardly projecting clamping arm, said clamping arms being curvilinear in contour and oppositely disposed with respect to each other and capable of being shifted towards and away from each other, and means to provide for the adjusting of said clamping members to position said clamping arms and further for fixedly securing said clamping members in adjusted position, said means connected with and extending through said clamping members and intermediate portion.



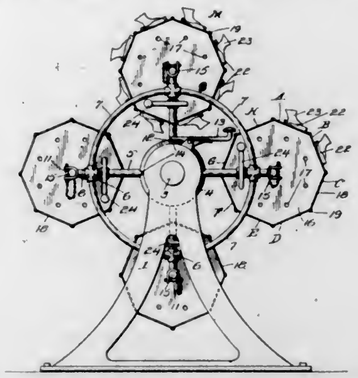
1,501,630. ROTARY ROCK DRILL. FRED S. STOLL, Los Angeles, Calif., assignor to William W. Wilson, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,693. 4 Claims. (Cl. 255—4.)



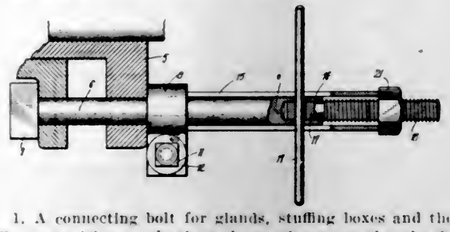
1. A drill comprising a drill stem adapted to be rotated, a bit, means carried by the drill stem and engaging means carried by the bit for connecting the bit to the drill stem and for causing the rotation of and hammering on the bit as the stem is rotated, the hammer action being effective both inside of and outside of the means on the bit.

1,501,631. GAS BURNER. ISRAEL B. TAYLOR, Buffalo, N. Y. Filed Aug. 21, 1923. Serial No. 658,629. 2 Claims. (Cl. 158—99.)

1. A gaseous fuel burner, comprising a supporting base having a gas-receiving chamber, a plurality of burner-nozzles rising from said base, a mixer-plate surmounting the latter in spaced relation thereto to form a universal mixing space, said space being open and unenclosed on all sides, said mixer plate having flame openings therein substantially in line with said nozzles, and a retaining wall for incandescent fuel supported on said mixer plate.



1,501,632. CUE TENONING AND TRIMMING MACHINE. OSCAR H. TWETEN, Chicago, Ill. Filed Mar. 25, 1919, Serial No. 285,018. Renewed Apr. 12, 1920. Serial No. 373,386. 2 Claims. (Cl. 144—198.)

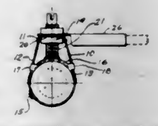


1. In a cue trimming machine, a cutter shaft, a cue rest adjacent the shaft on which the cue may be rotated, and a blank tipped milling cutter for trimming the cue end, said cutter carrying a blank tip for engaging the side of the cue when rotated to limit the cutting action so as to have a flush finished cue end.

1,501,633. HEEL-DRYING APPARATUS. THADDEUS F. TYLER, Haverhill, Mass. Filed Nov. 29, 1922. Serial No. 603,955. 12 Claims. (Cl. 34—26.)

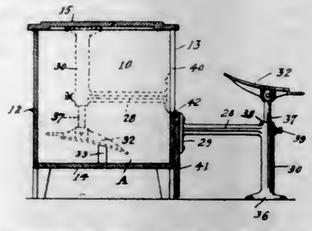
1. A heel drying apparatus including a polygonal shaped drum including a plurality of supporting plates, and means for detachably securing a plurality of heels to each of said plates.

1,501,634. THREADLESS BOLT. MORRIS H. VAN BILLIARD, Bethlehem, Pa. Filed Apr. 30, 1923. Serial No. 635,727. 4 Claims. (Cl. 85—5.)



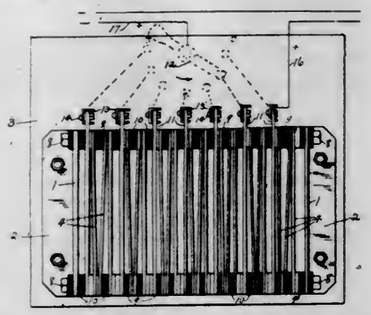
1. A connecting bolt for glands, stuffing boxes and the like comprising a shank, a loose clamp on the shank, a slotted ferrule for adjusting the position of the clamp with respect to a part and means for locking the ferrule against the clamp.

1,501,635. METHOD OF MAKING NOVOCAINE. WILLIAM A. VAN WINKLE, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Mar. 31, 1920. Serial No. 370,280. 4 Claims. (Cl. 204—9.)



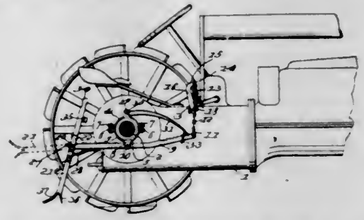
1. In the manufacture of novocaine, the method of reducing the intermediate diethylaminoethyl ester of para-nitrobenzoic acid, which consists in treating the same electrolytically, substantially as described.

1,501,636. ELECTRICAL GROUND-CONNECTION CLAMP. CHARLES VITEK, Maywood, Ill., assignor, by mesne assignments, to Benjamin A. Tetzlaff, Green Bay, Wis. Filed Aug. 11, 1921. Serial No. 491,632. 2 Claims. (Cl. 173—273.)



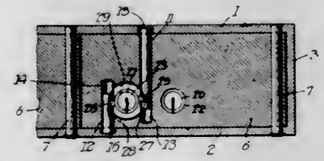
2. An electrical connection comprising a pair of flexible legs encompassing a grounding element, means for connecting the free ends of said legs, an integral portion uniting the other ends of said legs, a bridge between the grounding element and said integral portion, a stationary nut, means supported by said bridge for preventing spreading of said legs, said bridge having a raised portion, a screw extending through said raised portion and said integral portion for tightening the legs around the grounding element, a cable shoe and means for clamping said cable shoe to the upper face of said integral portion.

1,501,637. SHOE-REST CABINET. JOEL L. WALLIN, St. Paul, Minn., assignor to George Earl, St. Paul, Minn. Filed Mar. 31, 1921. Serial No. 457,181. 10 Claims. (Cl. 15—265.)



1. In combination with a cabinet, a shoe rest within said cabinet secured to the side wall, the side wall being adapted to swing into a plane parallel with its original plane to completely bring said shoe rest outside of the cabinet.

1,501,638. RHEOSTAT. ROBERT E. WEIMER and MATZ A. SPEICHER, Colliers, W. Va., assignors to Weimer-Warren Company, Colliers, W. Va., a Corporation of West Virginia. Filed May 6, 1921. Serial No. 467,353. 4 Claims. (Cl. 219—48.)

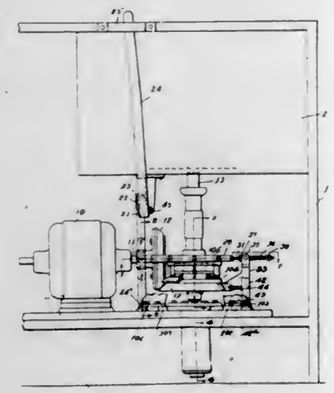


1. In a rheostat, a series of separate metal bars, each except one at each end of the rheostat having each end electrically connected to one bar at each side thereof so as to form a continuous zigzag path for electric current, the angles of the zigzag path being made by the union of the ends of two bars.

1,501,639. TRACTOR. BONY H. ALEXANDER, Lexington, Miss., assignor of seven-twentieths to J. Preston Rogers and five-twentieths to L. E. Barr, both of Lexington, Miss. Filed July 18, 1922. Serial No. 575,797. 12 Claims. (Cl. 180—82.)

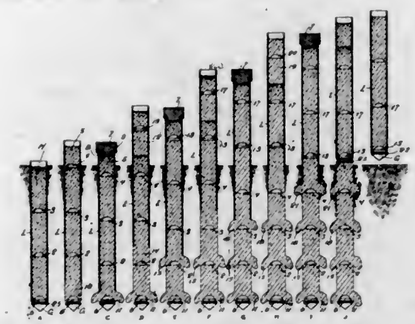
1. The combination with a tractor having a clutch, of means for actuating said clutch when the tractor attempts to turn over backward, said means including a ground-engaging member to cause actuation of said clutch, the lower portion of said member, when the tractor is in normal position and traveling forward, being arranged to elevate incident to its engagement with an obstruction over which the tractor is passing without causing actuation of said cluth.

1,501,640. LOCK MECHANISM. EDGAR W. ANDERSON, Manitowoc, Wis., assignor to Invincible Metal Furniture Company, Manitowoc, Wis., a Corporation of Wisconsin. Filed Mar. 6, 1923. Serial No. 623,087. 3 Claims. (Cl. 70—74.)



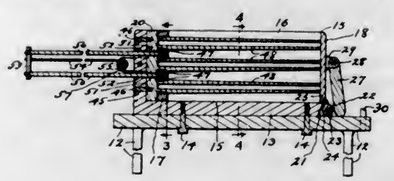
1. The combination of a door and locking mechanism therefor, comprising a main bolt and an auxiliary bolt or bolts, and mechanism for actuating said bolts to advance and retract the same, the means for actuating said auxiliary bolt or bolts comprising a rotatable ring, projections thereon which engage a notch or notches formed in said auxiliary bolt or bolts, and connection between said ring and the main bolt of the locking mechanism, substantially as described.

1,501,641. GAME BOARD. WILLIAM F. BAKER, Wayne, Pa. Filed Sept. 9, 1921. Serial No. 499,410. 3 Claims. (Cl. 46—56.)



1. In a game board, a board and loop-like members of fibrous material, which latter are adapted to be passed through the former, said members having legs of varying characteristics which are disposed upon the rear of said board and bent for a portion of their length toward each other and held concealed there.

1,501,642. CENTRIFUGAL EXTRACTOR. DANA H. BENJAMIN, Cleveland, Ohio, assignor to Henrietta C. Benjamin, Cleveland Heights, Ohio. Filed July 26, 1920. Serial No. 399,211. 6 Claims. (Cl. 192—136.)



1. In an extractor, the combination of a curb, a cover therefor, a rotatable basket in said curb, means for operating said basket, a liquid containing system, means for producing pressure in said system upon operation of said basket, and a cover lock actuated by pressure in said system whereby openeng of said cover during operation of said basket is prevented.

1,501,643. CONCRETE PILE AND MEANS FOR AND METHOD OF PRODUCING SAME. MAURICE BLUMENTHAL and ERNEST GILMORE GARDNER, Brooklyn, N. Y. Filed Jan. 2, 1920. Serial No. 349,024. 8 Claims. (Cl. 61—57.)

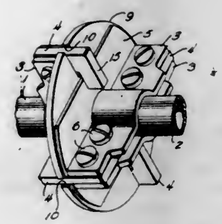
6. The herein described method of producing within the earth concrete piles, which method consists in sinking within the earth a pile shell, said shell being filled with concrete material, entirely withdrawing the shell without the concrete material meanwhile adding concrete material within the upper end of the shell to maintain the shell filled, sinking the shell while thus filled again into the earth in a different location, again withdrawing the shell without the concrete material meanwhile adding further concrete material within the upper end of the shell to maintain the shell filled, and repeating this operation as desired.

1,501,644. MOLD FOR MAKING BUILDING BLOCKS. OTTO E. BORNHAUSER and JOHN EDWARD HERMAN, Sandusky, Ohio. Filed Feb. 17, 1923. Serial No. 619,605. 14 Claims. (Cl. 25—45.)

1. A mold of the character indicated comprising a pair of spaced opposite upright walls and two spaced opposite upright walls arranged substantially at a right angle to the first-mentioned walls, one of the second-mentioned walls being a slidable wall disposed to move between and independently of the first-mentioned walls, the other of said second-mentioned walls being movable into a position permitting movement of a building block or product substantially horizontally from betwen the first-mentioned walls by said slidable wall, and said slidable wall being normally in position to be slid substantially horizontally and independently of said first-mentioned walls in the direction in which the inner side of said slidable wall faces.

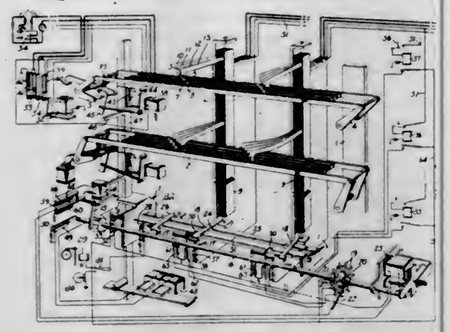
1,501,645. FERTILIZER AND PROCESS FOR THE MANUFACTURE OF SAME. JOSEPH BRESLAUER and CHARLES GOUDET, Geneva, Switzerland, assignors to the Firm: Société d'Etudes Chimiques pour l'Industrie, Geneva, Switzerland. Filed June 22, 1922. Serial No. 570,239. 6 Claims. (Cl. 71—9.)

1. A process for the manufacture of a fertilizer consisting in utilizing economically the residues from the decomposition of raw cyanamide by gaseous acids, said residues containing calcium salts and carbon and treating the said residues with solutions of compounds which are assimilable by plants to transform the mixture into a fertilizer.



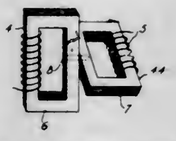
6. A fertilizer consisting of a mixture of residues resulting in the decomposition of raw calcium cyanamide by carbonic acid, the said residues containing calcium carbonate and carbon, and solutions containing a urea salt obtained during the manufacture of assimilable nitrogenous products from cyanamide.

1,501,646. EVAPORATOR COIL. STANLEY BROWN, Garden City, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1922. Serial No. 533,235. 4 Claims. (Cl. 159—28.)



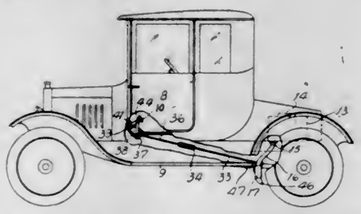
1. In an evaporator, the combination with a containing shell of a heating element within said shell, comprising a continuous tubing having a plurality of convolutions, the cross section of said tubing being distorted from a circular form, and the broad faces of successive convolutions being adjacent, whereby a maximum clearance between convolutions is obtained and bridging over of scale between successive convolutions is restricted.

1,501,647. SHAFT COUPLING. THADDEUS C. CAMPBELL, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 2, 1921. Serial No. 497,852. 8 Claims. (Cl. 64—91.)



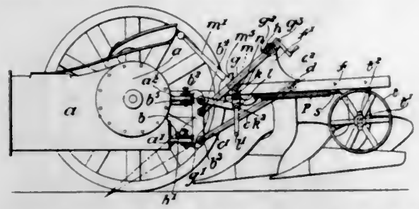
1. A shaft coupling comprising an intermediate plate having radially extending slots and two shaft carried elements slidably engaging the slots of said intermediate plate, said shaft carried elements each comprising a pair of oppositely disposed members, clamping means for securing said members and for attaching said shaft carried element to its respective shaft and independent means for aligning said members.

1,501,648. TELEPHONE SYSTEM. ROY DOUGLAS CONWAY, Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1920. Serial No. 401,907. 11 Claims. (Cl. 179—8.)



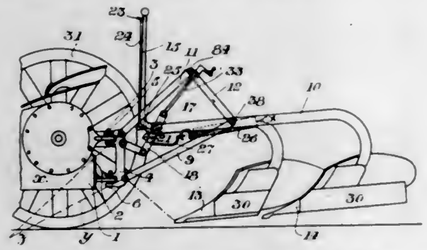
1. In a switching mechanism, a plurality of trunk bars, means for preselecting a trunk bar, means for seizing the preselected trunk to render the same busy, a register, and means operable when all the trunk bars become busy for controlling said register.

1,501,649. TRANSFORMER. GEORGE C. CUMMINGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1919. Serial No. 347,511. 8 Claims. (Cl. 171—119.)



1. A transformer comprising a primary and a secondary winding, a separate and complete magnetic core for each of said windings, and means for connecting said cores together whereby the reluctance path between said windings may be varied for providing a loose coupling.

1,501,650. SANDING DEVICE FOR AUTOMOBILES. CHARLES F. DIENSTBACH and JOSEPH W. KUEMMERLE, St. Louis, Mo. Filed Jan. 9, 1922. Serial No. 527,959. 4 Claims. (Cl. 291—15.)



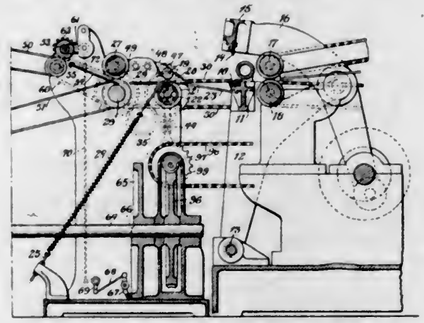
1 In a sanding device for automobiles in combination with the braking mechanism thereof, a sand reservoir, pipes leading from said reservoir and each terminating in a vertical chamber having a flattened discharge orifice, a pair of valves vertically spaced apart located in said chamber, a lever mechanism, located on the outside of said chamber and adapted to operate said valves in opposite directions simultaneously, and a resilient connection between the lever mechanism and the braking mechanism for operating said valves.

1,501,651. AGRICULTURAL IMPLEMENT. HARRY FERGUSON, Belfast, Ireland. Filed May 4, 1922. Serial No. 558,468. 3 Claims. (Cl. 97—98.)

1. The combination with means for hitching an agricultural implement to a tractor, comprising upper and lower members movably connected to the tractor and to the implement so as to permit free relative movement therebetween during operation, said members being arranged so as to cause the effective line of draft to be from a position other than that of the actual connection between the tractor and the implement, of means on the implement adapted to bear on the ground and regulate the working depth of the soil engaging parts of the implement.

1,501,652. AGRICULTURAL IMPLEMENT. HARRY FERGUSON, Belfast, Ireland. Filed Oct. 12, 1922. Serial No. 593,984. 42 Claims. (Cl. 97—47.)

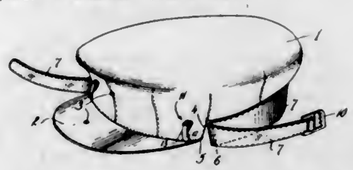
1. In an agricultural implement adapted to be operated mechanically, a connection for coupling said implement to its operating mechanism and means forming a part of the connection whereby the implement can be kept automatically at a regular working depth when in operation and irrespective of inequalities in the contour of the ground.



7. In an agricultural implement adapted to be operated mechanically, a connection for coupling said implement to its operative mechanism whereby it is permitted to move up and down, means operated automatically by relative movement of the implement or its operative mechanism and the connection to keep the implement at a regular working depth during its operation irrespective of inequalities in the contour of the ground, and means for raising the implement from its operative position when required.

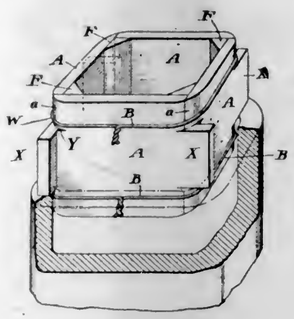
18. An agricultural implement adapted to be drawn by a tractor having a connection for coupling the implement to the tractor including means whereby the weight of the implement can be wholly carried by the tractor when in operation, and means forming a part of the connection providing freedom of up and down movement and for automatically keeping the implement at a regular working depth during its operation irrespective of inequalities in the contour of the ground over which it may be drawn by the tractor.

27. A connection for coupling an implement to a tractor comprising means which, when the implement is pulled by the tractor, exerts a downward pull or pressure on the implement and holds it down to its work, means preventing the implement, whilst in operation, from turning angularly upwards around the first mentioned means, the said means allowing the implement to move laterally relative to the tractor, and means forming a part of the connection for automatically balancing the downward pull of the implement to keep it at a regular working depth.



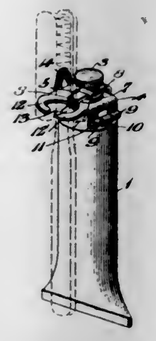
42. A device for hitching an agricultural implement to a tractor comprising, in combination, a swivel head adapted for connection to the tractor, a set of three lower link members pivotally connected to said head and to the implement one of said members being arranged diagonally between the other two, an upper link pivoted to said head, a double strut pivotally connected to the implement and to said upper link, depth control gear carried by the implement frame, and means for manually raising and lowering the implement relative to the tractor, said means including a laterally adjustable link bracket pivotally connected to the swivel head, a cross head pivotally supported by the implement frame and connected with said link bracket and a control lever for actuating said cross head.

1,501,653. CUT-OFF MECHANISM. BERNARD M. FINE, Philadelphia, Pa., assignor to Samuel M. Langston Company, Camden, N. J., a Corporation of New Jersey. Original application filed Oct. 17, 1921, Serial No. 508,082. Patent No. 1,460,059, dated June 26, 1923. Divided and this application filed June 19, 1922. Serial No. 569,396. 20 Claims. (Cl. 164—68.)



1. A machine for cutting sheet material into sections, including an oscillatory cutter movable back and forth in the general direction of travel of the material, a pair of feed rolls spaced from said cutter to receive the end of the sheet before the cutter severs the end section from the body of the sheet, and supporting members secured to said cutter and movable back and forth therewith and extending between the axes of said feed rolls, said feed rolls permitting free movement of said supporting members, but acting to grip and positively advance the cut-off sections and prevent the return movement of said sections with said supporting members.

1,501,654. ADJUSTABLE CAP. PHILIP A. FISCHER, New York, N. Y. Filed June 9, 1922. Serial No. 567,051. 8 Claims. (Cl. 2—147.)

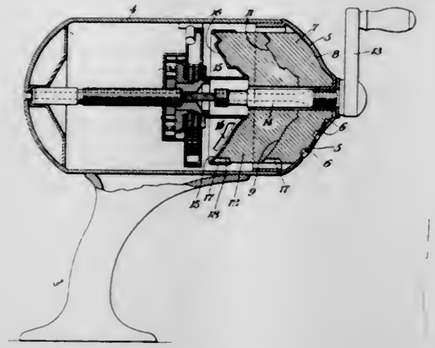


1. In a cap, the combination of a strap along the edge thereof, a loop adapted to encircle said strap loosely, said loop being fastened to the cap near the lower edge of said cap only, said loop being free to assume an easy position around said strap.

1,501,655. SHRINK-HEAD CASING FOR INGOT MOLDS. EMIL GATHMANN and MARK GATHMANN, Baltimore, Md. Filed July 14, 1922. Serial No. 574,909. 25 Claims. (Cl. 22—147.)

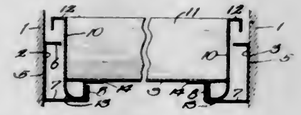
1. A shrink head casing made of a plurality of sections having integral interlocking devices at their ends for joining the sections to complete the feeder, integral parts of said devices being prolonged to provide means for supporting the feeder on a mold.

1,501,656. MATERIAL CONTAINER. JULIUS EDW. GILDA, Philadelphia, Pa. Filed Nov. 28, 1923. Serial No. 677,384. 4 Claims. (Cl. 221—60.)



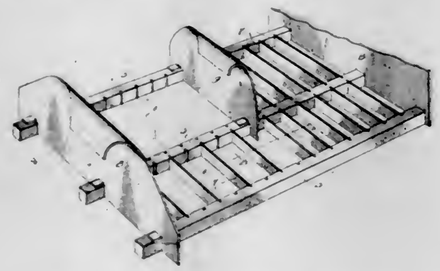
1. A device of the character stated comprising a receptacle having a neck forming an outlet, a plate hinged to said receptacle which plate is slotted in register with said outlet, a cap for closing said outlet fitted to the slotted portion of said plate which cap is provided with a flanged portion and oppositely disposed lips carried by said plate and engaging over said flanged portion for retaining said cap upon said plate during movement of the latter.

1,501,657. SOAP DISPENSING. EDWARD V. GLUCK, Richmond Hill, N. Y., assignor to Sonpitor Company Incorporated, a Corporation of New York. Filed June 12, 1920. Serial No. 388,403. 9 Claims. (Cl. 87—23.)



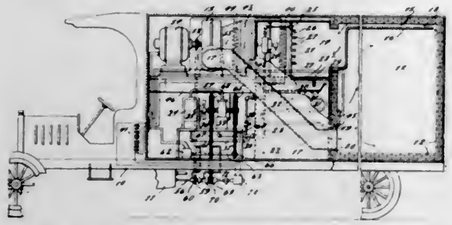
1. A cake of soap adapted for use in a dispensing machine and having a substantially frustro-conical con-

vex face on one end and a substantially frustro-conical concave face on the other end, said faces being pro-



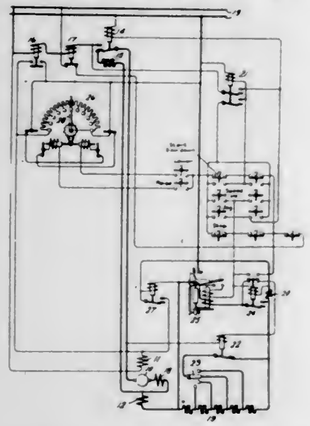
vided with irregularities adapted to fit and interlock with a similar cake of soap.

1,501,658. CABINET. HARRY C. GOWRAN, Two Rivers, Wis., assignor to the Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1921. Serial No. 525,133. 1 Claim. (Cl. 45—77.)



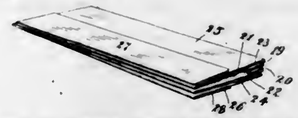
A cabinet having a drawer space; a drawer in said space provided with runners upon its bottom; and runways upon the cabinet that support said runners and the drawer having them, these runways having each an intermediate section for attachment to the cabinet, an inwardly extending top ledge, an inwardly extending runway portion at the bottom, and upright wall portions at the inner edges of the runways and with which the runners are engageable to limit the lateral movement of the drawer, the bottoms of the runners riding upon the tops of the runways.

1,501,659. CANDY MOLD. MICHAEL M. HADDAD, Pontiac, Mich. Filed Mar. 8, 1922. Serial No. 541,916. 1 Claim. (Cl. 107—19.)



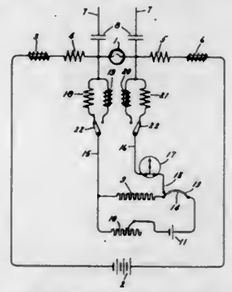
A candy mold comprising a pair of longitudinal side members correspondingly transversely slotted to receive intervening spacer sections, a plurality of pairs of intervening spacer sections interposed between said longitudinal members removably receivable at the ends within the slots in the members to form a succession of independent candy-receiving compartments between said longitudinal members, each individual compartment separated from its adjacent compartments by a separate independent spacer section, and end plates notched to be received over the longitudinal side members within a slot thereof to hold said side members in spaced-apart relationship.

1,501,660. METHOD OF AND APPARATUS FOR CONDITIONING AIR. LOUIS HELMER, New York, N. Y. Filed Mar. 28, 1921. Serial No. 456,183. 2 Claims. (Cl. 236—44.)



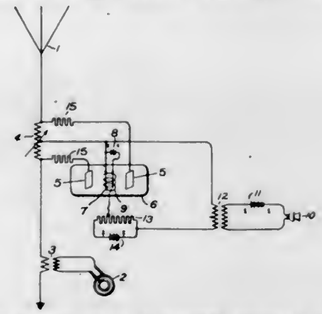
1. In a device of the character described, a compartment, means for circulating air through said compartment, a liquid-circulating system and means for spraying the liquid into the entering air and at substantially the saturation point, means for lowering the temperature of the circulating liquid prior to the spraying operation, means comprising a heating device for controlling the temperature of the air and liquid spray mixture as the latter is being introduced to the air, and means for raising the temperature of said mixture and thereby lowering the percentage of liquid spray content therein.

1,501,661. APPARATUS FOR AND SYSTEM OF MOTOR CONTROL. JOHN A. HEPPERLEN, East Orange, N. J., assignor to General Electric Company, a Corporation of New York. Filed Feb. 19, 1923. Serial No. 619,836. 6 Claims. (Cl. 172—179.)



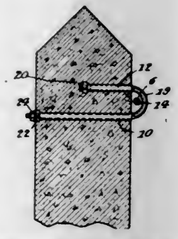
2. The combination in a system of motor control of electroresponsive line switch mechanism, electroresponsive means for controlling the motor speed, a starting switch and a speed up switch, and connections whereby the line switch mechanism is energized to close when the starting switch is temporarily operated and is maintained closed when the starting switch is returned to its original position, and the said electroresponsive means is energized to effect an increase of the motor speed when the speed up switch is closed and then maintained energized through a circuit controlled by the starting switch when the speed up switch is opened.

1,501,662. SHEET OF FOLDED MATERIAL. PAUL H. HORWITT, Brooklyn, N. Y., assignor to Independent Paper Mills Inc., Brooklyn, N. Y., a Corporation of New York. Filed July 21, 1923. Serial No. 652,940. 2 Claims. (Cl. 206—57.)



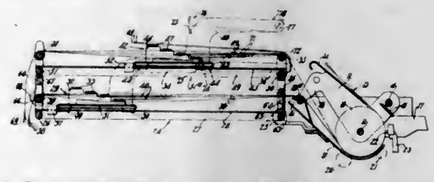
1. A sheet of material folded into a plurality of substantially coextensive sections, and an end section which is non-coextensive with the other sections, the sheet being then folded transversely to cause the non-coextensive end section to lie along one edge at the top and bottom thereof.

1,501,663. MEASURING SYSTEM. CHARLES A. HOXIE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 30, 1921. Serial No. 481,657. 6 Claims. (Cl. 175—183.)



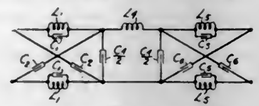
6. A system for measuring alternating currents comprising a resistance element having a resistance variable with the temperature, means for sending a direct current through the resistance, means whereby the current to be measured may also be sent through the resistance so as to heat it, inductive coils in series with said resistance through which coils only the direct current flows, a second resistance, means for sending a direct current through said resistance, means for connecting the two resistances in series so that their potential drops are opposed, inductive coils in the last mentioned series circuit whereby only direct current can pass, and means for varying the second resistance until the potential drops balance.

1,501,664. WIRELESS SIGNALING SYSTEM. AUGUST HUND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 18, 1914. Serial No. 862,325. 6 Claims. (Cl. 250—6.)



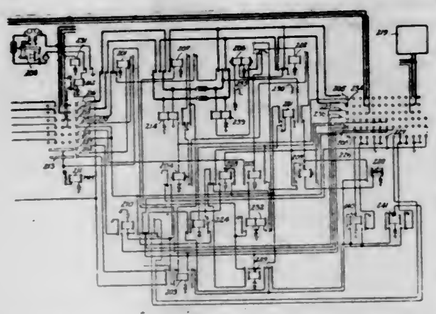
1. The combination in a wireless signaling system of an antenna, a source of energy connected to said antenna, a tuning inductance in series with said antenna, a relay comprising a plurality of electrodes enclosed in a highly evacuated envelope, direct electrical connections from said electrodes to points in said inductance between which there is a large difference of potential and means cooperating with said relay whereby the amplitude of the current flow in said antenna may be varied in accordance with the signals to be transmitted.

1,501,665. STAPLE FOR WIRE-FENCE CONCRETE POSTS. WILLIAM H. JAMES, Marshfield, Mo. Filed Nov. 14, 1921. Serial No. 515,124. 3 Claims. (Cl. 256—50.)



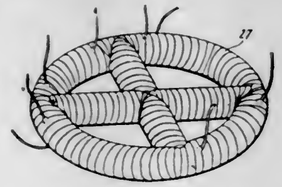
1. A wire fastener comprising a substantially U-shaped sleeve adapted to be embedded in a cementitious structure and having its crown portion cut away to provide a saddle and extend beyond one face of said structure, and means for bracing and locking said sleeve in the structure and also adapted to secure a longitudinal element to the aforesaid saddle.

1,501,666. TYPEWRITING MACHINE. ARTHUR A. JOHNSON, Washington, D. C., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 6, 1921. Serial No. 482,695. 16 Claims. (Cl. 197—126.)



1. In a typewriting machine adapted for continuous billing, in combination, a platen, a platen-carriage having a rearward extension, and a plurality of superposed carbon-carrier tracks on said extension.

1,501,667. ELECTRICAL NETWORK. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 11, 1921. Serial No. 468,710. 5 Claims. (Cl. 178—44.)



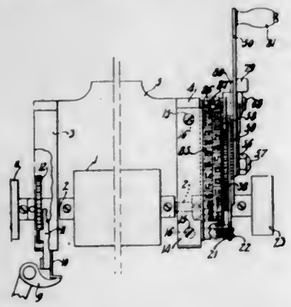
1. A wave filter comprising a section having terminals for receiving electric waves, parallel reactive paths between said terminals, output terminals on said paths at points the potentials of which are such that waves of a band of frequencies are substantially attenuated and waves of an adjacent band of frequencies are passed substantially without attenuation, said output terminals having substantially equal potentials for a frequency in the attenuated range relatively near the cut-off frequency whereby waves of said frequency are substantially wholly suppressed, and a filter section connected in tandem therewith having the same cut-off frequency but having a different frequency of maximum suppression.

1,501,668. TELEPHONE SYSTEM. LEO KELLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1920. Serial No. 397,596. 17 Claims. (Cl. 174—27.)

1. In a telephone system, a branch office, a main office, connecting circuits including numerical automatic switching mechanism at the branch office, an attendant's position thereat, subscribers' lines terminating at the branch office, senders associated therewith for setting said switching mechanism to interconnect said lines, a trunk extending between said offices, a signal for said trunk at the branch office actuated when the trunk is taken for use at the main office, means controlled from said position for causing said trunk to be connected to an idle one of said connecting circuits, and a sender for setting the numerical automatic switching mechanism thereof to select the desired subscriber's line.

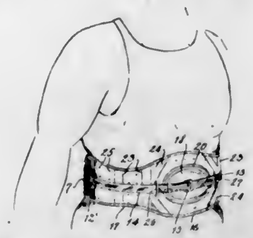
1,501,669. INDUCTANCE DEVICE AND METHOD FOR OPERATING THE SAME. GEORGE A. KELSALL, Belleville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1920. Serial No. 409,129. 15 Claims. (Cl. 178—46.)

1. The combination with two physical circuits consisting of line conductors, together furnishing a phantom circuit, of an inductance device comprising a magnetic core having a plurality of connected portions, another set of core portions connected to each other and connecting the junctions of the first named portions, and a winding for each line conductor mounted on one of said second named portions and a second winding for each line conductor mounted on and substantially equally divided between two of said first named portions, the number of turns of each winding for one of said line conductors being substantially of the same order of magnitude.



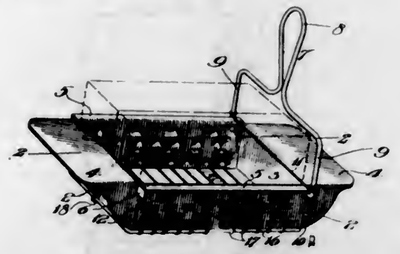
1,501,670. WINDING MACHINE. HENRY KOCH, Jamaica, N. Y., assignor to Dictograph Products Corporation, a Corporation of Virginia. Filed June 28, 1922. Serial No. 571,508. 10 Claims. (Cl. 242—9.)

1. In a winding machine, a rotatable winding spindle, a clutch carried by one end of the spindle for removably mounting an electromagnet frame to be wound, means for driving said spindle, a cam, means for driving said cam concomitantly with said spindle, a rotatable pin having an eccentric cam portion, an arm rotatable on said eccentric cam portion and contacting with the cam surface of the cam, a spring device pressing the arm into contact with the cam, and a guide device carried by the arm for feeding the wire to the frame, the arm being



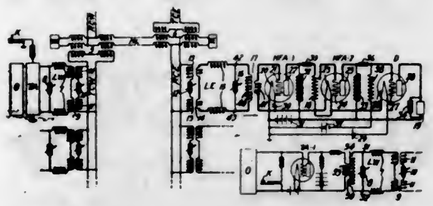
shifted back and forth by the cam and spring to form uniform layers of wire upon the frame, the rotation of the pin and its eccentric cam portion serving to shift the arm about its point of contact with the cam to vary the position of the guide device and thereby vary the starting point of the layers upon the frame.

1,501,671. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 23, 1921. Serial No. 479,734. 25 Claims. (Cl. 197—117.)



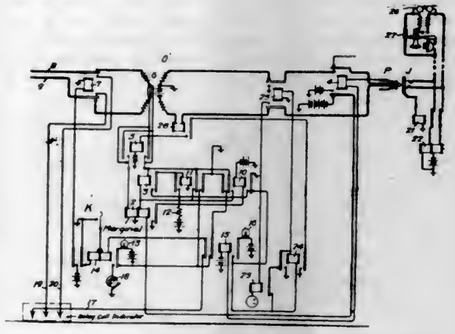
1. In a typewriting machine, in combination, a platen, a line-spacing ratchet-wheel having equally-spaced teeth, platen-sweeping mechanism comprising a handle and rotation-multiplying means interposed between said handle and the platen, including multiplying gears, a sweeping ratchet-wheel and an actuating pawl therefor, an overthrow-gear connected to the platen for rotation therewith, and having the same number of teeth as the line-spacing ratchet-wheel, and means moved into engagement with the overthrow-gear, between the teeth thereof, by the platen-sweeping mechanism, to arrest the rotation of the platen; the arrangement being such that the overthrow-gear will always arrest the platen at exactly a whole number of line-spaces from the point of beginning of the platen-sweeping movement.

1,501,672. OBESITY-REDUCING BAND. THOMAS LAWTON, New York, N. Y. Filed Nov. 29, 1922. Serial No. 603,899. 7 Claims. (Cl. 128—293.)



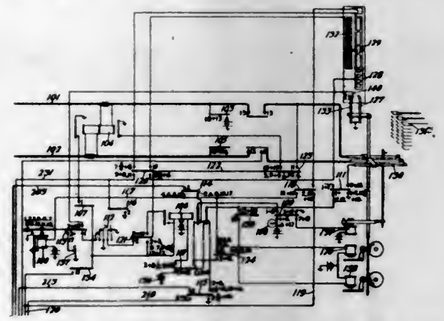
1. A reducing band comprising a relatively wider middle portion constructed to fit the body of the wearer closely, the said wider portion of the band having a resilient outwardly cupped member about which the said band lies closely against the body, a massage member located within said cupped member, and means for securing the band upon the person of the wearer.

1,501,673. BUTTER CUTTER. WILLIAM LOCKETT, Philadelphia, Pa. Filed Dec. 7, 1923. Serial No. 679,113. 3 Claims. (Cl. 31—25.)



1. A butter cutter comprising a frame, open at its top and bottom and provided with sides having a plurality of outwardly deflected lips of varying sizes arranged in rows in horizontal alignment but in staggered order vertically and out of horizontal alignment and a cutting wire engaging said lips and positioned transversely across the open bottom of said frame.

1,501,674. SELECTIVE CIRCUITS. MAURICE B. LONG, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 17, 1922. Serial No. 568,945. 8 Claims. (Cl. 178—51.)

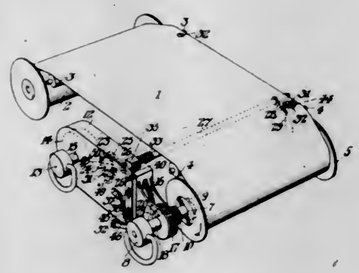


1. A current wave transmission system comprising a loop tuned circuit, a translating device, and a step-down transformer connected between said loop tuned circuit and said translating device for the transfer of energy therebetween.

1,501,675. TELEPHONE-EXCHANGE SYSTEM. ALBEN E. LUNDELL and EDGAR H. CLARK, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1920. Serial No. 377,215. 12 Claims. (Cl. 179—27.)

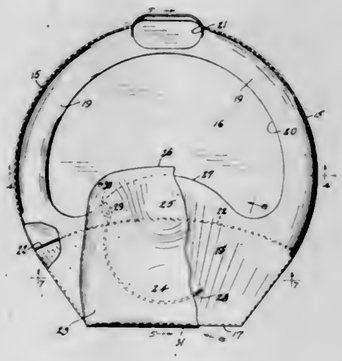
1. In a telephone exchange system, subscribers' lines, a cord circuit terminating in a plug terminal for extending a connection to any one of said lines, a signaling device, and means for operating said signaling device upon the seizure of said cord circuit, irrespective of the position of said plug terminal with realtion to the jacks of lines to which it has access.

1,501,676. TELEPHONE-EXCHANGE SYSTEM. ALBEN E. LUNDELL, Chicago, Ill., and JAMES J. WYNNE, Roselle Park N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 1, 1920. Serial No. 393,377. 33 Claims. (Cl. 179—27.)



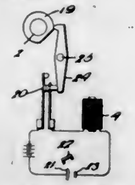
1. In a telephone exchange system, subscribers' lines, automatic switches to be used in establishing inter-connections between said lines, a plurality of variably operable primary registering devices, means to selectively position said primary registering devices, a progressively operable switch, means to position said switch under the joint control of said primary registering devices, a plurality of secondary registering devices, means controlled in accordance with the position assumed by said switch for setting said secondary registering devices, and means to selectively operate said automatic switches under the control of said secondary registering devices.

1,501,677. CAMERA. HARRY F. MCMAHON, Toronto, Ontario, Canada. Filed Mar. 4, 1921. Serial No. 449,599. 7 Claims. (Cl. 95—31.)



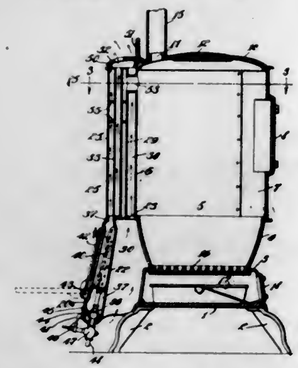
1. In a camera, the combination with two spools arranged to detachably engage a film strip at its respectively opposite ends; of means arranged to turn one of said spools to progress a film from one end to the other, in

cluding an axially reciprocatory handle having an axial stem arranged to detachably axially engage the take-up spool; a gear through which said stem reciprocates; a clutch device connecting said gear with said stem, arranged to turn the latter and said take-up spool, when said gear is turned, and permit said stem to turn, in the same direction, independently of said gear; whereby said take-up spool may be turned by said handle and by said gear, independently of each other; a spring motor arranged to turn said gear; a regulating escapement device, arranged to regulate the speed of said motor; co-



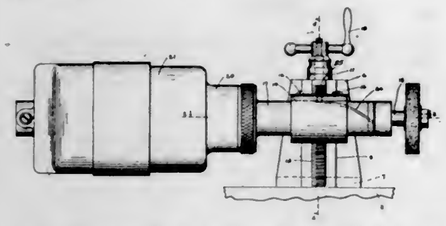
operative means arranged to simultaneously stop the movement of said film and of said motor, including a detent plunger adapted to successively engage a longitudinal series of perforations in said film; means arranged to simultaneously release said motor and said film, including means arranged to withdraw said detent plunger from said film; and means arranged to lock said releasing device in inoperative position when the film is entirely wrapped upon said take-up spool; whereby said mechanism indicates when it is necessary to recharge the camera with another film.

1,501,678. BEDPAN. ANNA C. MCNETTON, Norwalk, Conn. Filed May 4, 1922. Serial No. 558,454. 13 Claims. (Cl. 4—112.)



1. A bed pan comprising a receptacle having curved sides and deeper at the rear than at the front, the bottom being curved upwardly adjacent the front toward the front edge, said front edge being substantially straight and of materially less width than the body of the pan, the upwardly curved portion of the bottom being also convex transversely of the pan to allow the pan to tip and rock under pressure from the body of the user, and the front portion of the top wall being of sufficient area to form a support for a patient lying on the side.

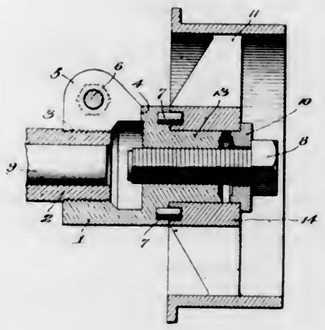
1,501,679. PRINTING TELEGRAPH. DONALD MURRAY, London, England, assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1920. Serial No. 418,248. 2 Claims. (Cl. 178—53.)



2. The combination of a telegraph printer, a uniform speed motor, a correcting magnet controlling an interposing pin, and an adjustable coupling mechanism between the motor and the driving shaft of the printer, consisting of a lever and pawl and a toothed wheel, a wedge cam to restore the interposing pin to zero position, and a cam arranged to open or close intermittently a phase correcting contact.

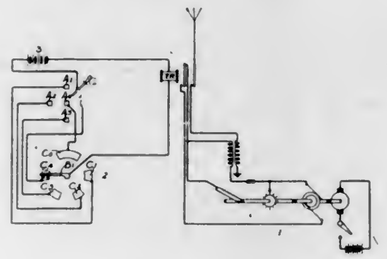
1,501,680. COMBINED FLUID-FUEL AND SOLID-FUEL HEATING APPARATUS. FRANK A. NIEBERDING, Cleveland, Ohio. Filed July 22, 1918. Serial No. 246,000. 10 Claims. (Cl. 126—116.)

10. Apparatus of the character set forth comprising a solid fuel stove, a smoke chamber mounted and spaced from one side of the combustion chamber of said stove to provide an air passage, a casing spaced from the fire pot of the stove and opening at its top into the smoke chamber, and a fluid fuel burner in said casing.



1,501,681. SUPPORTING MEANS FOR ROTATABLE GRINDERS AND THE LIKE. EMANUAL NIELSEN, Racine, Wis., assignor to Hamilton-Beach Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Oct. 24, 1921. Serial No. 509,954. 3 Claims. (Cl. 51—259.)

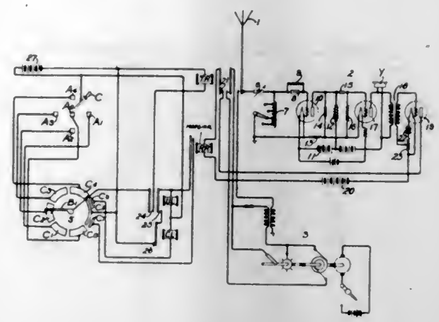
1. In combination a supporting standard, a collar member mounted on said standard, a casing member mounted in said collar member, and a shaft journaled in



said casing member and adapted to carry a grinding element or the like, one of said members having a pin and the other a spiral groove adapted to receive said pin, said connection causing an axial displacement of said casing relative to said collar when said casing is rotated.

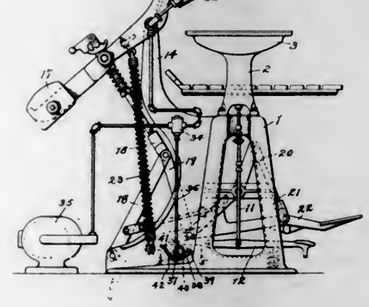
1,501,682. COMBINATION WHEEL PULLER, TOOL GRINDER, AND POWER DEVICE. GEORGE E. NOFFSINGER, Elkhart, Ind. Filed Nov. 28, 1922. Serial No. 603,823. 6 Claims. (Cl. 7—1.)

1. A power transmitting mechanism comprising one member having means for fixedly mounting the same upon the hub of a driving wheel, dowel pins projecting from said member, a second member adapted to make threaded engagement with said first member, and a power pulley adapted to be rigidly fixed to said first member by means of said dowel pins and said second member.



1,501,683. REMOTE CONTROL SYSTEM. ARTHUR A. OSWALD, Bradley Beach, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1920. Serial No. 428,561. 20 Claims. (Cl. 250—2.)

1. A transmitting device for transmitting impulses at timed intervals, a receiving device for receiving said impulses and means actuated by said receiving device in response only to impulses received at definite instants and of duration between two fixed limits.

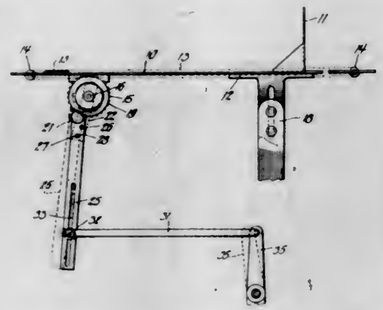


1,501,684. REMOTE CONTROL SYSTEM. ARTHUR A. OSWALD, Bradley Beach, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1920. Serial No. 428,948. 12 Claims. (Cl. 250—2.)

1. In combination, a control mechanism and a distant controlled mechanism, each of said mechanisms comprising a constantly moving element, means at said control mechanism for transmitting energy to operate said con-

trolled mechanism, and means at said control mechanism for preventing transmission of said energy except when such elements are in synchronism and phase agreement.

1,501,685. PRESSING MACHINE. EVERETT E. PARKER, Chicago, Ill., assignor, by mesne assignments, to Metropolitan Trust Company, trustee, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1916. Serial No. 119,499. 4 Claims. (Cl. 68—9.)



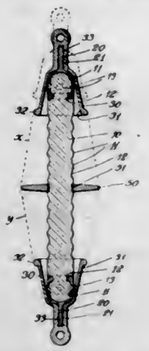
1. A pressing machine, comprising relatively movable pressing members, each provided with a foraminous pressing wall and an inner chamber communicating with the atmosphere through the openings in said wall, means for supplying steam to the chamber in one of said members, means for producing suction in the chamber in the other member, means for producing relative pressing movement between said members, and means actuated by said member-moving means for rendering said suction effective when said members are in pressing relation with each other.

1,501,686. FEED MECHANISM FOR BOOK-SEWING MACHINES. GUSTAV A. PAULSEN, Chicago, Ill., assignor to Joseph E. Smyth Company, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,514. 9 Claims. (Cl. 112—21.)

1. In a feed mechanism of the character described, a rotatable feed wheel having a plain driving surface, a

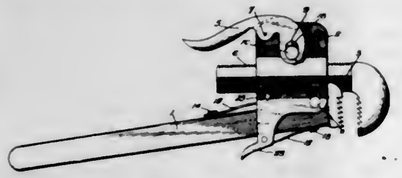
movable arm, and means carried by said arm for gripping the plain driving surface of the wheel by movement of

the arm and advancing said wheel by the movement of said arm and thereafter releasing said gripping means, so as to intermittently rotate said wheel.



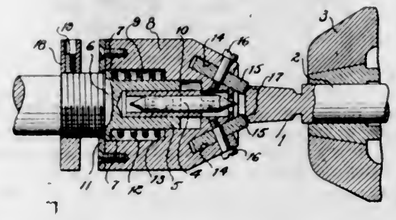
1,501,687. NECKTIE. GIUSEPPE F. PINSETI, New York, N. Y. Filed Nov. 18, 1921. Serial No. 516,036. 2 Claims. (Cl. 2—11.)

1. A four-in-hand tie comprising an end member, a loop at one extremity of the end member, and a body member, with one end thereof threaded through the said loop and turned back against the body member so that the body member and that portion thereof threaded through the loop form continuations of the end member whereby the body member may be folded over the end member and that portion of the body member which is threaded through the loop to form a knot which is slidable on both the end member and that portion of the body member threaded through the loop.



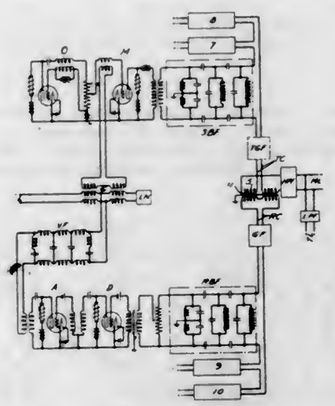
1,501,688. COLUMN-STRAIN INSULATOR. LOUIS STEINBERGER, Brooklyn, N. Y. Filed May 23, 1919. Serial No. 299,209. Renewed Sept. 16, 1921. Serial No. 501,147. 1 Claim. (Cl. 173—318.)

In a device of the class described, an elongated body of insulating material, end caps each having a bead and also a cavity formed therein to effect a molded union with said insulating body, and an axially extending screw-threaded shank secured thereto; a bell shaped terminal threaded on each shank to adjust its position thereon, said terminals each having an annular bead formed at one end and a securing eye adapted to receive a supporting wire formed on the other end thereof, and a disc shaped barrier surrounding said insulating body at a point sub-



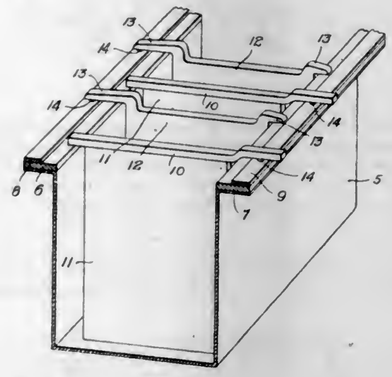
stantially half way between said end caps, coacting with the beads on said terminals to act as an arcing member to prevent injury to said body of insulating material.

1,501,689. ADJUSTABLE PIPE AND NUT WRENCH. DELPHIS E. ST. JACQUES, Springfield, Mass. Filed Dec. 30, 1922. Serial No. 609,970. 2 Claims. (Cl. 81—105.)



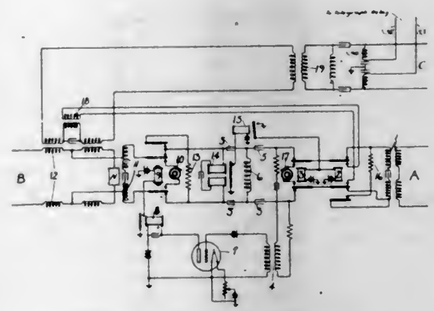
1. A wrench comprising a handle or wrench bar with a fixed jaw, a housing with side and upper plates, said housing being pivoted to said handle, and having a longitudinal opening to conform with the shape of the sliding jaw bar, a movable jaw having a jaw bar slidably mounted in said opening, said jaw bar being hexagonally shaped and provided with teeth on its upper edge the shape of the jaw bar and said opening being thus designed to result in a wedging action bracing the jaw bar against movement when the jaws are under stress and thereby relieving the pressure from the spiral springs; a lock dog provided with teeth on the lower side of its base section to engage with the teeth on the sliding jaw bar and having two cylindrical crossarms extending horizontally trough the side plates of the housing permitting the lock dog to be raised or lowered by the lever, and having one cylindrical arm extending vertically from the enlarged portion adjoining the base section of the lock, fitting into a socket provided therefor in the upper plate of the housing and acting as a guide, two spiral springs pressing said lock dog teeth into locking engagement with the jaw bar teeth, a lever pivoted on the housing and so connected with the lock dog as to move it in an inoperative position by compressing the spiral springs, oval slots in the side plates of the housing, running vertically, through which the cross-arms project and so made as to permit the cross-arms of the lock to move upward and downward freely and also to hold said cross-arms firmly in place thereby relieving the strain from the teeth on the upper side of the sliding jaw bar, and a trigger formed at the lower end of the housing for the purpose of spacing and setting the wrench and also to be held when disengaging the teeth of the lock dog and the sliding jaw bar when the lever is pressed to release the lock dog.

1,501,690. DEVICE FOR BURNISHING SURFACES OF ROLLS FOR ROLLER BEARINGS. ERNEST G. STRONG, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed June 5, 1922. Serial No. 566,090. 6 Claims. (Cl. 29—90.)



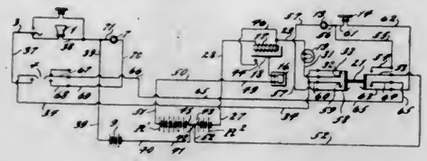
1. A device for smoothing rolls for roller bearings, comprising a rotatable head and a plurality of rollers mounted in said head and conically disposed about the axis thereof, said rollers projecting beyond the end of said head and the axes thereof intersecting inside of said head.

1,501,691. SELECTIVE TRANSMISSION OF ELECTRIC WAVES. HARALD J. VENNES, Westmount, Quebec, Canada, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1922. Serial No. 577,493. 7 Claims. (Cl. 179—15.)



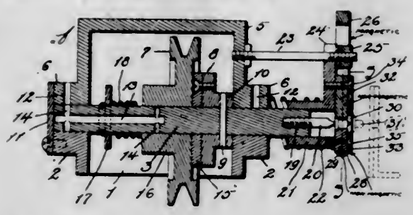
1. An alternating current system comprising a transmission line, a transmitting circuit for impressing alternating current upon said line, another circuit for receiving alternating current from said line, and a transformer having a line winding and a station winding, said receiving circuit being connected to said station winding, said line winding being connected to said line, and said transmitting circuit being connected in series with said line winding at its electrical midpoint.

1,501,692. ELECTRODE. HENRY L. WARD, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 1, 1922. Serial No. 572,181. 14 Claims. (Cl. 204—4.)



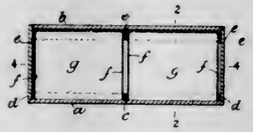
1. An electrode for use in electrolytic apparatus, comprising a body portion and a mounting, and a contact member carried by said mounting, said contact member having an electrical resistance lower than that of said mounting.

1,501,693. TELEPHONE TRANSMISSION SYSTEM. RAY S. WILBUR, Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 25, 1919. Serial No. 340,480. 15 Claims. (Cl. 179—4.)



15. In a telephone system, a two-wire circuit, a four-wire circuit, means coupling one side of said four-wire circuit to said two-wire circuit, a source of ringing currents, and means responsive to ringing currents in said two-wire circuit for impressing currents from said source upon said side of said four-wire circuit while maintaining fixed the connections of said side to said two-wire circuit.

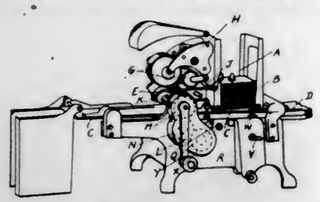
1,501,694. SIGNAL SYSTEM FOR TELEPHONES AND THE LIKE. FRIEDRICH H. N. WOHLERS, Jamaica, N. Y., assignor to Dictograph Products Corporation, a Corporation of Virginia. Filed Apr. 14, 1921. Serial No. 461,281. 17 Claims. (Cl. 179—89.)



12. In a signal system, a main circuit having therein a battery, a telephone receiver, and a single winding relay, and a secondary circuit having therein a portion in inductive relation to the main circuit, a buzzer, and a switch device therefor controlled by the relay.

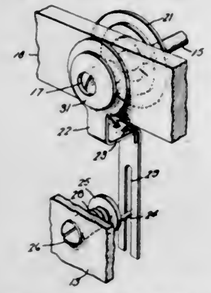
1,501,695. SCREW-DRIVER MACHINE. WILLIAM WURBACK, St. Louis, Mo. Filed Sept. 3, 1921. Serial No. 498,381. 6 Claims. (Cl. 144—32.)

1. A machine of the class described including a rotary screw-driver and means for rotarily actuating the same, in combination with means comprising a magnet having an apertured seat-providing pole-piece for magnetically holding a screw in position for driven engagement by the screw-driver.



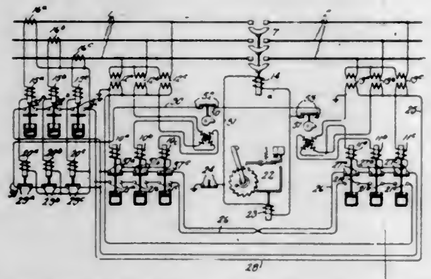
1,501,696. BOX OR CONTAINER FOR CIGARS, CIGARETTES, AND THE LIKE. SAMUEL BAIRD, London, England. Filed Aug. 14, 1922. Serial No. 581,640. 9 Claims. (Cl. 217—7.)

1. In a box or container for cigars, cigarettes and the like, an outer enclosing box body composed of substantially impervious material having a closing lid applied thereto, an inner receptacle composed of thin porous material bent into a laterally closed form for holding the cigars, cigarettes or the like in a vertical attitude, and means for supporting the said inner receptacle at a substantial distance from the walls of said outer box body to provide a space unoccupied except by air about the said inner receptacle and between the same and said box body.



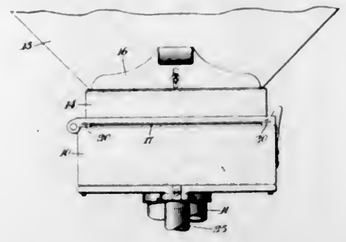
1,501,697. ADDRESSING MACHINE OR LIKE PRINTING MACHINE. LOUIS MAURICE BARMAN, Holborn, London, England, assignor to Roneo Limited, London, England, a Company of Great Britain. Filed Aug. 21, 1922. Serial No. 583,421. 2 Claims. (Cl. 101—49.)

1. In an addressing or like printing machine of the type wherein stencils are automatically fed, from a supply of stencils, between a presser roller and an inking roller; means to rotate said rollers, pivotally mounted rocker arms upon which said presser roller is mounted, a manually operable lever and means operated thereby to actuate said pivotally mounted rocker arms and move said



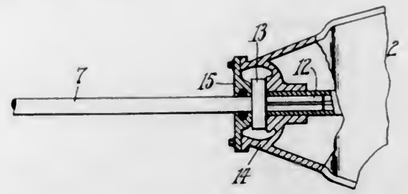
presser roller out of contact with said inking roller whereby a printing operation may be selectively prevented upon a stencil as it passes between said printing and inking rollers.

1,501,698. INDICATING INSTRUMENT. ALBERT R. BECKERT, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 6, 1920. Serial No. 401,805. 1 Claim. (Cl. 171—95.)



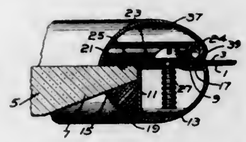
In an indicating instrument, a spirally wound control spring for the movable element, and an angularly adjustable member having non-aligned apertures through which the outer end of the control spring is loosely threaded.

1,501,699. SYSTEM OF ELECTRIC DISTRIBUTION. ELMER F. BLISS, Alplaus, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 1, 1923. Serial No. 655,114. 6 Claims. (Cl. 171—97.)



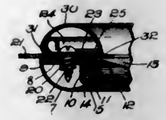
1. In a system of distribution, two electric circuits normally disconnected from each other, means for energizing each circuit, means responsive to the deenergization of either one of said circuits while the other circuit is energized for connecting both circuits together, and means adapted to effect the disconnection of said circuits from each other when the current supplied from one circuit to the other circuit when they are connected together decreases below a predetermined value.

1,501,700. FEEDING ATTACHMENT FOR CROWN-CORK-MAKING MACHINES. ALEXANDER BOGDÁNFFY Brooklyn, N. Y. Filed June 19, 1916. Serial No. 104,525. 5 Claims. (Cl. 113—113.)



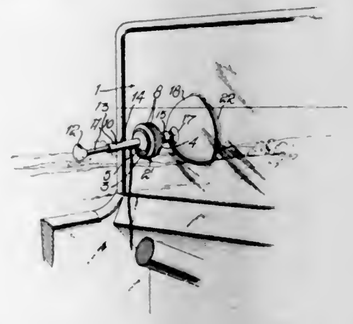
1. In a device of the character described, the combination with a receptacle for a mass of sealing disks of cork or the like; of a movable plate provided with an outlet to discharge said disks; and an outlet chute to receive and stack the same, and consisting of a stationary portion and a movable portion, the latter being adapted to be engaged by said movable plate.

1,501,701. EXTENSIBLE AUTOMOBILE CONSTRUCTION. HOWARD R. BRUAH, Chicago, Ill. Filed July 25, 1917. Serial No. 182,776. 7 Claims. (Cl. 64—89.)



1. In an automobile the combination of a chassis including motor-transmission and propeller-shafts, the side pieces of the frame of which chassis have been lengthened, with a fixed support, a stud-shaft operatively interposed between said motor-transmission and propeller shafts having a collar disposed in abutting relation with said fixed support and a fixed bearing plate for maintaining said collar in said abutting relation to prevent longitudinal movement of said extension shaft.

1,501,702. WINDOW FOR VEHICLES. ALPHONSO S. CAMPBELL, West Medford, Mass., assignor, by mesne assignments, to A. S. Campbell Company, Boston, Mass., a Corporation of Massachusetts. Filed June 14, 1919. Serial No. 304,195. 20 Claims. (Cl. 296—145).

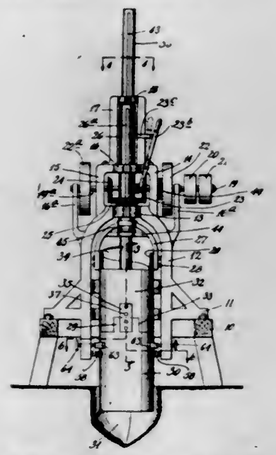


15. A curtain window frame including a continuous glass-surrounding unit for application to one side of a curtain and glass, said unit comprising interior and exterior parts, the interior part providing a strut bearing against the interior of the exterior part, and said exterior part providing at one edge a glass-engaging portion and at the other edge a retaining flange overlying said interior part.

1,501,703. CURTAIN WINDOW. ALPHONSO S. CAMPBELL, West Medford, Mass., assignor to A. S. Campbell Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1921. Serial No. 459,117. 7 Claims. (Cl. 296—45.)

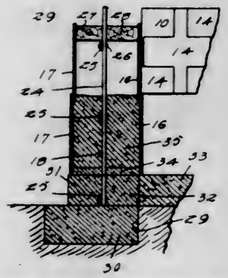
6. A curtain window installation comprising, in combination, a glass carrying frame adapted to be secured to one side of the curtain adjacent the window opening, said frame comprising an angled portion presenting a flange at an angle to the plane of the curtain and a cover frame for said angled portion shaped to provide a filler receiving recess of which said flange forms one wall, filler means seated in said recess and adapted to engage one side of the glass, a glass seated in said frame and means for securing the glass firmly in seated relation upon said filler means.

1,501,704. SPOT OR SEARCH LIGHT ASSEMBLY. OLIVER H. CLARKE, Washington, D. C., assignor, by mesne assignments, to Clymer Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 17, 1920. Serial No. 366,683. 18 Claims. (Cl. 240—61.)



1. In combination, a windshield having an opening, and a spotlight device comprising a central member mounted for universal movement in said opening, a spotlight located on one side and a handle located on the other side of the windshield.

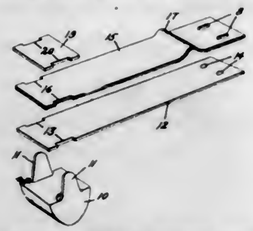
1,501,705. CHANGE-SPEED APPARATUS. ROBERT DECOUX, Ceney, Belgium. Filed June 8, 1920. Serial No. 387,410. 6 Claims. (Cl. 64—8.)



1. A change speed apparatus comprising a drive and a driven pulley, a flexible power transmitting member led over said pulleys, means for varying the operative diameters of the pulleys, and means for automatically varying the tension of the said flexible member in accordance with the working conditions.

1,501,706. CONVEYING AND EXCAVATING MACHINE. WENCESLAO GOIZUETA Y LÓPEZ DE ZUBIRIA, Milagro, Spain. Filed July 7, 1922. Serial No. 573,340. 11 Claims. (Cl. 255—21.)

1. A device of the character described comprising a frame, an Archimedean screw mounted in said frame for reciprocation therein, means to prevent said screw from rotating, a casing substantially enclosing said screw and means to rotate said casing.

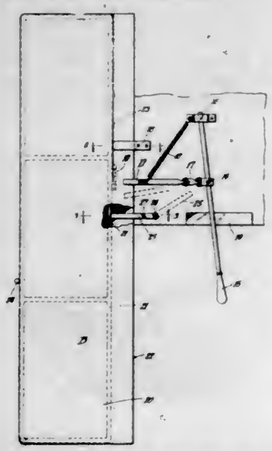


1,501,707. PROCESS OF AND APPARATUS FOR MAKING CONCRETE WALLS. AUGUST W. DUBE, Lexington, Tex. Filed Apr. 1, 1922. Serial No. 548,671. 5 Claims. (Cl. 25—124.)

5. The process of constructing a wall consisting in arranging a reinforcing frame for the wall with a core enclosed thereby and spaced therefrom, in laying a course of concrete intermediate said core and frame and outside of the frame, in elevating said core, in providing mold means about said core and enclosing said frame, applying spacing means intermediate the mold means and frame at the base thereof, in laying a course of concrete within the mold means, and which course positions the mold means at the base thereof, in then raising the spacing means to position the mold means at the top thereof, and in laying a course of concrete on the second mentioned course.

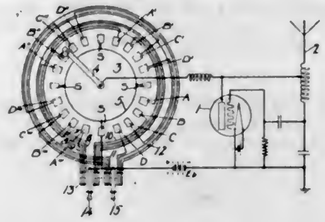
1,501,708. CONTROLLER FINGER. LAURENT A. FROBERGER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 7, 1921. Serial No. 505,971. 5 Claims. (Cl. 200—171.)

5. A controller finger comprising an elongated spring member provided at one end with oppositely disposed notches, a similar shaped notched copper shunt superimposed thereon, a similarly notched metallic washer superimposed on said shunt and a contact button provided with integral ears which enter the notches in said



parts and are bent over and pressed down onto the washer so as to firmly grip the parts between the bent over portion of the ears and the main body of the button.

1,501,709. TILE AND TERRA-COTTA BLOCK. WILLIAM HENRY GRUEBY, New York, N. Y. Filed Sept. 13, 1922. Serial No. 587,886. 5 Claims. (Cl. 72—29.)

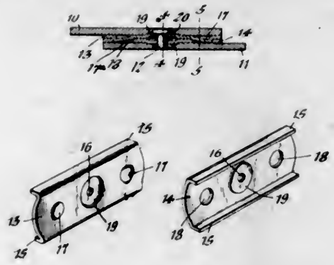


1. A tile block having an outer substantially flat facing side and an inner surface provided with inwardly-extending projections at the middle portion and at opposite ends, the middle projection having a vertically-disposed recess of suitable dimensions wholly within the same and the end projections having recesses of a portion of the area of the recess of the middle projection, whereby when stacked two of the end recesses will register with a middle recess to form continuous channels.

1,501,710. VISOR HOLDING AND FEEDING MECHANISM FOR SEWING MACHINES. WILLIAM C. GRUNOW and AUGUST J. WIEGAND, Chicago, Ill., assignors to Grigsby-Grunow-Hinds Co., Chicago, Ill., a Corporation of Illinois. Filed July 26, 1922. Serial No. 577,603. 8 Claims. (Cl. 112—207.)

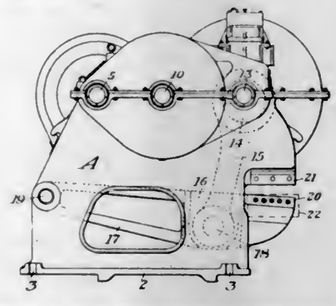
1. In a mechanism for sewing machines for holding and feeding flat open bag-like visor covers with frames therein including a lever controlled device for gripping and pulling the open side of the visor cover taut over the frame, said device being manually operable and yieldingly mounted so as to move with the visor as it is fed along while being sewed.

1,501,711. DISTANT CONTROL SYSTEM. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,101. Renewed March 13, 1924. 11 Claims. (Cl. 250—2.)



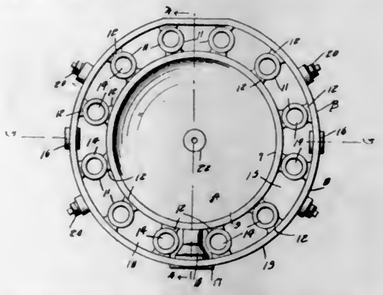
1. The method of distant selective control which comprises transmitting a group of oscillations at a selected period within a timing cycle to determine the particular one of a plurality of distant controls to be actuated, and determining the degree of actuation of a selected distant control by the number of successive timing cycles in which said group of oscillations is transmitted at the corresponding selected period of each cycle.

1,501,712. RULE. JAMES H. MCCAFFREY, Buffalo, N. Y. Filed Dec. 23, 1920. Serial No. 432,807. 2 Claims. (Cl. 33—107.)



1. A rule having a U-shaped clip embracing its end and its sides, said clip having a series of graduations arranged transversely of the end of the rule and extending continuously from one side of the clip to the other, and means for securing said clip to the rule.

1,501,713. FOLDING RULE. JAMES H. MCCAFFREY, Buffalo, N. Y. Filed Dec. 21, 1923. Serial No. 681,949. 5 Claims. (Cl. 33—120.)



1. The combination of a pair of adjoining rule-sections, joint-plates secured to the respective sections and having opposing dished portions forming springs, the concave sides of said dished portions facing each other, and a pivot connecting said plates and passing through said dished portions, the plates being provided with complemental locking devices arranged to interlock in the folded and unfolded positions of the sections.

1,501,714. SHEARS. RICHARD W. MOSES, Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1923. Serial No. 620,365. 3 Claims. (Cl. 164—47.)

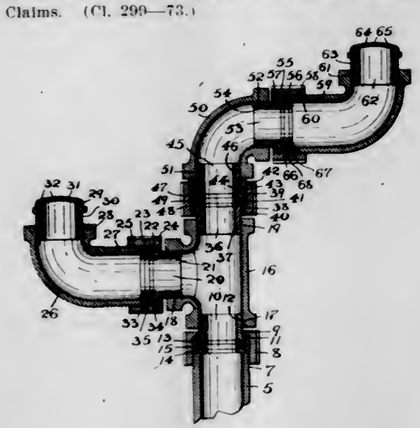
1. In a shearing mechanism, a frame having a portion arranged to overhang a roll table and having the portion thereof below said overhanging portion arranged to lie substantially wholly at one side of said roll table, a fixed knife carried by said overhanging portion, a lever pivoted to said frame and projecting at one end beneath said overhanging portion, a knife carried by said projecting end for co-operating with said fixed knife, and means for operating said lever, substantially as described.

1,501,715. CYLINDER HEAD. RODER W. NYBERG, Picher, Okla. Filed Jan. 19, 1922. Serial No. 530,423. 1 Claim. (Cl. 123—173.)

A cylinder head comprising hollow cylindrical members of relatively different diameters and altitudes and closed at their upper ends, the members fitting one within the other with their end and lateral walls relatively spaced, tubes positioned between the lateral walls of said members and passing through the end wall of the larger member, and said tubes being welded to said lateral walls from end to end of the lines of contact of the tubes therewith and to the end wall to hold the members against relative lateral and longitudinal movements.

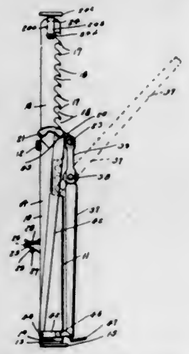
1,501,716. BROACH. JOHN OAKLEY, Springfield, Mass. Filed Apr. 12, 1921. Serial No. 460,730. 21 Claims. (Cl. 90—33.)

1. As an improved article of manufacture, a broach comprising a divided shank, and an inserted cutter bar having teeth formed on the exposed edge thereof, and



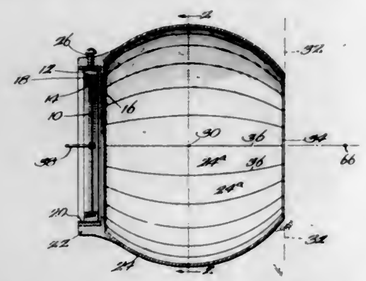
side chip-clearance passages therein extending from said edge to the opposite edge, said shank having a longitudinal passage therein into which said first-named passages open at their inner ends.

1,501,717. ENVELOPE-FASTENER STRIP. ALBERT OLGAY, Glenellyn, Ill., assignor to Gaw-O'Hara Envelope Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1923. Serial No. 617,182. 1 Claim. (Cl. 85—17.)



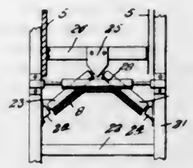
An integral strip of envelope fasteners comprising a series of tubular bodies adapted to be individually attached to envelopes, each body being provided at one end with a circumferential flange extended laterally at opposite sides to provide integral, pliant, smooth edged fastening wings adapted to be disposed in parallelism for insertion through the opening of an envelope flap, adjacent fasteners in said strip being connected together by necks integral with and extending from said flanges at right angles to the longitudinal axes of said wings to thereby provide a continuous flexible strip of fasteners in which said wings project laterally in both directions from the longitudinal axis of said strip, said strip being adapted to be rolled up on a spool or the like for feeding purposes.

1,501,718. SPRINKLER. LEO OLSCHEWSKI, Irvington, N. J. Filed Dec. 6, 1921. Serial No. 520,384. 2 Claims. (Cl. 299—73.)



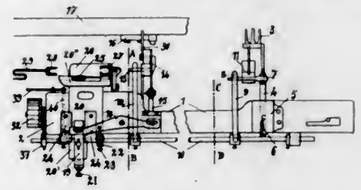
1. A sprinkler comprising a stand-pipe having a screw-threaded portion, a flanged union screwed thereon, a screw-threaded and flanged coupling connected with said union, a packing between said union and coupling and the end of said stand-pipe, a T-fitting screwed upon said coupling, a screw-threaded and flanged coupling connected with one of the outlets of said T-fitting, a flanged union rotatably connected with said last-mentioned coupling, an elbow screwed into said last-mentioned union, and a sprinkler-cap connected with said elbow, a packing between said coupling and union and the end of said elbow, a flanged and screw-threaded coupling screwed into the other outlet of said T-fitting, a flanged and screw-threaded union rotatably connected with said last-mentioned coupling, a screw-threaded sleeve screwed into said last-mentioned union, another flanged and screw-threaded coupling screwed into said sleeve, an elbow screwed upon said latter coupling, a packing between the flanged end portions of said last-mentioned couplings, a flanged and screw-threaded coupling screwed into the outlet-portion of said last-mentioned elbow, a flanged and screw-threaded union connected with said last-mentioned coupling, an elbow screwed into said last-mentioned union, and a sprinkler-cap connected with said last-mentioned elbow, and a packing between said last-mentioned coupling and union and the said last-mentioned elbow.

1,501,719. EMERGENCY JACK. EDWIN J. OXFORD and JAMES PETR, Chambers, Nebr. Filed Oct. 17, 1922. Serial No. 595,089. 2 Claims. (Cl. 254—120.)



1. A jack having a standard provided with spaced uprights forming a slot open at one side of the standard, a lifting member operable between the uprights, said lifting member having an object-engaging means extending through and beyond said slot, a bridge integral with and connecting said uprights above the slot, ears integral with an extending from the uprights substantially opposite said bridge, a pawl to coact with the lifting member, a pin pivotally securing said pawl to said ears, links depending from said pin, an operating finger and a stud integral with said pawl, said operating finger and said stud extending in opposite directions, said stud being pivoted on said pin intermediate said links, an operating lever pivoted to said links, and said standard being cut away below the ears to facilitate engagement of said lever with said lifting member.

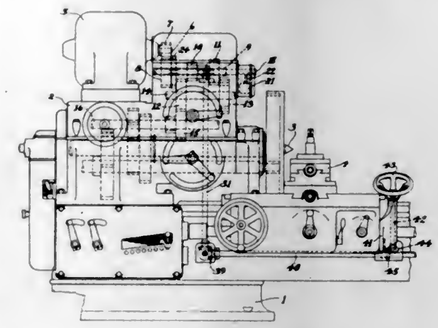
1,501,720. SOUND AMPLIFIER FOR PHONOGRAPHS. HOWARD L. PAGE, Chicago, Ill. Filed Dec. 27, 1921. Serial No. 524,893. 2 Claims. (Cl. 274—25.)



1. In mechanism of the class described, a hollow sphere, of vibratable, sound transmittable material, cut away on one side to form an opening for a vibratable diaphragm, a vibratable diaphragm at said opening and means for shifting the diaphragm towards and from the sphere center, for the purposes set forth.

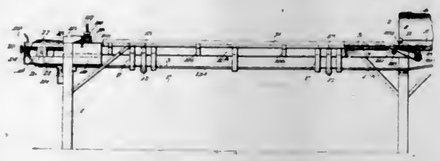
1,501,721. CONVEYER. CHARLES V. PETERSON, Braham, Minn. Filed July 13, 1923. Serial No. 651,230. 2 Claims. (Cl. 198—230.)

1. A conveyer of the class described comprising an elongated frame having a longitudinal series of transverse idler rollers journaled therebetween, an endless belt passing above and below said rollers and having the upper flight thereof resting on said rollers, said rollers being of spool shape in elevation for troughing the upper flight of the belt, transverse oppositely inclined idler rollers above the return flight of the conveyer belt for flexing the longitudinal edges of the return flight of the belt downwardly, and a further idler roller for holding the return flight of the belt in contact with the lower surfaces of said transverse inclined rollers.



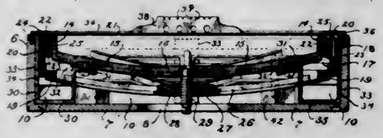
1,501,722. AUTOMATIC APPARATUS FOR CHANGING THE WEFT BOBBINS IN LOOMS. LÉOPOLD POLET, Gennevilliers, France. Filed Nov. 25, 1921. Serial No. 517,481. 11 Claims. (Cl. 139—243.)

1. Automatic bobbin changing mechanism for looms having a lay, a weft fork mechanism, and a breast beam, said changing mechanism comprising a shaft rotatably carried by and extending along the breast beam, an arm fixed on said shaft and having a cam surface thereon, a member carried by the beam for movement into and out of engagement with said cam surface for operating the arm and shaft into one position when moved in one direction and for releasing them when moved in another direction, means controlled by the weft fork mechanism for operating the member, a tappet moving with the lay toward and from the beam, horizontally operating charging mechanism carried by the beam, a magazine to supply bobbins to said charging mechanism, an operating interponent connected with said charging mechanism and movable into and out of the path of the tappet, a second arm on the shaft and operable upon the interponent to hold it out of the path of the tappet when the first mentioned arm is operated by the member into said one position, whereby when the first arm and shaft are released and the interponent is allowed to move into the path of the tappet on the lay, the lay will act through the interponent to effect a charging of the shuttle with a new bobbin.



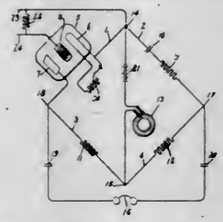
1,501,723. LATHE-CONTROLLING MECHANISM. CLIFFORD F. RANDOLPH, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 25, 1920. Serial No. 406,014. 26 Claims. (Cl. 82—2.)

1. A machine control mechanism in combination with a machine having a spindle and a movable carriage, power means for operating the spindle, a change speed mechanism for varying the speed of such operation, a brake for stopping the spindle operation, means for shifting the change speed mechanism to change the speed of operation, means for controlling the brake, and a single means on the carriage for operating the last two mentioned means.



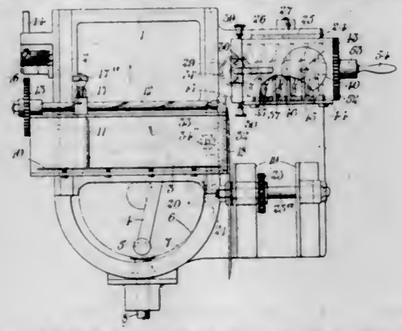
15. In a machine control mechanism, in combination with a machine having a speed change mechanism, an electric control box for the drive motor thereof and a friction brake, a rod operatively engaging the brake and having a plurality of notches therein adapted to be successively engaged by a switch button extending from the control box, a rod operatively engaging the speed change mechanism, and a single means for operating both rods, movement of the single means in one direction permitting the said button to momentarily drop into the first notch to close the motor switch through the control box whereby to slightly rotate the motor and bring the teeth of the speed change mechanism into a meshing position, and the continued movement of the single means operating directly thereafter to engage the speed change mechanism, throw off the brake and close the switch, and movement thereof in the opposite direction being adapted to perform the reverse of such operations.

1,501,724. APPARATUS FOR COOLING AND CHILLING HOT CHOCOLATE AND OTHER CONFECTION-COVERED CAKES. PETER RASMUSSEN, Denver, Colo., assignor of one-half to Stephen Knight, Denver, Colo. Filed Sept. 23, 1922. Serial No. 590,205. 26 Claims. (Cl. 34—12.)



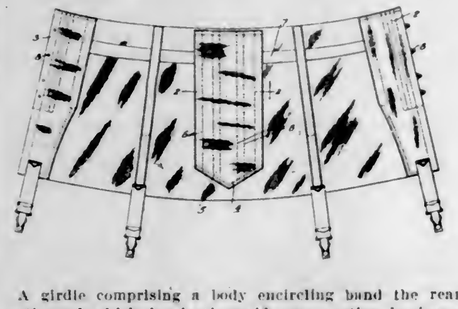
3. A hot chocolate chilling apparatus consisting of a hot chocolate covered cake conveying system, an enclosed conveyor way through which said chocolate covered cakes are conveyed, means including an air cooling and chilling apparatus for maintaining a chocolate cooling and chilling atmosphere in said enclosed conveyor way, and connected to the entrance end portion of said way and arranged to deliver cool air into said enclosed way, said conveyor comprising an endless belt, which passes through said enclosed way and beyond each end of the same to provide a receiving terminal for hot chocolate covered cakes from a source of supply, and a portion from which the cakes are removed, and means for loosening the chilled chocolate covered cakes at the discharge end of the enclosed way.

1,501,725. MUSICAL INSTRUMENT. ADAM J. REGER, Philadelphia, Pa. Filed Oct. 24, 1921. Serial No. 509,952. 5 Claims. (Cl. 84—272.)



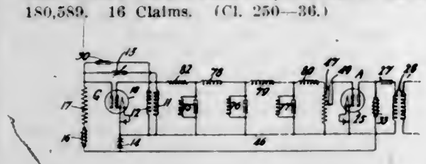
2. A musical instrument including a member having an upwardly extending ring shaped portion, means providing a support for said member, a head supported by the ring portion and having a portion extending around the outer side of said ring portion, a member having a flange portion providing a shoulder for engagement with the head portion extending around the ring portion, and means for moving the members relatively to each other to increase or decrease the tension of the head.

1,501,726. SIGNALING SYSTEM. CHESTER W. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1919. Serial No. 301,987. 6 Claims. (Cl. 179—171.)



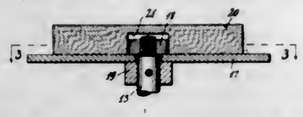
1. The combination in a signaling system of a source of signaling current of inaudible frequency, a Wheatstone bridge, a source of current of audible frequency connected to two opposite terminals of said bridge, a receiving device connected to the other two opposite terminals of said bridge, said bridge being normally so adjusted that no audible frequency current will flow through said receiving device, an electron discharge relay in one arm of said bridge and means actuated by the signaling current for varying the resistance of said relay and thereby causing an audible frequency current to flow in said receiving device.

1,501,727. MACHINE FOR SPREADING BREAD WITH BUTTER OR THE LIKE. CHARLES HENRY ROBINS, Kettering, England, assignor to Charles Wicksteed & Company (1920) Limited, Kettering, Northamptonshire, England, a British Company. Filed Sept. 22, 1922. Serial No. 589,869. 10 Claims. (Cl. 91—14.)



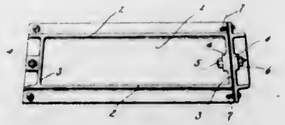
1. In a machine for spreading bread with butter or like spreadable material, the combination of a container for holding the spreadable material and having a delivery opening, a single roller only mounted to rotate in said opening and forming with one edge thereof a delivery outlet, a bread carrier for presenting bread in front of said opening, which bread-carrier and container are movable one in relation to the other so as to traverse the bread in front of said opening, feeding means in the container for feeding the material through the said outlet to the face of the bread moving in front of the same, said roller being arranged to roll in contact with said face of the bread and having its periphery so shaped that it is adapted to hold the said material and feed it outside said opening from the outlet at one side of the roller to the other side thereof, and spreading means situated at the side of said roller remote from said outlet for spreading the material on the bread after the material has been fed onto the bread, substantially as described.

1,501,728. GIRDLE. LOTTIE G. ROSENBAUM, New Rochelle, N. Y. Filed June 29, 1923. Serial No. 648,429. 1 Claim. (Cl. 2—43.)



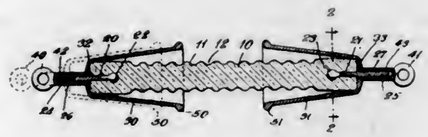
A girdle comprising a body encircling band the rear portion of which is elastic, said rear portion having a zone stiffened by vertical strips and an inelastic fabric substantially coextensive with said zone for preventing twisting of the strips during the stretching of the band.

1,501,729. OSCILLATION GENERATOR. EDWARD O. SCRIVEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1917. Serial No. 180,589. 16 Claims. (Cl. 250—36.)



1. The combination with a source of oscillations, of means for suppressing the undesired oscillations from said source, and of a resistance adapted to prevent said means from reacting upon said source.

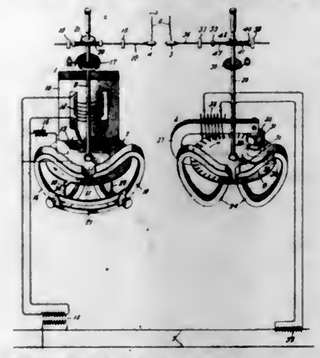
1,501,730. GRINDING WHEEL. PHILIP SIEGEL, Guttenberg, N. J. Filed Sept. 9, 1921. Serial No. 499,500. 1 Claim. (Cl. 51—209.)



A portable grinding device comprising a supporting plate mounted to rotate upon a vertical axis and having an upper plane surface, a cylindrical grinding wheel of smaller diameter than said plate, having upper and lower plane surfaces, and detachably mounted on said plate so as to expose the entire cylindrical periphery and the upper plane surface of said wheel, whereby said wheel may be used either for peripheral or face grinding, one of said elements being provided with a central recess and the other having a projection adapted to be received within said recess, said recess and projection being of non-circular form to compel said wheel to rotate with said plate, said plate by virtue of its larger diameter extending beyond said wheel to provide a guiding surface for articles to be ground upon the periphery of said wheel, a shaft upon the end of which said plate is secured, and means to drive said shaft, said shaft projecting beyond said driving means a sufficient distance to permit free unobstructed access to said grinding wheel.

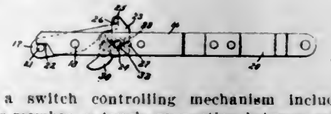
1,501,731. MOLDING JACKET. JOHN A. SPERRY, Munnsville, N. Y. Filed Apr. 19, 1922. Serial No. 555,576. 2 Claims. (Cl. 22—112.)

1. A device of the class described comprising a plurality of plates, adapted to be assembled in successively overlapping relation, fastening devices in the ends of said plates intermediate the edges thereof and a pair of stops disposed in the overlapping end of each of said plates and adapted to overlie the plate secured to said overlapping end.



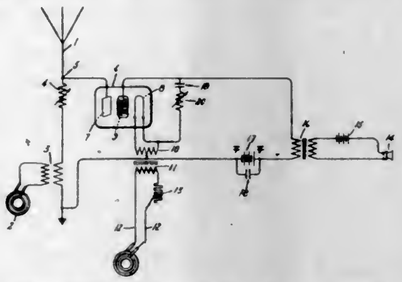
1,501,732. COLUMN-STRAIN INSULATOR. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Dec. 10, 1918. Serial No. 266,051. 4 Claims. (Cl. 173—318.)

1. In a device of the kind described, an insulator body, members forming stress distributors molded within its ends, the molded-in portions of the stress distributors being provided with globular shaped ends, the outwardly extending portions thereof being screw-threaded, bell shaped terminals one at each end of the insulator body, the skirts of which surround the body of insulating material and the base portions of each being provided with means for engagement with the screw-threaded portions of the stress distributors, and fastening members fitting the screw-threaded portions of the stress distributors constructed to respectively engage the base portions of the bell shaped terminals.



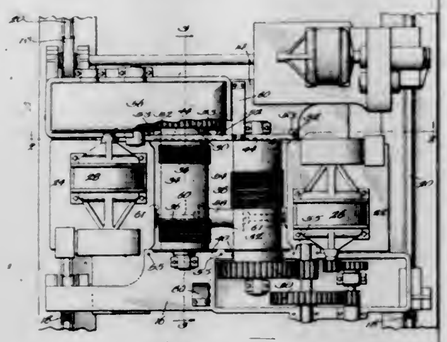
1,501,733. RELAY. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 12, 1923. Serial No. 662,162. 10 Claims. (Cl. 175—294.)

1. In combination with an electric circuit, a relay comprising relatively movable cooperating contacts, a movable member for controlling one of said contacts controlled by the current in said circuit arranged upon the occurrence of current above a predetermined value to move said contact at a speed dependent upon the current, and a second movable member for controlling another of said contacts controlled by the voltage of said circuit and biased for movement in one direction arranged to assume a position dependent upon the voltage whereby the time interval between the occurrence of current



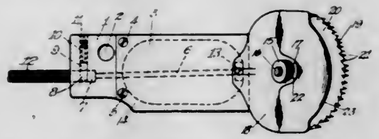
above a predetermined value and the engagement of said contacts is dependent upon the voltage and the current of said circuit.

1,501,734. ELECTRIC-SWITCH-CONTROLLING MECHANISM. LUDWIG S. WALLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 8, 1923. Serial No. 673,582. 2 Claims. (Cl. 200—109.)



1. In a switch controlling mechanism including an operating member, a toggle connection between said operating member and said switch comprising a pair of members pivoted to each other and having cooperating portions for limiting relative pivotal movement in one direction, a main latch for said toggle carried by one of said members and adapted to engage one portion of the other of said members and a second latch carried by said first latch adapted to engage another portion of said other member.

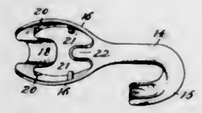
1,501,735. WIRELESS SIGNALING SYSTEM. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1915. Serial No. 32,367. 14 Claims. (Cl. 250—6.)



1. The combination in a system for the transmission of wireless signals of an electron discharge relay comprising an anode, a cathode and a grid, means for impressing an alternating potential of high frequency upon the anode of said relay and a connection between the cathode and grid of said relay which offers a low impedance to high frequency current whereby large high frequency potential differences between grid and cathode are prevented.

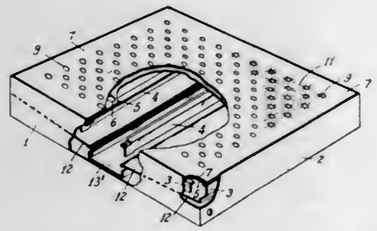
1,501,736. ROPE GUARD FOR CRANE TROLLEYS. BRADFORD H. WHITING, Chicago, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Jan. 27, 1923. Serial No. 615,217. 2 Claims. (Cl. 254—184.)

1. In mechanism of the class described, in combination with trolley sides, spaced drums connecting said trolley sides, guard plates at the ends of the drums, respectively, and a roller carried by each guard plate and extending across the space between the drums.



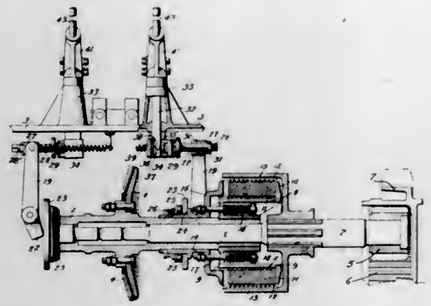
1,501,737. HAIR CLIPPERS. EDWIN F. ALLIN, Oklahoma City, Okla. Filed July 5, 1923. Serial No. 649,477. 1 Claim. (Cl. 30—1.)

A device of the character stated embodying a hollow handle with thickened end portions, a shaft extended lengthwise of and within said handle and having its ends journaled in said end portions, with one end extended, the under side of the end portion through which said shaft extends being inclined, a stationary blade disposed parallel with said inclined face with one end bearing against the bottom edge of said end, a cutter blade likewise inclined and bearing on said stationary blade, a gear on the extended end of said shaft, a gear rigid with the cutter blade and disposed upon the upper face thereof and meshing with the first-named gear, a cover plate over the chamber of the handle and resting on said end portions, a top plate having one side resting on said cover plate and its opposite side bearing frictionally on the outer edge of the cutter blade, and a bolt passed through said top plate, stationary and cutter blades, and an adjustable tension spring on said bolt.



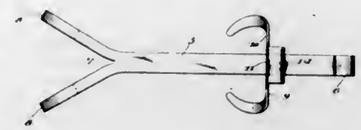
1,501,738. SPRING-TONGUE SNAP-HOOK. JOHN B. BAXTER, Troy, N. Y., assignor to Covert Manufacturing Co., Troy, N. Y., a Corporation of New York. Filed Dec. 8, 1920. Serial No. 429,126. 6 Claims. (Cl. 24—236.)

1. A snap hook of the character described comprising a shank having a bill on one end and a frame structure on the opposite end, said frame structure comprising sides which are normally spaced apart to form an open top and end, a projection extending from one side, a tongue formed on the shank and extending into the frame structure, said tongue being disconnected from the sides of the frame, and a substantially U-shaped spring tongue carried by the frame, one arm of the spring tongue adapted to engage the bill in the other arm adapted to engage the tongue which extends into the frame, the sides of the frame adapted to be moved inwardly to engage the edges of the arm of the spring tongue with the projection en-



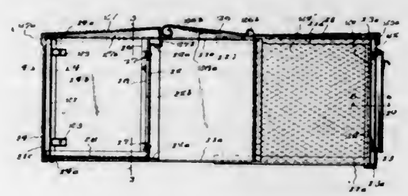
gaging the face of the arm opposite to that engaged by the tongue, and portions of the end of the frame being offset to overlie the outer face of the closed end of the spring tongue.

1,501,739. BATH MAT. ALFRED BENEDEK, New York, N. Y. Filed Mar. 3, 1923. Serial No. 622,524. 10 Claims. (Cl. 20—78.)



1. In an article of the character described, the combination of a receptacle, a cover therefor, provided with apertures and a mat provided with apertured nipples adapted to extend into the apertures in the cover.

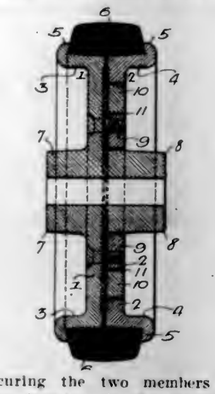
1,501,740. CLUTCH-CONTROL MECHANISM. CLARENCE LEO BEST, San Leandro, Calif., assignor to C. L. Best Gas Traction Company, San Leandro, Calif., a Corporation of California. Filed Dec. 30, 1920. Serial No. 434,053. 9 Claims. (Cl. 192—99.)



1. The combination with a clutch having an axially movable actuating collar, and yieldable means acting to normally maintain the actuating collar in operative position, of releasing means including a pair of levers pivoted intermediate their ends, the levers being positioned with the end portions thereof at one side of their fulcrums arranged to engage the actuating collar at opposite sides of its central part, and adapted, when operated, to shift the actuating collar to inoperative position, an equalizer bar pivotally connected at opposite end portions with the end portions of the levers at the other side of their fulcrums, a rotary shaft disposed at right angles to the equalizer bar, and means on the shaft engaging a part on the equalizer bar intermediate the ends thereof to bodily shift the equalizer bar laterally of the shaft upon turning the same.

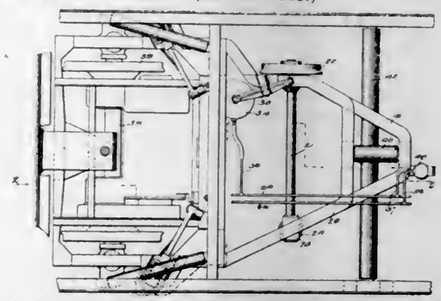
1,501,741. KITCHEN UTENSIL. ROBERT M. BIGGS, Wakefield, Mass. Filed Dec. 14, 1922. Serial No. 606,957. 1 Claim. (Cl. 294—34.)

A cooking receptacle supporting device comprising shank, and a movable member having its rear portion formed with a U-shaped attaching portion having spaced substantially parallel legs provided with slots receiving said shank, the lower portion of said movable member and the forward portion of said shank being divided and curved longitudinally in opposite direction to provide pairs of utensil engaging arms, the terminal portions of said utensil engaging arms being adapted for contact with opposite sides of a cooking utensil and the remaining portion of said arms being curved away and upwardly from the cooking utensil to space the major portion of the shank a substantial distance above the cooking utensil whereby the shank may be manually engaged at a point between said arms.



1,501,742. POULTRY HOUSE. JOSEPH L. BOISVERT, Bourbonnais, Ill. Filed Aug. 18, 1922. Serial No. 582,721. 2 Claims. (Cl. 119—19.)

1. A collapsible poultry house comprising side walls having upper and lower inwardly directed longitudinal flanges, end walls having horizontal flanges swingingly connected to the upper and lower flanges of one of said side walls and having vertical flanges joined with said horizontal flanges, a partition having upper and lower flanges swingingly connected to the upper and lower flanges of the side wall opposite the side wall having the flanges to which the end walls are connected, and a top having flanges extending over the side walls and having an end flange over and engaging the upper flange of said partition.

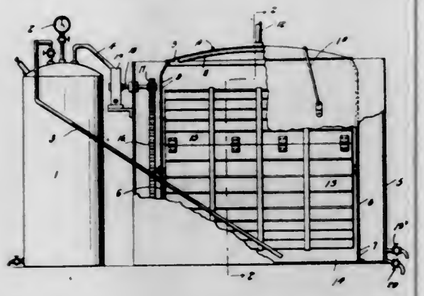


1,501,743. CASTER WHEEL. JAMES BOWEN, Manheim, Pa., assignor to Bond Foundry and Machine Company, Manheim, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1923. Serial No. 621,610. 2 Claims. (Cl. 301—63.)

1. The combination in a wheel for trucks and the like of two circular members each having an undercut beveled flange, a rubber tire fitting the space between the flanges, one member having a hub the other member having an opening through which the hub extends; lugs on one member fitting holes in the other members,

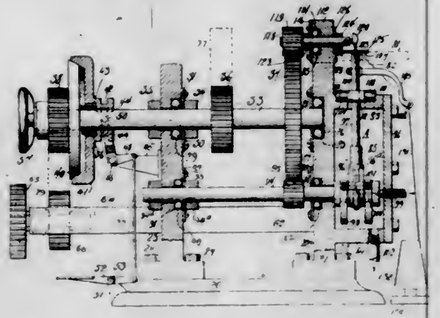
and screws securing the two members together and clamping the tire between the flanges of the members.

1,501,744. CAR TRUCK. SAMUEL BOWER BRILHART, New York, N. Y. Filed Nov. 22, 1922. Serial No. 602,587. 8 Claims. (Cl. 105—165.)



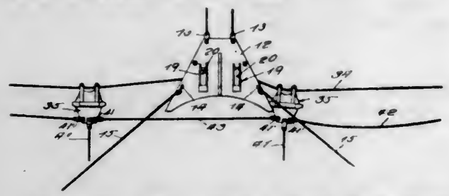
1. A car truck, comprising a frame, a supporting axle provided with two supporting wheels, means for mounting the frame on said axle, a steering wheel carried by said frame, means for raising and lowering said steering wheel so as to move the same into and out of engagement with the track, and means for locking said frame against lateral swinging movement.

1,501,745. METALLIC PENCIL. FRANCIS CARROLL, Yonkers, N. Y. Filed Sept. 27, 1923. Serial No. 665,209. 3 Claims. (Cl. 120—83.)



1. As a new article of manufacture, a writing pencil formed of a lead alloy containing mercury determining the degree of hardness of the pencil

1,501,746. WASHING MACHINE. MARTIN W. CARTER, Toccoa, Ga. Filed Mar. 31, 1923. Serial No. 629,058. 1 Claim. (Cl. 68—18.)



A washing machine comprising a vessel, upright partitions in opposite end portions of the vessel forming end spaces and an intermediate chamber, said partitions having openings in their upper and lower end portions, a drum within the chamber journaled in said partitions, gearing in one of the end spaces for operating the drum, means for operating said gearing to impart rotary movement to the drum, a cover for closing the chamber, and a pipe carried by said cover for supplying rinse water thereto.

1,501,747. HEMMING MACHINE. WILLIAM CASE, St. Louis, Mo., assignor to the E. V. Benjamin Company, Inc., New Orleans, La., a Corporation of Louisiana. Filed Nov. 26, 1920. Serial No. 426,373. 4 Claims. (Cl. 112—2.)

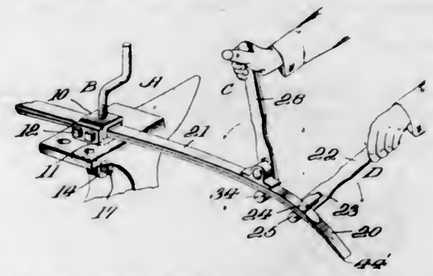
3. In a machine of the character described the combination of a rotating main shaft, a second shaft journaled in the machine, connections between the shafts, a looper shaft journaled in the machine, connections between the main shaft and the looper shaft, a looper connected to the looper shaft, a chamber having a roof formed with the machine and the said second shaft extending into said chamber, an eccentric fastened to the second shaft in said chamber, an eccentric strap for said eccentric, a needle bar carried by the strap and extending through the roof of the chamber, a needle carried by the needle bar, a journal bracket in the roof of the chamber, an oscillating guide having a guide opening supported in said journal bracket and guiding the upper end of the needle bar and a pair of guides to guide a hem in the material operated upon above said needle bar, said guides having an opening to enable said needle to pass therethrough, said needle having an eye for a thread which is carried through said material and engaged by said looper after passing therethrough.

1,501,748. SUSPENDED CABLE CARRIER. RAY K. CHAPMAN and ERNEST G. MESSER, Elma, Wash. Filed Sept. 19, 1923, Serial No. 663,638. Renewed June 12, 1924. 8 Claims. (Cl. 104—182.)

1. In a cable carrier system, a cable carrier including spaced side members, cable supports slidably mounted in said side members and shiftable toward and away from one another, means normally holding the cable supports in engaged relation, means locking the cable supports against separation when the weight of a cable is superimposed thereon, and a cable carriage adapted to travel upon the cable and to elevate the cable from the supports to thereby permit unlocking and separation of the cable supports during passage of the carriage.

1,501,749. KNIFE SHARPENER. CHARLES CHISEWER, Chicago, Ill. Filed Dec. 27, 1922. Serial No. 609,254. 1 Claim. (Cl. 76—87.)

A knife sharpener including a handle consisting of a flat piece of sheet metal of the same thickness throughout its length, having one end forked to form divergent spaced arms, the outer ends of said arms having transverse openings therethrough, hardened steel discs positioned against one face of said arms and having their peripheries in normal contacting position with respect to each other, said discs having central openings therethrough, the openings in said discs being of greater diameter than the openings in the arms, bolts extending in a straight transverse line through said openings whereby to mount the discs for adjustment with respect to the arms, and nuts threaded on one end of the bolts in clamping engagement with the arms to retain the discs in adjusted positions.



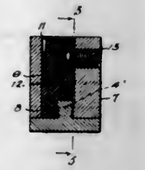
1,501,750. HAIRPIN. MYRTLE COLBY, Calexico, Calif. Filed June 19, 1923. Serial No. 646,288. 1 Claim. (Cl. 132—50.)

A hair pin including a single wire member formed centrally into an open loop portion, the ends extending diagonally outward from said loop portion and

terminating in inwardly extending portions from which the ends of the member extend in parallel spaced relation, the junction of the inward and outward portions forming shoulders, said shoulders being spaced apart a distance equal to the transverse dimension of the loop, the ends of said member being spaced apart a distance substantially less than the distance between the shoulders, and the space at the juncture of the loop and the outwardly extending end portions being substantially less than the distance between the parallel ends, whereby the inwardly extending portion will separate the hair for providing a passage for the loop, and the outwardly extending portions from the loop will compress the hair received between the parallel ends for subsequent expansion within the loop to secure the hair pin in place.

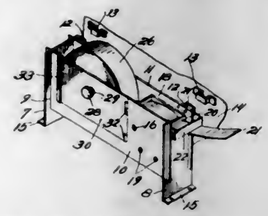
1,501,751. METAL-WORKING TOOL. CHARLES W. CRANNELL, Chappel, Nebr., assignor of one-half to Benjamin J. Connor, Chappel, Nebr. Filed Aug. 14, 1922. Serial No. 581,686. 7 Claims. (Cl. 153—32.)

1. A set of tools for working metal springs or the like, comprising a combination of a metal holding tool, a metal working member comprising an operating handle having two outwardly extending members in separated parallel relation, the inner extending member of the working member provided with a metal working tool having a flat elongated base with beveled ends, and the metal working tool adapted to be moved along the work, for the purpose described.



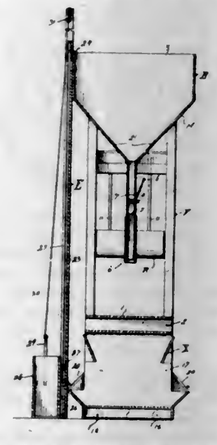
1,501,752. SAW-BLADE HOLDER. ERNEST E. CULLEN, New Baltimore, Mich., assignor of one-half to Robert H. Reiter, New Baltimore, Mich. Filed May 9, 1923. Serial No. 637,677. 8 Claims. (Cl. 145—31.)

1. A saw blade holder, having in combination a support provided with a laterally projecting arm, a clamping vice supported by said arm, and means for clamping the jaws of the vise to hold the saw blade in a plane offset from the plane of the support.



1,501,753. QUOIN. JAMES J. CURTIS, New York, N. Y. Filed May 8, 1923. Serial No. 637,546. 5 Claims. (Cl. 254—42.)

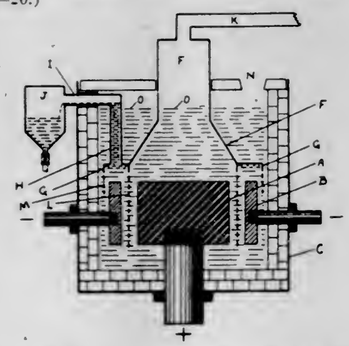
1. A quoin of the character described, comprising a body provided with a bead and arranged at an angle to the bottom of the body, said body being provided with a pair of upstanding members at one end forming a groove therebetween, said body at said upstanding members being provided with an opening, a clamping block arranged in said opening, said clamping block being



formed with a pivotal point, and a set screw carried by one of said upstanding members for swinging said block on its pivotal point for causing the same to operate as a lock for locking a co-acting quoin in place.

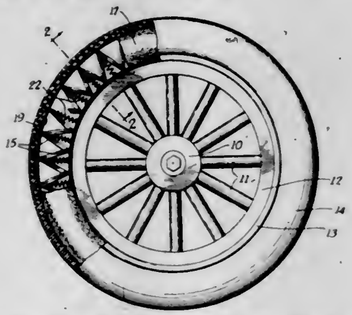
1,501,754. TAPE DISPENSING AND MOISTENING DEVICE. JULIUS CYTRON, Tulsa, Okla. Filed Dec. 11, 1922. Serial No. 606,177. 4 Claims. (Cl. 91—14.5.)

1. A tape dispensing and moistening device comprising a knock-down receptacle composed of side and end members formed with slots for detachable engagement at the corners of the receptacle, a moistener provided with a container supported in one end of said receptacle, a tape-roll holder journaled between said side members in line with said container, said container being provided with slot openings for the passage of the tape over said moistener, and a tape-tearing device secured in position adjacent the top of said container.



1,501,755. DISPENSING APPARATUS. JAMES ELIS DANKWORTH, Ballinger, Texas. Filed May 2, 1923. Serial No. 636,222. 4 Claims. (Cl. 211—6.)

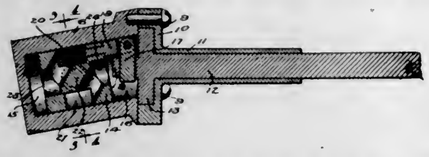
1. An apparatus of the class described comprising a bin, partitions dividing the same into a plurality of compartments, a hopper common to all of the compartments



provided with a discharge, a separate valve for each of the compartments for controlling the discharge therefrom wit in the hopper, and an individual supplemental compartment in connection with each of the first named compartments at a point above the valve associated with said first named compartments, said supplemental compartment being arranged exteriorly of the bin.

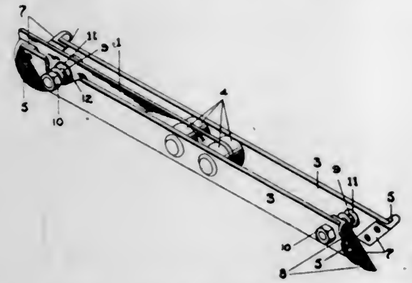
1,501,756. ELECTROLYTIC PROCESS AND CELL. JAMES CLOYD DOWNS, Niagara Falls, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1922. Serial No. 582,582. 23 Claims. (Cl. 204—20.)

1. In combination in an electrolytic cell for producing alkali metal and a halogen from fused alkali metal halide, a compartment for the reception of the material to be electrolyzed, a submerged compartment for the collection and delivery of the halogen, and a compartment for the collection and delivery of alkali metal.



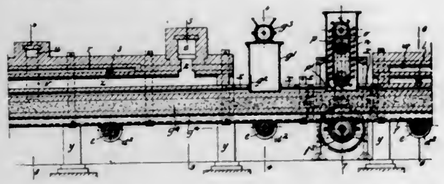
1,501,757. SPRING VEHICLE WHEEL. JOHN DISCHLER, Adams, Wis. Filed Nov. 19, 1923. Serial No. 675,482. 3 Claims. (Cl. 152—8.)

1. A resilient tire comprising in combination with a shoe and a rim around which the shoe is secured, of a helically coiled open wound circumferentially disposed spring enveloped in said shoe, a fabric casing intervening between said spring and shoe, and clips fixed in said casing one for each coil of said spring, said clips being seated on said rim.



1,501,758. CIRCULATING PUMP. MICHAEL A. DREES, Milwaukee Wis. Filed Nov. 2, 1922. Serial No. 598,581. 1 Claim. (Cl. 103—157.)

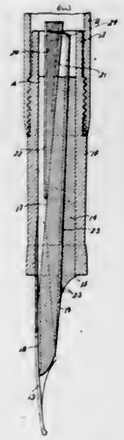
In a pump, a casing having an open end and oppositely disposed inlet and exhaust ports, a shaft having its longitudinal axis arranged diagonally with respect to that of said casing, and having a portion projecting into the open end of said casing, said shaft being formed with a flange for forming a closure for said open end, a bearing on said shaft having a collar surrounding said flange and to which said casing is secured, a rotor in said casing having rotary and longitudinal movements therein and forming chambers between the same, the closed end of the casing and said flange, said rotor being provided with oppositely disposed chambers inter-



mediate the ends thereof, and ports in its ends communicating with the chambers formed by the rotor and casing, each of said ports also having communication with one of said intermediate chambers, and a pin pivotally connected to said rotor at one end thereof and engageable in the portion of said shaft projecting into said casing to impart movement of said shaft to said rotor.

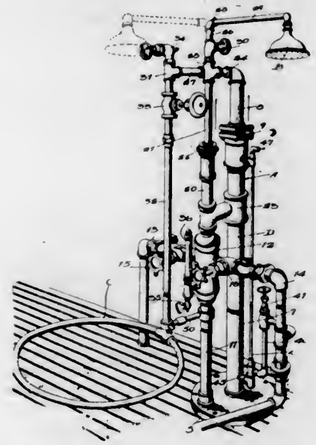
1,501,759. TUBE SCRAPER. LOUIS HIPPOLYTE AUGUSTE DUCASSE, Alexandra, Natal, South Africa. Filed July 13, 1920. Serial No. 395,945. 1 Claim. (Cl. 15—104.17.)

In a tube scraper the combination of a holder, a rectangular cutter bar at each side of and extending substantially longitudinally of same, packing pieces at the centre of each cutter bar adapted to space the cutter bars from the holder, a plurality of cutters mounted on the bars and having arcuate cutting edges, the planes of the cutting edges being inclined to the longitudinal axis of the scraper, and spiral springs supported on spindles fixed at each end of the cutting bars adapted to force the bars outwards.



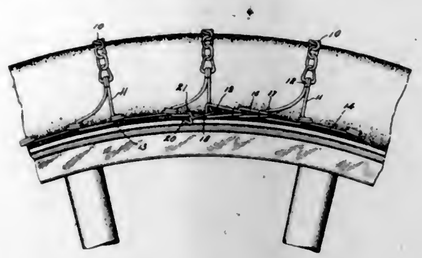
1,501,760. PROCESS FOR THE FIXATION OF NITROGEN. ARTHUR MCDOUGALL DUCKHAM, London, England. Filed Sept. 25, 1922. Serial No. 590,516. 4 Claims. (Cl. 23—13.)

1. A process for the fixation of nitrogen by means of a mixture of carbon and a barium oxide yielding substance, which process consists in causing a layer of the mixture to travel in an atmosphere of nitrogen beneath



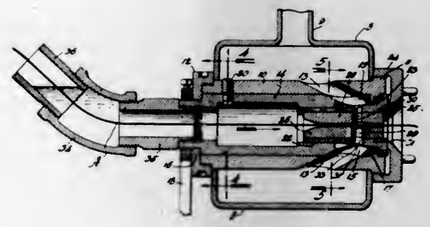
an impervious partition heated to a high temperature, the speed of travel being such that while the upper part of the layer is heated by radiation to the temperature at which reaction occurs the lower part remains at a temperature below this.

1,501,761. ADJUSTABLE FEED FOR FOUNTAIN PENS. LYTH F. EVENSON, Silverton, Oreg.; Nora Evenson executrix of said Lyth F. Evenson, deceased. Filed June 4, 1923. Serial No. 643,386. 6 Claims. (Cl. 120—50.)



2. In a fountain pen, a body carrying a pen point and formed with a bore, a feed bar located within the bore and having an inclined slot communicating with a duct leading to the pen point, a wedge slidable along said slot, and a handle member slidable longitudinally of the feed bar and connected with said wedge, said handle member being formed with means for engagement by a thumb nail for effecting movement.

1,501,762. COMBINATION SHOWER BATH. ROBERT G. FERGUSON, Lakewood, N. J. Filed Apr. 26, 1923. Serial No. 634,842. 6 Claims. (Cl. 4—145.)



1. A shower bath comprising an overhead spray, a ring-shaped spray for encircling the body, and hydraulic means for automatically raising and lowering said sprays.

1,501,763. TIRE CHAIN. ERNEST I. FISHER, George, Iowa. Filed June 22, 1923. Serial No. 647,054. 3 Claims. (Cl. 152—14.)

2. A tire chain comprising a plurality of cross chains having their extremities provided with triangular links, the bases of which are substantially perpendicular to the length of said cross chains, links connecting said triangular links to form substantially parallel side chains, a latch having an eye embracing one of the sides of one of the terminal triangular links and having a locking extremity proportioned to be forced through an angle of said terminal link only when the eye has been moved away from its normal position, and a link carried at the opposite terminus of the respective side chain proportioned to embrace and co-act with said latch.

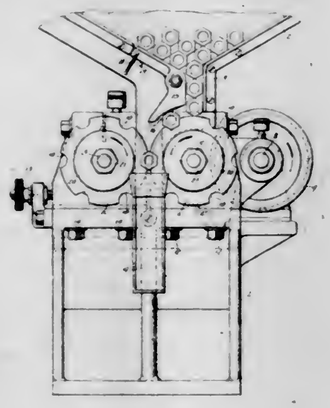
1,501,764. COATING DEVICE FOR METALLIC STRIPS. WARREN E. FLINT, Palisades Park, N. J. Filed Apr. 8, 1922. Serial No. 550,825. 21 Claims. (Cl. 18—13.)

2. In a strip coating device, two concentrically arranged members one of which is rotatable relative to the other, and which members have ports adapted to register with and to move out of communication with one another; a die arranged within and extending longitudinally of the inner of said members and having a passage through which a strip may pass; and means for supplying a plastic coating material through the passage provided by said ports and to a strip to be coated.

8. In a strip coating device, a hollow member through which a strip may pass; a die having a passage through which the strip passes; means for supplying a plastic coating material to the strip to thereby coat the same; and means for providing a liquid seal within said hollow member and bout the strip at is passes therethrough.

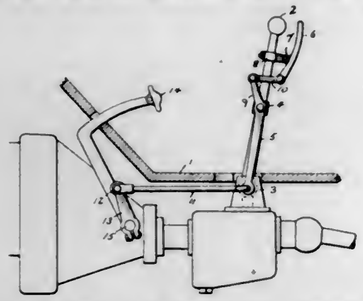
13. In the art of coating a strip with a plastic material containing a volatile solvent by supplying the material to the strip as the same passes through a suitable die, the step which consists in causing the strip to pass through a liquid seal of the same general character as the solvent before the coating material is supplied to the strip; and then applying the coating material to the strip.

19. In a strip coating device, a tubular die carrying sleeve and two die members located within said sleeve and having longitudinally extending grooves which register to provide a passage through which a strip may pass;



said die members having each a hole intermediate its ends and through which plastic coating material may flow into said passage and one of which holes is larger than the other.

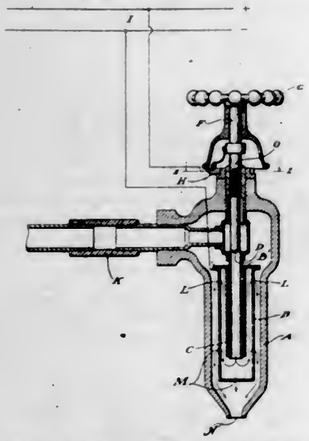
1,501,765. ARCH SUPPORT. HERMAN A. FREESE, Pasadena, Calif. Filed Aug. 24, 1921. Serial No. 495,017. 1 Claim. (Cl. 36—71.)



An arch support comprising a relatively thin strip of elastically yielding material around at its rear edge and forward edge so that the rear edge will fit the heel of the shoe and the forward edge will fit against the sole of the shoe, the rear portion of the upper face at the heel end being depressed to form a heel seat and forward of this heel seat being convexly rounded, the under face being slightly flattened at its rear end and then concavely arched longitudinally, the inside margin of the under face being beveled in an approximately straight line extending from the heel to the toe portion, said inside margin of the support being thicker than the outside margin, the under face of the support at its forward edge having a flat edge face in the same plane as the under face of the heel portion of the support.

1,501,766. ROTATING NUT SWAGING AND EXPANDING MACHINE. JOHN GUY FURLAN, New York, N. Y., assignor to Furlan Nut Machinery Corporation, New York, N. Y., a Corporation of New York. Filed May 1, 1923. Serial No. 635,879. 3 Claims. (Cl. 10—72.)

1. In a nut expanding machine the combination of a frame two rotatable mandrels journalled thereon and carrying swaging disks, a hopper for feeding nuts to said swaging disks, the said swaging disks having notches adapted to convey the nuts from the hopper to the point of nearest approach of the disks and there expand the nuts by squeezing between the sides of the grooves in the nuts.



1,501,767. HAND-OPERATED GEAR SHIFT. HAROLD L. GIBBONS, Halifax, Nova Scotia, Canada. Filed Mar. 12, 1923. Serial No. 624,506. 3 Claims. (Cl. 74—39.)

1. In a clutch operating device, the combination with the usual pivoted gear shift lever, a clutch lever pivotally mounted upon said gear shift lever, and means carried by said gear shift lever for operating the clutch lever for disengaging the clutch when shifting the gears

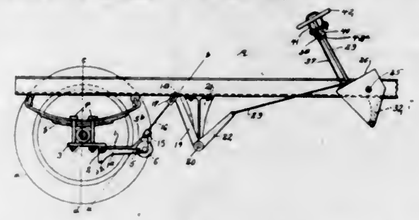
---

1,501,768. ELECTRIC HEATER FOR FAUCETS. OTTO GRAETZER, Zollikon, and OTTO F. BRUMAN, Zurich, Switzerland. Filed Nov. 13, 1920. Serial No. 423,913. 5 Claims. (Cl. 219—40.)

1. An electrical water heating device which comprises a cup-shaped electrode, a second electrode extending thereinto, and means on the cup-shaped electrode whereby the flow of water therefrom varies in accordance with the level of the water therewithin.

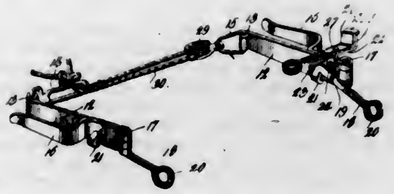
1,501,769. GREEN DYE-STUFFS DYEING IN REDUCING BATHS AND THEIR PROCESS OF MANUFACTURE. LOUIS HAAS, Paris, France, assignor to Société Chimique de la Grande Paroisse, Paris, France. Filed May 10, 1923. Serial No. 638,104. 2 Claims. (Cl. 260—24.)

1. A process for the manufacture of green dye-stuffs with blue reflections which consists, substantially, in diazotising nitronaminophenol 1:3:4, then in subjecting the product obtained to the action of an alkaline polysulphide.



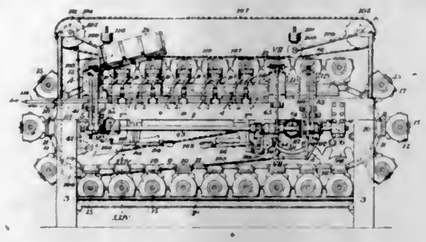
2. A process as claimed in claim 1, which consists in introducing the diazo of nitroaminophenol 1:3:4 in polysulphide of sodium in fusion, then in raising the temperature to about 200° C. until the evolution of hydrogen sulphide has ceased.

1,501,770. DISPLAY BOX. OTTO C. HANISCH, South Attleboro, Mass., assignor to Geo. H. Fuller & Son Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed July 12, 1923. Serial No. 651,089. 6 Claims. (Cl. 206—44.)



1. A display box of the class described, a chart or information card divided into sections positioned within said box, reference indicia placed in said sections, and transparent containers adapted for receiving articles of manufacture corresponding with said indicia positioned upon said sections whereby said articles and said reference indicia may be viewed simultaneously through said containers.

1,501,771. ANTISKID DEVICE. FRANK W. HANLEY, Pittsburgh, Pa. Filed Mar. 2, 1923. Serial No. 622,404. 5 Claims. (Cl. 188—5.)

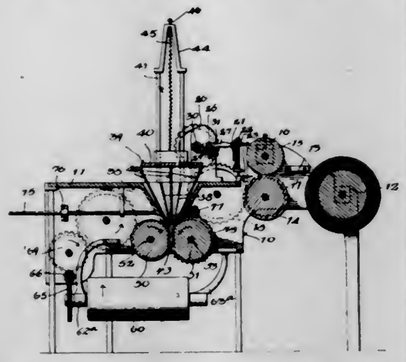


1. In combination with an automobile, braking members pivotally mounted at their rearward ends and extending when in normal raised position forwardly of the rear axles, and means for normally holding said members raised, said means permitting limited vertical movement of the members and positively limiting downward movement thereof, the braking members and the means for holding the same raised being so related that the force of a blow struck by the members on their downward movement will be transmitted along a line which will intersect the traction surface slightly in advance of a vertical line passing through the axis of the axles of the automobile.

1,501,772. ANTIKICKING DEVICE FOR ANIMALS. EMORY H. HARFORD, Piper City, Ill. Filed June 22, 1922. Serial No. 570,116. 3 Claims. (Cl. 119—128.)

1. A hopple of the class described comprising a body portion, an arm hinged thereto having its outer end formed to provide a gripping portion, a locking member pivoted to the body portion to retain the arm in closed position upon the body portion, an L-shaped bracket removably mounted on the body portion and means pivoted on the bracket to provide a tail-holding element for said hopple.

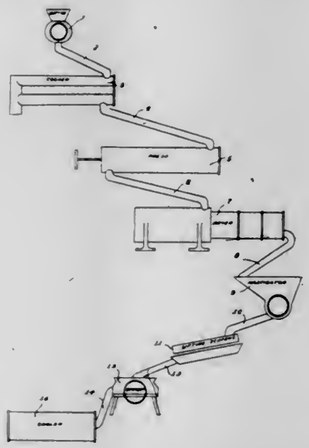
1,501,773. VIAL-NECKING MACHINE. BENJAMIN T. HEADLEY and PARKE H. THOMPSON, Millville, N. J., assignors to Millville Machine Company, Millville, N. J., a Corporation of New Jersey. Filed May 7, 1918. Serial No. 233,078. 33 Claims. (Cl. 49—7.)



13. A vial necking machine comprising a flexible carrier, means for moving said carrier step by step, a plurality of chucks mounted on said carrier, each of the chucks comprising a casing, a sprocket wheel rotatably mounted in the casing, means adapted to successively engage said sprocket wheels during the movement of the carrier for rotating the chucks, chuck members connected to the sprocket wheel and arranged to be rotated therewith, springs for holding said chuck members away from each other, jaw members radially movable in the sprocket wheel, springs for moving the jaw members radially away from the center of the chuck, and coacting devices on the jaws and the chuck members for closing the jaws when the chuck members are moved away from each other, substantially as described.

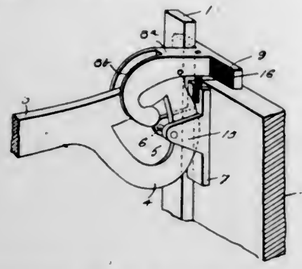
23. A vial necking machine comprising a plurality of transverse shafts, each of said shafts having a sprocket wheel thereon, a sprocket chain mounted on said sprocket wheels, a driving shaft, a Geneva gear connection between the driving shaft and one of the sprocket wheel shafts for intermittently operating the sprocket wheel shaft, means for continuously rotating the driving shaft, a plurality of cam shafts, actuating connections between the cam shafts and the driving shaft for continuously actuating the cam shafts, chuck loading mechanism for feeding blanks to the chucks, actuating levers for the chuck loading mechanism, cams on the cam shaft for actuating the chuck loading mechanism, clutches on the cam shafts for connecting and disconnecting the cams, blank finishing devices, levers for actuating the blank finishing devices, cams on the cam shafts for actuating the levers for the blank finishing devices, clutches for engaging and disengaging the cams for the blank finishing devices, chuck unloading devices, levers for actuating said chuck unloading devices, cams on the cam shaft for actuating said unloading devices, and clutching actuating mechanism for simultaneously actuating both of said clutches, substantially as described.

1,501,774. FOLDING MACHINE. FRANK W. HEETER and TERRY E. HEETER, Toledo, Ohio. Filed Feb. 18, 1922. Serial No. 537,658. 10 Claims. (Cl. 270—61.)



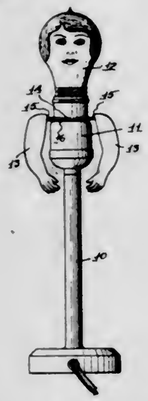
1. In a machine of the character described, a table, a supply roll, feed rollers for delivering a web of paper from said supply roll to said table, a gear for driving said feed rollers, cutting mechanism for severing the length of paper sufficient to constitute a napkin and comprising a cutter and actuating mechanism therefor including a gear, an intermediate gear meshing with the gear of the feed rollers and with the gear of the actuating mechanism whereby the cutter operates in timed relation with respect to the feed rollers, a folding bed depending from the table, a forming plunger cooperable with the forming bed, folding rollers cooperatively arranged with respect to the forming bed, shafts carrying said rollers, twin gears fixed to said

shafts, one of said twin gears being meshed with the intermediate gear for driving the same, operating mechanism for the plunger including a crank arm having a crank pin, a pitman connected with the plunger and having a hook end releasably and intermittently engaged with the crank and spring means for effecting



quick movement of the plunger, finishing rollers cooperatively arranged with respect to the folding rollers, gearing for driving said finishing rollers from said twin gears, and means for driving one of the shafts of the feed rollers whereby said twin gears and the gears driven therefrom are actuated.

1,501,775. PROCESS FOR THE MANUFACTURE OF HIGH-GRADE FLOURS FROM FISH AND LIKE MATERIALS. STANLEY HILLER, San Jose, Calif., assignor to Roy L. Daily, San Francisco, Calif., R. R. Bellingall, Oakland, Calif., and Stanley Hiller, San Jose, Calif. Filed Jan. 14, 1924. Serial No. 686,156. 3 Claims. (Cl. 99—11.)

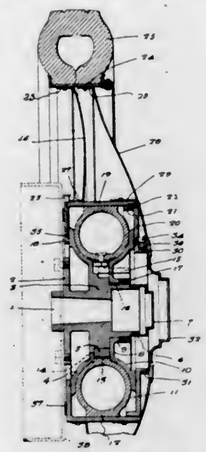


3. A continuous process for manufacturing high grade fish flour which comprises the steps of cutting fresh fish to relatively small particles; cooking the freshly cut fish; pressing the cooked fish while hot to extract the oil therefrom; drying the solid residue from the press by the application of heat thereto; treating the dried material while hot to break the flesh portion from the bone without materially reducing the size of the bone particles; separating the flesh content from the bone by sifting; and grinding the separated flesh content to produce flour.

1,501,776. WRECKING TOOL. JOHN E. HOFFMAN, Casper, Wyo. Filed Oct. 20, 1923. Serial No. 669,767. 3 Claims. (Cl. 254—131.)

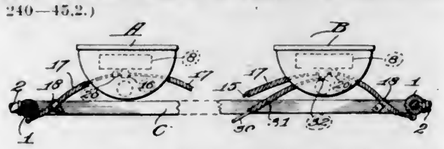
2. A wrecking tool of the character specified, comprising an anchoring member, a pry pivoted at one end to the anchoring member and having a cam at one side spaced therefrom intermediate its ends, a shoe having spaced ears embracing opposite sides of said cam, a pin connecting the free ends of said ears and adapted to engage the inner edge of the cam, and a yieldable connection between the shoe and anchoring member, said yieldable connection comprising a slide mounted upon the anchoring member and having the shoe pivoted thereto, and a spring between the slide and anchoring member.

1,501,777. DOLL. HELEN E. HOLLINGSWORTH, Minneapolis, Minn. Filed Nov. 28, 1922. Serial No. 603,743. 4 Claims. (Cl. 240—10.)



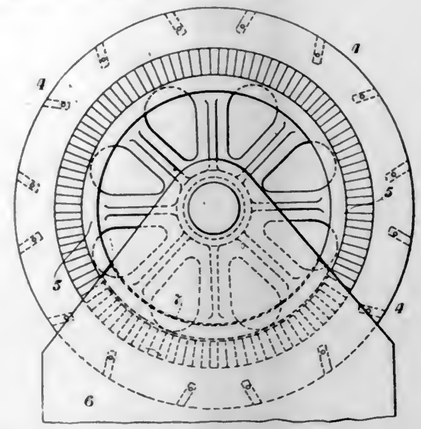
1. A doll of the class described including, in combination, an electric socket having an annular shoulder thereon and comprising the body of the doll, means supporting said socket in upright position, an electric lamp fitted in said socket and comprising the head of the doll, a flexible mounting encircling and yieldingly gripping the socket, said mounting being held against downward displacement by engagement with the shoulder on said socket, and arms secured to the mounting, said mounting being adjustable angularly of said socket to permit the proper positioning of said arms with respect to said head.

1,501,778. CUSHION WHEEL. WILLIAM P. HOOPES, Buffalo, N. Y. Filed Dec. 1, 1922. Serial No. 604,272. 3 Claims. (Cl. 152—42.)



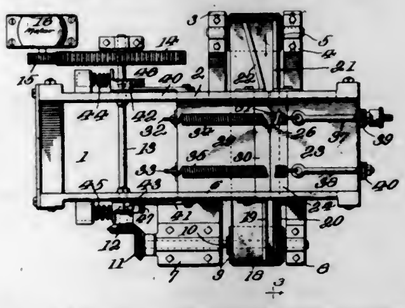
1. In an elastic wheel, a hub including a bearing sleeve having an outstanding flange, an outstanding lug on the sleeve formed with a concaved side extension to provide the fixed section of a tire seat, a member

surrounding the hub, in contacting engagement with the lug thereof and having an arcuate side providing the second section of the tire seat, means adjusting the removable seat section with respect to the fixed seat section, means for locking the removable seat section on the sleeve, a pneumatic tire for the seat, interengaging means between the tire and the lug for holding the former from turning on the latter, a cap for the sleeve, a ring surrounding and contacting the outer surface of



the tire, said ring having an integral flange in contact with one of the sides of the tire seat, a removable disk adjustably secured to the opposite end of the ring, means locking said disk to said ring, a tire carrying rim surrounding the hub, a disk comprising inner and outer sections fixed to the tire carrying rim and to the ring, a cap threadedly engaging the removable disk and in contacting engagement with the ring, and means for feeding a lubricant between the sides of the ring and of the removable disk and the sides of the tire seat.

1,501,779. LIGHT DEFLECTOR FOR HEADLIGHTS. CORA ELIZABETH HUGHES, Los Angeles, Calif., assignor of one-third to Thomas M. Ingman and one-third to Lloyd L. Elliott, both of Los Angeles, Calif. Filed May 25, 1922. Serial No. 563,642. 2 Claims. (Cl. 240—45.2.)

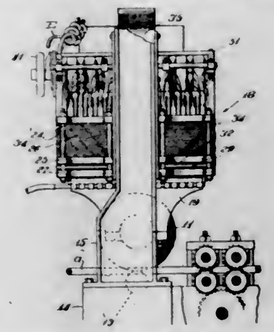


1. The combination with a vehicle axle having stub shafts pivoted thereto, of a headlight having a plurality of reflectors transversely spaced across the front of said headlight upon vertical pivots, an operating member connected to said stub shafts so as to be shifted in opposite directions by turning movement of said stub shafts in opposite directions, a lug on said operating member, means for turning said reflectors having an abutment element adapted to be engaged by said lug upon shifting of said operating member in one direction for turning said reflectors so as to laterally deflect transversely spaced portions of the rays of light from said headlight, said lug being adapted to disengage said abutment element during shifting of said operating member in the opposite direction, and a spring for actuating said reflector turning means so as to turn said reflectors edgewise to the rays of light from said headlight when said lug is disengaged from said abutment element.

1,501,780. CUTTING DISK. MALCOLM MILLER IRVINE, Glasgow, Scotland. Filed Jan. 12, 1924. Serial No. 685,862. 4 Claims. (Cl. 262—27.)

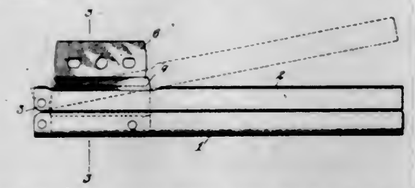
1. In a coal cutting or like cutting machine, a cutting disk having a forged metal race welded thereto.

1,501,781. MACHINE FOR OPENING PACKS OR PILES OF METAL PLATES. WILLIAM L. JENKINS, Sr., Niles, Ohio. Filed Apr. 15, 1921. Serial No. 461,539. 13 Claims. (Cl. 29—17.)



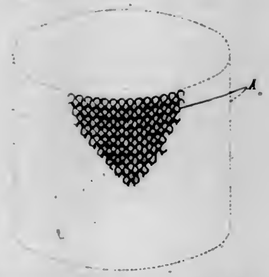
9. A machine of the character described, comprising a frame, a transverse endless conveyor carried by the frame, a gearing between the shaft and the conveyor for continuously driving the same, a female die above the conveyor and extending over the same, and having a vertical groove therein, a spring pressed plunger carried by the die and intersecting the groove, a male die movable transverse the conveyor, springs normally holding the die in engagement with the female die, cams carried by the driven shaft, levers pivoted at their upper ends and their lower ends in engagement with said cams, and links connected to the male die and the levers intermediate their ends whereby the male die is moved against the tension of the springs and suddenly released to allow the male die to be rapidly driven against the female die.

1,501,782. APPARATUS FOR ELECTRICALLY BUTT-WELDING TUBING. GUSTAVE V. JOHNSTON, Chicago, Ill., assignor, by mesne assignments, to The Elyria Iron and Steel Company, a Corporation of Ohio. Filed Oct. 4, 1920. Serial No. 414,408. 24 Claims. (Cl. 219—13.)



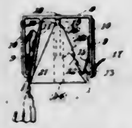
1. In a tube welding machine, the combination of means, including seam-straddling electrodes and opposed tube support, forming a welding throat, an alternating-

current transformer having its secondary connected with the electrodes and having a plurality of primary coils in a circuit excluding said secondary, a plurality of



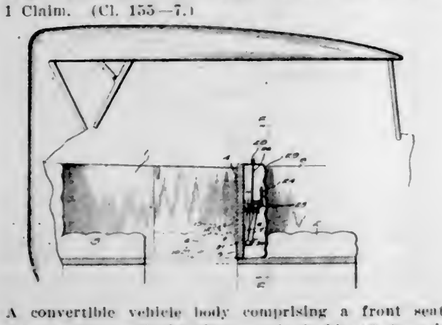
switches respectively controlling the number of service-turns of different primary coils, and means for operating said switches.

1,501,783. RAZOR-BLADE HOLDER. PHILIP KILIMNIK, New York, N. Y. Filed Feb. 26, 1924. Serial No. 695,370. 1 Claim. (Cl. 30—25.)



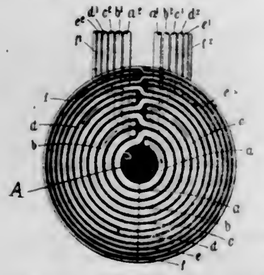
A razor blade holder, which comprises a pair of pivoted handles, a pair of spaced blade-receiving plates mounted on one handle, said plates converging at their upper edges to receive a blade therebetween, the other handle portion slotted and provided with side walls, said walls adapted when the handles are drawn together to engage the sloping faces of said plates to force said plates together to grip the blade when the handles lie adjacent each other.

1,501,784. KNIT ABRASIVE FABRIC AND ARTICLE MADE THEREFROM. RUSSELL B. KINGMAN, Orange, N. J. Filed June 14, 1923. Serial No. 645,282. 1 Claim. (Cl. 15—209.)



An abrasive fabric made of a base thread around which is convoluted a thin ribbon-like metallic wire adapted to present by its convolutions a multiplicity of sharp abrasive edges, said base thread so formed being knitted into a seamless tubular body providing rows of intermeshed loops which by their turns project said sharp abrasive edges of the convoluted wire in many different directions.

1,501,785. CLASP. STEVEN KOTELES, Claremont, Va. Filed Sept. 13, 1923. Serial No. 662,432. 4 Claims. (Cl. 24—260.)



2. A clasp having oppositely disposed depending side members, a resilient arm carried by said clasp, a pin mounted centrally of said clasp, a triangular wedge-shaped clamping member cooperating with said resilient arm slidable on said pin and means carried by one of said side members for locking said wedge in adjusted position.

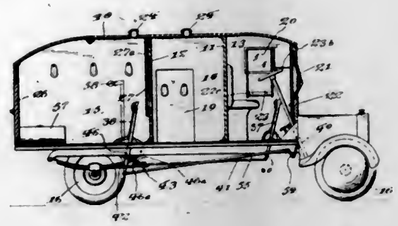
1,501,786. CONVERTIBLE VEHICLE BODY. THEODORE KUGLER and FRANK L. VAN ROSSUM, Appleton, Wis. Filed Apr. 17, 1922. Serial No. 553,786. 1 Claim. (Cl. 155—7.)

A convertible vehicle body comprising a front seat, a rear seat spaced therefrom, a back hinged to said front seat and adapted to bridge the space between said seats when lowered, cushions arranged on said front and rear seats and said back, a foldable arm to support said back in lowered position, said arm being normally disposed in a plane between the back and the front face of said back cushion, one end of said arm being secured to the side of said body, a bracket secured to said back, a pin carried by said bracket, the other end of said arm being pivotally supported on said pin, a locking member secured to said body, said locking member being adapted to engage said pin, and an operating member connected thereto and projecting slightly beyond the upper edge of said back.

1,501,787. ELECTROMAGNET. HOWARD LACY, Surbiton, England. Filed Nov. 3, 1921. Serial No. 512,605. 2 Claims. (Cl. 175—21.)

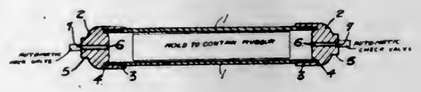
1. An electro-magnet of the type described, comprising a core and a winding composed of an even number of differently sized wires each wound in two layers in the same direction and with the direction of winding of successive wires reversed, said wires decreasing in size progressively in accordance with the ampere-turns required per wire, and insulation between all layers of the winding, whereby said wires are adapted to function in pairs to produce a variable inductance, the value of which may be controlled by inter-connecting the wires to form different combinations.

1,501,788. SOCKET WRENCH. JAMES M. LAFLIN, Boise, Idaho. Filed Aug. 14, 1923. Serial No. 657,285. 3 Claims. (Cl. 81—111.)



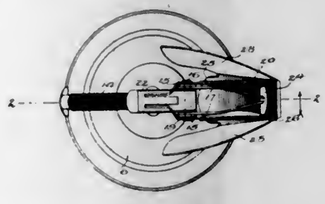
1. A socket wrench comprising a handle, laterally extending arms at the end of said handle, a pair of gripping jaws pivotally and adjustably mounted on one side of said arms, an adjusting segment carried by the other arm, and means associated with the gripping jaws to engage with the segment and hold said jaws in adjusted positions.

1,501,789. BOILER ATTACHMENT. SAMUEL J. LINDELL, Mandeville, La., assignor to C. Sidney Frederick, Covington, La. Filed Jan. 6, 1922. Serial No. 527,411. 4 Claims. (Cl. 154—44.)



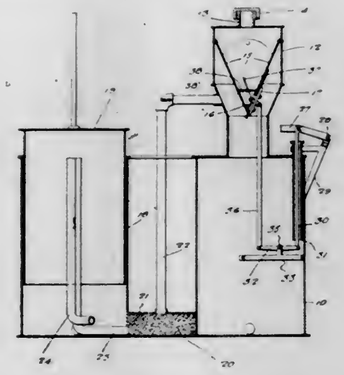
4. A protecting device for a boiler seam comprising a plurality of longitudinally curved plates, longitudinally curved parallel flanges extending from said plates and engaging said boiler upon opposite sides of said seam, means for removably connecting the adjacent ends of said plates, spring influenced adjustable means for removably securing said plates in position upon said boiler, a plurality of spaced wedge shaped members secured to said plates, a plurality of fire bricks having angular grooves in the opposite edges thereof engaging said triangular shaped members and a refractory material disposed upon opposite sides of said fire bricks engaging said flanges and boiler.

1,501,790. MOTOR VEHICLE. C. GILBERT MCCLAY and BEN RUDIS, Chicago, Ill. Filed May 4, 1922. Serial No. 558,349. 5 Claims. (Cl. 180—77.)



1. A motor vehicle having its body provided with a driver's compartment and a separate compartment to the rear thereof, a steering mechanism controllable from the driver's compartment, and means operable from the rear compartment for disabling the steering mechanism.

1,501,791. GAS-EXPANDED VULCANIZED-RUBBER SUBSTANCE AND PROCESS FOR MAKING THE SAME. CHARLES LANCASTER MARSHALL, London, England. Filed June 23, 1920. Serial No. 391,091. 3 Claims. (Cl. 18—53.)

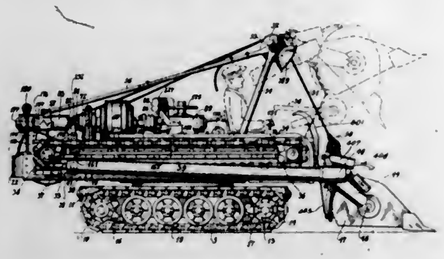


1. The process of making expanded rubber, consisting in providing a mixture of raw rubber and fluxing material, together with vulcanizing material, applying a skin of rubber and sulphur compound to such mixture of raw rubber, vulcanizing the same, subjecting the same while being vulcanized to the action of an inert gas under such pressure as to cause the gas to penetrate the same, and then relieving such gas pressure.

1,501,792. PENCIL SHARPENER. SYLVESTER K. MATHEWS, Albany N. Y. Filed Oct. 17, 1922. Serial No. 595,197. 7 Claims. (Cl. 120—95.)

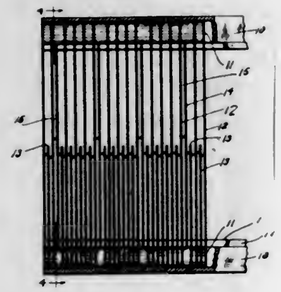
6. In a pencil sharpener, a receptacle having an opening, a standard supported thereby, a handle carried by said standard and having cutting blades at one end thereof and arranged above said receptacle, a pencil holder pivotally connected to said handle and arranged in a plane between said blades, and a chute having its lower end extending into the opening in said receptacle and its upper end extending to a point above and on opposite sides of said cutting blades whereby said blades are positioned between the side walls of said chute, the upper ends of said side walls terminating in outwardly flared flanges.

1,501,793. ACETYLENE-GAS GENERATOR. OSCAR MAXON, Cadiz, Ky., assignor of one-half to Ernest Linwood Hardey, Cadiz, Ky. Filed Nov. 14, 1922. Serial No. 600,895. 2 Claims. (Cl. 48—55.)



1. In an acetylene gas generator including a carbide container having an outlet, a slide valve controlling the outlet, a water receptacle below the carbide container, a lever having one end pivoted at a point above the water receptacle, spaced parallel rods arranged within the water receptacle, a cross piece pivoted between its ends and terminally connected to the adjacent extremities of the rod, one of the rods being pivotally connected with said lever, the other of said rods being connected to the valve, and an agitator carried by the valve and operating in the carbide container.

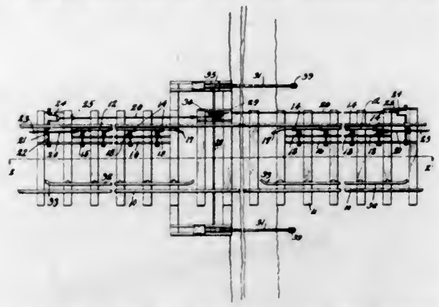
1,501,794. REENFORCED HORN. RAY MERTZ, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 11, 1923. Serial No. 656,891. 3 Claims. (Cl. 181—27.)



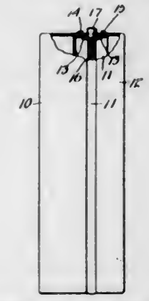
3. A sound amplifier or megaphone composed of vulcanized rubber compound having an annular metallic reinforcement in the mouth thereof, and lengthwise disposed metallic reinforcements embedded in the material thereof, and free from connection with the said annular reinforcement.

1,501,795. UNDERGROUND MINING MACHINE. ARTHUR K. MITCHELL, Bronxville, N. Y., assignor to St. Joseph Lead Company, New York, N. Y., a Corporation of New York. Filed Oct. 2, 1922. Serial No. 591,689. 25 Claims. (Cl. 214—134.)

1. In a shoveling machine, a frame, a boom, and means supporting said boom at one of its ends upon the frame for rectilinear traveling movement and vertical swinging movement, a dipper carried by the other end of said boom, mechanism for effecting a rectilinear movement of the boom relative to the frame, mechanism for swinging said boom vertically, a separate operating motor for each of said mechanisms, and manual control means for the respective motor circuits whereby combined rectilinear and vertical swinging movements, or either of such movements independently of the other, may be imparted to the boom at the option of the operator.



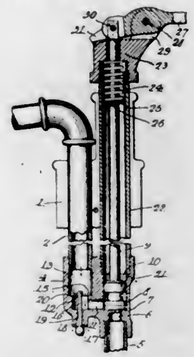
1,501,796. HEDDLE FRAME. OVILA D. MOREAU, Manville, R. I., assignor of one-half to Joseph C. Mallioux, Woonsocket, R. I. Filed Oct. 14, 1922. Serial No. 594,543. 8 Claims. (Cl. 139—53.)



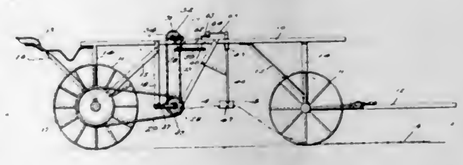
1. A heddle frame having a multiplicity of spaced-apart dents providing spaces for the reception of the warp threads, needles in said spaces each to act upon and form a fancy weave on its threads, and means in said frame whereby extra dents may be removably mounted in any desired number of spaces in said frame between a needle and the next adjacent dent, without removing any of the heddle parts.

1,501,797. STOP SIGNAL FOR RAILWAY CROSSINGS. HENRY MORRIS, ARMOUR HOWARD, and GEORGE W. GARTMAN, Chunchula, Ala. Filed Nov. 15, 1923. Serial No. 674,958. 6 Claims. (Cl. 246—293.)

1. In a crossing signal, an actuating rail mounted for movement longitudinally of a track rail, a pivoted gate, an operating shaft therefor provided with a crank arm, an operating rod from said actuating rail mounted to slide in a single plane and having a link connection to said crank arm, a gate operating arm upon said operating shaft disposed beneath the gate, and a tension spring extending directly from said gate operating arm to the gate.



1,501,798. LATCH FOR VANITY CASES. SIMON MORRISON, Brooklyn, N. Y. Filed Jan. 25, 1923. Serial No. 615,444. 2 Claims. (Cl. 220—55.)



1. A vanity case comprising an intermediate compartment, a cover therefor, a lower compartment nesting with the intermediate compartment, and a double latch on the intermediate compartment adapted to engage the lower compartment and the cover for holding them in place, substantially as set forth.

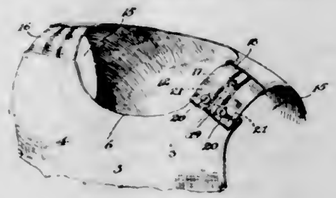
1,501,799. HYDRANT. HORACE FALK NEUMEYER, Macungie, Pa., assignor to Hobart G. Biehn, Quakertown, Pa. Filed Sept. 8, 1922. Serial No. 586,981. 6 Claims. (Cl. 137—13.)

1. In a device of the class described, the combination of a valve cage having spaced chambers, and a cross passage connecting said chambers, an inlet pipe in communication with one of the chambers, a valve arranged to open or shut off communication between the valve cage and the inlet pipe, manually controlled means for operating said valve, an outlet pipe in communication with the discharge chamber of the valve cage, a disk slidably mounted in said discharge chamber, said disk having a cut out portion forming a restricted passage for the flow of water past the disk, said disk having a depending stem carrying a ball valve, the valve cage having a restricted discharge passage in which the ball valve seats when the disk is in its elevated position, whereby to close the discharge passage when water is flowing through the outlet pipe and to open it upon the cessation of outflow of water.

1,501,800. WIRE-WINDING MACHINE. ALFRED NOVOTNE, Gibbon, Nebr. Filed Aug. 6, 1923. Serial No. 655,963. 5 Claims. (Cl. 242—92.)

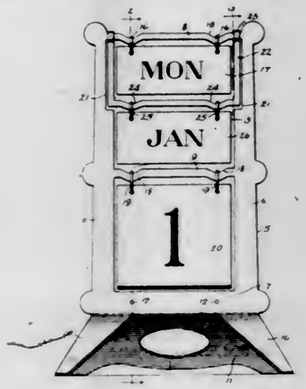
1. A machine of the character described comprising a wheel supported frame provided with draft means, a shaft mounted within the frame and carrying a removably mounted reel, means for rotating said shaft, a guide movable laterally of the frame for guiding wire to the reel, and means for moving said guide synchronously with the reel, the guide including a supporting track, a carriage slidable thereon, and a box link guide eye depending from said carriage.

1,501,801. THERMOMETER AND CASING THEREFOR. CHARLES NURNBERG, Brooklyn, N. Y. Filed Oct. 16, 1922. Serial No. 594,837. 1 Claim. (Cl. 73—52.)



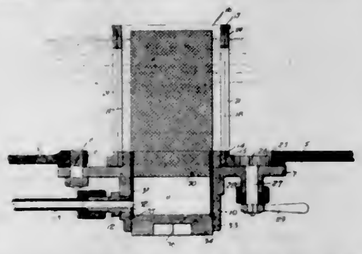
In a device of the character described, the combination of a casing having an open end, a closure for said end of the casing having a portion insertable into and withdrawable from said end and also having a flange intermediate the ends thereof for limiting the inward movement of said closure, said flange being provided with a plurality of plane surfaces, said closure also having a centrally arranged recess in its inner end extending outwardly to a point medially the ends of the closure, and a thermometer having one end secured in said recess and held in spaced relation to the walls of said casing by said closure, said thermometer being provided with a projection cooperating with one of said plane surfaces to maintain said thermometer out of contact with a support when resting thereon and to prevent rolling of said thermometer on said support.

1,501,802. ATHLETIC UNION GARMENT. AUSTIN N. OPPENHEIM, Baltimore, Md. Filed Dec. 1, 1922. Serial No. 604,148. 1 Claim. (Cl. 2—78.)



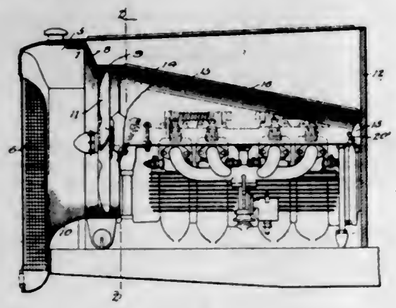
A one-piece undergarment of inelastic material, comprising a unitary body and leg portion having relatively large arm openings and a neck opening between them, a separable shoulder strap separating the neck opening from one arm opening and adapted when disengaged to provide a slip-on as the combined neck opening and one arm opening are of a size to freely admit the body to the garment, said separable shoulder strap of elastic woven material

and having a pair of buttonholes in said elastic material, a pair of buttons on the front portion of the garment to enter the buttonholes, and a strip of inelastic material



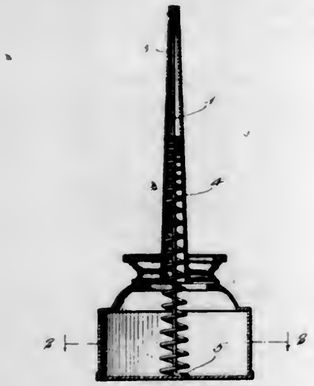
secured beneath the end of the strap and having registering buttonholes and preventing stretching of the strap at the buttonhole end.

1,501,803. CALENDAR. WILLIAM S. ORTH, Dunkirk, Ohio. Filed Feb. 8, 1923. Serial No. 617,822. 2 Claims. (Cl. 40—119.)



1. In a calendar, a frame formed from a single sheet of material including opposed side members and supporting cross bars joining the same, said cross bars having angular notches in their upper edges, the base of said sheet being split and the split portions being bent in opposite directions to form supports for the frame, rings disposed in said angular notches, and a plurality of cards supported by said rings.

1,501,804. OIL-SUMP SCREEN. VICTOR W. PAGE, New York, N. Y. Filed Apr. 16, 1921. Serial No. 461,938. 1 Claim. (Cl. 210—170.)

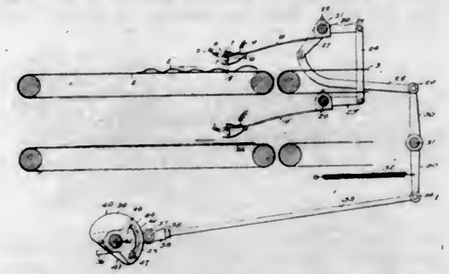


In an engine sump, a stationary plate provided with a passage extending therethrough, a slotted tubular member surrounding said passage and projecting inwardly of the sump, a slotted sleeve surrounding said slotted tubular member and movable with respect thereto, a sleeve slidably mounted in the opening of said plate, means for retaining said sleeve in position in the opening in said plate, and a screen carried by said sleeve and projecting inwardly of the sump within the confines of the slotted tubular member.

1,501,805. SUPPLEMENTARY COOLING HOOD FOR MOTORS. VICTOR W. PAGE, New York, N. Y. Filed May 3, 1922. Serial No. 558,229. 2 Claims. (Cl. 180—69.)

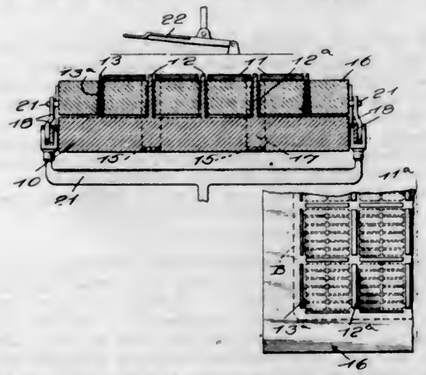
1. In combination with the engine compartment of a motor vehicle having a radiator forming its front wall, a supplemental motor hood, said hood comprising a forwardly disposed flared member embracing a portion of the radiator, said flared portion having a rearwardly disposed flange, a motor-covering hood supported at its forward end on said flange, and means carried by the rear wall of the engine compartment for supporting the rear end of the motor-covering hood.

1,501,806. OIL-SPOUT CLEANER. RALPH C. PETER, Minneapolis, Minn. Filed Nov. 15, 1922. Serial No. 600,668. Renewed Dec. 12, 1923. 1 Claim. (Cl. 221—57.)



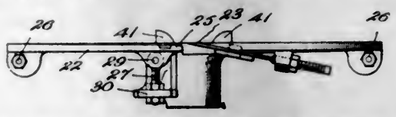
The combination with an oil can having an upstanding upwardly tapered spout; of a wire rod extending from the bottom of the can through the spout to the free end of the latter, and a tapered coiled spring surrounding said rod in spaced relation thereto and having its smaller end portion received snugly in and extending throughout a portion of the length of said spout, the other end of said spring being integrally joined to said rod and resting upon the bottom of the can under compression, said spring and rod being bent from a single length of wire.

1,501,807. HAT-SUPPORTING HOOK. OSWALD PETSCHEL, Brooklyn, N. Y. Filed May 4, 1923. Serial No. 636,687. 2 Claims. (Cl. 24—84.)



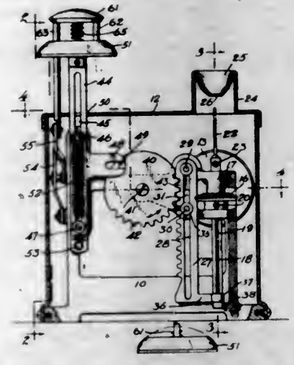
1. A hook comprising a body portion having its ends curved and occupying positions on opposite sides of the longitudinal axis of said body portion, a laterally swinging locking member pivotally connected to the body portion and bridging one of the curved ends of the body portion, and a right angular extension formed on said locking member.

1,501,808. CHOKE DETECTOR. JOSEPH PRUSH and ALVIN B. LANIGAN, Brooklyn, N. Y. Filed Apr. 27, 1923. Serial No. 635,074. 5 Claims. (Cl. 192—127.)



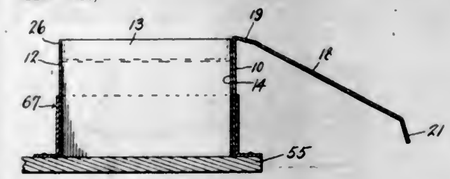
1. A choke detector for paper feeding machines, folding machines and the like, comprising a pair of electrical contacts normally spaced apart, a swinging arm adapted to move both of said contacts across the path of the paper passing through the machine so as to engage the paper and be closed thereby in case the paper is out of its correct position, a rock shaft for actuating said arm, a system of levers, links and arms for actuating said rock shaft, a cam for actuating said levers in one direction, and a spring for actuating the levers in the opposite direction.

1,501,809. SLAB FOR USE IN PASTING BATTERY GRIDS. CHARLES CLAYTON RICH, Mount Vernon, N. Y., assignor of one-twentieth to Charles Wintermeyer, Mount Vernon, N. Y. Filed July 20, 1923. Serial No. 652,795. 10 Claims. (Cl. 226—39.)



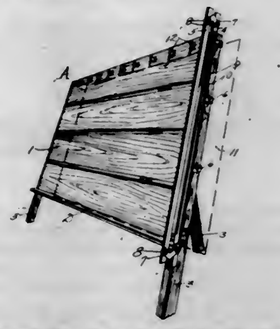
1. Means used in pasting battery plates having certain apertures not designed to be filled with paste comprising a slab having a flat working surface upon which the battery plate may be placed, said flat surface having projections formed to fill the said apertures in the battery plate when the battery plate is laid upon the slab.

1,501,810. SLICING MACHINE. HENRY ROBINSON, Lindenhurst, N. Y. Filed Feb. 19, 1924. Serial No. 693,739. 1 Claim. (Cl. 146—124.)



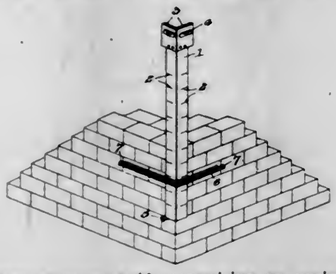
In a slicing machine a casing and a revoluble cutting element comprising in combination a fixed knife bearing portion, a portion pivotally mounted on said fixed portion, a bracket under the cutting element, and a pin supported by said bracket and pivotally connected with the pivotally mounted portion aforesaid.

1,501,811. CIGAR-PERFORATING DEVICE. CHARLES SCHLEY, Garfield, N. J. Filed Apr. 21, 1921. Serial No. 463,100. 8 Claims. (Cl. 131—20.)



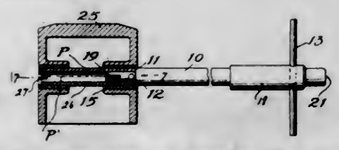
3. A device for preparing a cigar for smoking comprising a stand, a movable rotary drill mounted on the stand, means for supporting a cigar to dispose the end to be perforated in the path of movement of the drill, an electric driving means for rotating the drill, means for advancing the drill into operative contact with the cigar end, said advancing means including a circuit closing element which is initially operable to actuate the electric driving means prior to the advancement of the drill into contact with the cigar end.

1,501,812. COLLAPSIBLE FRUIT BOX AND HOLDER THEREFOR. OTTO W. SCHULZ, Denver, Colo. Filed Mar. 11, 1922. Serial No. 543,012. 2 Claims. (Cl. 224—45.)



1. The combination with a box having a bottom attached at one side edge and free at the other edges, of a flanged holder for receiving the box and constituting a temporary bottom therefor when the box is inverted for packing, the bottom first named being fully secured before the box is placed in an upright position after packing.

1,501,813. GAUGE BOARD FOR BREAKING WALL BOARD AND THE LIKE. JOHN SCHUMACHER, Sr., Los Angeles, Calif. Filed Nov. 25, 1921. Serial No. 517,625. 5 Claims. (Cl. 164—78.)

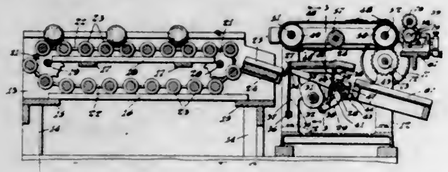


1. A device of the character disclosed, comprising a frame for supporting the work to be fractured, said frame being provided at one extremity with spaced members between which the work is passed and at the plane of which members the work is fractured under pressure; said spaced members comprising bars provided with laterally projecting flanges at the outer edges of which the fracture of the work is produced.

1,501,814. MASONRY CORNER GUIDE. FRANK W. SCOFIELD, Woodland, Mich. Filed May 13, 1922. Serial No. 560,641. 1 Claim. (Cl. 33—85.)

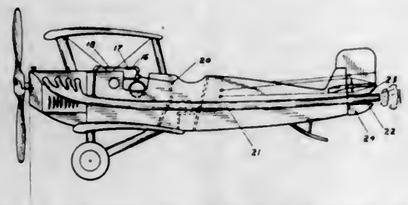
A masonry corner guide comprising an upright angle member adapted to be supported in straddling relation to the corner of a wall and provided at its upper end with plumbing means, a retractile spring straddling the upright angle member and adapted at its ends to be connected to wall portions at right angles to each other, and means for connecting the spring ends to wall portions.

1,501,815. PISTON-BUSHING EXTRACTOR AND REPLACER. ALFRED BRUNO SEPPMANN, Lake Crystal, Minn. Filed Apr. 23, 1923. Serial No. 634,037. 6 Claims. (Cl. 29—88.2.)



1. A tool for removing and replacing the piston pins and bushings of pistons, comprising a body portion of a diameter slidably engaging in the bore of the bushings with the piston, the body portion being provided at one end with a reduced extension of a diameter slidably engaging the bore of the piston pin, and at the opposite end with an enlarged extension of a diameter slidably engaging the bores of the piston bosses.

1,501,816. TOOL FOR INSERTING AND REMOVING VALVE PINS. ALFRED BRUNO SEPPMANN, Lake Crystal, Minn. Filed Apr. 23, 1923. Serial No. 634,038. 3 Claims. (Cl. 294—36.)



1. A tool of the class described comprising a pair of pivotally connected jaws, the opposed faces of each being provided with pin receiving grooves, each of said jaws being continued by a handle member, one of said handle members having an angular extension slidably disposed through the second handle member, and a spring interposed between said members and encircling said angular extension.

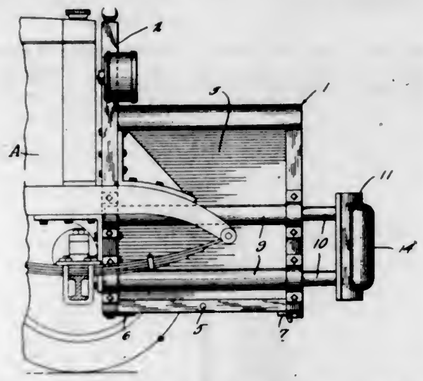
1,501,817. MACHINE FOR MARKING ROUND ARTICLES. FREDERICK J. SÉVIGNÉ, Milford, N. H. Filed Sept. 22, 1922. Serial No. 589,793. 20 Claims. (Cl. 101—40.)

13. A marking machine comprising in its construction a substantially horizontal endless belt carrying a marking member, and a longitudinally stationary runway vertically yieldable throughout its length below said belt.

1,501,818. AERIAL ADVERTISER. ANDREW A. SOULEK and KARL A. HOBLIT, Lincoln, Nebr. Filed Mar. 20, 1924. Serial No. 700,573. 6 Claims. (Cl. 244—1.)

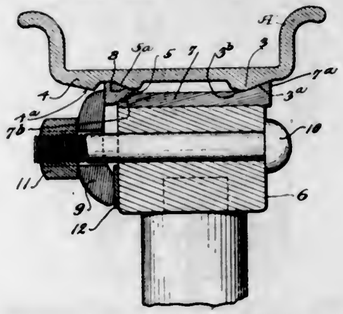
3. In combination with an aircraft, means for leaving a trail of visible and relatively persistent smoke and vapor behind the aircraft in its path, said means including a single container in which a vegetable oil emulsion is carried, means under the control of the pilot for discharging said emulsion into the exhaust pipes whereby the exhaust gases will ignite the oil particles and vaporize the water in the emulsion, whereby a mixture of smoke, exhaust gases, and steam is discharged from the exhaust pipe.

1,501,819. AUTOMOBILE-SPRING CONSTRUCTION. FRANK N. SPRAGUE, Holyoke, Colo. Filed Apr. 14, 1923. Serial No. 632,024. 5 Claims. (Cl. 267—36.)



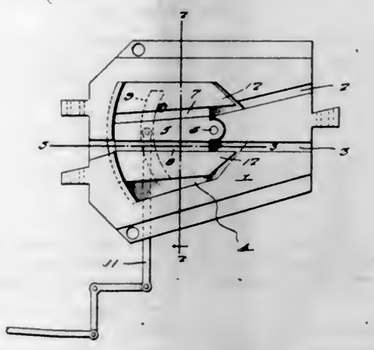
1. In automobile spring construction of the character described, the combination with the body supporting side bars and axle, of a cross bar connecting said side bars, semi-elliptic side springs secured to said axle so that the greater part of their lengths lie on one side of said axle, the ends of the longer portion of said springs being secured to said side bars, a cross bar connecting the

opposite ends of said springs, a cross bar connecting said side bars, an elliptic spring interposed between said cross bars, pulling members secured to said side springs and connected to the ends of said side bars, friction elements secured at one end to opposite sides



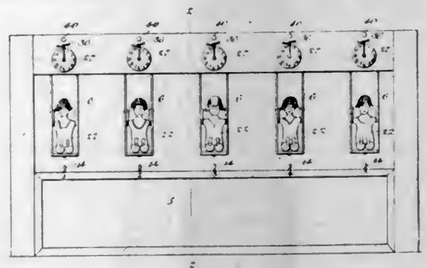
of one of said cross bars and extending beyond the opposite cross bar, and means for resiliently pressing the unsecured end portions of said friction elements against said elliptic spring, thereby to retard the compression and rebound of said spring.

1,501,820. AUTO FENDER. ALEXANDER STEACH, Boston, Mass. Filed Feb. 9, 1924. Serial No. 691,771. 3 Claims. (Cl. 293—54.)



2. In combination with a vehicle, a frame connected with the front thereof and including upwardly extending side and rear pieces forming a casing, a tiltable bottom for the casing, latch means for holding the bottom in closed position, cushions on the side and rear pieces and on the bottom, a bumper, means for movably supporting the bumper from the frame and spring means for resisting the rearward movement of the bumper.

1,501,821. INTERCHANGEABLE DEMOUNTABLE RIM. GEORGE STEINGRUBER, Atlanta, Ga. Filed Mar. 24, 1922. Serial No. 546,479. 7 Claims. (Cl. 301—10.)

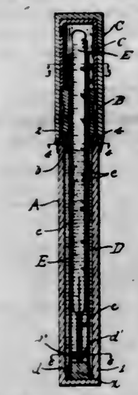


1. A demountable rim provided upon its inner periphery with a plurality of annular ribs, each of the ribs being formed with a beveled bearing surface and one of the ribs being formed with an additional reversely inclined bearing surface, the rib with the two bearing surfaces being of a greater height than the other ribs, and different selected combinations of the bearing surfaces being adapted to be used in seating the rim upon different types of wheels.

1,501,822. SWITCH FROG. JAMES P. SWIFT, Millstone, Ky. Filed Apr. 21, 1924. Serial No. 707,942. 1 Claim. (Cl. 246—386.)

A switch frog structure comprising a body plate having angularly disposed grooves channeled in the upper surfaces thereof, the said body plate being provided with a recess located between the ends of the grooves, a tongue pivoted in the recess and having converging grooves adapted to be moved in alignment with the grooves in the body plate, said body plate being provided at its ends and at the sides of the grooves therein with extension adapted to be aligned with the side edges of the grooves in the body plate.

1,501,823. AMUSEMENT APPARATUS. JENSHIRO TERUYA, Coney Island, Brooklyn, N. Y. Filed Jan. 10, 1923. Serial No. 611,780. 13 Claims. (Cl. 46—56.)

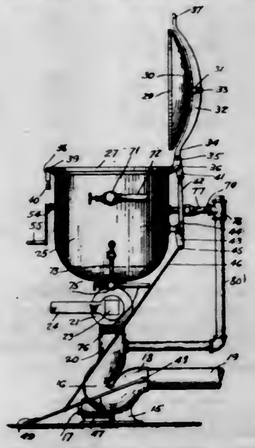


1. An amusement apparatus comprising an indicator, an object swingingly movable with respect to the indicator, the indicator including means to be engaged by the object to govern actuations of the indicator, and means for operatively moving the object.

1,501,824. THERMOMETER CASE. HENRY J. UPTON, Medford, Mass., assignor to Vaughn-Upton Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1923. Serial No. 673,180. 3 Claims. (Cl. 206—16.5.)

1. The holder above described, made up of an outer case closed at one end, a valve seat at the open end of

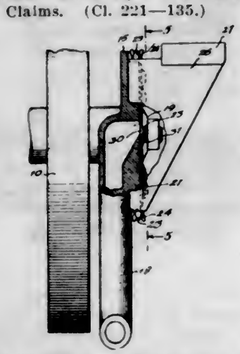
the outer case; an inner cylinder slidably mounted within the outer case, closed at its inner end, and having a valve seat on the outer surface of the inner end and a perforation through its walls adjacent the valve seat, all combined and operating substantially as described.



1,501,825. PENHOLDER. GEORGE R. VESTAL, Owensboro, Ky. Filed Sept. 28, 1922. Serial No. 591,100. 3 Claims. (Cl. 120—98.)

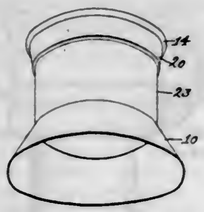
1. A pen holder provided at its forward end with spring fingers adapted to project from the holder and engage a surface upon which the holder may be placed, and a sleeve fitted upon the end of the holder and adapted to house said fingers and maintain them in inoperative position.

1,501,826. BEDPAN CLEANSER AND STERILIZER. LEON L. WATTERS, New York, N. Y., assignor to Hospital Supply Company and Watters Laboratories Consolidated, New York, N. Y. Filed June 29, 1921. Serial No. 481,263. 8 Claims. (Cl. 141—1.)



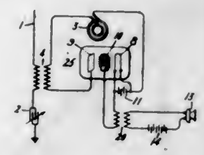
1. An apparatus comprising a tank having a hinged cover, a gasket carried by the rim of said tank, means for clamping the cover to form an impervious joint with said tank, a work holder revolubly mounted in the tank, means for manually actuating said holder, means for spraying the work carried in the holder, a hollow pedestal on which said tank is mounted, a drainage means connected with said pedestal, and pedally operated means for raising said cover.

1,501,827. SOFT-HEADED MALLET. CHAUNCY P. WHISLER, Kenmore, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 2, 1924. Serial No. 684,029. 4 Claims. (Cl. 145—29.)



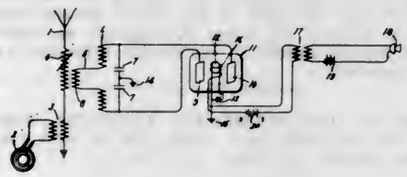
1. A mallet having a head of elastic material provided with an outwardly flaring handle-receiving eye provided with an annular internal rib adjacent the inner face of the head, and a handle having an outwardly flared end engaging said flared eye, and an annular groove engaged by said annular rib.

1,501,828. SEED PLANTER. GEORGE HENRY WRIGHT, Spokane, Wash. Filed Apr. 12, 1923. Serial No. 631,684. 2 Claims. (Cl. 221—135.)



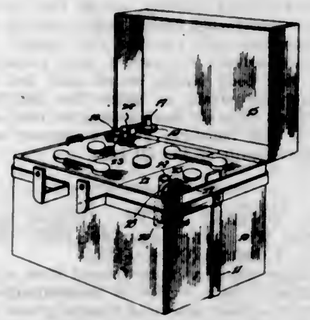
1. In a seed planter, a seed dispensing plate comprising a disk having a plurality of openings extending therethrough, said openings being located in circular arrangement in the disk, and buckets integral with the disk, said buckets projecting from the disk and partially encircling said openings, the edge of the bucket wall sloping upward from the plane of the disk, said bucket wall being inclined to the plane of the disk.

1,501,829. METAL CONTAINER. HERBERT E. WRIGHT, Melrose, Mass., assignor to Wright-Ziegler Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 11, 1923. Serial No. 662,054. 5 Claims. (Cl. 220—73.)



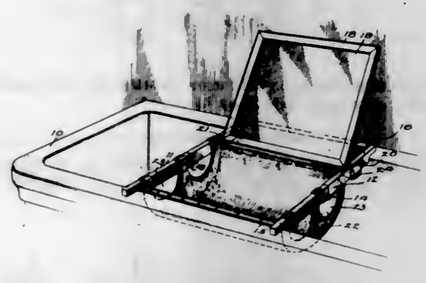
1. A metal container having a mouth adapted to be sealed by a closure member therefor and provided with an outwardly extended lip or bead and a reinforcing member upon the exterior of the container below and in proximity to said lip or bead.

1,501,830. WIRELESS SIGNALING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 30, 1914, Serial No. 835,433. Renewed Feb. 29, 1924. 6 Claims. (Cl. 250—17.)



1. A modulating system comprising an antenna to be supplied with signal waves, means for supplying high frequency power to be modulated to said antenna, an audion having a cathode and anode and an auxiliary electrode, means for serially introducing the impedance between said anode and cathode into said antenna, and means for controlling the potential of said auxiliary electrode in accordance with a signal.

1,501,831. WIRELESS SIGNALING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 10, 1916, Serial No. 71,190. Renewed Aug. 4, 1921. Serial No. 479,086. 38 Claims. (Cl. 250—6.)



1. The method of signaling by means of a sending circuit in which inductance is neutralized by capacity through resonance which consists in diverting a variable amount of energy from the sending circuit and varying the effective resistance thereto in direct proportion to the amount of energy diverted.

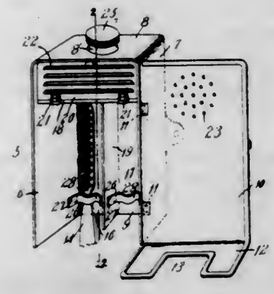
1,501,832. MOTOR-VEHICLE BATTERY BOX. JACOB E. AMEND, Lovell, Wyo., assignor of one-half to Harry B. Richardson, Lovell, Wyo. Filed June 7, 1923. Serial No. 644,008. 1 Claim. (Cl. 204—29.)

A battery box including a box body shaped to fit in the battery carrier of a motor vehicle receiving a battery, a lid hinged upon the box body normally closing the box body housing the battery, a split sleeve having companion spring contact fingers, means connecting the ends of the sleeve and adjustable for clamping the sleeve to one terminal post of the battery, a coacting contact upon the lid provided at its inner end with a blade to engage between said fingers when the lid is closed, a split sleeve having a tongue to extend between the battery and the box body in electrical contact with the box body, and means connecting the ends of the latter sleeve and adjustable for clamping such sleeve upon another terminal post of the battery.

1,501,833. COLLAPSIBLE BATHTUB. JOSEPH SIMPSON AMSEL, Brooklyn, N. Y. Filed Sept. 1, 1922. Serial No. 585,768. 3 Claims. (Cl. 45—38.)

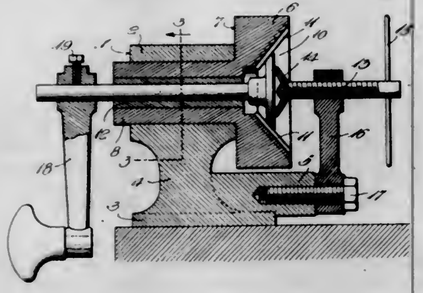
3. A device of the character described for locating in bodies of water, comprising a collapsible frame, a fabric suspended from the frame, said fabric having a plurality of notches cut in its edge for allowing the flow of water, a waterproof fabric suspended from the frame forming a clothes compartment, and a dressing table hinged to the frame along the dividing line between the fabrics.

1,501,834. BRACE FOR FENDERS. DAVID S. BACHELDER, Decatur, Ill. Filed Oct. 6, 1922. Serial No. 592,840. 1 Claim. (Cl. 280—152.)



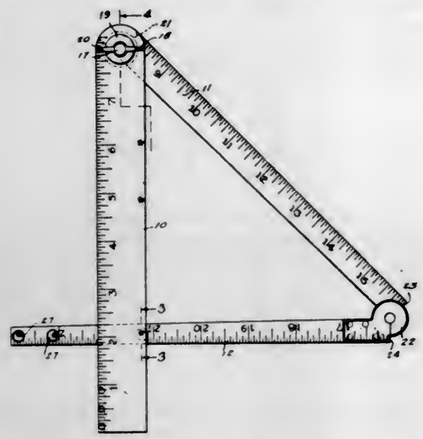
A fender brace for automobiles, comprising a channel bar adapted to extend transversely of the forward portion of a motor vehicle with its channel facing the vehicle and the closed side facing outward, arms having a half twist intermediate of their ends, whereby the outer ends of the bars will be presented flatwise and the inner ends edgewise, the outer ends of the bars terminating in downwardly extending hooks for engaging the outer edges of the fenders, the inner ends of the bars having longitudinal slots and extending into the ends of the channel and lying against the closed side thereof, bolts passing through the channel bar and the slots of the arms, longitudinally slotted clamping members lying against the underside of the arms and having offset outer ends for engaging the inner edges of the fenders, and bolts passing through the arms and the slots of the clamping members.

1,501,835. TOOTHBRUSH CONTAINER. CHARLES BASH, Brookline, Mass., assignor of one-half to Charles Herrick, Denver, Colo. Filed Jan. 10, 1923. Serial No. 611,873. 6 Claims. (Cl. 206—15.1.)



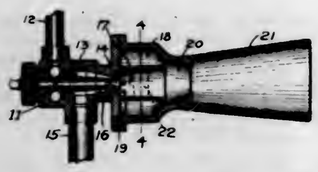
1. A tooth brush container having, in combination, a casing, means to position a tooth brush therein, a porous

member adapted to contain deodorizing material and located in said container, a door hinged to said casing and



a horizontal flange on said door constituting a bottom for said casing when said door is closed.

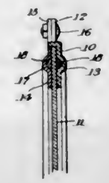
1,501,836. VALVE FACER. WILLIAM H. BEITZ, Lomira, Wis. Filed Jan. 18, 1923. Serial No. 613,469. 1 Claim. (Cl. 82—1.)



A valve facing tool comprising a substantially cylindrical body having a longitudinally extending horizontally disposed passage, said body being provided with a depending neck terminating in a flared support-engaging base adapted to be firmly secured upon a support, an arm extending from the depending neck and merging into said base and extending beyond the forward end of the base and having its forward end portion provided with a longitudinally extending threaded socket extending parallel to the axis of the passage in said body, an enlarged cutter head fitting against the forward end of said body and having a hollow shank extending through the passage in said body and held against rotation therein, said head having a conical pocket leading from its forward end, a bushing removably fitting in the hollow shank for rotatably receiving the stem of a valve having its head positioned in the conical recess of said head, radially disposed cutting blades removably fitting in grooves formed in the walls of said recess for trimming the seat-engaging face of said valve head when the valve is rotated through the medium of a turning device removably connected with the valve stem beyond the rear end of said shank and bushing, an arm having an opening registering with the threaded socket, a fastener bolt passing through the opening in said arm and screwed into said threaded socket to mount the arm for swinging movement, the swinging arm being provided in its free end portion with a threaded opening for axial alinement with said bushing when in place, a pressure screw in the threaded opening of said arm, and a foot for engaging the valve head swiveled upon the end of said pressure screw.

1,501,837. MECHANIC'S INSTRUMENT. CLARENCE FRANKLIN BENJAMIN, Milford, Conn. Filed Apr. 7, 1923. Serial No. 630,530. 6 Claims. (Cl. 33—98.)

1. A mechanic's instrument including a plurality of rule sections pivotally connected in series, means carried by the end sections and adapted for engagement to determine the angle of the several sections relative to one another, and means for adjusting the angle of said elements relative to one another after their angle has been set.



1,501,838. OIL BURNER FOR FURNACES. SAMUEL COOK, Stamford, Conn. Filed July 12, 1920. Serial No. 395,565. 5 Claims. (Cl. 158—74.)

1. An oil burner comprising a body having a flange portion and a tubular extension projecting therefrom to form an atomizing chamber, said body having a bore converging into said chamber, an oil tube in said bore having an unobstructed flaring mouth opening into said chamber and flush with the rear wall thereof, a portion of said tube reduced to form a fluid passage around the tube, said body having an oil port for the tube, and a port for steam or other like impelling fluid communicating with the fluid passage so that, under the influence of the impelling fluid, a vacuum is created in the flared mouth of the oil tube.

1,501,839. LICENSE PLATE. CHARLES D. CRASE, Jonesdale, Wis. Filed Apr. 30, 1923. Serial No. 635,703. 1 Claim. (Cl. 40—125.)

In a license plate, a frame formed from sheet metal and including a front section of substantially L-shaped cross section, spaced apertured clamping ears extending parallel to and spaced from the front edge of the front section, a back section, spaced apertured clamping ears extending from the opposite edges of the back section for clamping engagement with the clamping ears of the front section, fastening devices extending through said ears to hold the front and back sections assembled and provide a groove which extends entirely around the frame, removable panels positioned within said groove, the opposed walls of the groove

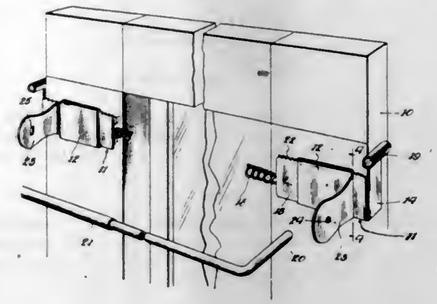
being provided with oppositely disposed grooves, packing strips positioned within the oppositely disposed grooves for contact with the opposite faces of the panels and attaching ears extending from the back section of the frame.

1,501,840. PROCESS FOR THE MANUFACTURE OF BARIUM CYANIDE. CAMILLE DEGUIDE, Enghien, France. Filed Dec. 4, 1923. Serial No. 678,527. 1 Claim. (Cl. 23—13.)

A process for the manufacture of barium cyanide by heating barium carbonate and carbon in the presence of nitrogen, consisting in mixing, with the barium carbonate and the carbon, a quantity of bibarytic silicate so calculated as to produce a mixture which is infusible at the temperature of formation of the barium cyanide.

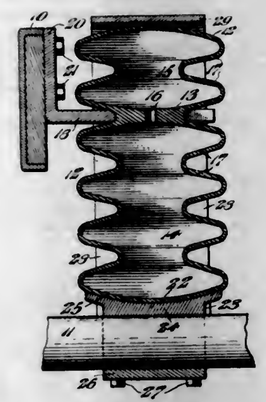
1,501,841. METHOD OF TAKING FINGERPRINTS. AUBREY J. DRUMMOND, New York, N. Y., assignor to Kuhne Identification Systems, Inc., a Corporation of New York. Filed Feb. 24, 1922. Serial No. 539,028. 4 Claims. (Cl. 41—41.)

2. The method of taking impressions of the character described consisting in first preparing a surface with material adapted to adhere to the part to be impressed, then impressing said part thereupon, thereafter impressing said part upon a receiving surface, and thereafter treating said receiving surface to chemically establish to greater degree the impression thereon.



1,501,842. CAMERA FOR PHOTOGRAPHING QUICKLY-MOVING OBJECTS. FRANZ DUDA, Vienna, Austria. Filed Apr. 2, 1923. Serial No. 629,478. 3 Claims. (Cl. 88—16.6.)

1. In a camera of the character described, the combination with a horizontal row of lenses, a rotatable drum-like shutter arranged behind the lenses and having its axis parallel to and in the same horizontal plane of the lenses, the shutter having for each lens a large opening and a relatively narrow slot diametrically opposite the opening, the openings and also the slots being arranged in spiral relation, substantially as and for the purposes set forth.

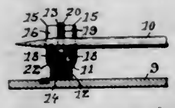


1,501,843. WINDOW-SHADE BRACKET. CECIL M. DURNELL and ROBERT WELSH, Utica, Ky. Filed June 7, 1922. Serial No. 566,536. 2 Claims. (Cl. 156—23.)

1. Brackets for window shades, comprising a pair of carriers and a pair of reversible sliding members thereon; a tensioning element tending to draw said carriers together, ledges on said carriers adapted to engage the sides of a window frame, arms on said members adapted to engage the ends of a shade roller, top and bottom flanges on said members adapted to engage the edges of said carriers whether in normal or reversed positions, ratchet teeth on the upper edges of said carriers and opposing claws integral with said flanges adapted to

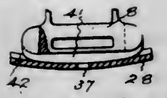
engage with said teeth to retain the members in any of the said positions; the perpendicular distance between a pair of said opposing claws being slightly greater than the corresponding distance from the top of the teeth to the bottom edge of the carrier.

1,501,844. SHOCK ABSORBER. CLEMENT E. ECKRODE, New Brunswick, THOMAS L. ACKEN, Newark, and ALFRED WEILAND, East Orange, N. J., assignors to Pneumatic Appliances Corporation, New Brunswick, N. J., a Corporation of New Jersey. Filed Nov. 29, 1922. Serial No. 603,941. 5 Claims. (Cl. 267—31.)



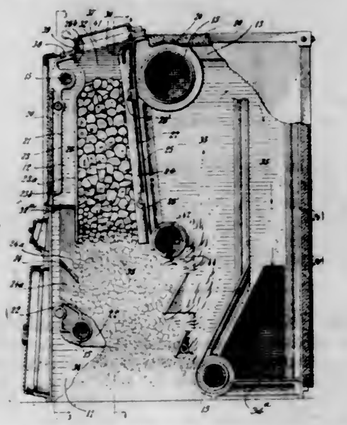
1. A shock absorber comprising an upper chamber and a lower chamber, a partition separating said chambers, said partition having a relatively small opening therethrough, and said chambers having a sealed wall of flexible material, and air under a predetermined compression contained within said chambers.

1,501,845. SAFETY CATCH FOR BROOCHES AND THE LIKE. FRANK EUGENE FARNHAM, Providence, R. I., assignor to The Jewelers Supply Company, Incorporated, Providence, R. I., a Corporation of Maine. Filed Oct. 3, 1923. Serial No. 666,386. 2 Claims. (Cl. 24—157.)



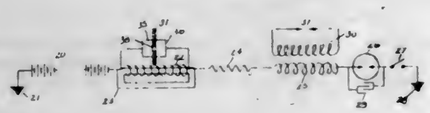
1. A safety-catch for brooches and the like, comprising a keeper having a base, spaced U shaped arms extending from the base, each having a pin tongue open-

ing and an oppositely disposed pintle bearing, a sickle shaped locking member intermediate the U shaped arms, the blade of the sickle forming the locking part of the locking member and the handle of the sickle forming the operating lever of the locking member and a pintle on one side of the locking member in a pintle bear-



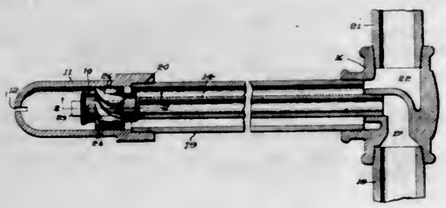
ing, whereby the locking member is pivotly secured to the keeper and either a right hand or a left hand operated safety-catch may be constructed from the keeper and locking member.

1,501,846. BRAIDING-MACHINE YARN CARRIER. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The American Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 12, 1922. Serial No. 594,012. 6 Claims. (Cl. 96—7.)



2. In a braiding machine of the type provided with a drum having an annular groove formed in its inner surface to open inwardly and having vertical slots formed in its walls in intersecting relation with said groove to provide passages for the outer yarns, and constructed to support inner yarn carriers adjacent their inner and outer ends respectively to operate in a horizontal plane; inner yarn carriers for supporting yarn masses with their axes extending in a horizontal direction radially of the drum, and a shoe projecting from the outer end of each of said carriers and formed as a flat plate extending from its carriers in a horizontal plane containing the longitudinal axis of the yarn mass to enter the groove by movement radially of the drum and constructed to span the vertical slots and slide smoothly over them as the carriers are forced outwardly by centrifugal force while traveling in their circular path.

1,501,847. BOILER. FRANK B. HOWELL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 31, 1920. Serial No. 434,261. 13 Claims. (Cl. 110—29.)

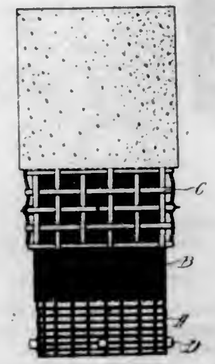


13. A boiler comprising a combustion chamber, a fuel receptacle positioned above and communicating therewith, a flue extending from said combustion chamber, a member forming a conduit between said flue and said fuel receptacle; said member having its lower end open and communicating with said combustion chamber, and its upper end closed and provided with inlet openings communicating with the upper end of said fuel receptacle, and an air conduit arranged adajcent to the front wall of said fuel receptacle having an intake opening at its lower end, and an outlet at its upper end for supplying preheated air to the intake end of the member forming the conduit intermediate the fuel receptacle and flue aforesaid, substantially as specied.

1,501,848. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 26, 1919. Serial No. 285,270. 10 Claims. (Cl. 123—148.)

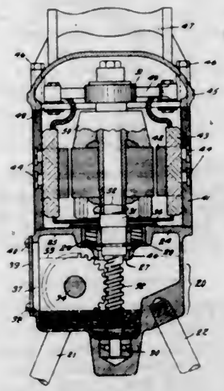
1. In an ignition system, the combination with an ignition coil having a relatively high transformation ratio; a timer; a current source of relatively high voltage; and electrical means for suppressing ignition at the closing of the timer contacts.

1,501,849. OIL BURNER. FRANK H. JOHNSON, Boston, Mass., assignor to Petroleum Heat and Power Company, Boston, Mass., a Corporation of Delaware. Filed May 29, 1923. Serial No. 642,198. 8 Claims. (Cl. 158—75.)



2. A burner comprising, in combination, a casing forming a burner tip having an orifice through which the combustible products are discharged, a mixer head for delivering oil and steam into the casing, vanes provided about the head and constructed to form steam passages between them which passages decrease in size in the direction they extend and are curved to present a substantially axially extending entrance portion and a substantially tangentially extending discharge portion, and means for delivering oil into the path of the steam issuing from said passages.

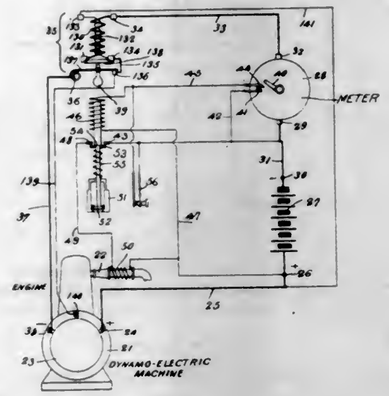
1,501,850. COMBINED FORM AND REENFORCEMENT FOR CEMENT. HUGO JACOB KARSTENS, Wheaton, and HARRY HUGH KARSTENS, Chicago, Ill. Filed Dec. 31, 1921. Serial No. 526,282. 3 Claims. (Cl. 72—76.)



1. A structure consisting of a cementitious body, a reenforcing mesh embedded within the body and of relatively heavy gauge to afford reenforcement to the body,

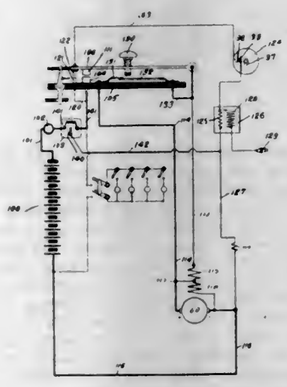
a metallic supporting mesh of relatively light gauge constituting a facing for the body, and a fabric covering of

relatively close mesh bearing against the supporting mesh and interposed between the supporting mesh and the body, substantially as described.



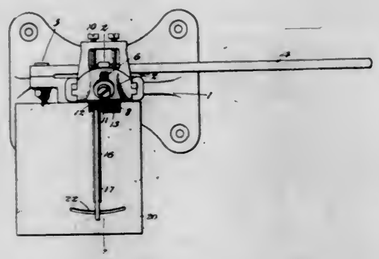
1,501,851. POWER DEVICE. LESTER S. KEILHOLTZ, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 18, 1919. Serial No. 290,986. 19 Claims. (Cl. 64—56.)

2. In a power device, the combination with a prime mover including a driving shaft; of a gear housing connected with the prime mover and provided with bearing means supporting the driving shaft, said gear housing being adapted to contain a quantity of lubricant and having an opening the lower edge of which is adapted to prevent filling the housing above a certain height; gearing supported for rotation within the housing and arranged to supply lubricant to said bearing means, and a boss projecting from the main surface of the enclosing wall to prevent the escape of the predetermined quantity of the lubricant when the power device is overturned.



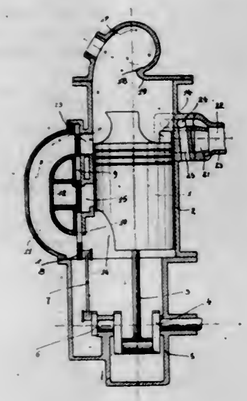
1,501,852. ENGINE-STARTING SYSTEM. CHARLES F. KETTERING, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 2, 1918. Serial No. 260,777. 6 Claims. (Cl. 290—30.)

3. In a starting system, the combination with an internal-combustion engine and a starting device therefor; of a fuel vaporizer; a current source; an actuator having an electromagnet and a movable member for rendering the fuel vaporizer operative during the first part of its movement, and then for rendering the starter operative



during a predetermined later part of its movement, said actuator having dash-pot provisions to retard the movement of said movable member; and means for connecting the magnet with the current source.

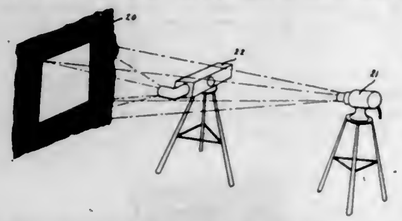
1,501,853. SYSTEM OF ELECTRICAL GENERATION. CHARLES F. KETTERING and WILLIAM A. CHRYST, Dayton, Ohio, assignors, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Original application filed Oct. 27, 1915, Serial No. 58,207. Divided and this application filed Nov. 8, 1919. Serial No. 336,589. 12 Claims. (Cl. 29—35.)



11. In an electric generating system, the combination with an engine; of an ignition circuit therefor; a dynamo-electric machine connected to said engine; a storage battery; a charging circuit connecting said dynamo-electric machine and said battery; a switch in said ignition circuit; and mechanical switch controlling means connected with said switch, said switch controlling means being driven from the engine crank shaft and operable automatically to open said switch.

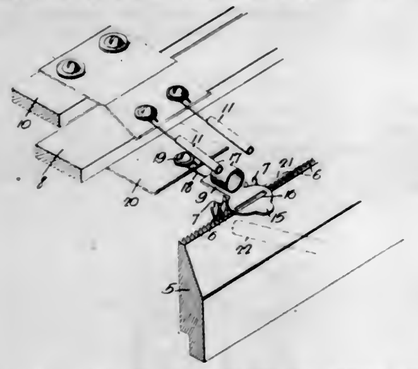
1,501,854. MITER TOOL. JOSEPH KLOHE, New York, N. Y. Filed Feb. 16, 1922. Serial No. 537,127. 7 Claims. (Cl. 90—43.)

1. In a cutting machine of the class described, a reciprocating head and V-shaped cutter therein, and a gauge extending in the direction of the open end of said V-shaped cutter.



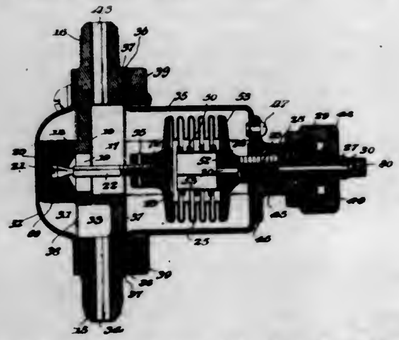
1,501,855. INTERNAL-COMBUSTION ENGINE. FERNAND LAGUESSE, Herstal, Belgium. Filed Apr. 4, 1922. Serial No. 549,555. 1 Claim. (Cl. 123—73.)

A two cycle engine comprising inlet and exhaust ports positioned at the same level, a conduit connecting the cylinder inlet port and the engine crank casing, a crank casing inlet port, a piston and a single slide valve, said slide valve being provided with two ports corresponding to the cylinder and casing inlet ports, said last two ports being controlled by the piston and slide valve; a crank offset from the engine crank by approximately 90° for operating the valve, whereby, on the descent of the piston, the cylinder inlet port is first closed by the valve for a time, then opened by the valve, the casing inlet port being closed by the valve during the descent of the piston, and on the upstroke of the piston, the piston controls the cylinder and the casing inlet ports.



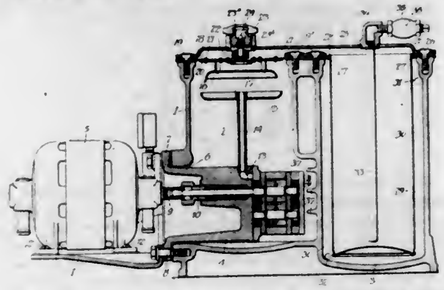
1,501,856. METHOD FOR DETERMINING THE EFFICIENCY OF LAUNDRY MACHINES. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 6, 1923. Serial No. 655,915. 7 Claims. (Cl. 88—14.)

1. The method of testing the cleansing ability of a laundry machine which includes soiling a sample of cloth, and in taking photometric measurements of the light reflecting ability of the sample before and after washing in the laundry machine, the standard of comparison being



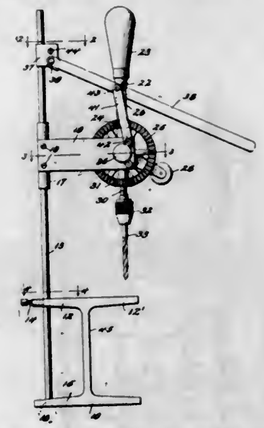
the light reflected by an unsoiled sample of preferably the same piece of cloth representing one hundred per cent cleanliness.

1,501,857. BRAID-KNITTING MACHINE. JOHN A. LIST, Philadelphia, Pa., assignor to Goodman Bros. & Hinlein, Philadelphia, Pa., a Firm. Filed June 20, 1923. Serial No. 646,552. 5 Claims. (Cl. 66—33.)



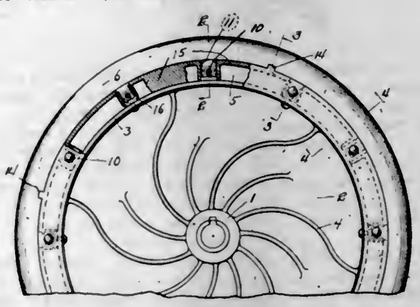
1. The combination in a machine for forming looped braid, of needles; and a guide having a flat guiding portion for a ribbon and having a contracted portion less in width than the flat guiding portion, said contracted portion being on a line with the needles.

1,501,858. EXPANSION VALVE FOR REFRIGERATING MACHINES AND THE LIKE. CHARLES L. McCUEN, Evanston, Ill., assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 1, 1919. Serial No. 335,032. 16 Claims. (Cl. 59—23.)



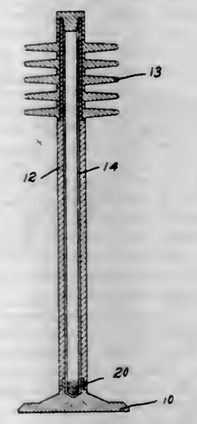
1. In a refrigerating apparatus of the described character, the combination with a valve chamber provided with passages adapted to have operative connection with the refrigerant circulatory system, a wall dividing the said chamber into two compartments, each of which is in communication with one of the said passages, a valve seat adjacent an opening in the said wall, a valve cooperating with said valve seat, a collapsible chamber secured in one of the compartments of the said valve chamber, there being a passageway extending from the interior of said collapsible chamber to the atmosphere, means for closing said passageway, and a connection between said collapsible chamber and said valve for controlling the latter.

1,501,859. REFRIGERATING APPARATUS. CHARLES L. McCUEN, Chicago, Ill., assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 5, 1920. Serial No. 401,426. 13 Claims. (Cl. 62—116.)



9. In a refrigerating apparatus of the class described, the combination of a casing having therein a pump chamber and a condenser chamber arranged along one side of the pump chamber separated therefrom by a common wall, a pump in the pump chamber spaced from said common wall and submerged in a fluid, and means for circulating a cooling medium in the condenser chamber whereby heat is abstracted through the common wall to cool the pump chamber.

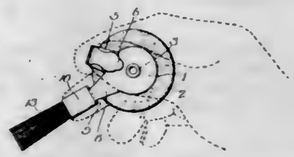
1,501,860. BENCH BLOCK AND DRILL HOLDER. JAMES B. MARQUIS, New York, N. Y. Filed June 6, 1923. Serial No. 643,816. 4 Claims. (Cl. 77—7.)



1. A drill frame comprising in combination a vertical rod, a base of such size as to be easily grasped and moved by the hand of the user having the shape in cross section of an H beam and having corresponding vertical holes in its upper and lower horizontal flanges near an edge of such size as to receive and fit the lower end of said rod serving as a support for the rod and for the article to be drilled, a sleeve surrounding said rod and adapted to slide longitudinally thereof, a laterally projecting member rigidly secured to said sleeve at one end and adapted to be secured at its outer end to a rigid part of a drill, a hand lever pivotally connected at one end to said rod above said sleeve for turning in a vertical plane and a link pivotally connected at one end to said laterally extending member at its other end to said lever between its ends.

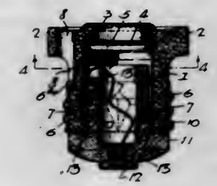
1,501,861. RAILROAD CUSHION WHEEL. FRANCIS MEAD, Chicago, Ill., and CHARLES O. GUERNSEY, Wabash, Ind. Filed July 5, 1922. Serial No. 573,015. 15 Claims. (Cl. 295—11.)

4. In a cushioned wheel, cushions disposed in two annular formations between two rims one of which has a web spacing the two cushion formations while the other has an integral flange engaging the laterally outer face of one cushion formation, a second flange engaging the laterally outer face of the other cushion formation, cushion engaging driving dogs alternately carried by the two rims, the driving dogs carried by the flange-equipped rim being disposed for rigidly spacing the two flanges, and bolts extending through the last named driving dogs and connecting the two flanges.



1,501,862. COOLING DEVICE FOR VALVES AND THE LIKE. THOMAS MIDGLEY, Jr., Dayton, Ohio, assignor, by mesne assignments, to The Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Original application filed Jan. 10, 1918, Serial No. 211,224. Divided and this application filed Oct. 2, 1918. Serial No. 256,530. 14 Claims. (Cl. 204—1.)

1. The process of electro-plating an amalgam coating upon the interior of a metallic hollow body consisting in applying electric current to an electrolytic cell of

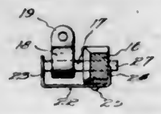


which the hollow body forms the cathode, the anode comprises one of the metals to be deposited, and the electrolyte comprises a salt of mercury and a salt of iron.

1,501,863. BRUSH AND HOLDER ATTACHMENT FOR ERASERS. JENS P. NIELSEN, Chicago, Ill. Filed Sept. 26, 1921. Serial No. 503,223. 4 Claims. (Cl. 120—36.)

1. An eraser and brush combination, comprising a disk eraser, a pair of arms extending substantially radially of the eraser and at an acute angle to each other, one of the arms being equipped with a hook adapted to serve as a supporting hook for the said combination and also disposed for overhanging the thumb tip of a hand grasping the eraser, a brush socket carried by the other arm and disposed for engagement by a finger-tip of the same hand, and a brush mounted in the socket.

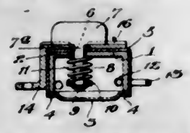
1,501,864. FUSE PLUG. HENRY T. PAISTE, Philadelphia, Pa., assignor to H. T. Paiste Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 15, 1921. Serial No. 484,902. 1 Claim. (Cl. 200—130.)



The combination of a hollow fuse plug body having a flange at one end and formed with a plurality of channels extending from its opposite end in its outside surface to said flange, said channels being extended inwardly in said second end of the body to communicate with the hollow interior thereof; a threaded terminal shell mounted on the body extended over said channeled end thereof and into the cavity of the body; with a removable capsule loosely fitting into the second end of the body and having a central contact and a relatively fusible element making electrical connection with the shell and with said contact.

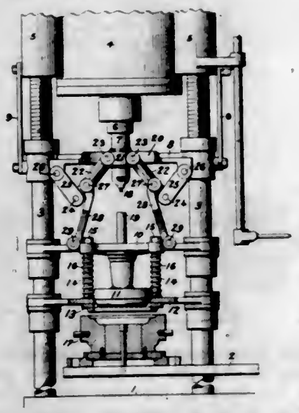
1,501,865. PROCESS OF INCREASING THE FINENESS OF GROUND CARBONATE-CONTAINING MINERALS. OTTO REITMAIR, Lang Enzersdorf, near Vienna, Austria. Filed Oct. 30, 1923. Serial No. 671,794. 5 Claims. (Cl. 252—1.)

1. A process of increasing the degree of fineness of ground carbonate containing minerals, which comprises thoroughly mixing the ground mineral containing at least 3% of combined carbonic acid, with a diluted mineral acid in such proportions that essentially only the carbonates are decomposed.



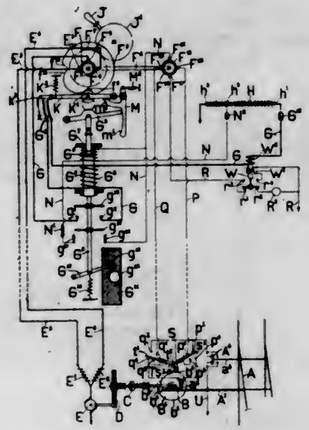
1,501,866. WEIGHING SCALE. EDGAR C. ROWE and ADOLPH MOHR, Chicago, Ill., assignors to Mason, Davis & Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 29, 1921. Serial No. 504,146. Divided and this application filed Mar. 18, 1922. Serial No. 544,757. 2 Claims. (Cl. 74—104.)

1. In a weighing scale the combination of a beam, an inverted knife edge extending through said beam and projecting therefrom at both sides, a loop member through which said knife edge extends, and a U-shaped clip passing beneath and secured to the beam at a point beneath the knife edge, one end of said clip overlying the end of the knife edge immediately beyond the position of



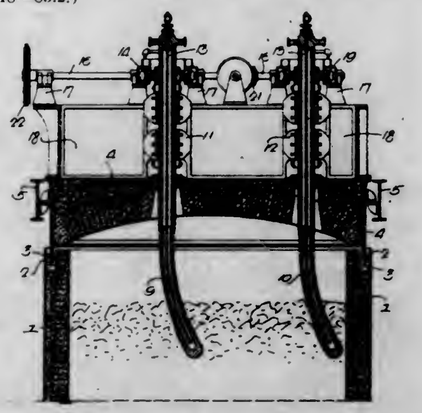
the loop member to retain the loop member in position on the knife edge and the other end of said clip being in engagement with the knife edge adjacent to the opposite face of the beam, substantially as described.

1,501,867. BRACELET CATCH. LOUIS E. SADLER, Attleboro, Mass., assignor to The F. H. Sadler Company, Attleboro, Mass. Filed June 21, 1923. Serial No. 646,783. 6 Claims. (Cl. 24—221.)



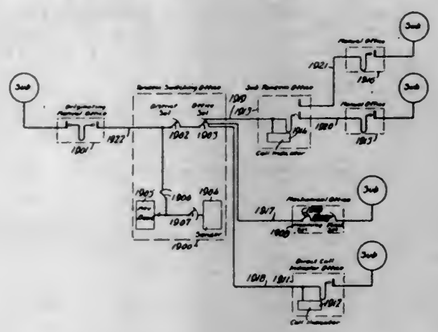
1. In a bracket catch, a housing including an inner inverted U-shaped member having an opening in its top, a bottom plate engaged with the bottom edges of said member, an outer box-like member having a top formed with a transverse groove and with an opening in register with said opening of the U-shaped member and having an open bottom, the edges of which are inturned to engage and support said bottom plate, a finger engaging member formed to engage in said groove and having a shank extending through said registering openings and having a coil spring thereon to tension the member, means to connect one end of a bracelet to the housing, and a clip formed for connection to the opposite end of the bracelet and having a slot through which said finger engaging member is movable and registrable with said first named groove and having a groove at right angles to the slot to receive said finger engaging member to hold the latter onto the housing, the clip having ears at its sides engaging the housing sides to prevent lateral movement of the clip.

1,501,868. GLASSWORKING APPARATUS. JESSE M. SAID and DAVID E. GRAY, Corning, N. Y., assignors to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Apr. 10, 1922. Serial No. 551,196. 12 Claims. (Cl. 49—38.)



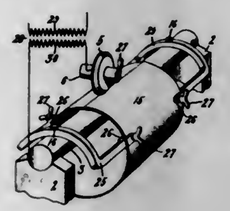
1. In a machine for pressing articles of glass, the combination of vertical standards having slidably mounted thereon a plunger cross head, and levers for actuating said plunger cross head the levers both having a floating fulcrum and a floating point of resistance separated from each other.

1,501,869. ELECTRICAL TRANSLATING DEVICE. LUDWIG SCHÖN and FELIX TOBIEN, Essen, Germany, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 4, 1922. Serial No. 541,071. 23 Claims. (Cl. 246—242.)



1. In combination with an electrical translating device comprising a reversible motor, a setting member for said translating device, a reversing switch in positive connection with said setting member, an overload switch connected in series with the armature of said reversible motor comprising an overload coil, and means operated by said setting member for first short circuiting said coil prior to connecting said overload switch to said reversing switch and said motor and then removing said short-circuit from said coil after said overload switch has been connected to said reversing switch and said motor.

1,501,870. GAS PRODUCER. CHARLES A. SCHRANZ, Philadelphia, Pa., assignor to Walter Wood, trading as R. D. Wood and Company, Philadelphia, Pa. Filed Sept. 26, 1922. Serial No. 590,689. 3 Claims. (Cl. 48—85.2.)

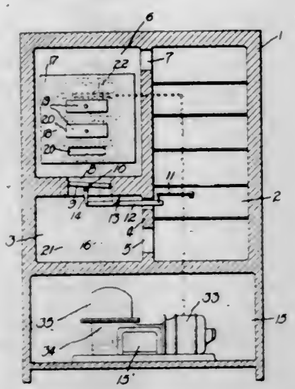


1. The combination in a gas producer, of a body portion; a top section; two stirrer bars extending into the producer from the top section, one stirrer bar being located nearer the center of rotation than the other stirrer bar; and means for separately rotating the outer stirrer bar around its own axis at a greater speed than the inner stirrer bar.

1,501,871. TELEPHONE-EXCHANGE SYSTEM. FRANKLIN A. STEARN, Paterson, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 3, 1921. Serial No. 474,702. 20 Claims. (Cl. 179—27.)

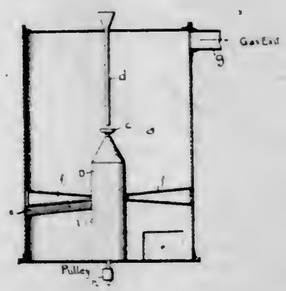
1. In a telephone system, connecting circuits, automatic selective switches having access to said circuits, a variably operable switch controlling register, means for setting said register in accordance with designations, means controlled in accordance with the setting of said register for operating said switches to select one of said connecting circuits, a second variably operable switch controlling rgeister, means effective when certain designations are registered on said first register for setting the second register in accordance with such designations, means controlled in accordance with the setting of one of said registers for operating said switches to select another of the connecting circuits, a selective mechanism, and means controlled over said last connecting circuit in accordance with the setting of the other of said registers for operating said selective mechanism.

1,501,872. APPARATUS FOR RESISTANCE LINE WELDING. HARRY W. TOBEY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 10, 1923. Serial No. 656,731. 5 Claims. (Cl. 219—17.)



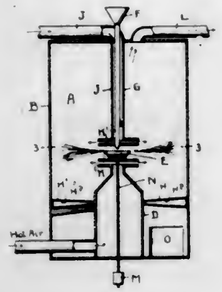
1. A welding apparatus of the type wherein means are provided for producing relative movement between the work and an electrode pressed against the work and forming a part of the circuit through which welding current is conducted across the joint between the parts to be welded together, characterized by the fact that means for holding the work are arranged to rock upon a support whereby the pressure required to bring the parts to be welded into good contact during the welding operation is reduced.

1,501,873. MANUFACTURE OF RED OXIDE OF IRON. DANIEL TYRER, Stockton-upon-Tees, England. Filed Mar. 27, 1922. Serial No. 547,204. 5 Claims. (Cl. 134—59.)



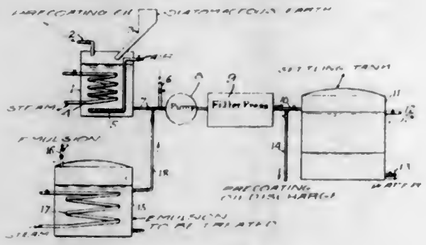
4. A method of manufacturing red oxide of iron, which consists in mixing ferrous chloride with hydrated ferric oxide in a very fine state of subdivision and passing a mixture of air and water vapour over this product at a temperature of 250° to 300° C.

1,501,874. APPARATUS FOR REFRIGERATION. FREDERIC A. WARDENBURG, Wilmington, Del., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 7, 1920. Serial No. 401,932. 7 Claims. (Cl. 62—4.)



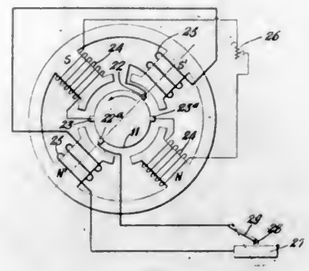
1. In a refrigerating device, a cooling compartment, a refrigerating chamber having openings communicating with said compartment for the circulation of air therethrough, a refrigerant system including a refrigerating unit within said chamber and a motor for supplying said unit with a refrigerant, a switch for said motor, means controlled by the temperature within said unit for operating said switch and means controlled by the temperature within said compartment for regulating the circulation of air through said chamber, substantially as shown and described.

1,501,875. DEVICE FOR DESICCATING LIQUID SUBSTANCES. FERDINAND WREESMANN, Munich, Germany. Filed Apr. 22, 1924. Serial No. 708,304. 1 Claim. (Cl. 159—4.)



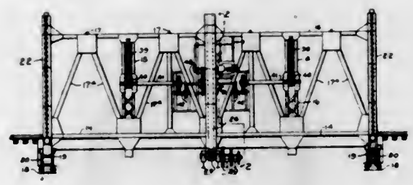
In an apparatus for desiccating solids contained in liquids by evaporation, the combination of a substantially cylindrical enclosed evaporating chamber, a vertical cylindrical column seated centrally on the bottom thereof and terminating a substantial distance below the top of said chamber, a centrifugal atomizer supported at the top of said column, and two oppositely and tangentially directed air conduits entering said chamber on opposite sides of said column the open end of each being upwardly inclined and extending laterally from said column to the wall of said chamber.

1,501,876. METHOD AND DEVICE FOR EVAPORATING THE VOLATILE CONSTITUENTS OF SOLUTIONS, EMULSIONS, AND SUSPENSIONS. FERDINAND WREESMANN, Munich, Germany. Filed Apr. 23, 1924. Serial No. 708,579. 3 Claims. (Cl. 159—4.)



1. A method of evaporating the volatile portions of liquid materials which comprises centrifugally atomizing the liquid in all horizontal directions from the center in an evaporating chamber, into an approximately horizontal layer of liquid particles, introducing a small portion of the desiccating agent in the form of a horizontal layer closely above and parallel to the layer of atomized liquid particles, leading the major portion of the desiccating agent in an upward direction against the layer of atomized liquid particles, and causing the same to penetrate said layer, and drawing off the used desiccating agent from above the said layer of liquid particles.

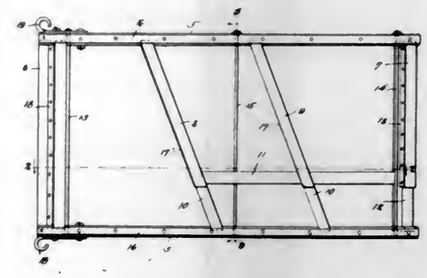
1,501,877. PROCESS FOR DE-EMULSIFYING LIQUIDS. CHARLES V. ZOUL, Santa Monica, Calif. Filed Dec. 11, 1922. Serial No. 606,288. 16 Claims. (Cl. 196—41.)



1. A process of de-emulsifying oily emulsions, consisting in wetting a filter material with a liquid miscible with the oily constituent of the emulsion to be treated; passing the emulsion through such wetted filtering material; and then separating the filtrate.

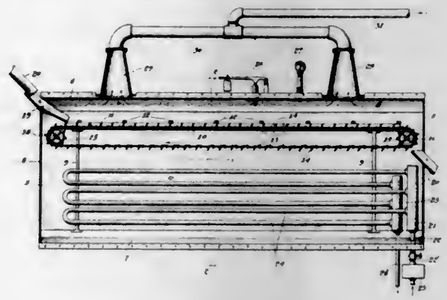
1,501,878. DYNAMO-ELECTRIC MACHINE. JAMES BURKE, Erie, Pa., assignor to Burke Electric Company, a Corporation of Pennsylvania. Filed June 15, 1922. Serial No. 568,421. 13 Claims. (Cl. 171—223.)

1. A dynamo-electric machine comprising main poles having shunt windings, main poles having series windings, said poles being angularly displaced from each other and each of the series wound poles being located between shunt wound poles, and each of the poles having a polarity the same as one adjacent pole and of opposite polarity to the other adjacent pole, and main brushes located to have the line of commutation opposite the series poles.



1,501,879. CAR UNLOADER. CHARLES L. KELLER, Chicago, Ill., assignor to The Scherzer Rolling Lift Bridge Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1920. Serial No. 352,290. Renewed May 23, 1924. 41 Claims. (Cl. 214—52.)

1. A car unloader comprising a rocking car supporting frame having a side truss and a track, top down holders carried by the frame for holding a car on said track, a side car supporting platform exterior to the truss and having extensions movable through the truss and provided with bearers for contact with the car side and normally in the plane of the inner side of the truss, and means for separately operating said platforms to move said bearers toward and from a car side.

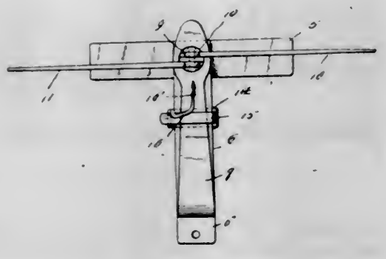


1,501,880. ROAD DRAG. PHILANDER B. DAY, Vinita, Okla. Filed Apr. 4, 1921. Serial No. 458,332. 1 Claim. (Cl. 37—148.)

In a road drag, side bars, runners on the lower surfaces of the side bars, rods having connection with the side bar for holding the side bars in spaced relation with each other, a forward drag blade and a rear drag blade, said blades being disposed at oblique angles with respect to the side bars, the rear drag blade having a cut out portion formed adjacent to one edge thereof, scraping blades arranged at oblique angles with respect to the side bars of the drag and operating in vertical planes, said scraping blades having cut out portions formed adjacent to one of the respective ends thereof and disposed in the lower edges thereof, the cut out portions in the scraping blades

being in alignment with the cut out portion of the rear drag blade, and means for holding the scraping blades in spaced relation with each other.

1,501,881. SHALE RETORT. PHILANDER L. BENNETT, Chicago, Ill. Filed Apr. 12, 1922. Serial No. 551,875. 3 Claims. (Cl. 196—19.)



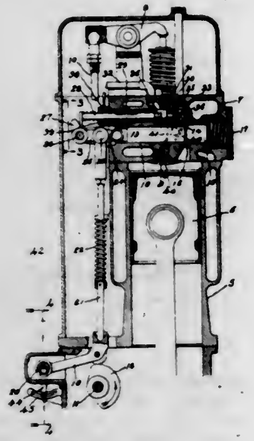
1. A shale retort comprising an elongated housing, a plurality of heating coils disposed therein, a distillation plate extending longitudinally within said housing and spaced slightly above said heating coils, a conveyor consisting of a chain-like netting movable longitudinally upon said plate in the interstices of which the shale is deposited, shovel blades mounted in said conveyor transverse to the plane of movement of the latter, said blades and netting coacting to move the shale upon said distillation plate, a plurality of scrapers arranged transversely of the length of said plate and positioned in a horizontal plane slightly above the upper edges of said shovels, and vapor outlets leading from said housing whereby the products of distillation are withdrawn.

1,501,882. ANIMAL TRAP. PETER J. NICHOLAS and WALTER JONES, Dover, Me. Filed May 29, 1923. Serial No. 642,357. 1 Claim. (Cl. 43—88.)

An animal trap, including a T-shaped base, a pair of jaws pivotally secured thereto and spaced therefrom, an expansion spring secured at one end to said base and at right angles to the jaws at the pivoted ends thereof, said spring having an opening adjacent its opposite ends for permitting the same to engage over said jaws, a plate secured to said base, a latch member hingedly mounted

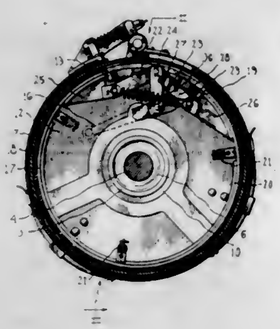
upon one end of said plate and adapted for engaging over said spring when the same is in a contracted position, and a bait carrying member pivoted to the opposite ends of said plate having a rearwardly and upwardly extending portion terminating in a forwardly extending prong for receiving bait, and having a projection on the rear side of the upwardly extending portion for engaging and retaining said latch in position upon said spring, where-

by the spring will act equally on both of said jaws for moving them on their pivots by reason of its mounting perpendicular to the open position of the jaws, and will be released in a slight forward movement of the bait carrying member so that the plate will engage the rearwardly and upwardly extending portion for forcing said forwardly extending prong into the mouth of the animal to exert a temporary holding action of the animal in the trap during the closing of the jaw members.



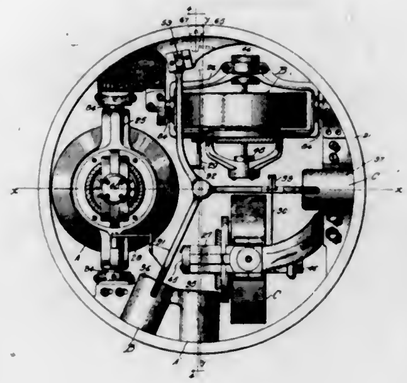
1,501,883. CHOCK BLOCK FOR AUTOMOBILES. THOMAS E. HOUGHTON, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 16, 1922. Serial No. 544,277. 5 Claims. (Cl. 188—32.)

1. A chock block for automobiles formed of a solid piece of wood having a channeled concave wheel engaging face and a rectangular recess formed in its base, and an attaching member secured in said recess and extending beyond the outlines of the base of said block at its rear end to provide attaching means for securing the block in position on its support.



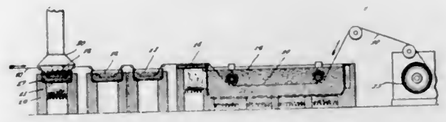
1,501,884. INTERNAL-COMBUSTION ENGINE. CHARLES R. SHORT, Dayton, Ohio, and ALEX TAUB, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 1, 1921. Serial No. 519,215. 18 Claims. (Cl. 123—33.)

1. Fuel supplying mechanism for internal combustion engines comprising a fuel supply pump operated by the engine and having a discharge port leading into the cylinder thereof; a fuel chamber communicating with said pump through a suitable port; means for supplying liquid fuel to said fuel chamber; an air supply passage leading



from the cylinder of the engine into said fuel chamber; and means for controlling the flow of air through said passage.

1,501,885. BRAKE MECHANISM FOR MOTOR VEHICLES. JOHN W. WHITE and LISLE H. GAYLORD, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 31, 1919. Serial No. 314,537. 6 Claims. (Cl. 188—78.)



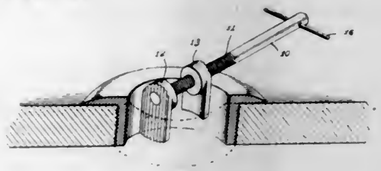
1. In a brake mechanism of the class described, a supporting member held in fixed position relative to a brake drum; an annular brake drum disposed substantially at right angles to the plane of said supporting member; a brake band located within said brake drum; an abutment carried by said supporting member and located adjacent said brake drum and between the two ends of said brake band, and the central portion of which abutment is cut away; two toggle levers pivotally connected together and the connected ends of which lie within the space provided by cutting away the central portion of said abutment as aforesaid, and the free outer ends of which are pivotally connected one with each of the ends of said brake band; and means for operating said toggle levers to thereby force said brake band against the inner surface of said brake drum.

1,501,886. GYROSCOPIC NAVIGATION INSTRUMENT. CHARLES G. ABBOT, Washington, D. C., assignor to General Electric Company, a Corporation of New York. Filed Oct. 27, 1921. Serial No. 510,803. 15 Claims. (Cl. 74—78.)

1. A gyroscopic navigation instrument comprising a buoyant medium, an element neutrally supported therein, a plurality of gyroscopes in said element arranged so that rotation of the element in any direction causes precession of one or more of said gyroscopes, and means controlled by said precession for producing a force acting on said element in opposition to the force causing the precession.

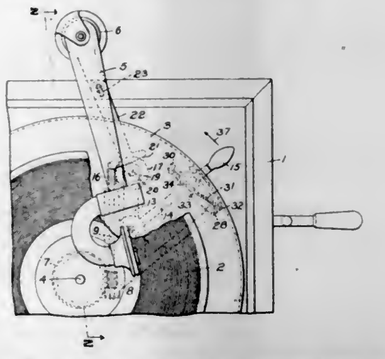
1,501,887. PROTECTED METAL AND PROCESS OF MAKING IT. FREDERICK M. CRAPO, Muncie, Ind., assignor to Indiana Steel & Wire Company, Muncie, Ind., a Corporation of Indiana. Filed Dec. 10, 1923. Serial No. 679,650. 27 Claims. (Cl. 91—70.2.)

8. The process of zinc-coating an iron or low-carbon steel article, which consists in immersing the article in a carbonizing bath of molten salts, and subsequently applying a zinc coating.



1,501,888. APPARATUS FOR HANDLING CONCRETE PIPES. COLEMAN MERIWETHER, Louisville, Ky., assignor to Peter C. Reilly, Indianapolis, Ind. Filed Mar. 28, 1921. Serial No. 456,298. 3 Claims. (Cl. 294—74.)

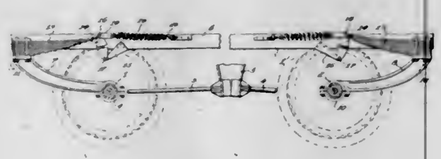
1. In an apparatus for handling concrete pipe sections, the combination of an articulated band arranged to extend part way around the pipe, and a chain the bight of which extends the remainder of the way around such pipe and movably co-operates with the ends of said band to tighten the latter, the ends of said chain extending upward to a lifting device, said band com-



prising a series of sections removably hinged together so that the length of a band may be varied as required.

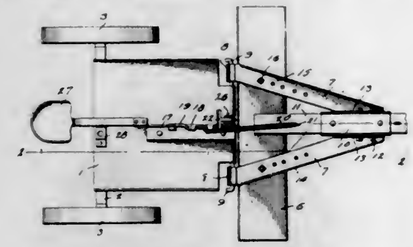
1,501,889. INTERNAL WRENCH. CLAUD J. MICK, Indianapolis, Ind., assignor to Leader Specialty Co., Inc., Indianapolis, Ind., a Corporation of Indiana. Filed June 14, 1923. Serial No. 645,252. 3 Claims. (Cl. 81—71.)

1. An internal pipe wrench, comprising a screw-threaded rod, a jaw mounted on the screw-threads of said rod, and a second jaw pivotally mounted on said rod, the exterior surfaces of said jaws being corrugated to grip internal surfaces.



1,501,890. AUTOMATIC STOPPING MECHANISM FOR PHONOGRAPHS. WILLIAM C. ROE, Pittsburgh, Pa. Filed July 17, 1919. Serial No. 311,446. 10 Claims. (Cl. 192—118.)

1. In a phonograph machine, the combination of a brake for stopping the phonograph, and trigger for operating said brake to stop the phonograph, said trigger



having two cocked positions, manual means to trip the said trigger from one position, and an automatic mechanism operating without manual interposition to trip the said trigger from the other position.

1,501,891. VEHICLE SPRING SUSPENSION. ERNEST SCHORR, Detroit, Mich.; Flora V. Kyte, administratrix of said Ernest Schorr, deceased, assignor to Schorr Motor Vehicle Company, a Corporation of Delaware. Filed Apr. 21, 1921. Serial No. 463,204. 4 Claims. (Cl. 267—28.)

1. A combination of a vehicle frame and axles therefor with pairs of inwardly extending distance rods pivotally connected to the axles and to the frame and in abutting relation, perch arms carried by the axles, inwardly extending spring arms each secured at the outer end to a perch arm and shackled at the other end to the chassis, and springs in tension operatively connecting the chassis frame and perch arms and effective to resist downward movement of the perch arms.

1,501,892. COMBINATION ROAD AND FARM DRAG. ISAAC W. DUNNING and HENRY CLAY SHIPLEY, Wapanucka, Okla.; said Shipley assignor of his interest to Lee McBee. Filed Mar. 1, 1922. Serial No. 540,206. 2 Claims. (Cl. 37—168.)

1. A combined road and farm drag comprising a flat plate forming a platform, a depending flange formed on the rear end of the platform, a supporting axle secured to the lower surface of the platform in engagement with the flange, supporting wheels mounted upon said axle, a hinge barrel formed on the forward end of the plate, a hinge pin mounted in said barrel, a pair of converging braces having their rear ends mounted upon said pivot pin, a draft appliance connected to the forward converged ends of the brace bars, the brace bars having openings formed therein, a transversely extending adjustable scraper blade, and bolts carried by the scraper blade adapted to be placed in any one of the openings in the brace bars.

Patents Nos. 1,501,893 to 1,502,648.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 324—No. 4. TUESDAY, JULY 22, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Attorneys—Disbarment.

(ORDER NO. 2,874.)

U. S. PATENT OFFICE, *Washington, July 5, 1924.*

Acting under the provisions of section 487 of the Revised Statutes of the United States, as amended February 18, 1922, Roscoe L. Peterson, of 205 Bankers Trust Building, Little Rock, Ark. (formerly of Brooklyn, N. Y.), whose registration number is 6128, has this day been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

U. S. PATENT OFFICE, *Washington, June 28, 1924.*

Samuel Block, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Landay Brothers, 311 Sixth Avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered September 28, 1909, No. 75,357, to Samuel Block, 220 Wabash Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to said Samuel Block at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Samuel Block, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, July 10, 1924.*

John H. Coyle, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the application of the Medico-Dental Specialty Co., 238 Broadway, San Diego, Calif., for registration of a trade-mark and trade-mark registered July 22, 1902, No. 38,645, to John H. Coyle, Thomasville, Ga. The Office having been unable to secure service upon said Coyle, notice is hereby given that unless said Coyle, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, June 28, 1924.*

Lucas Thompson & Co., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Ireland Bros. Inc., of 102 Franklin Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Lucas Thompson & Co., of 40 Lispenard Street, New York, N. Y., No. 22,068, dated November 29, 1892, and the notice of such proceeding sent by registered mail to the said Lucas Thompson & Co., at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Lucas Thompson & Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. Ill.) The Laas, Eling, and Sponenburg patent, No. 703,602, for rail stay, claims 1, 2, and 4 *Held* not infringed. *Barnett* v. *Anchor Co.*, 298 Fed. Rep. 23.

Renewal of Forfeited Cases.

A petition for the renewal of a forfeited application need not be signed by the inventor or assignee, but may be signed by the attorney.

A power of attorney in the original application authorizing an attorney to transact all business in the Patent Office in connection with the application construed to be of sufficient scope to include the signing of a petition for renewal and the subsequent prosecution of the application. (*Ex parte Agee*, 101 O. G., 1609.)

Amendments.

In order to insure the prompt delivery of amendments to the proper examining division, applicants are requested in their actions on applications to give the division number and the room number appearing on the last Office letter, as well as the date of such letter.

Condition of Applications Under Examination at Close of Business July 11, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 60,470; Trade-Mark Division, 1,768. Oldest new case, Nov. 5, 1923; oldest amended, Nov. 12, 1923. The dates given are 1923 except where * indicates 1924.) Divisions, Examiners, and subjects of inventions.	Oldest new application awaiting office action.	Oldest amended application awaiting office action.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

NATIONAL CIGAR STANDS CO. *v.* FRISHMUTH BRO. & CO., INC.

No. 1,624. Decided March 3, 1924.

1. TRADE-MARKS—SURNAMES AND CORPORATE TITLES—"NATIONALS."

While an individual or corporation has no right to the exclusive appropriation of a name to which others have a common right of use as a surname or corporate title, the later competitor must take reasonable precautions to prevent confusion.

2. SAME—SAME.

An individual, firm, corporation, or association may register his or its name as a trade-mark provided such registration be accomplished so as not to prevent a like use of the name by others similarly entitled.

3. SAME—SAME.

A mere name may not be registered unless so displayed as to give a distinctive impression to the eye of the ordinary observer that the significance of the mere name is outweighed.

Mr. A. W. Murray for National Cigar Stands Co.

Appellee not represented.

Before ROBB and VAN ORSDEL, Justices, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.:*

This appeal involves a decision of an Assistant Commissioner of Patents reversing the Examiner of Interferences and dismissing the opposition to the registration by Frishmuth Bro. & Co., Inc., of the word "Nationals" as a trade-mark for cigarettes.

In July of 1905 the National Cigar Stands Company was incorporated under the laws of the State of New Jersey. In March of 1914 it was succeded by the National Cigar Stands Company, incorporated under the laws of the State of Massachusetts. The earlier corporation actively engaged in the business of advertising and selling throughout the United States cigarettes, cigars, smoking tobacco, etc., this business being continued in the same way by the later corporation.

In December of 1920 Frishmuth Bro. & Co., Inc., of Philadelphia, Pa., applied for the registration of the word "Nationals" as a trade-mark for cigarettes, alleged in its application use of the mark since January 1, 1920, and submitted with its application the following drawing as representing the mark:

The Assistant Commissioner ruled that, under the decision of the Supreme Court of the United States in *Beckwith* v. *Com. of Patents*, 252 U. S. 538; 274 O. G. 613, no mark should be refused registration which consisted merely in the name of a corporation if written in some distinctive manner, and, finding that appellant's mark was so written, reversed the decision of the Examiner of Interferences and dismissed the opposition. The Assistant Commissioner's decision involved a complete misapprehension of the opinion of the Supreme Court upon which it was based, as well as a misapprehension of the Trade-Mark Act.

An ordinary surname may not be appropriated as a trade-mark by any one person as against others of the same name "who are using it for a legitimate purpose." *Brown Chemical Co.* v. *Meyer*, 139 U. S. 540; 55 O. G. 287. In *Columbia Mill Co.* v. *Alcorn*, 150 U. S. 460, 466; 65 O. G. 1916, the Court said:

> A person may put his own name upon his own goods, notwithstanding another person of the same name may, in that name, manufacture and sell the same or similar articles.

Each party, of course, must clearly indicate the origin and identity of his product. In *Howe Scale Co.* v. *Wyckoff Seamans, Etc.*, 198 U. S. 118, 138; 116 O. G. 209, the Court sustained the right of a corporation to the use of the surname "Remington," saying:

> In our opinion the Remingtons and Sholes made a reasonable and fair use of their names in adopting the name "Remington-Sholes" for their machine, and in giving that name to the corporation formed for its manufacture and sale.

In its opinion the Court quoted with approval the following:

> A body of associates who organize a corporation for manufacturing and selling a particular product are not lawfully entitled to employ as their corporate name in that business the name of one of their number when it appears that such name has been intentionally selected in order to compete with an established concern of the same name, engaged in similar business, * * *. This, of course, assumes not only that the name selected was calculated to deceive, but that the selection was made for that purpose.

In *Waterman Co.* v. *Modern Pen Co.*, 235 U. S. 88, 94; 210 O. G. 1065, it was ruled that when the use of his own name upon his goods by a later competitor leads the public to confuse them with the goods of an older and well established firm of that name, the law will require him to take reasonable precautions to prevent mistake; and that—

> there is no distinction between corporations and natural persons in the principle, which is to prevent a fraud.

[1] The purport of these decisions is that while an individual or corporation has no right to the exclusive appropriation of a name to which others have a common right of use as a surname or corporate title, the later competitor must take reasonable precautions to prevent confusion.

[2] It follows from what we have said that the provision of the Trade-Mark Act that no mark shall be registered which—

> consists merely in the name of an individual, firm, corporation, or association not written, printed, impressed or woven in some particular or distinctive manner,

was not intended to permit and does not permit an individual, firm, corporation or association of another name measurably to appropriate the goodwill of an established individual, firm, corporation, or association built up under his or its name, through adoption of that or a similar name as a trade-mark. *Rogers* v. *International Silver Co.*, 34 App. D. C. 410; *The Mansfield Tire & Rubber Co.* v. *Ford Motor Co.*, 44 App. D. C. 205; 222 O. G. 1056; *in re United Drug Co.*, 44 App. D. C. 209; 222 O. G. 729; and *Howard Co.* v. *Baldwin Co.*, 48 App. D. C. 437. The real purpose of this provision was to permit an individual, firm, corporation, or association to register his or its name as a trade-mark, provided such registration be so accomplished as not to prevent a like use of the name by others similarly entitled.

[3] In the present case the appellant, for more than 15 years prior to the adoption by appellee of the word "Nationals," had extensively advertised and sold "under the name National Cigar Stands Company," cigarettes, cigars, smoking tobacco and other tobacco products, and it is apparent that the word "National" as the predominating feature of appellant's name, necessarily had come to indicate to the purchasing public its particular product. When, therefore, Frishmuth Bro. & Co. adopted for its mark, on goods of the same description properties, the plural of this distinguishing word, the conclusion is irresistible that it did not do so in good faith but, on the contrary, for the purpose of appropriating the goodwill of appellant. Had this word been a distinctive feature of appellee's corporate name, which had been selected for no ulterior purpose, a different case would have been presented; but, even then, it could not have been said that the manner in which appellee printed its mark constituted compliance with the statute. We have said that the controlling principle underlying the requirement of the statute is that a mere name may not be registered unless so displayed as to give such a distinct impression to the eye of the ordinary observer that the significance of the mere name is outweighed. *In re Artesian Mfg. Co.*, 37 App. D. C. 113; 166 O. G. 988.

There is nothing in *Beckwith* v. *Com. of Patents*, 252 U. S. 538, inconsistent with what we have said. That case involved the registration of a composite mark, carrying certain descriptive matter, which had been disclaimed. The Supreme Court said:

> No question of patent right or of unfair competition, or that the design of the trade-mark is so simple as to be a mere device or contrivance to evade the law and secure the registration of non-registrable words, is involved. *Nairn Linoleum Co.* v. *Ringwalt Linoleum Works*, 46 App D. C. 64, 69; 237 O. G. 919.

It is clear, therefore, that the question now before us was not involved in the Beckwith case. The object of the Trade-Mark Act was to protect honest dealers, to prevent and not promote confusion. The conclusion reached by the Assistant Commissioner would completely frustrate that object. The decision therefor is reversed and the opposition sustained.

Reversed.

Court of Appeals of the District of Columbia.

IN RE THE IRVING DREW COMPANY.

No. 1,620. Decided April 7, 1924.

1. TRADE-MARKS—PURCHASE OF BUSINESS WITH RIGHT, TITLE, AND INTEREST OF THE MARK.
   Where the mark was first used in 1909 by the Utz & Dunn Company and the applicant began to use it on the same class of goods in 1912 and prior to the decision of the Commissioner purchased the business of the company and all its right, title, and interest in the mark, *Held* that the use of the mark by the applicant and its predecessors in interest dates back to 1909.
2. SAME—MEANING OF WORDS CONSTITUTING THE MARK.
   The meaning which should be given to the words constituting the mark is the impression and signification which they would convey to the public.
3. SAME—SAME—DESCRIPTIVE WORDS—"ARCH REST."
   If "Arch Rest" is a term which would be recognized by the public as the designation or name of some part of a boot, shoe, or slipper, it would be descriptive.
4. SAME—SAME—MARK NOT DESCRIPTIVE—MERELY SUGGESTIVE.
   If there is no part of a boot, shoe, or slipper which is known as the arch rest, and the public understands from "Arch Rest" that the *use* of footwear stamped with the mark will give rest, aid, or support to the arch of the foot and not rest or support to the arch of the boot, shoe, or slipper, it is not descriptive of the goods, but is merely suggestive.

Mr. J. R. Hodder for The Irving Drew Co.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before ROBB and VAN ORSDEL, Associate Justices, and SMITH, Judge of the U. S. Court of Customs Appeals.

SMITH, *J.*:

This is an appeal from a decision of the Commissioner of Patents, which held that the words "Arch Rest" were descriptive of the goods and affirmed the decision of the Examiner refusing to register the words as a trade-mark for boots, shoes and slippers.

It appears from the record that the mark "Arch Rest" was first used on boots and shoes in 1909, by the Utz & Dunn Company and that the applicant, the Irving Drew Company, began to use it in 1912.

[1] Prior to the decision of the Commissioner, the applicant purchased the business of the Utz & Dunn Company and all its right, title and interest in and to said mark. It may be considered as established therefore that the use of the mark by the applicant and its predecessors in interest dates back to 1909.

Shoe manufacturers other than the Utz & Dunn Company also made use of the mark and some of them sought to register it in the Patent Office. Upon being notified however of the claims of the Irving Drew Company such shoe manufacturers ceased to use the words "Arch Rest" and recognized the prior right thereto of the Irving Drew Company.

Whether "Arch Rest" the mark proposed for registration is descriptive of the boots, shoes and slippers to which it is applied by the applicant, is the question presented by this appeal.

[2, 3, 4] The meaning which should be given to the words constituting the mark, is the impression and signification which they would convey to the public. If "Arch Rest" is a term which would be recognized by the public as the designation or name of some part of a boot, shoe or slipper, it would be clearly descriptive. On the other hand, if there be no part of a boot, shoe or slipper which is known as the arch rest and the public understands from "Arch Rest" that the *use* of footwear stamped with that mark will give rest, aid or support to the arch of the foot and not rest or support to the arch of the boot, shoe or slipper, it is not descriptive of the goods but is merely suggestive.

In our opinion rest, ease or support to the arch of the foot was the meaning which the applicant intended to convey by the mark and was the meaning accorded to it by the public. That interpretation finds strong support in the fact that a boot, shoe or slipper which would give rest to the *arch of the foot*, would be far more likely to attract buyers than would a boot, shoe or slipper which had a rest or support for the *arch of the footwear*. Indeed, the Patent Office when it registered such marks as "Archbrace," "Repose Arch," "Arch Doctor," and "Arch Comfort," "Arch Preserver," "Arch Developer," "Arch Grip," and "Arch D-Fend-R," must have construed the word "arch" to mean the arch of the foot when used as part of trade-marks for footwear. Just why "arch" should be given a different meaning when used in conjunction with the word "rest" is not apparent.

"Rest" does mean, among other things, "a support * * * as a rest for a foot, a gun rest," and when "rest" is used in that sense and is the designation or part of the designation by which an article or part of an article is commonly known, it must be regarded as descriptive. Foot rests and head rests are well known designations of parts of dentists' and barbers' chairs and are therefore descriptive. There is however no part of boots, shoes or slippers which is commonly known as the arch rest and from that it follows that "arch rest" can not be considered as descriptive of such articles. The following cases cited in the brief for the Commissioner, are not in point: *In re Alvah Bushnell Co.* 49 App. D. C. 133; 270 O. G. 189; *Toledo Scale Co.*, 52 App. D. C. 103; 303 O. G., 399; *In re Kawneer Manufacturing Co.*, 48 App. D. C. 587; 262 O. G. 167; *Florence Manufacturing Co.* v. *Dowd & Co.*, 178 Fed. 73; *In re Swan & Finch Co.*, 49 App. D. C. 95; 266 O. G. 139; *Burt* v. *Young*, 98 N. E. 596. In the Bushnell case registration was refused for the words "Safe T Seal." The refusal was upheld by the court on the ground that the public would identify the goods to which the mark was attached as safety-seal envelopes or safe-seal envelopes, for which class of envelopes a patent had been issued to others than the applicant and which were commonly known as safety envelopes or safety-seal envelopes.

In the Toledo Scale Company case, registration was sought for the words "Honest Weight" as a trade-mark applicable to scales. The court interpreted the words "Honest Weight" to mean correct or accurate and therefore indicative of the quality of the article.

In the Kawneer Manufacturing Co. case the registration of the word "Easyset" as a trade-mark for window sashes was properly refused inasmuch as the word was designed to produce and did produce the impression that the parts of the window sashes were easily set in place or that the *glass* of the sash was so set that it would "ride" easily without danger of breakage. "Easyset" consequently announced to the public an inherent quality of the sashes and was therefore held not to be registrable.

In the Swan & Finch Co. case, the Patent Office refused to register the words "Slo Flo" for lubricating grease for high-speed machines, and that decision was upheld by the court on the ground that "Slo Flo" was descriptive of the viscosity of the grease and of its quality of flowing slowly.

In *Burt & Co.* v. *Coes & Young Co.*, a bill in equity was brought to restrain the defendant from using its trade-mark "Flexible Arch." That mark unmistakably referred not to the arch of the foot, but to the arch of the *shoe* and was therefore clearly descriptive. Registration of the mark does not seem to have been directly involved in that case.

More to the point and supporting applicant's contention is a decision of the U. S. Circuit Court of Appeals for the Ninth Circuit in which it was held that the terms "Arch Builder," and "Heel Leveler," were susceptible of exclusive appropriation as trade-marks inasmuch as they were used in a secondary sense. *Wonder Mfg. Co.* v. *Block et al.*, 249 Fed. 748, 749; 253 O. G. 955.

The description, the inherent qualities, the characteristics of boots, shoes and slippers is one thing and the effect which the use of the articles may produce on the wearer is another.

The decision appealed from is reversed.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 22, 1924.

[VOL. 324. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 131,099. (CLASS 39. CLOTHING.) AMERICAN WHOLESALE CORPORATION (BALTIMORE BARGAIN HOUSE), Baltimore and Cumberland, Md. Filed Apr. 14, 1920.

RADIUM

Particular description of goods.—Men's, Women's, and Children's Underwear Made of Netted and Textile Fabrics and in One, Two, and Three Piece Garments.
Claims use since January, 1913.

Ser. No. 141,439. (CLASS 12. CONSTRUCTION MATERIALS.) THE UPSON COMPANY, Lockport, N. Y. Filed Dec. 22, 1920.

The mark consists of a red center in the board or paper comprising laminations of dyed fiber viewable from the edge or on the walls of any cut made therethrough. It has been displayed in the form of two laminations of red separated by a thin lamination of white, so as to appear practically as a broad red line, the intervening white being not readily distinguishable.
Particular description of goods.—Artificial Lumber in the Nature of Heavy Paper or Fiber Board.
Claims use since Nov. 1, 1915.

Ser. No. 150,062. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JAMES A. DOYLE, New York, N. Y. Filed July 6, 1921.

Particular description of goods.—Woolen Goods in the Piece.
Claims use since Nov. 1, 1920.

Ser. No. 156,787. (CLASS 39. CLOTHING.) SARAH O. GRADY, Chicago, Ill. Filed Dec. 16, 1921.

WEAREVER

Particular description of goods.—Girdles and Corsets
Claims use since Nov. 18, 1921

Ser. No. 159,277. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PAULAIS CO., Los Angeles, Calif. Filed Feb. 13, 1922.

No claim is made to the representation of a fleur-de-lis, except in the combination and arrangement shown.

Particular description of goods.—Food Sirups, Candies; Nuts, Plain, Salted, and Candied; Oranges, Fresh, Candied, and Preserved; Cakes, Pastries, Mincemeat, Chewing Gum, Coffee, Tea, Cocoa, Chocolate, Drinking and Cooking.

Claims use since July, 1920.

Ser. No. 162,146. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SPAUDE & SON, Milwaukee, Wis. Filed Apr. 11, 1922.

SPAUDE'S
GOLDEN DREAM

Particular description of goods.—Candy.

Claims use since Jan. 15, 1922.

Ser. No. 162,224. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WEBER ELECTRIC COMPANY, Schenectady, N. Y. Filed Apr. 12, 1922.

ROYAL

Particular description of goods Incandescent-Electric-Lamp Sockets.

Claims use since June 15, 1921.

Claims use since Apr. 19, 1924.

Ser. No. 197,559. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) JOHN C. RAISLEY, New Haven, Conn. Filed May 24, 1924.

RADIAN

Particular description of goods.—Kitchen and Table Knives and Forks Made of Base Metal.
Claims use since June 18, 1923.

Ser. No. 197,561. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROACH TISDALE & CO., Minneapolis, Minn. Filed May 24, 1924.

Dear Kiss

Particular description of goods.—Chocolate Bars.
Claims use since Dec. 30, 1922.

Ser. No. 197,562. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SIDNEY SIMON, doing business as Moon Products Company, New York, N. Y. Filed May 24, 1924.

DIGEX

Particular description of goods.—Preparation Helpful in the Treatment of Indigestion.
Claims use since May 2, 1924.

Ser. No. 197,564. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SITROUX IMPORTING CO. INC., New York, N. Y. Filed May 24, 1924.

YOLANDA

The trade-mark consists of the word "Yolanda."
Particular description of goods.—Hair Nets.
Claims use since Mar. 6, 1924.

Ser. No. 197,568. (CLASS 2. RECEPTACLES.) UNION PAPER COMPANY, New York, N. Y. Filed May 24, 1924.

UNPACO

Particular description of goods.—Paper Cans.
Claims use since Apr. 29, 1924.

Ser. No. 197,581. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GEO. W. CASWELL CO., San Francisco, Calif. Filed May 26, 1924.

YELLOW & BLUE

Particular description of goods.—Coffee.
Claims use since 1907.

Ser. No. 197,582. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GEO. W. CASWELL CO., San Francisco, Calif. Filed May 26, 1924.

CASWELL'S

The picture shown in the drawing is fanciful.
Particular description of goods.—Coffee.
Claims use since 1907.

Ser. No. 197,587. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LEWIS R. DONELSON, Jr., doing business as The Donelson Company, Memphis, Tenn. Filed May 26, 1924.

BIG DIME

Particular description of goods.—Pancake Flour.
Claims use since Mar. 21, 1924.

Ser. No. 197,592. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) A. W. FIFE, Jacksonville, Fla. Filed May 26, 1924.

Fife's No. 26

Particular description of goods.—Preparation for Treatment of Eczema, Itch, and All Skin Eruptions.
Claims use since 1901.

Ser. No. 197,604. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JEANNE LANVIN, Paris, France. Filed May 26, 1924.

Particular description of goods.—Perfumes.
Claims use since Apr. 1, 1923.

Ser. No. 197,616. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE NORRIS MANUFACTURING CO., Columbus, Ohio. Filed May 26, 1924.

"MASTER"

Particular description of goods.—Coin-Operated Vending Machines.
Claims use since May 7, 1924.

Ser. No. 197,628. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE STEVENS LABORATORIES, Oakland, Calif. Filed May 26, 1924.

The picture shown in drawing is fanciful.
Particular description of goods.—Chemical Preparation for Use in the Bath in the Treatment of Rheumatism, Sciatica, Neuritis, Pleurisy, Lumbago, Malaria, Eczema, Neurasthenia, Blood, and Skin Eruptions.
Claims use since Feb. 12, 1924.

Ser. No. 197,629. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE STEVENS LABORATORIES, Oakland, Calif. Filed May 26, 1924.

VIVOCREME

Particular description of goods.—Healing Salve and Antipain Balm.
Claims use since Feb. 12, 1924.

Ser. No. 197,636. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE WASHBURN COMPANY, Worcester, Mass. Filed May 26, 1924.

NoNox

Particular description of goods.—Tire-Chain Adjusters.
Claims use since September, 1920.

Ser. No. 197,637. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE WASHBURN COMPANY, Worcester, Mass. Filed May 26, 1924.

LOXOL

Particular description of goods.—Lock Washers.
Claims use since May, 1923.

Ser. No. 197,638. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE WASHBURN COMPANY, Worcester, Mass. Filed May 26, 1924.

SHURLOX

Particular description of goods.—Lock Washers.
Claims use since May, 1920.

Ser. No. 197,641. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE WASHBURN COMPANY, Worcester, Mass. Filed May 26, 1924.

CHAMPION

Particular description of goods.—Tire-Chain Adjusters.
Claims use since June, 1923.

Ser. No. 197,656. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARBIDE & CARBON CHEMICALS CORPORATION, New York, N. Y. Filed May 27, 1924.

CELLO-SOLVE

Particular description of goods.—Solvents for Gums, Resins, Cellulose Esters, and the Like and for Extracting Essential Oils.
Claims use since May 8, 1924.

Ser. No. 197,657. (CLASS 38. PRINTS AND PUBLICATIONS.) THE COCA-COLA COMPANY, Atlanta, Ga. Filed May 27, 1924.

The Red Barrel

Particular description of goods.—Monthly Publications.
Claims use since Jan. 15, 1924.

Ser. No. 197,669. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) KUNST & SMALL CO., New York, N. Y. Filed May 27, 1924.

ALL WOOL & HAIR
WULAMO
CLOTH
BRITISH MANUFACTURE

No claim is made to the words "All Wool and Hair, British Manufacture," or the word "Cloth" apart from the mark shown in the drawing, without, however, waiving any common-law rights thereto.
Particular description of goods.—Wool, Wool Cloth, Worsted and Wool, and Haircloth Goods in the Piece.
Claims use since Dec. 1, 1923.

Ser. No. 197,690. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) STANDARD PLATINUM COMPANY, INC., New York, N. Y. Filed May 27, 1924.

ULTRA

Trade-mark consists of the word "Ultra."
Particular description of goods.—Metallic Alloy, Particularly an Alloy for the Production of White Gold.
Claims use since May 15, 1924.

Ser. No. 197,692. (CLASS 37. PAPER AND STATIONERY.) THE TISSUE COMPANY, Saugerties, N. Y. Filed May 27, 1924.

PRINCESS

Particular description of goods.—Crêpe Paper and Paper Napkins.
Claims use since May 2, 1921.

Ser. No. 197,734. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) FLEXIBLE STEEL LACING COMPANY, Chicago, Ill. Filed May 28, 1924.

15

Particular description of goods.—Flexible or Hinged Belt Fasteners.
Claims use since Feb. 27, 1911.

Ser. No. 197,735. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) FLEXIBLE STEEL LACING COMPANY, Chicago, Ill. Filed May 28, 1924.

20

Particular description of goods.—Flexible or Hinged Belt Fasteners.
Claims use since June 10, 1914.

Ser. No. 197,736. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) FLEXIBLE STEEL LACING COMPANY, Chicago, Ill. Filed May 28, 1924.

55

Particular description of goods.—Flexible or Hinged Belt Fasteners.
Claims use since Sept. 26, 1910.

Ser. No. 197,737. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) FLEXIBLE STEEL LACING COMPANY, Chicago, Ill. Filed May 28, 1924.

65

Particular description of goods.—Flexible or Hinged Belt Fasteners.
Claims use since Oct. 29, 1909.

Ser. No. 197,738. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) FLEXIBLE STEEL LACING COMPANY, Chicago, Ill. Filed May 28, 1924.

75

Particular description of goods.—Flexible or Hinged Belt Fasteners.
Claims use since July 26, 1912.

Ser. No. 197,740. (CLASS 38. PRINTS AND PUBLICATIONS.) FONTAINE FOX, New York, N. Y. Filed May 28, 1924.

TOONERVILLE FOLKS

Particular description of goods.—Series of Cartoons.
Claims use since May 4, 1924.

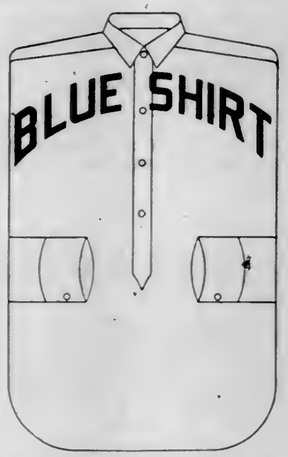
Ser. No. 197,744. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRANKLIN BAKER COMPANY, Hoboken, N. J. Filed May 28, 1924.

BANNER

Particular description of goods.—Prepared Coconut.
Claims use since Jan. 1, 1921.

Ser. No. 197,750. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRANKLIN BAKER COMPANY, Hoboken, N. J. Filed May 28, 1924.

SILVER NUGGET



Particular description of goods.—Prepared Coconut.
Claims use since Jan. 1, 1922.

Ser. No. 197,765. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MOUNTAIN CITY MILL CO., INC., Chattanooga, Tenn. Filed May 28, 1924.

BLUE SHIRT

Particular description of goods.—Plain and Self-Rising Flour.
Claims use since May 15, 1924.

Ser. No. 197,766. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MOUNTAIN CITY MILL CO., INC., Chattanooga, Tenn. Filed May 28, 1924.

Particular description of goods.—Plain and Self-Rising Flour.
Claims use since May 15, 1924.

Ser. No. 197,767. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) NESTOR JOHNSON MFG. CO., Chicago, Ill. Filed May 28, 1924.

"Swift as Wings"

Particular description of goods.—Ice Skates.
Claims use since Apr. 29, 1924.

Ser. No. 197,785. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SILICA GEL PRODUCTS CORPORATION, Baltimore, Md. Filed May 28, 1924.

SILOX

Particular description of goods.—Toilet Powder.
Claims use since May 9, 1924.

Ser. No. 197,797. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BIG E LABORATORIES, Denver, Colo. Filed May 29, 1924.

The pictures are fanciful.
Particular description of goods.—Hairdressing Compound.
Claims use since Dec. 27, 1923.

Ser. No. 197,803. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN CRAMPTON AND COMPANY, LIMITED, Manchester, England. Filed May 29, 1924.

LADYRIGHT

Particular description of goods.—Rice Products for Use as Food.
Claims use since June 8, 1923.

EATMOR POTATO CHIPS

No claim is made to the words "Potato Chips" apart from the mark shown.
Particular description of goods.—Potato Chips.
Claims use since Apr. 14, 1921.

Ser. No. 197,840. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Filed May 29, 1924.

FLUF

Particular description of goods.—Soda Ash (Sodium Compound).
Claims use since Feb. 21, 1924.

Ser. No. 197,857. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN P. ARDELEAN, Aurora, Ill. Filed May 31, 1924.

J.P. Ardelean.

Trade-mark consists of portrait and facsimile signature of applicant.
Particular description of goods.—Lung Balsam for Use in the Treatment of Coughs, Colds, and Influenza.
Claims use since May 16, 1924.

Ser. No. 197,893. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH MUSCOLINO, Brooklyn, N. Y. Filed May 31, 1924.

La Famosa

Particular description of goods.—Hair Tonic.
Claims use since May 1, 1924.

Ser. No. 197,896. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM MERLE NELSON, Modesto, Calif. Filed May 31, 1924.

DON PEDRO

Particular description of goods.—Fresh Citrous Fruits, Fresh Deciduous Fruits, Fresh Grapes, Melons, and Fresh Vegetables.
Claims use since Feb. 20, 1924.

Ser. No. 197,899. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) PACIFIC NOVELTY COMPANY, New York, N. Y. Filed May 31, 1924.

TRADEX

Particular description of goods.—Barrettes.
Claims use since May 2, 1924.

Ser. No. 197,911. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORGE S. SMYTH, doing business as Acaricide Laboratories, Chicago, Ill. Filed May 31, 1924.

Acaricide

Particular description of goods.—Medicine for Itching Scalp, Dandruff, Falling Hair, Eczema, and for the Promotion of Hair Growth.
Claims use since May 22, 1924.

Ser. No. 197,944. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANNIE B. KINKADE, Cleveland, Ohio. Filed June 2, 1924.

Particular description of goods.—Hair Grower, Shampoo Cream, and Hair Pressing Oil.
Claims use since about Apr. 1, 1924.

Ser. No. 197,946. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EUGENE R. LAMPARTER, Green Lane, Pa. Filed June 2, 1924.

Trade-mark is a facsimile signature of the late Dr. E. Lamparter, applicant's predecessor in business.
Particular description of goods.—Stomach Tonic.
Claims use since May 14, 1924.

Ser. No. 197,949. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ERNEST I. MITCHELL, doing business as The Nu-Del Company, Chicago, Ill. Filed June 2, 1924.

Nu-Del

Particular description of goods.—Cream Depilatory.
Claims use since May 22, 1924.

Ser. No. 197,950. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) WILLIAM R. MOORE DRY GOODS COMPANY, Memphis, Tenn. Filed June 2, 1924.

OUR HOME

Particular description of goods.—Brown and Bleached Sheetings, Sheets, and Pillowcases.
Claims use since 1912.

Ser. No. 197,953. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ORCHIDEW CORPORATION, New York, N. Y. Filed June 2, 1924.

ORCHIDEW

Particular description of goods.—Cleansing Skin Lotion.
Claims use since May 1, 1924.

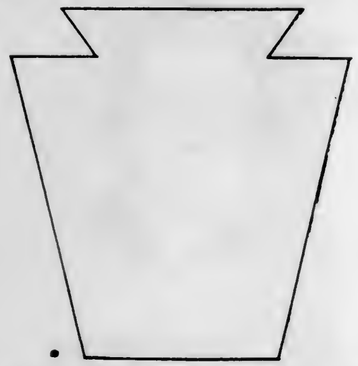
Ser. No. 197,965. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SORDS PHARMACY CO., doing business as McDonald & Co., Cleveland, Ohio. Filed June 2, 1924.

Vegeto

Particular description of goods.—Headache Powder, Liver Pills, Cold and Grippe Tablets.
Claims use since December, 1886.

Ser. No. 197,972. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VERITAS REMEDY CO., Clovis, N. Mex. Filed June 2, 1924.

Veritas



Particular description of goods.—Preparation for the Treatment of Acute and Chronic Catarrhal Affections of the Genito-Urinary System.

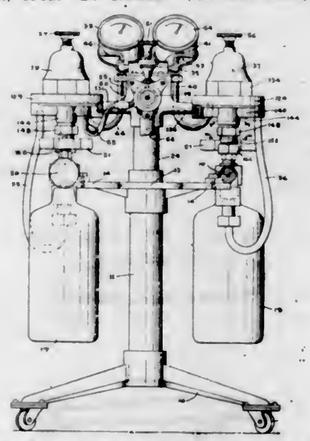
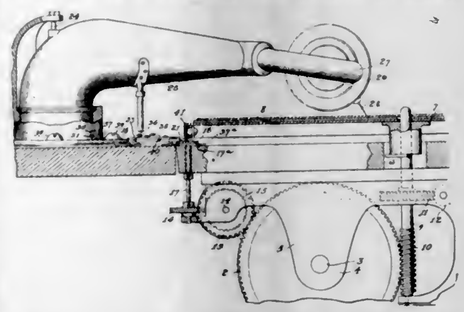
REISSUES



JULY 22, 1924.

15,873. ANÆSTHETIC APPARATUS. JAY A. HEIDBRINK, Minneapolis, Minn. Filed May 2, 1924. Serial No. 710,661. Original No. 1,309,686, dated July 15, 1919, Serial No. 662,066, filed Nov. 23, 1911. 11 Claims. (Cl. 128—203.)

1. An anæsthetic administering apparatus comprising means including delivery valves for producing a mixture of gases of a predetermined proportion, an expansible member for receiving the mixture as the same is delivered from the valves, and a system of solenoids controlled by movement of said expansible member for controlling the valves.

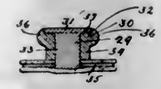


15,874. APPARATUS FOR DELIVERING A MIXTURE OF GASES. JAY A. HEIDBRINK, Minneapolis, Minn. Filed May 2, 1924. Serial No. 710,662. Original No. 1,265,910, dated May 14, 1918, Serial No. 722,455, filed Sept. 26, 1912. 20 Claims. (Cl. 128—203.)

1. A gas administering machine comprising a plurality of sources of fluid supply, a mixing chamber, means for causing each of said gases to be delivered into the mixing chamber at a definite rate of flow so as to produce a mixture of said gases of predetermined proportions, and means for simultaneously changing the rate of flow of each of said gases into the mixing chamber in the same proportional amount.

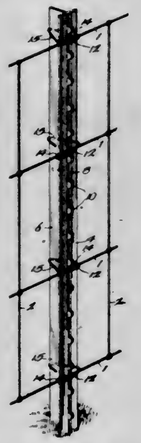
15,875. PHONOGRAPH. ALDEN L. HOWARD, Ann Arbor, Mich. Filed Nov. 4, 1921. Serial No. 512,923. Original No. 1,369,280, dated Feb. 22, 1921, Serial No. 375,686, filed Apr. 22, 1920. 8 Claims. (Cl. 192—118.)

1. In an automatic starting and stopping device for phonographs, the combination with a rotating disc and reproducing mechanism adapted to progress horizontally across substantially one half of the disc during its rotating period, of an automatically actuated arc adapted



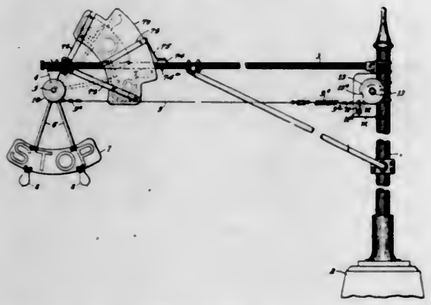
to frictionally contact the disc, operative connections between the reproducing mechanism and the arc for automatically starting and stopping the rotation of the disc.

15,876. OVERHEAD ELECTRICAL CONDUCTOR SYSTEM. HENRY B. P. WRENN and ALOYSIUS S. O'DONOGHUE, Cleveland, Ohio. Filed June 4, 1924. Serial No. 717,912. Original No. 1,459,174, dated June 19, 1923, Serial No. 600,458, filed Nov. 11, 1922. 7 Claims. (Cl. 191—41.)



1. An electrical system of the character set forth comprising a feeder wire, a plurality of contact wires positively and independently connected to said feeder wire to form a positive electrical connection therewith thereby to permit the transfer of electrical energy from such feeder wire to said contact wires without arcing or sparking, said contact wires being arranged in a series of freely suspended overlapping loops whereby a shearing action between said contact wires will be effected at substantially all points along said wires as a current collecting device moves therealong.

15,877. HOSE-SUPPORTER BUTTON. CARL J. HAZELTON, Worcester, Mass., assignor to American Narrow Fabric Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 2, 1923. Serial No. 649,175. Original No. 1,432,694, dated Oct. 17, 1922, Serial No. 543,061, filed Mar. 11, 1922. 10 Claims. (Cl. 24—245.)



8. In a hose supporter the combination of a collet provided with a shank and an elongated head, a base plate and a staple for securing the collet to the base plate, said staple being provided with an elongated head extending lengthwise of the elongated head of the collet.

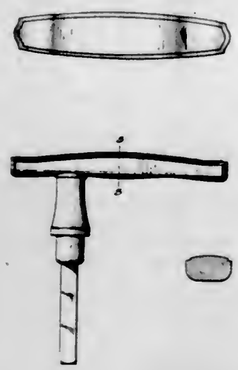
15,878. FENCE. JACOB STEFAN, Jr., Chicago Heights, Ill., assignor, by mesne assignments, to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Filed June 5, 1924. Serial No. 718,180. Original No. 1,452,766, dated Apr. 24, 1923, Serial No. 542,101, filed Mar. 8, 1922. 4 Claims. (Cl. 256—48.)

1. A fastener for the wires of fences in which there is a T bar fence post and a horizontal fence wire passing across its front face, the fastener having a hook at one end for engaging one of the front flanges of the post, a mid portion to extend across the front of the post and engage the wire and a third portion extending rearward in substantially the same plane as the book and of sufficient length to pass around the rear edge of the rear flange of the post for engaging it.

15,879. SIGNAL. FRANK T. VANATTA, Mill Valley, Calif., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1918. Serial No. 229,866. Original No. 1,255,959, dated Feb. 12, 1918, Serial No. 84,532, filed Mar. 15, 1916. 37 Claims. (Cl. 177—339.)

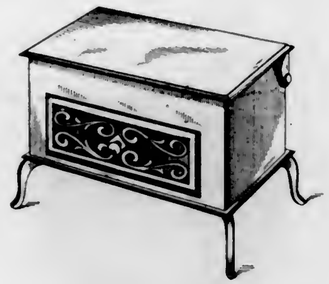
9. A railway crossing signal comprising a warning member mounted to oscillate, electromagnetic means for causing said member to swing to and fro continuously to give a danger indication, and electromagnetic means for holding said member in a position to indicate safety.

DESIGNS



JULY 22, 1924.

65,213. INDIVIDUAL FRYING PAN. SAMUEL COURTIER ABBEY, New York, N. Y., assignor of one-third to Edward Reilly and one-third to William J. Reynolds, both of New York, N. Y. Filed Mar. 6, 1924. Serial No. 8,861. Term of patent 3½ years.



The ornamental design for an individual frying pan, as shown.

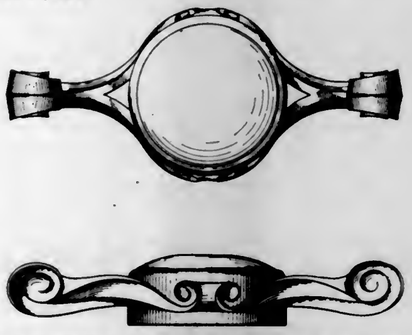
65,217. FINGER RING. DAVID BELAIS, New York, N. Y. Filed May 15, 1924. Serial No. 9,599. Term of patent 3½ years.

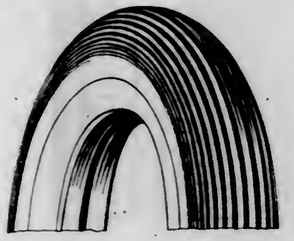


The ornamental design for a finger ring as shown.

65,218. AUTOMOBILE TIRE. WALTER PHILIP BRAENDER, Montclair, N. J. Filed Jan. 31, 1921. Serial No. 441,488. Term of patent 3½ years.

The ornamental design for an automobile tire, as shown.

65,219. AUTOMOBILE RADIATOR CAP. STANLEY G. BROOKS, Columbus, Ohio, assignor to The D. L. Auld Company, Columbus, Ohio, a Corporation of Ohio. Filed May 28, 1924. Serial No. 9,729. Term of patent 7 years.

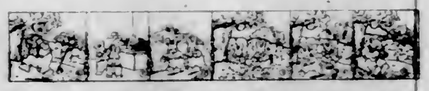


The ornamental design for an automobile radiator cap, as shown.

65,220. BADGE. IRVING L. BROWN, Chicago, Ill., assignor to American Homes Bureau, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1924. Serial No. 9,344. Term of patent 3½ years.

The ornamental design for a badge, as shown.

65,221. PNEUMATIC RUBBER TIRE. LZ ADAM BROWN, Alto, Mich. Filed June 5, 1924. Serial No. 9,802. Term of patent 14 years.



The ornamental design for a pneumatic rubber tire substantially as shown.

65,222. BOX OR SIMILAR ARTICLE OF MANUFACTURE. HARRISON CADY, Brooklyn, N. Y., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 5, 1922. Serial No. 1,559. Term of patent 7 years.

The ornamental design for a box or similar article of manufacture substantially as shown and described.

65,223. MUSICAL INSTRUMENT. SAMUEL CONGER, Indianapolis, Ind. Filed Feb. 7, 1924. Serial No. 8,571. Term of patent 14 years.

The ornamental design for a musical instrument, as shown.

65,224. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,141. Term of patent 7 years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,225. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,142. Term of patent 3½ years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,226. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,143. Term of patent 7 years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,227. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,144. Term of patent 7 years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

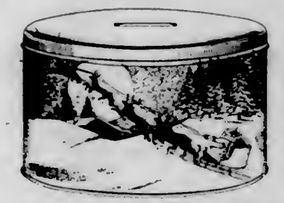
65,228. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,145. Term of patent 7 years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,229. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,146. Term of patent 7 years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,230. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,147. Term of patent 7 years.



The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,231. BOX OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,148. Term of patent 7 years.

The ornamental design for a box or similar article of manufacture substantially as shown and described.

65,232. BOX OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 515,149. Term of patent 7 years.

The ornamental design for a box or similar article of manufacture substantially as shown and described.

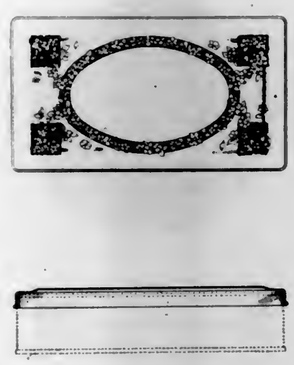
65,233. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,874. Term of patent 3½ years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,234. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,875. Term of patent 14 years.

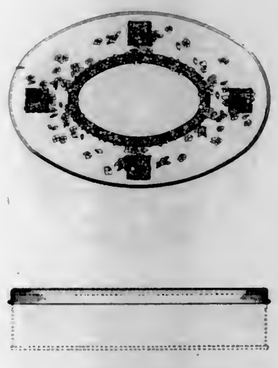
The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,235. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,876. Term of patent 3½ years.



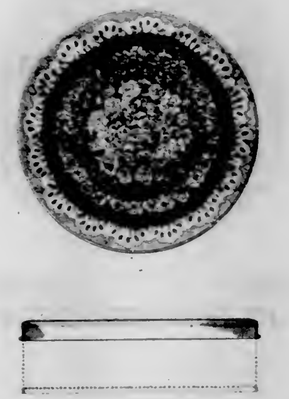
The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,236. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,877. Term of patent 3½ years.



The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,237. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,878. Term of patent 3½ years.



The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,238. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,879. Term of patent 3½ years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,239. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,880. Term of patent 3½ years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,240. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,697. Term of patent 3½ years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,241. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,698. Term of patent 3½ years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,242. BOX OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,699. Term of patent 3½ years.

The ornamental design for a box or similar article of manufacture substantially as shown and described.

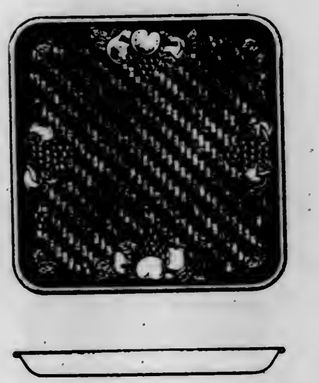
65,243. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Dec. 15, 1921. Serial No. 522,708. Term of patent 14 years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,244. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Dec. 15, 1921. Serial No. 522,709. Term of patent 14 years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,245. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Mar. 16, 1922. Serial No. 1,200. Term of patent 3½ years.



The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

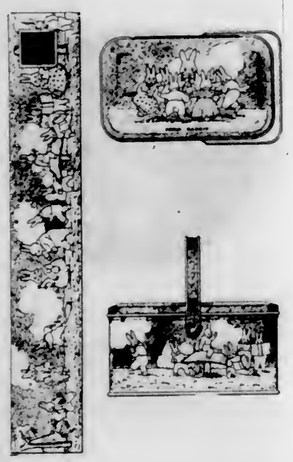
65,246. BOX COVER OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Mar. 16, 1922. Serial No. 1,201. Term of patent 3½ years.

The ornamental design for a box cover or similar article of manufacture substantially as shown and described.

65,247. TRAY OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Mar. 16, 1922. Serial No. 1,202. Term of patent 7 years.

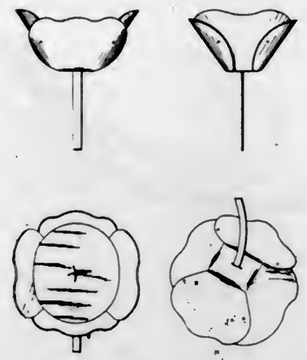
The ornamental design for a tray or similar article of manufacture substantially as shown and described.

65,248. BOX OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 13, 1922. Serial No. 1,739. Term of patent 7 years.



The ornamental design for a box or similar article of manufacture substantially as shown and described.

65,249. BOX OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 20, 1922. Serial No. 1,897. Term of patent 3½ years.



The ornamental design for a box or similar article of manufacture substantially as shown and described.

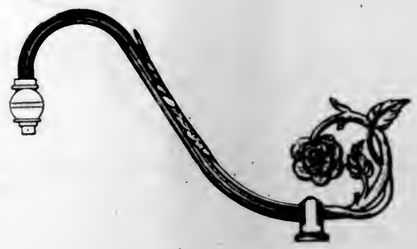
65,250. BOX OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 20, 1922. Serial No. 1,898. Term of patent 3½ years.

The ornamental design for a box or similar article of manufacture substantially as shown and described.

65,251. FRUIT BASKET. WILLARD C. COOK, Clovis, Calif. Filed May 15, 1924. Serial No. 9,600. Term of patent 7 years.

The ornamental design for a fruit basket, as shown.

65,252. BOX. ERNEST DALTROFF, Paris, France, assignor to Caron Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1924. Serial No. 8,493. Term of patent 14 years.



The ornamental design for a box substantially as shown.

65,253. ARM FOR LIGHTING FIXTURES. ARTHUR L. DEDI, Oak Park, Ill. Filed Feb. 26, 1923. Serial No. 5,293. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures substantially as shown.

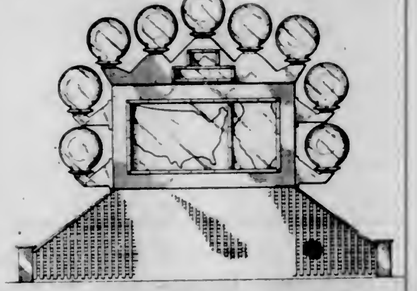
65,254. ARM FOR LIGHTING FIXTURES. ARTHUR L. DEDI, Oak Park Ill. Filed Feb. 26, 1923. Serial No. 5,294. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures substantially as shown.

65,255. FINGER RING. HARRY DINHOFER, New York, N. Y. Filed May 28, 1924. Serial No. 9,724. Term of patent 7 years.

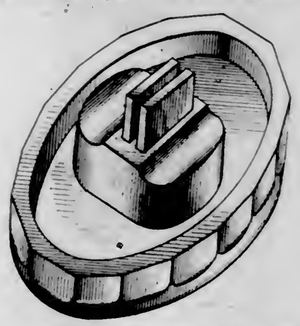
The ornamental design for a finger ring, as shown.

65,256. STATUETTE. EDWARD W. DODGE, Portland, Me. Filed Sept. 25, 1923. Serial No. 7,310. Term of patent 7 years.



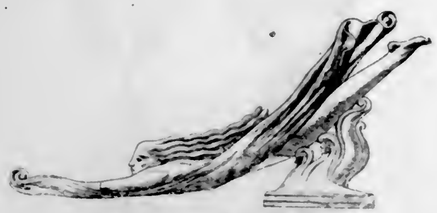
The ornamental design for statuette as shown.

65,257. LANTERN. WILLIAM C. EMBURY, Warsaw, N. Y., assignor to Embury Manufacturing Company, Warsaw, N. Y., a Corporation of New York. Filed Aug. 24, 1922. Serial No. 3,541. Term of patent 7 years.



The ornamental design for a lantern, as shown.

65,258. ADVERTISING SIGN. ALBERT C. FORD, Chicago, Ill. Filed June 5, 1924. Serial No. 9,799. Term of patent 7 years.

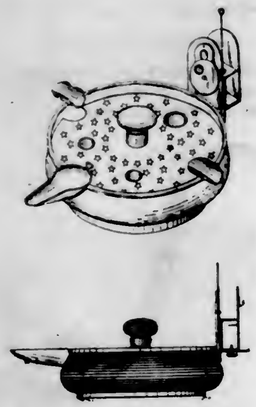


The ornamental design for an advertising sign, as shown.

65,259. COMBINATION MATCH AND ASH TRAY. DAVID FISHER, Paden City, W. Va. Filed May 12, 1924. Serial No. 9,557. Term of patent 7 years.

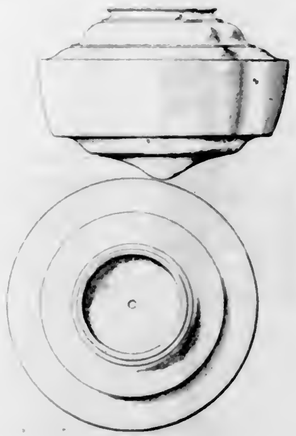
The ornamental design for combination match and ash tray as shown.

65,260. STATUETTE. HARRIET W. FRISHMUTH, New York, N. Y. Filed Oct. 15, 1923. Serial No. 7,503. Term of patent 7 years.



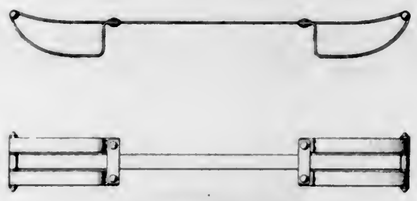
The ornamental design for a statuette, as shown.

65,261. ASH TRAY OR SIMILAR ARTICLE. BENJAMIN F. FREEBLE, Jamaica, N. Y., assignor to Sewickley Electric Manufacturing Company, Sewickley, Pa., a Corporation of Delaware. Filed Nov. 30, 1923. Serial No. 7,914. Term of patent 3½ years.



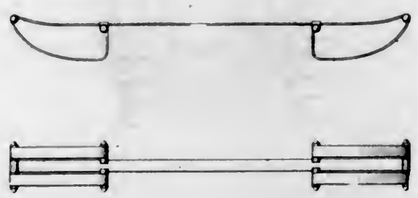
The ornamental design for an ash tray or similar article, as shown.

65,262. ASH TRAY. CHARLES F. GAUNT, Birmingham, England. Filed Oct. 5, 1922. Serial No. 3,885. Term of patent 14 years.



The ornamental design for an ash tray as shown.

65,263. LIGHTING GLOBE. EDWIN BENNETT GILLINDER, Port Jervis, N. Y., assignor to Gillinder Brothers, Port Jervis, N. Y., a Copartnership composed of William T. Gillinder and James Gillinder. Filed May 5, 1922. Serial No. 2,097. Term of patent 7 years.

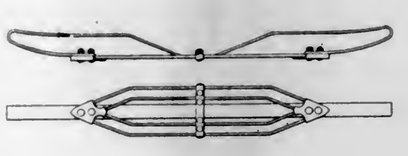


The ornamental design for a lighting globe, as shown.

65,264. AUTOMOBILE BUMPER. CHRISTIAN GIRL and WAYNE E. DUNSTON, Detroit, Mich., assignors to The C. G. Spring Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 6, 1923. Serial No. 7,957. Term of patent 14 years.

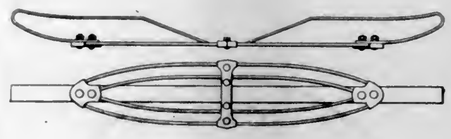
The ornamental design for an automobile bumper, as shown.

65,265. AUTOMOBILE BUMPER. CHRISTIAN GIRL and WAYNE E. DUNSTON, Detroit, Mich., assignors to The C. G. Spring Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 15, 1923. Serial No. 8,041. Term of patent 14 years.



The ornamental design for an automobile bumper, as shown.

65,266. AUTOMOBILE BUMPER. CHRISTIAN GIRL, Detroit, Mich. Filed Mar. 17, 1924. Serial No. 8,961. Term of patent 14 years.

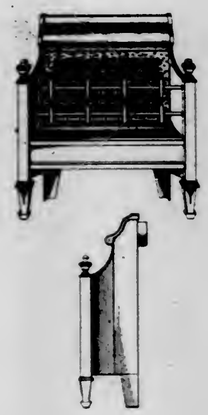


The ornamental design for an automobile bumper, as shown.

65,267. AUTOMOBILE BUMPER. CHRISTIAN GIRL, Detroit, Mich. Filed Mar. 17, 1924. Serial No. 8,962. Term of patent 14 years.

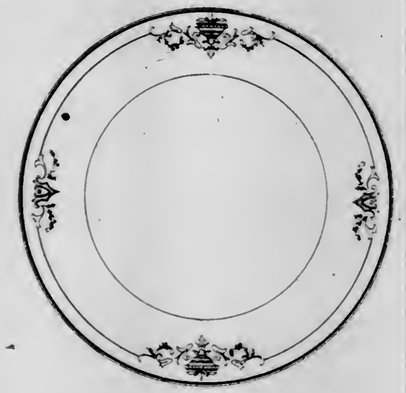
The ornamental design for an automobile bumper, as shown.

65,268. AUTOMOBILE BUMPER. CHRISTIAN GIRL, Detroit, Mich. Filed Mar. 17, 1924. Serial No. 8,963. Term of patent 14 years.



The ornamental design for an automobile bumper, as shown.

65,269. AUTOMOBILE BUMPER. CHRISTIAN GIRL, Detroit, Mich. Filed Mar. 17, 1924. Serial No. 8,964. Term of patent 14 years.

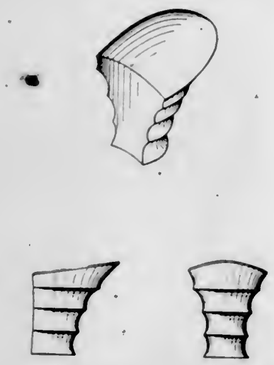


The ornamental design for an automobile bumper, as shown.

65,270. GAS HEATER. JOHN H. GRAYSON, Athens, Ohio, assignor to The J. H. Grayson Manufacturing Company, Athens, Ohio, a Corporation of Ohio. Filed May 7, 1924. Serial No. 9,516. Term of patent 14 years.

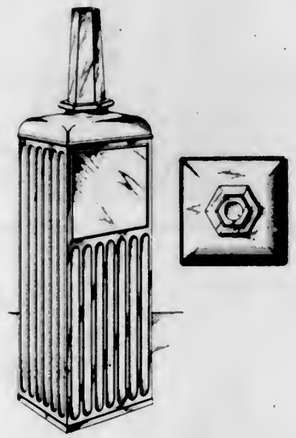
The ornamental design for a gas heater, as shown.

65,271. PLATE OR SIMILAR ARTICLE. HANS GUENTHERMANN, Mount Vernon, N. Y., assignor, by direct and mesne assignments, to Butler Bros., New York, N. Y., a Corporation of Illinois. Filed Oct. 18, 1922. Serial No. 4,013. Term of patent 7 years.



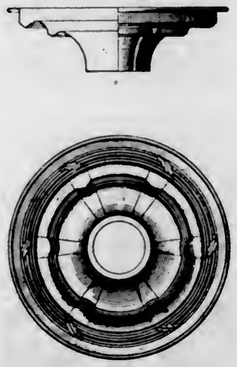
The ornamental design for a plate or similar article, as shown.

65,272. CASING FOR A COMBINED WEIGHING AND ADVERTISING MACHINE. ALBERT HEIMANN, New York, N. Y. Filed Apr. 17, 1924. Serial No. 9,303. Term of patent 14 years.



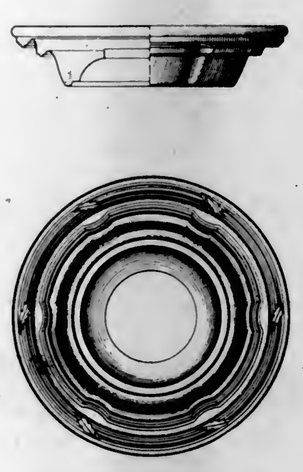
The ornamental design for a casing for a combined weighing and advertising machine, as shown.

65,273. HEEL FOR BOOTS AND SHOES. DAVID HILL, Leicester, England. Filed Aug. 3, 1921. Serial No. 489,649. Term of patent 7 years.



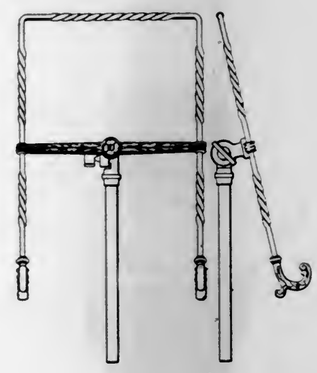
The ornamental design for a heel for boots and shoes as shown.

65,274. OIL CAN. FRANK A. HOWARD and ALMEDA BARR HOWARD, Elizabeth, N. J., assignors to Standard Development Company, a Corporation of Delaware. Filed May 1, 1924. Serial No. 9,457. Term of patent 14 years.



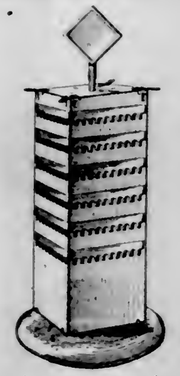
The ornamental design for an oil can as shown.

65,275. CEILING FIXTURE FOR LIGHTING FIXTURES. HAMILTON T. HOWELL, New York, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 30, 1921. Serial No. 457,075. Term of patent 7 years.



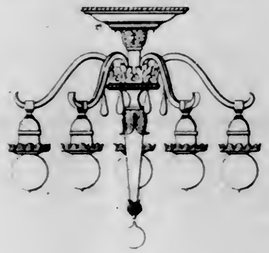
The ornamental design for a ceiling fixture for lighting fixtures, as shown.

65,276. COLLAR-RING HUSK. HAMILTON T. HOWELL, New York, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 30, 1921. Serial No. 457,073. Term of patent 7 years.



The ornamental design for a collar ring husk, as shown.

65,277. DISPLAY FIXTURE. WILLIAM EVANS KEHOE, San Francisco, Calif. Filed Apr. 2, 1923. Serial No 5,665. Term of patent 7 years.

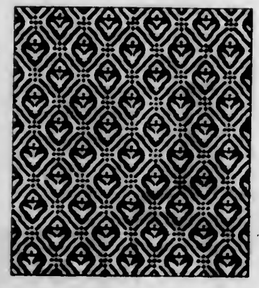


The ornamental design for a display fixture, as shown.

65,278. SALES RACK. WILLIAM WILLARD KELLY, Cleveland, Ohio. Filed Feb. 20, 1924. Serial No. 8,685. Term of patent 14 years.

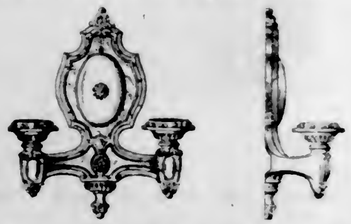
The ornamental design for a sales rack, substantially as shown.

65,279. CEILING LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Jan. 25, 1924. Serial No. 8,418. Term of patent 7 years.



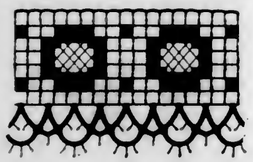
The ornamental design for a ceiling lighting fixture as shown.

65,280. TOY BEAR. THEODORE F. KOTTER, Hollis, N. Y. Filed Mar. 30, 1923. Serial No. 5,647. Term of patent 3½ years.



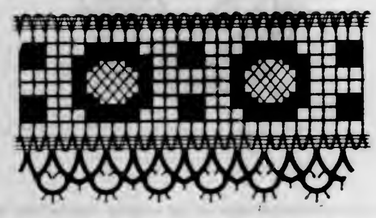
The ornamental design for a toy bear as shown and described.

65,281. PILE FABRIC. CLARENCE V. KOZLAY, New York, N. Y., assignor to Sidney Blumenthal & Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 24, 1923. Serial No. 7,869. Term of patent 7 years.



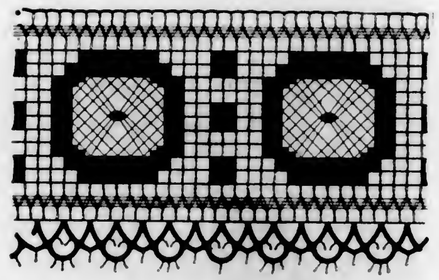
The ornamental design for a pile fabric substantially as shown.

65,282. WALL BRACKET. SAMUEL KRAMER and ABRAHAM KRAMER, Brooklyn, N. Y. Filed May 19, 1924. Serial No. 9,655. Term of patent 3½ years.



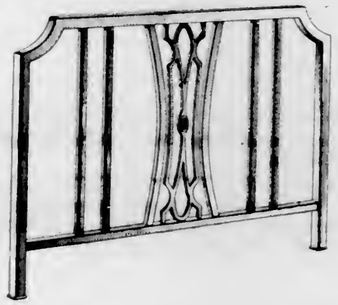
The ornamental design for a wall bracket, as shown.

65,283. LACE. HANS LEPPERHOFF, Reading, Pa., assignor to The Narrow Fabric Co., West Reading, Pa., a Corporation of Pennsylvania. Filed June 2, 1924. Serial No. 9,776. Term of patent 3½ years.



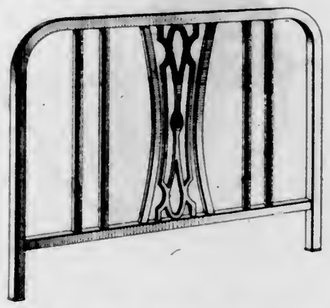
The ornamental design for lace, as shown.

65,284. LACE. HANS LEPPERHOFF, Reading, Pa., assignor to The Narrow Fabric Co., West Reading, Pa., a Corporation of Pennsylvania. Filed June 2, 1924. Serial No. 9,777. Term of patent 3½ years.



The ornamental design for lace, as shown.

65,285. LACE. HANS LEPPERHOFF, Reading, Pa., assignor to The Narrow Fabric Co., West Reading, Pa., a Corporation of Pennsylvania. Filed June 2, 1924. Serial No. 9,778. Term of patent 3½ years.

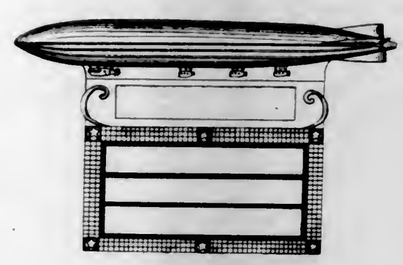


The ornamental design for lace as shown.

65,286. END-FRAME FOR A BEDSTEAD. WILLIAM LIES, Brooklyn, N. Y., assignor to Greenpoint Metallic Bed Company, Brooklyn, N. Y., a Firm composed of David Frank, John Trounstine, and William Lies. Filed June 7, 1921. Serial No. 475,737. Term of patent 3½ years.

The ornamental design for an end frame for a bedstead, as shown.

65,287. END FRAME FOR A BEDSTEAD. WILLIAM LIES, Brooklyn, N. Y., assignor to Greenpoint Metallic Bed Company, Brooklyn, N. Y., a Firm composed of David Frank, John Trounstine, and William Lies. Filed June 7, 1921. Serial No. 475,739. Term of patent 3½ years.

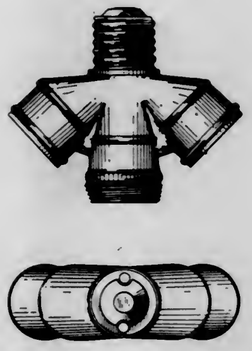


The ornamental design for an end frame for a bedstead, as shown.

65,288. LAMP STAND OR SIMILAR ARTICLE. NORMAN LIPSKY, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc., a Corporation of New York. Filed May 16, 1924. Serial No. 9,627. Term of patent 3½ years.

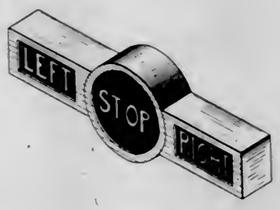
The ornamental design for a lamp stand, or similar article substantially as shown.

65,289. ADVERTISING SIGN. ARTHUR R. LUNDQUIST, Chicago, Ill. Filed Nov. 26, 1923. Serial No. 7,894. Term of patent 3½ years.



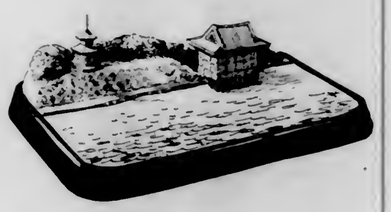
The ornamental design for an advertising sign as shown.

65,290. CASING FOR A DENTAL FLOSS HOLDER. FREDERICK L. MACDONALD, Waltham, Mass., assignor to Flostik Company, Waltham, Mass., a Corporation of Massachusetts. Filed Feb. 28, 1922. Serial No. 937. Term of patent 14 years.



The ornamental design for a casing for a dental floss holder as shown.

65,291. COMBINED LAMP SOCKET CLUSTER AND CONNECTION PLUG. BENJAMIN P. MCKINLEY, Brooklyn, N. Y. Filed Feb. 9, 1922. Serial No. 626. Term of patent 14 years.



The ornamental design for a combined lamp socket cluster and connection plug, as shown.

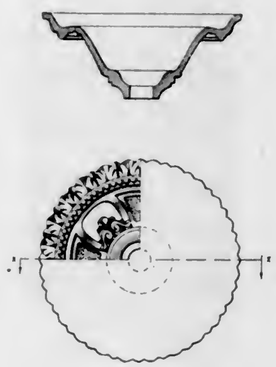
65,292. VEHICLE SIGNAL-LAMP CASING. LOUIS A. MEYER, St. Louis, Mo. Filed Apr. 15, 1922. Serial No. 1,784. Term of patent 7 years.

The ornamental design for a vehicle signal-lamp casing as shown.

65,293. INCENSE BURNER. SHIGEO MORITA, San Francisco, Calif. Filed Oct. 16, 1923. Serial No. 7,510. Term of patent 3½ years.

The ornamental design for an incense burner substantially as shown.

65,294. PLATE FOR LIGHTING FIXTURES. BARNET NEWLAND, New York, N. Y. Filed Mar. 29, 1924. Serial No. 9,113. Term of patent 3½ years.

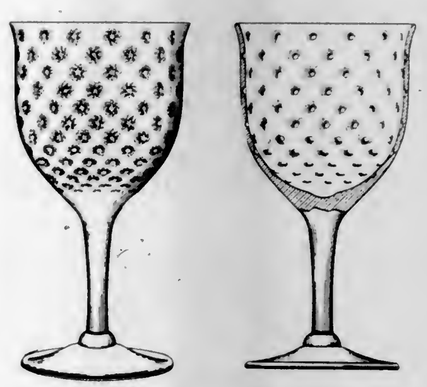


The ornamental design for a plate for lighting fixtures as shown.

65,295. PLATE FOR LIGHTING FIXTURES. BARNET NEWLAND, New York, N. Y. Filed Apr. 5, 1924. Serial No. 9,168. Term of patent 3½ years.

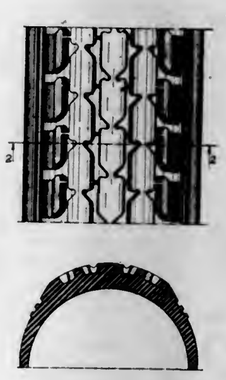
The ornamental design for a plate for lighting fixtures as shown.

65,296. CANDLE CUP FOR LIGHTING FIXTURES. BARNET NEWLAND, New York, N. Y. Filed Apr. 5, 1924. Serial No. 9,169. Term of patent 3½ years.



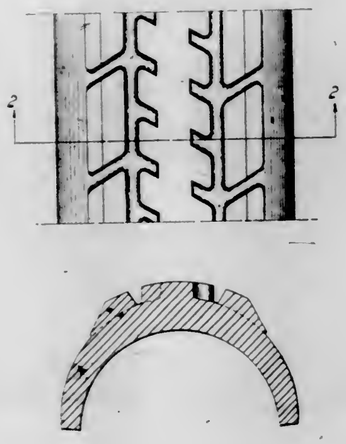
The ornamental design for a candle cup for lighting fixtures as shown.

65,297. TIRE. PHILIP H. OBER, Mansfield, Ohio, assignor to Mansfield Tire and Rubber Company, Mansfield, Ohio, a Corporation of Ohio. Filed Apr. 30, 1924. Serial No. 9,442. Term of patent 14 years.



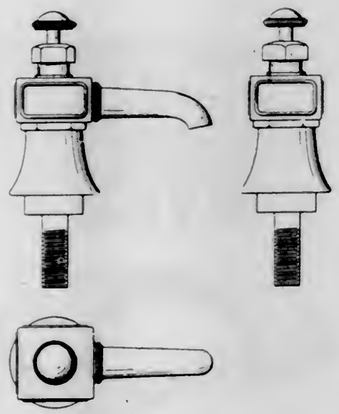
The ornamental design for a tire, as shown.

65,298. GOBLET OR SIMILAR ARTICLE. CHARLES H. PHILLIPS, Jr., Richmond Hill, N. Y., assignor to Seneca Glass Co., Morgantown, W. Va., a Corporation of West Virginia. Filed Feb. 25, 1924. Serial No. 8,733. Term of patent 7 years.



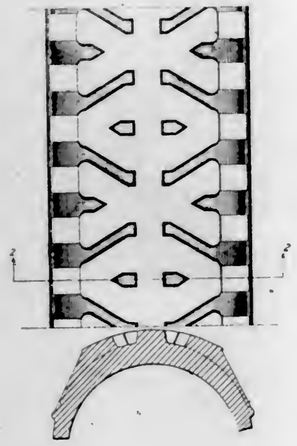
The ornamental design for a goblet or similar article, as shown.

65,299. TIRE. BENJAMIN H. PRATT, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 31, 1924. Serial No. 9,754. Term of patent 14 years.



The ornamental design for a tire substantially as shown.

65,300. RESILIENT TIRE. HAROLD D. REICHARD, Akron, Ohio. Filed May 15, 1924. Serial No. 9,597. Term of patent 14 years.



The ornamental design for a resilient tire, as shown.

65,301. FAUCET. JAMES C. ROSS, Seattle, Wash. Filed May 21, 1924. Serial No. 9,673. Term of patent 3½ years.

The ornamental design for a faucet, as shown.

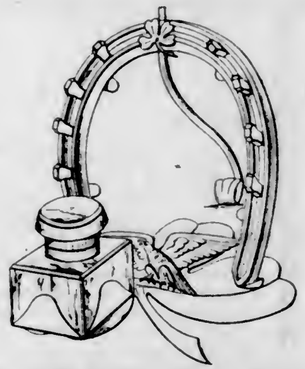
65,302. RESILIENT TIRE. HARRY RUDGINSKY, Boston, Mass. Filed May 9, 1924. Serial No. 9,534. Term of patent 14 years.

The ornamental design for a resilient tire, as shown.

65,303. HOUSE-NUMBER BOX. GEORGE T. SHEARER, Atlanta, Ga., assignor of one-half to Eugene Bart, Atlanta, Ga. Filed Mar. 7, 1924. Serial No. 8,864. Term of patent 3½ years.

The ornamental design for a house number box as shown.

65,304. UNITARY COMBINATION TRAY AND CONDIMENT HOLDER. FRANCIS SCHENKER, Wallingford, Conn., assignor to Dowd Rodgers Company, Wallingford, Conn., a Corporation of Connecticut. Filed Mar. 22, 1924. Serial No. 9,040. Term of patent 3½ years.



The ornamental design for a unitary combination tray and condiment holders, as shown.

65,305. GOBLET OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed June 5, 1923. Serial No. 6,389. Term of patent 7 years.

The ornamental design for a goblet or similar article substantially as shown.

65,306. INKWELL. FRANK ADAM SILAJ, Chicago, Ill. Filed Oct. 22, 1923. Serial No. 7,571. Term of patent 3½ years.

The ornamental design for an inkwell as shown.

65,307. METAL BORDER STRIP FOR A DISH OR SIMILAR ARTICLE. WINFIELD D. SMITH, Deal, N. J., assignor to Knickerbocker Silver Company, Port Jervis, N. Y., a Corporation of New York. Filed May 28, 1923. Serial No. 6,365. Term of patent 3½ years.

The ornamental design for a metal border strip for a dish or similar article, as shown.

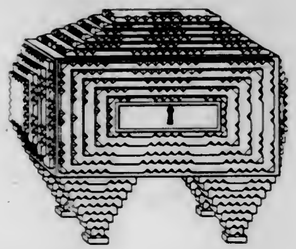
65,308. WRIST-WATCH CASE. LEOPOLD STRASSER, New York, N. Y. Filed Apr. 21, 1924. Serial No. 9,350. Term of patent 7 years.

The ornamental design for a wrist watch case as shown.

65,309. WRIST-WATCH CASE. LEOPOLD STRASSER, New York, N. Y. Filed Apr. 21, 1924. Serial No. 9,351. Term of patent 7 years.

The ornamental design for a wrist watch case as shown.

65,310. WRIST-WATCH CASE. LEOPOLD STRASSER, New York, N. Y. Filed Apr. 25, 1924. Serial No. 9,395. Term of patent 7 years.

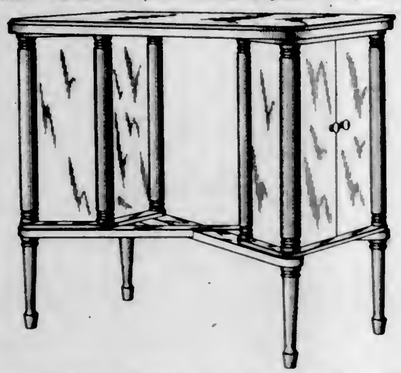


The ornamental design for a wrist watch case as shown.

65,311. WRIST-WATCH CASE. LEOPOLD STRASSER, New York, N. Y. Filed Apr. 25, 1924. Serial No. 9,396. Term of patent 7 years.

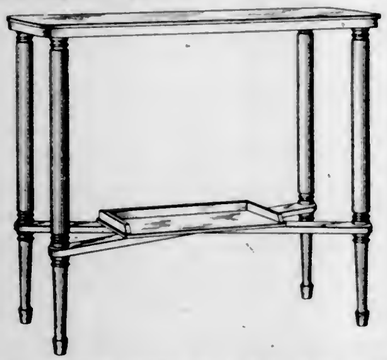
The ornamental design for a wrist watch case as shown.

65,312. TOY BANK. JOHN TESTA, St. Paul, Minn. Filed Oct. 12, 1922. Serial No. 3,957. Term of patent 7 years.



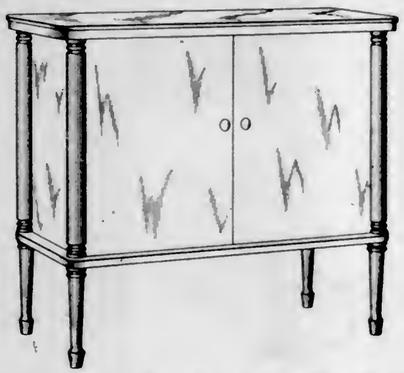
The ornamental design for a toy bank, as shown.

65,313. BADGE OR SIMILAR ARTICLE. HATTIE HULL TROUPE, deceased, late of Relay, Md., by Calvin F. Troupe, executor, Relay, Md., assignor to Service Star Legion, Incorporated, Baltimore, Md., a Corporation of Maryland. Filed Apr. 25, 1924. Serial No. 9,405. Term of patent 7 years.



The ornamental design for a badge or similar article substantially as shown.

65,314. COMBINED TABLE AND RADIO CABINET. DAVID C. WILLIAMS, Medfield, Mass. Filed May 20, 1924. Serial No. 9,663. Term of patent 14 years.

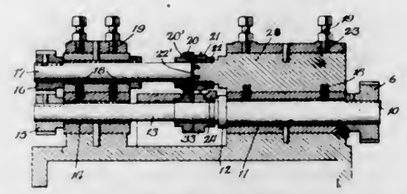


The ornamental design for a combined table and radio cabinet, as shown.

65,315. RADIO TABLE. DAVID C. WILLIAMS, Medfield, Mass. Filed May 20, 1924. Serial No. 9,664. Term of patent 14 years.

The ornamental design for a radio table, as shown.

65,316. RADIO CABINET. DAVID C. WILLIAMS, Medfield, Mass. Filed May 20, 1924. Serial No. 9,665. Term of patent 14 years.



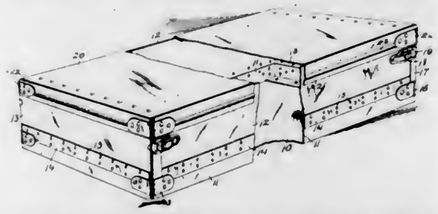
The ornamental design for a radio cabinet, as shown.

PATENTS

GRANTED JULY 22, 1924.

1,501,893. MACHINE FOR SCORING CAN BODIES. SAMUEL E. ALLERTON, Chicago, Ill. Filed Dec. 20, 1922. Serial No. 607,950. 9 Claims. (Cl. 113—15.)

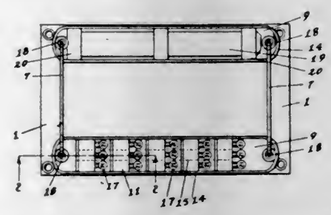
1. In a machine of the class described, a rotatable shaft, a stationary support in axial alinement therewith, a cutter rotatably mounted on said support, and means for driving said cutter from said shaft.



1,501,894. COMPOUND HAVING A TRYPANOCIDAL ACTION. ROGER ADAMS and JOHN RAVEN JOHNSON, Urbana, Ill. Filed Dec. 27, 1921. Serial No. 525,159. 4 Claims. (Cl. 260—14.)

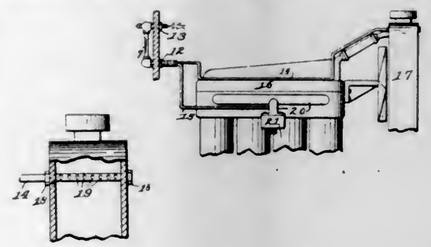
3. As a new article of manufacture, the compound derived by the action of arsanilic acid upon pyruvic acid and benzaldehyde, which is a cream colored solid melting with decomposition at 186–7° (Cor.) and which upon dissolving in alkalies gives a solution having a trypanocidal action.

1,501,895. COMPOSITION FOR FIREPROOFING AND OTHER PURPOSES. LAUNCELOT W. ANDREWS, Chicago, and LEWIS D. MATHIAS, Chicago Heights, Ill. Filed July 5, 1919. Serial No. 308,781. 10 Claims. (Cl. 23—5.)



9. A fireproofing composition comprising alkali metal phosphate and a borate in proportions to form an aqueous solution non-crystallizing on exposure to ordinary atmospheric conditions.

1,501,896. FOLDING BOX. WILLIAM BAL, Newark, N. J. Filed Aug. 30, 1922. Serial No. 585,132. 3 Claims. (Cl. 229—41.)



1. A folding box comprising a tray-like bottom, side and end-flaps hinged to the top edges of the tray and adapted to fold inwardly, catches on the outside of the flaps to secure the corners thereof when extended, the end flaps having flanges to embrace the sides of the tray when folded, and a cover having means to engage the catch members on the end flaps to secure the cover and the folded bottom portion together.

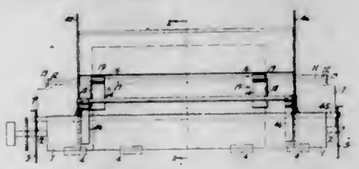
1,501,897. MARKING-PIN HOLDER. CHARLES L. BRALEY, Chicago, Ill., assignor of one-half to Charles F. Noftzger, Chicago, Ill. Filed Apr. 16, 1920. Serial No. 374,394. 3 Claims. (Cl. 211—34.)

1. A marking pin holder comprising a flexible pocket member, pocket strips disposed transversely of said pocket member, bindings for the edges of said pocket member embracing the ends of the pocket strips, there being rows of stitches longitudinally of said pocket member and through said pocket strips providing rows of pockets, support engaging grommets at the ends of said pocket member, stiffening strip supporting straps disposed on the rear side of said pocket member, and a stiffening strip disposed under said straps.

1,501,898. MOTOR METER. JAMES M. BRENNAN, Los Angeles, Calif. Filed Apr. 26, 1923. Serial No. 634,922. 3 Claims. (Cl. 73—52.)

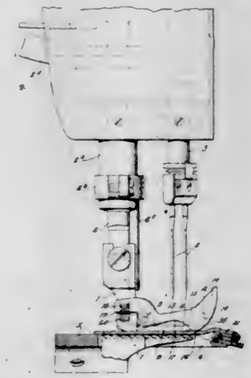
1. A motormeter comprising a casing; a bulb having a transparent stem connected thereto; a temperature element in said bulb; means to mount said bulb and stem upon the dash of an automobile; said mounting means having a chamber therein surrounding said bulb; a pipe opening into said chamber and adapted to be connected to the radiator of an automobile engine above the water line; a pipe opening into said chamber and adapted to be connected to the intake pipe leading from the carburetor to the cylinders of an automobile engine.

1,501,899. STRUT FOR RAILWAY BRAKE BEAMS. SETH A. CRONE, East Orange, N. J. Filed Oct. 11, 1922. Serial No. 593,667. 6 Claims. (Cl. 188—231.)



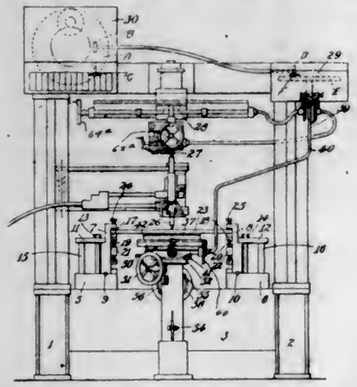
1. A strut to be interposed between the compression and tension members of a trussed brake-beam and formed from a single integral bar of forged metal of uniform width and thickness, said bar being folded on a U-bend at the forward end of the strut and

forming parallel angularly set spaced-apart sides connected together by said forward fold, and the forward end of the strut at said fold being concavely inset on a line horizontally crossing the said angularly set



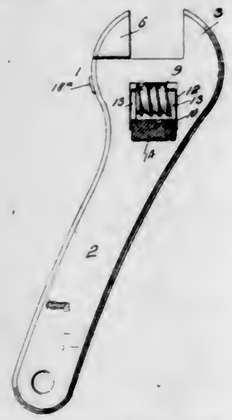
sides and offset forwardly at the end portions of said fold, thereby to form a concave seat for the truss rod and upper and lower forwardly extending projections serving to deepen the seat and engage upper and lower portions of said rod.

1,501,900. TYPEWRITING MACHINE. JOHN E. BOODY, Toronto, Ontario, Canada, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 25, 1920. Serial No. 412,756. 20 Claims. (Cl. 197—127.)



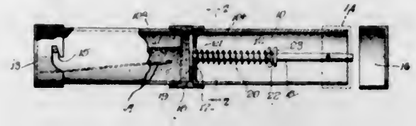
1. In a typewriting machine, the combination with a cylindrical platen, of means at the introductory side of the platen for guiding thereto a wide sheet and a narrow sheet to pass around the platen outside of the wide sheet, said guiding means comprising a paper-table, side gages adjustable thereacross to correspond to the width and position of the narrow sheet and forming with the paper-table a narrow chute, and a wide chute, to guide the wide sheet over said narrow chute and the sheet therein, comprising side walls of greater height than the side gages and having their forward ends resting on said paper-table to form therewith the front portion of the wide chute, and a floor connecting the rear portions of said side walls and serving as an extension of the paper-table.

1,501,901. PRESSER FOOT FOR SEWING MACHINES. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 28, 1922. Serial No. 563,864. 7 Claims. (Cl. 112—235.)



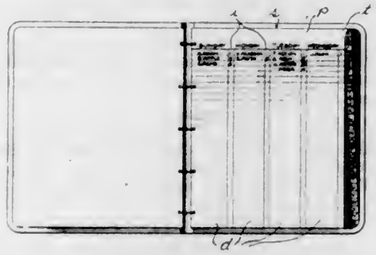
1. A presser-foot for sewing machines having, in combination, a shank, a main sole-piece directly pivoted to said shank and having a limited tilting movement, a stripper-foot pivoted to said shank and having at its forward end a downwardly extending projection, said stripper-foot being recessed intermediate its pivot and said projection to permit the latter to engage a thin portion of the work while said sole-piece rests upon a thicker portion of work.

1,501,902. JET-CUTTING MACHINE. ALFRED GODFREY, Wood Green, London, England. Filed Jan. 27, 1921. Serial No. 440,544. 8 Claims. (Cl. 266—23.)



1. In a cutting machine the combination of a cutting jet movable freely in one plane, a magnetic chuck for holding a workpiece in position to be cut by the jet, and means for rotating the chuck, and means to position the jet over the workpiece in accordance with a predetermined closed contour.

1,501,903. WRENCH. WILLIAM GORDON, Union, N. J. Filed June 9, 1922. Serial No. 566,933. 3 Claims. (Cl. 81—157.)

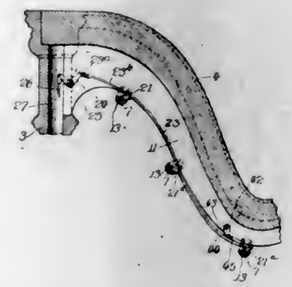


1. In a wrench, a suitable handle, jaws, one of which is movable relatively to the other, a rack on said movable jaw, a carrier mounted adjacent to the rack and movable away from said rack at substantially a right angle thereto; a screw rotatably mounted in said carrier, a spring for forcing said screw into contact with the rack, and a spring for automatically moving said jaw to full open position upon a releasing movement of said carrier and screw, and also applying pressure on the jaw to force the teeth of the rack into engagement with the threads of the screw.

1,501,904. APPARATUS FOR DEVELOPING PHOTOGRAPHS. BARNETT WALTER HARRIS, Chicago, Ill., assignor to Utilities Development Corporation, Chicago Ill., a Corporation of Virginia. Filed June 10, 1920. Serial No. 387,919. 19 Claims. (Cl. 95—90.)

1. A device of the character described comprising, in combination, a plurality of communicating chambers, means for interrupting the communication between said chambers, and means for rendering said first mentioned means operative only when one of said chambers is open to the admission of light.

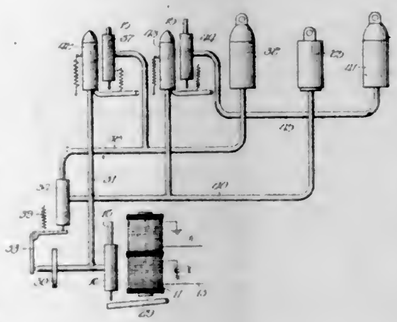
1,501,905. ACCOUNT BOOK AND THE LIKE. MAX HOMOVITZ, Woodridge, N. Y. Filed July 12, 1923. Serial No. 650,990. 8 Claims. (Cl. 283—36.)



1. A book of account such as a ledger for hotels, boarding houses and the like, comprising an alphabetic index page or pages provided with seven day columns corresponding to the seven days of the week.

1,501,906. NICKEL ALLOY. NOAK VICTOR HYBINETTE, New York, N. Y., assignor to National Trust Company Limited, Toronto, Canada. Filed Aug. 1, 1921. Serial No. 489,096. 4 Claims. (Cl. 75—1.)

1. Carbonized nickel which is practically free from silicon.

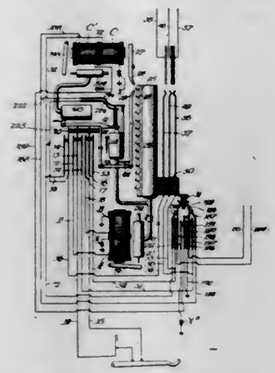


1,501,907. HARP. WALTER I. KIRK, Chicago, Ill. Filed Aug. 19, 1921. Serial No. 493,626. 1 Claim. (Cl. 84—264.)

In a harp the combination of a damper comprising a rod or bar arranged crosswise and close to the upper ends of the strings, supporting brackets for said rod or bar, said brackets being secured to the neck of the harp, threaded bolts in said brackets and the bolts being connected with the damper, threaded sleeves surrounding the threaded portions of said bolts, crank arms on said sleeves, a single link connected with all of said arms and extending cross-wise of the harp strings substantially the entire length of said damper, whereby a longitudinal movement of said link will cause a corresponding axial rotary movement on the part of all of said eccentric arms so as to adjust said damper toward and away from the strings evenly throughout its entire length, a bell crank on the harp neck near the upper end of the column, said bell crank having a sliding pivotal connection with the adjacent end of said sliding rod or bar, a link arranged in said column and having its upper end connected with the other end of the said bell crank and its lower end extended down to the base of the column, a foot lever connected with the lower end of said last mentioned link for actuating the same by foot power, and a hand lever mounted on the harp neck on one side of the same, said lever being pivoted between its ends and one of its ends being formed in the shape

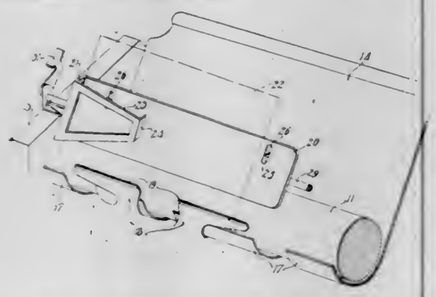
of a handle for manual operation and the other end having a pin having a sliding connection with a supplemental link whose other end is pivotally connected with one of said eccentric arms, whereby said longitudinally adjustable link may be actuated by said hand lever and also whereby the actuation of said link by foot will not interfere with hand operation and vice versa.

1,501,908. MOTOR CONTROL FOR SWITCHING MECHANISMS. FRANK A. LUNDQUIST, Chicago, Ill., assignor, by mesne assignments, to Henry S. Conrad, trustee. Filed Oct. 2, 1919. Serial No. 328,078. 15 Claims. (Cl. 179—16.)



1. The combination with a magnet provided with electrical connections to a distant station, and two air valves, of means by which upon impulses flowing thru said magnet one of said valves will be opened and closed alternately and means controlled by the operation of said first valve for alternately closing and opening the second valve, said parts being so arranged that when one valve is opened the other is closed.

1,501,909. AUTOMATIC TELEPHONE EXCHANGE. FRANK A. LUNDQUIST, Chicago, Ill., assignor, by mesne assignments, to Henry S. Conrad, trustee. Filed Jan. 22, 1920. Serial No. 353,235. Renewed Apr. 11, 1924. 11 Claims. (Cl. 178—18.)



3. The combination with a switching mechanism, and lines leading thereto, of pneumatic power devices for

operating the mechanism to connect said lines to other lines, magnetic devices for transmitting impulses of com-

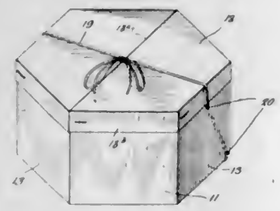
pressed air for controlling the power devices, and means for disconnecting all such devices at the mechanism when said mechanism completes an operation.

1,501,910. TYPEWRITING MACHINE. HARRY T. MCBAIEN, Cleveland, Ohio, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 28, 1921. Serial No. 480,964. 9 Claims. (Cl. 197—140.)

1. In a front-strike typewriting machine, in combination, a platen, and a card-controlling device mounted above the platen comprising a plate extending longitudinally of the platen, a side-edge gage extending upwardly therefrom, and an arm extending from said side-edge gage parallel to the plate and having a finger extending toward the plate but spaced therefrom to permit ready insertion of the card while engaging the front face thereof to hold the same against the platen at the printing line.

1,501,911. FIRE-RESISTING OR FLAMEPROOF STARCHING COMPOSITION. LEWIS D. MATHIAS, Chicago Heights, Ill., assignor to Victor Chemical Works, Chicago, Ill., a Corporation. Filed Dec. 27, 1921. Serial No. 524,922. 9 Claims. (Cl. 23—5.)

9. A fireproofing and starching composition comprising an alkali metal phosphate and borate, in proportions to form an aqueous solution non-crystallizing under ordinary atmospheric conditions, and starch.



1,501,912. DANCING DOLL. FLORENCE B. MEEHAN, Highland Park, Ill. Filed June 21, 1920. Serial No. 390,534. 5 Claims. (Cl. 46—40.)

5. In a toy figure, an upwardly extending rod having a handle portion at the lower end thereof, a head supported upon the upper end of said rod, a body portion adjacent said handle and below said head and adapted

to be rotated and moved up and down in respect to both said head and handle, and a pair of limbs supported on said body portion.

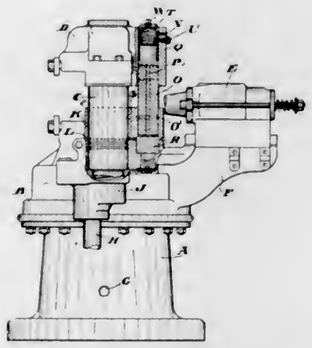
1,501,913. COLLAPSIBLE BOX. EDWARD K. MORRIS, Baltimore, Md. Filed Feb. 20, 1923. Serial No. 620,170. 6 Claims. (Cl. 229—41.)

1. A collapsible box comprising side walls which are flexibly connected at the corners of the box, a bottom which is foldable inwardly between the side walls on a median line, a pair of diametrically opposite side walls having tongues at the bottom and the box bottom having slits into which the tongues are removably insertible, and a tie-string threaded at its ends through opposite side walls and passing intermediate its ends over the bottom corners of the box and across the box-bottom, said intermediate portion of the tie-string being also threaded through the slits of the box bottom, said tie string further extending longitudinally over the tongues on the outside thereof whereby to draw said tongues securely into position and prevent their disengagement from the slits.

1,501,914. FERTILIZER AND PROCESS OF MAKING THE SAME. YASUJURO NIKAIDO, Bay City, Mich., assignor to Michigan Chemical Company, a Corporation of Michigan. Filed June 7, 1922. Serial No. 566,586. 4 Claims. (Cl. 71—6.)

1. The process of making a fertilizer in solid form which consists in treating concentrated beet sugar residue with sulphuric acid, heating the mass and then treating with lime.

1,501,915. PROCESS OF MAKING FERTILIZERS. YASUJURO NIKAIDO, Bay City, Mich., assignor to Michigan Chemical Company, a Corporation of Michigan. Filed Aug. 28, 1922. Serial No. 584,865. 3 Claims. (Cl. 71—9.)

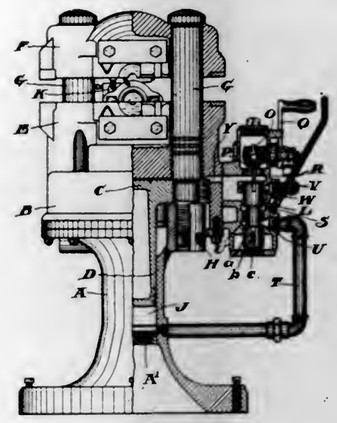


1. The process of making a fertilizer in solid form, which consists in treating concentrated beet sugar residue with sulphuric acid and heating at a temperature upwards of 200° C., mixing with acid phosphate and then drying the product.

1,501,916. FERTILIZER AND PROCESS OF MAKING THE SAME. YASUJURO NIKAIDO, Bay City, Mich., assignor to Michigan Chemical Company, a Corporation of Michigan. Filed Oct. 9, 1922. Serial No. 593,444. 8 Claims. (Cl. 71—6.)

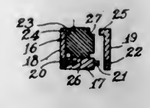
1. A fertilizer in the form of a permanently dry solid produced by treating beet sugar residue with acid and heating at a temperature upwards of 200° C.

2. A process of producing a fertilizer which consists in treating concentrated beet sugar residue with an acid and heating at a temperature of upwards of 200° C. until the mass when subsequently cooled forms a permanently dry solid.



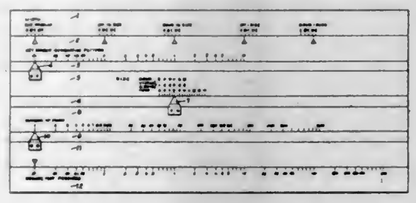
1,501,917. OILING DEVICE FOR DRILL SHARPENERS. ARTHUR E. PETERS, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 21, 1923. Serial No. 664,006. 4 Claims. (Cl. 76—5.)

2. In a drill sharpener, the combination of a guide, a cross head rod in said guide, a cross head on said rod, and means for supplying oil to said rod and guide, including a hollow stationary plunger forming a guide for said cross head and having a well at the lower end communicating with said rod guide, and a cylinder for said plunger in said cross head and having a compression space above said plunger and a relief hole to relieve the greater part of the pressure in said cylinder caused by reciprocation thereof.



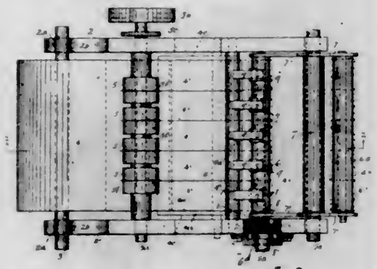
1,501,918. SHARPENER FOR DRILL STEELS. ARTHUR E. PETERS and MORTIMER S. PARKHILL, Littleton, Colo., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 14, 1923. Serial No. 680,688. 7 Claims. (Cl. 76—5.)

1. In a drill sharpening device, a clamping cylinder, a raising cylinder and a dolly cylinder, a valve having three consecutive operating positions and adapted to connect a supply of motive fluid with said raising cylinder in the first position and to exhaust the clamping cylinder to atmosphere; to associate said motive fluid supply with said clamping cylinder in the second position and to bleed said raising cylinder; and in the third position to



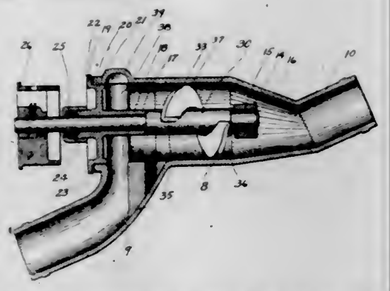
associate said clamping cylinder and said dolly cylinder with said motive fluid supply and to continue to bleed said raising cylinder.

1,501,919. RUBBER HOLDER FOR CYLINDERS. JOHN PETERS, Huntington, N. Y. Filed Jan. 23, 1922. Serial No. 531,301. 3 Claims. (Cl. 164—66.)



1. A holder for a resilient strip which is rectangular in form in cross section and the corner portions of which are cut out to form rabbet grooves, said holder being approximately of channel formation and being provided with flanges adapted to enter two of the rabbet grooves of said strip for holding said strip against displacement in said holder.

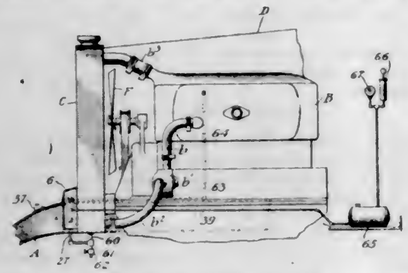
1,501,920. LEATHER-ESTIMATING SLIDE RULE. MARTIN H. REYMOND, Binghamton, N. Y. Filed May 18, 1922. Serial No. 562,017. 4 Claims. (Cl. 235—70.)



1. A logarithmically graduated multiple slide rule comprising in respective order: a stationary scale on the body of the rule; an adjacent slide containing a marker cooperating with said scale, and a second scale; a second slide containing a marker cooperating with said second scale, and a third scale; a third slide containing a marker cooperating with said third scale, and a fourth scale; and finally a fifth scale on the body of the rule cooperating with said fourth scale.

1,501,921. MACHINE FOR WINDING CORES. LINO SCUSA, Phoenix, N. Y. Filed Feb. 2, 1922. Serial No. 533,504. 8 Claims. (Cl. 93—81.)

1. In a machine for making hollow cores from a continuous web of stock, a pair of feed rollers for the web, means for slitting said web while it is passing between said rollers for providing a number of similar strips, a table for supporting said strips in a common plane while the strips are being moved towards the core winding position, a mandrel having a longitudinal groove disposed in the path of the forwardly moving strips, means for cutting said strips transversely into elongated sheets simultaneously with the entry of the forward ends of the strips into the groove of the mandrel, means for rotating said mandrel for winding said sheets into hollow cores, and means for repeating the cutting operation once during each revolution of the feed rolls.



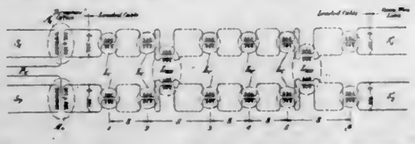
1,501,922. PUMP. HENRY N. SCHOFIELD, Kansas City, Mo. Filed Apr. 24, 1922. Serial No. 556,202. 4 Claims. (Cl. 103—89.)

1. A pump comprising a casing having an intermediate, cylindrical portion, a circumferential recess at one end forming a whorl chamber, an inlet tube adjacent to the recessed portion, a tubular outlet at the opposite end, a partition across the chamber near the upper end thereof, a spider within the casing comprising flat blades, the sides of which are arranged longitudinally of the casing, a cap closing the end of the casing distant from the outlet, a bearing in the cap, a shaft projecting through the bearing so that one end extends within the casing and the other outside the casing, a pulley on the end of the shaft outside the casing, and an impeller on the shaft inside the casing, the impeller comprising a spiral blade extending 360 degrees around the shaft so that there will be an open unimpeded space between the ends of the blade to permit water to pass through when the blade is still, and a bearing on the spider for supporting one end of the shaft.

1,501,923. HEATER. HENRY C. SEIPP, Pittsburgh, Pa. Filed Jan. 20, 1922. Serial No. 530,648. 7 Claims. (Cl. 123—174.)

1. The combination with an automobile having a water cooled engine, of a circulation system therefor including a radiator, pipes for conducting water to and from the engine to and from the radiator, a heater for maintaining the water in the cooling system at an elevated temperature comprising a casing having a

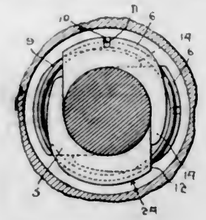
burner and water heating means therein, a pipe leading from the bottom of the radiator to the heater, a riser pipe leading from the heater to the engine, and means for conducting heated gases from the burner to the radiator.



1,501,924. PROCESS OF OBTAINING FIBERS FROM BAGASSE. JOHN K. SHAW, Minneapolis, Minn. Filed Oct. 23, 1920. Serial No. 419,046. Renewed Jan. 20, 1923. 2 Claims. (Cl. 92—7.)

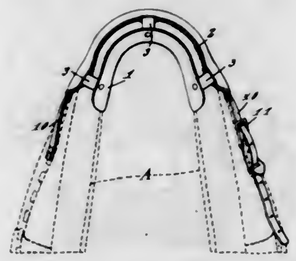
1. The process of treating bagasse and analogous fibers which consists in cooking said fibers with their natural pith sufficiently to loosen their encrusting casings but insufficiently to dissolve a substantial portion of said pith; subjecting said fibers to the action of a beating engine; separating out a portion of the long fibers from the short fibers present after leaving said engine; and subjecting said portion of long fibers to a second cooking action to produce a paper making pulp, substantially as described.

1,501,925. BAGASSE FIBER AND PROCESS OF PRODUCING THE SAME. JOHN K. SHAW, Minneapolis, Minn., assignor to C. F. Dahlberg, St. Paul, Minn. Filed Mar. 26, 1920. Serial No. 368,993. 6 Claims. (Cl. 92—14.)



1. The process of producing flexible and strong bagasse fibers provided with pith like protuberances which consists in cooking the same while associated with their natural pith for a time and at a temperature insufficient for paper making purposes, and in a solution containing a weight of alkali not exceeding 20% of the bone dry weight of the fibers until the strength of said alkali is practically exhausted; and recovering the fibers thus treated, substantially as described.

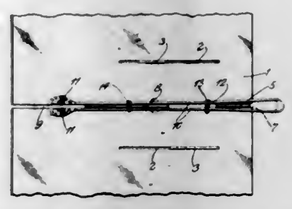
1,501,926. LOADED TRANSMISSION CIRCUIT. THOMAS SHAW, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 30, 1922. Serial No. 571,849. 14 Claims. (Cl. 178—45.)



1. A transmission system including a phantomed group of conductors, the phantom circuit being loaded to transmit one limited range of frequencies and the side circuits being loaded to transmit another limited range of frequencies, one of said ranges being considerably wider than the other.

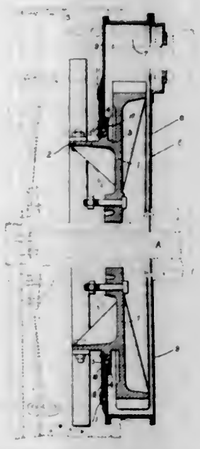
1,501,927. ROD PACKING. JOHN W. SHEPARD, Tucson, Ariz. Filed July 23, 1920. Serial No. 398,514. 2 Claims. (Cl. 288—3.)

1. A packing ring comprising a pair of relatively movable overlapping complemental segments, each of said segments formed with a relatively thick peripherally grooved body having a flat bearing surface at one end and an inwardly directed laterally disposed tapered finger at the opposite end, the lateral finger of one segment having slidable contact with the bearing surface of the other segment, a circular contractile split spring encircling said segments and mounted in the grooves thereof and spaced radially from said fingers, one of said segments provided with a slot extending at right-angles with respect to its groove, and one of the ends of said spring formed with an extension disposed at right-angles with respect to the plane of the spring and positioned in said slot to prevent circumferential shifting of the spring with respect to the segments.



1,501,928. HORSE COLLAR. ROBERT M. SWINDLER, Ottawa, and GEORGE L. BRADSHAW, Topeka, Kans. Filed Dec. 29, 1923. Serial No. 683,394. 3 Claims. (Cl. 54—19.)

2. An attachment for horse collars including upper and lower pads for the reception of a portion of a collar therebetween, connections between the front and back of the pads, said upper pad including superposed layers of material fastened together at their edges and longitudinally at an intermediate point, a filling strip interposed between the layers to provide an outstanding retaining rib, and the portion of the pad back of the retaining rib constituting a strap receiving casing open at its ends.

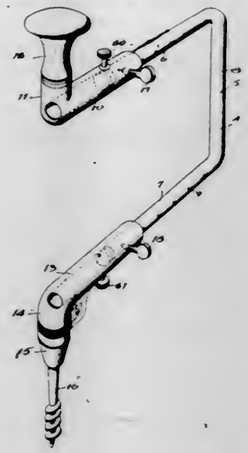


1,501,929. GRAIN BINDER. WILLIAM TRIPPE, Holstein, Mo. Filed Oct. 9, 1922. Serial No. 593,247. 3 Claims. (Cl. 56—433.)

3. In a grain binder the combination with a binder deck having a slot therein, a needle arranged to operate through said slot, and an arm supported near the lower end of the deck and arranged to swing to and from a position above the deck below said needle, of a bifurcated member having its connected ends below said arm and having its detached ends pivoted to said deck above said needle, one of said arms of said bifurcated member being at each side of said needle and said first named arm, a spacer between the arms of said bifurcated member above said first named arm and below said needle, a bolt passing through said arms of said

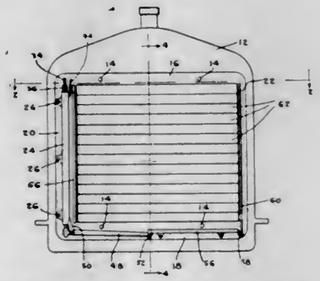
bifurcated member and through said spacer and clamping said parts together, and an element supported by said needle arranged to engage both of the arms of said bifurcated member to raise said member as an incident to operation of the needle in a tying operation.

1,501,930. DRIVING GEAR FOR TRACTORS AND THE LIKE. JUAN BAUTISTA VERGÉS, Buenos Aires, Argentina. Filed Dec. 15, 1923. Serial No. 681,018. 5 Claims. (Cl. 74—7.)



1. In combination with a driving wheel for tractors, a driving gear comprising a flanged disk integral with said gear; a case surrounding said gear; a retaining disk secured to said case; a cover disk secured to said flanged disk of the gear; a joint protector secured to said retaining disk and overlapping the free edge of said cover disk; and means for obtaining a tight joint between said retaining disk and the flanged disk on one side and the cover disk on the other side, said flanged disk and the driving gear forming a channel for the passage of oil.

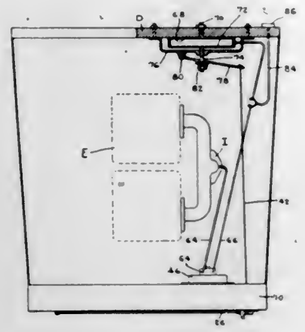
1,501,931. ADJUSTABLE BRACE. CALEB S. WEDDLE, Casper, Wyo. Filed Mar. 2, 1923. Serial No. 622,393. 1 Claim. (Cl. 145—66.)



As a new article of manufacture, a hand brace comprising a U-shaped hand crank including a pair of arms having equidistantly spaced sockets therein and annular grooves adjacent to the outer ends thereof, a hand rest portion including a laterally extending sleeve, one of said arms being rotatably and slidably mounted in said sleeve, a bit socket portion including a laterally extending sleeve for slidably and rotably receiving the other

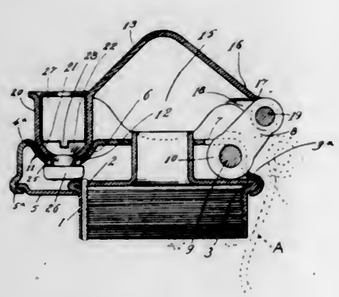
arm, spring pressed dogs carried by the sleeves of the hand rest and socket portions for engaging in said grooves when the hand crank is pulled out to its fullest

extent to prevent the accidental displacement of said hand crank from said sleeves, and set screws carried by said sleeves for engaging in said sockets to hold the hand crank in an adjusted position in said sleeves.



1,501,932. DEVICE FOR AUTOMATICALLY CONTROLLING THE TEMPERATURE OF AUTOMOBILE RADIATORS. ALBERT A. WILSON, Minneapolis, Minn. Filed May 28, 1921, Serial No. 473,278. Renewed May 14, 1924. 4 Claims. (Cl. 236—35.)

1. A device for automatically controlling the temperature of automobile radiators comprising a thermostatic tube mounted at the front of the radiator, an auxiliary thermostat mounted on the back of the radiator, connections between said auxiliary thermostat and said thermostatic tube whereby the action of the latter is supplemented, shutters mounted in front of the radiator and connections between said shutters and said thermostatic tube for causing said shutters to open and close.

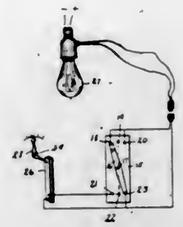


1,501,933. DEVICE FOR AUTOMATICALLY CONTROLLING THE TEMPERATURE OF COOLING SYSTEMS OF INTERNAL-COMBUSTION ENGINES. ALBERT A. WILSON, Minneapolis, Minn. Filed Dec. 31, 1921, Serial No. 526,364. Renewed May 26, 1924. 2 Claims. (Cl. 123—174.)

1. A device for automatically controlling the temperature of cooling systems of internal combustion engines of motor vehicles comprising a casing secured to the dash of the motor vehicle, one of the walls of said casing constituting a diaphragm, a closure device mounted in front of the radiator, connections between said diaphragm and said closure device whereby inward movement of said diaphragm will open said closure device, a pipe connection between the chamber of said casing and the intake of the

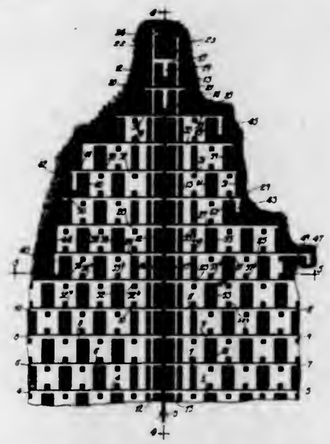
engine, a thermostat secured to the back of the radiator, and a movable member operated by said thermostat, said member normally closing the passageway through said pipe connection and causing said passageway to be opened when said thermostat expands a predetermined amount.

1,501,934. STEERING-WHEEL LOCK. SOLOMON WISE, Cincinnati, Ohio. Filed July 19, 1922. Serial No. 575,925. 14 Claims. (Cl. 70—129.)



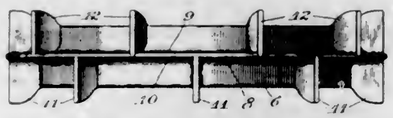
8. In a steering wheel lock, a gear case cover, means on the said cover comprising a hinge, and a lock part, a lock plate secured to said hinge, said lock plate having a complementary lock part, said lock plate hinge and lock parts so located that the lock plate will swing up and over the hub of a steering wheel and be locked in place in such position.

1,501,935. ALARM CLOCK. HARRY WONG, Duluth, Minn. Filed Apr. 3, 1923. Serial No. 629,680. 2 Claims. (Cl. 58—19.)



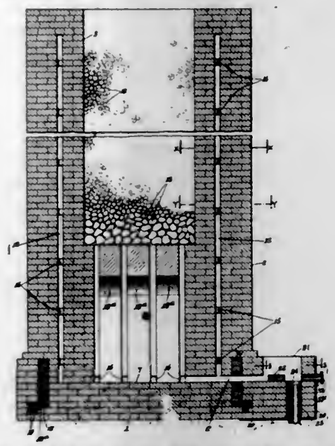
1. The combination with an alarm clock having a sound producing alarm thereupon and an electric light and circuit therefor cooperatively connected therewith, and a manually controlled switch comprising a plurality of selective terminals whereby the light may be caused to function independently of the alarm, with the alarm, or neither, of means within the electric light circuit for

regulating the duration thereof comprising two normally parallel spaced resilient terminals, the action of one of which towards the other is governed by the clock



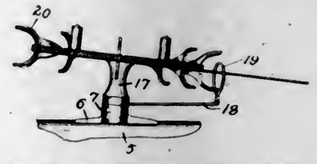
mechanism, and means for manually adjusting the other to determine the spaced relation thereof for the purpose described.

1,501,936. METHOD OF MINING. EDWIN BALL, Birmingham, and CLARENCE E. ABBOTT, Bessemer, Ala. Filed May 12, 1922. Serial No. 560,394. 10 Claims. Cl. 262—1.)



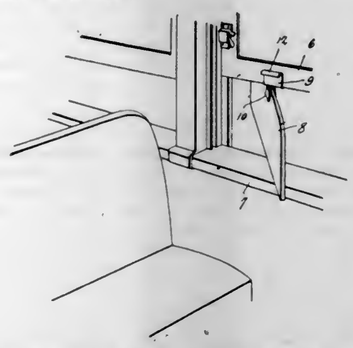
1. The method of mining which consists in driving a main slope beneath an inclined seam or deposit, turning levels laterally from the slop in the deposit, driving manways in advance of the main slope and substantially parallel to the center line thereof, connecting the manways by levels in advance of the slope and raising the slope from said levels.

1,501,937. TRACTION WHEEL. BERT R. BENJAMIN, Oak Park, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed May 26, 1922. Serial No. 563,962. 4 Claims. (Cl. 301—41.)



4. As an article of manufacture, a traction wheel having a rim, a centrally disposed rib of gradually decreasing thickness extending radially outward therefrom, the sides of the rib merging into the outer face of the rim, radial traction lugs of the same height as the rib secured to opposite sides thereof and to the rim and extending laterally beyond the rim.

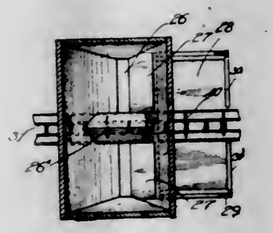
1,501,938. MASONRY CONSTRUCTION FOR CHEMICAL APPARATUS. VERN K. BOYNTON, New York, and PAUL W. WEBSTER, Pelham Manor, N. Y., assignors to Perry & Webster Incorporated, Elizabeth, N. J., a Corporation of New Jersey. Filed July 13, 1918. Serial No. 244,825. 21 Claims. (Cl. 25—1.)



1. In an apparatus of the class described, the combination of a flat base, an outer enclosure and an inner enclosure, the latter consisting of a plurality of walls loosely mounted on said base.

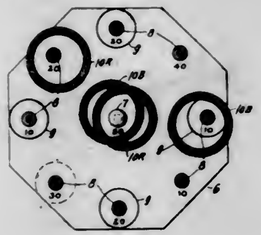
1,501,939. FISHING-REEL ATTACHMENT. WALTER BRINTZENHOFE, Bluffton, Ind. Filed Aug. 30, 1922. Serial No. 585,223. 4 Claims. (Cl. 242—84.5.)

1. In a fishing reel, a brake, spring means normally holding the brake in operative braking position with the reel, and means for releasing the brake through the movement of the reel during the reeling in of the line.



1,501,940. VENTILATOR. EDWARD A. BROWN, Fort Worth, Tex. Filed May 3, 1923. Serial No. 636,454. 3 Claims. Cl. 98—22.)

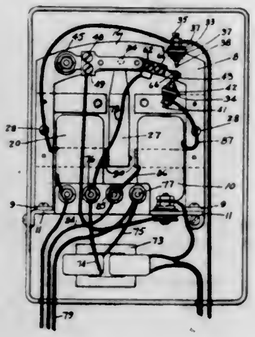
1. The combination with a window sash; of a ventilator including a relatively rigid shield extending in the direction of the length of said sash beyond one rail thereof,



a sash attaching means for said shield comprising sash and shield engaging members, and a pivotal connection between said members extending in the direction of the length of said sash.

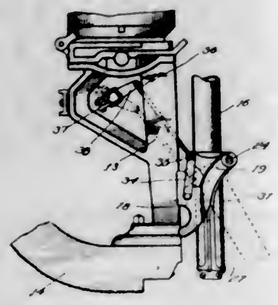
1,501,941. FEEDING MECHANISM FOR POTATO PLANTERS. NORMAN E. BUNTING, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Dec. 19, 1919. Serial No. 346,181. 9 Claims. (Cl. 198—56.)

1. In potato feeding mechanism, the combination of a hopper, spaced outlets at the bottom of its rear wall, a table extending rearwardly below each outlet and a conveyor between the tables and extending beneath the hopper.



1,501,942. GAME. DENSLAY L. CARMAN, Selby, S. Dak. Filed Apr. 27, 1923. Serial No. 635,108. 1 Claim. (Cl. 46—59.)

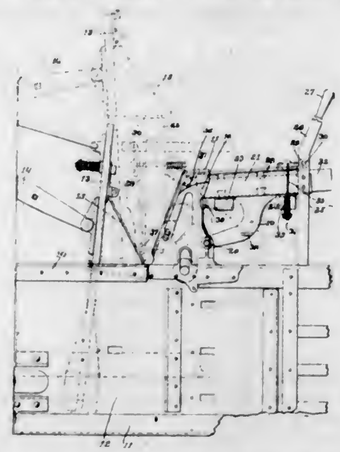
A game comprising a base plate, a plurality of vertically disposed, spaced pins secured in said plate and having a designating number on the base adjacent each pin, and rings adapted to be tossed or thrown in a manner to each engage one of said pins and means for varying the designation of one or more of the pins; said means for varying the numerical designation of the pins comprising washers adapted to beplaced on any of said pins and to rest on the base to cover the numerical designation of the pin.



1,501,943. SWITCH MECHANISM. FREDERICK S. DENISON, Minneapolis, Minn., assignor to Minneapolis Heat Regulator Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 7, 1922. Serial No. 580,559. 4 Claims. (Cl. 200—98.)

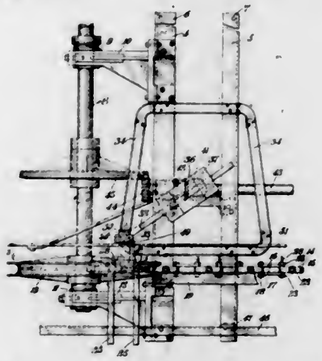
4. An electric switch mechanism including a frame, electromagnets on the frame, an armature pivoted on the frame between the electromagnets to be selectively shifted in reverse directions thereby, a rock shaft on the frame, a connection between said armature and shaft to oscillate the shaft, a pair of spaced arms insulatedly mounted on said shaft, a contact member pivotally mounted between said spaced arms, contacts on opposite sides of said contact member, spaced contacts on said frame opposite said contacts on said contact member, and a coiled spring arranged between said spaced arms and connecting the rear end of the latter with said contact member, said

spring being constructed and arranged to hold said contact member into shifted position on opposite sides of the pivot connecting said contact arm to said spaced arms.



1,501,944. FERTILIZER ATTACHMENT FOR PLANTERS. RALPH L. FORD, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Dec. 19, 1919. Serial No. 346,182. 5 Claims. (Cl. 111—51.)

1. The combination of seed discharging and fertilizer discharging devices, means for causing both devices to discharge intermittently including means for varying the distance between the points at which the seed and fertilizer are discharged comprising a movably supported spout on the fertilizer discharging device, a movably supported closure for the spout, operating means therefor, means for connecting the operating means either to the spout or to the closure, and means for immovably locking the non-operating element.



1,501,945. BLOCK-SETTING MECHANISM FOR BALING PRESSES. ALBERT GRIEVES, Springfield, Ohio, assignor to International Harvester Company, a Corporation of New Jersey. Filed June 23, 1919. Serial No. 305,993. 10 Claims. (Cl. 100—24.)

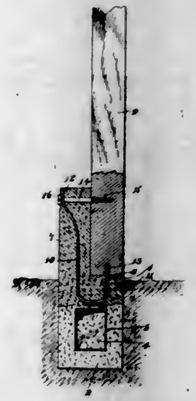
1. In a baling press, a frame, a block setter pivotally mounted thereon, resilient means carried by the block setter for yieldingly retaining a block in the setter when in discharging position, and means engaging the resilient

means when the setter is in block receiving position to positively limit insertion of a block.

1,501,946. ELECTROPLATING APPARATUS. WESLEY F. HALL, Matawan, N. J., assignor to A. P. Munning & Co., New York, N. Y., a Corporation of New Jersey. Filed Apr. 28, 1922. Serial No. 557,116. 18 Claims. (Cl. 204—11.)

1. An electroplating apparatus comprising a work holder for articles to be plated, a conveying mechanism adapted to move said work holder continuously along a tank, and means engaging said work holder at the delivery end of the tank for disconnecting such work holder from said conveying mechanism, and raising the work holder above the tank.

1,501,947. PRINTER'S GAUGE. FREDERICK M. HILLMAN, Indianapolis, Ind. Filed Apr. 25, 1923. Serial No. 634,630. 1 Claim. (Cl. 33—143.)

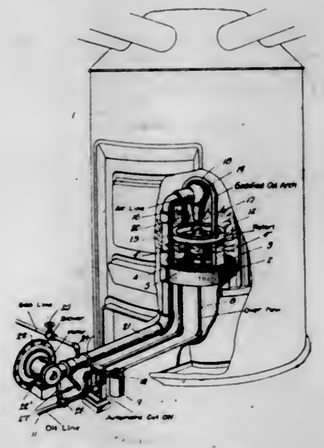


A printer's gauge comprising a bar having graduations thereon and a projection at one end thereof with the inner face of said projection at right angles to said bar, an adjustable slide formed with an opening to fit about said bar and mounted thereon, said slide having a projecting inner face in opposed parallel relation to the inner face of the projection on the end of the bar, and having a perforation in one wall of the opening and registering with a depression in the opposite wall of the opening, said bar having transversely extending openings therethrough adapted to be brought into registry with the perforation and depression in the slide, and a securing member adapted to extend through said perforation and engage any opening in the bar and the depression in the slide, substantially as set forth.

1,501,948. CUTTING TOOL. GEORGE E. HILL, Pittsburgh, and RAYMOND R. WILLIAMS, Glenshaw, Pa. Filed Sept. 23, 1922. Serial No. 590,128. 5 Claims. (Cl. 30—9.)

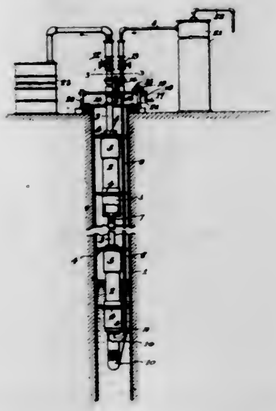
1. In a cutting tool, a blade holder comprising a pair of opposed leaves, each having an elongated bolt hole therethrough adapted to permit the slidable operation of a bolt therein, a cutting blade between the leaves having an indentation formed in each end thereof, and means passing through the cutting blade indentations and the holder leaves, for securing the said cutting blade in operative position.

1,501,949. FENCEPOST BASE. FRANK HOBART, Marseilles, Ill. Filed July 23, 1923. Serial No. 653,219. 8 Claims. (Cl. 72—84.)



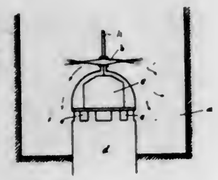
4. A concrete base for fence posts comprising a body portion having its top provided with a vertical extension, a combined reinforcing and coupling member embedded in the extension and body portion and further projecting through the top of said body portion to provide a fence post securing means, and a fence post securing element extending transversely of and projecting from the inner side of said extension.

1,501,950. OIL BURNER. WALTER S. HUMPHREY, Kansas City, Mo. Filed June 11, 1923. Serial No. 644,618. 4 Claims. (Cl. 158—66.)



1. In an oil burner, a base comprising a ring-shaped member filled with loose material to admit air through the member, an oil pan within the ring, a centrally lo-

cated refractory member above the pan, a support for said member, a ring-shaped retort above the base and about the refractory member, a hollow arch communicat-



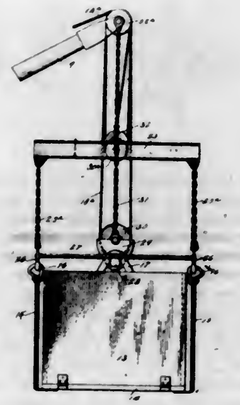
ing with the retort, and a spherical mixing chamber communicating with the hollow arch and having a nozzle in line with the refractory member.

1,501,951. AIR PUMP FOR WELLS. JAMES B. KENNEDY, Bainbridge, Ga., assignor of one-half to H. G. Bell, Bainbridge, Ga. Filed Oct. 31, 1922. Serial No. 598,143. 3 Claims. (Cl. 103—232.)

1. In an air pump water conducting element, a lower terminal casing comprising a body portion having a closed bottom and one of its sides perpendicular and slotted, said body portion further including a top formed with an opening and an upstanding peripherally threaded annular flange for coupling the casing with the body portion of the conducting element flush with said opening, said top further having an opening positioned between the lower end of the flange and one end of the top for connecting an air supply pipe to the casing, and said top projecting laterally from the upper end of the body portion throughout to provide a flat ledge extending entirely around said flange.

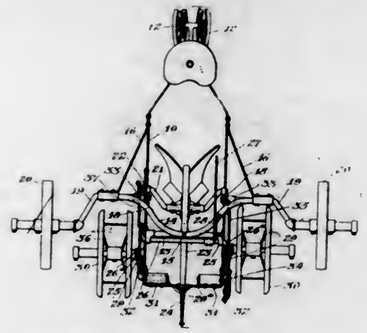
1,501,952. PROCESS OF AND APPARATUS FOR EVAPORATING LIQUIDS. GEORG ALEXANDER KRAUSE, Munich, Bavaria, Germany, assignor, by mesne assignments, to American Lurgi Corporation, New York, N. Y., a Corporation of New York. Filed June 19, 1920. Serial No. 390,302. 6 Claims. (Cl. 159—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

5. In apparatus for evaporating liquids, an atomizer including a vessel having discharge orifices for forming a substantially horizontal stratum of mist, means disposed below the atomizer for supplying a drying medium and means for minimizing the formation of a zone of reduced pressure adjacent the discharge orifices, said means consisting of means for positively deflecting at least a part of the drying medium into the region in which the zone of reduced pressure would normally be formed.



1,501,953. FISHING LEADER. ELMER LESLIE, Medford, Oreg. Filed Dec. 13, 1922. Serial No. 606,675. 1 Claim. (Cl. 43—28.)

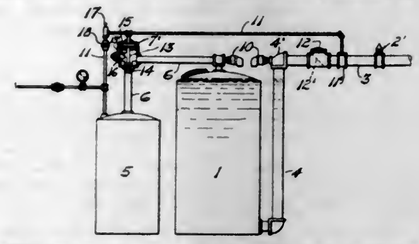
A fishing leader including a leader member of wire for connecting a hook with a fishing line, and a coating of silver solder covering the wire and tending to render the leader invisible when in the water.



1,501,954. BATCH-BOX APPARATUS. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed June 6, 1922. Serial No. 566,362. 11 Claims. (Cl. 212—41.)

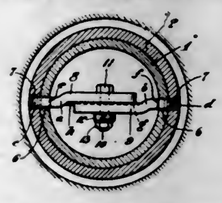
1. Batch box handling apparatus comprising a hoisting cable, a batch box comprising dumping doors and operative connections intermediate the doors of the batch box and the said cable and intermediate the said cable and the batch box body together with means to act on one of said connections whereby on proper move-

ment of the cable relative movements may be imparted to the batch box body and its doors to open the same for dumping action.



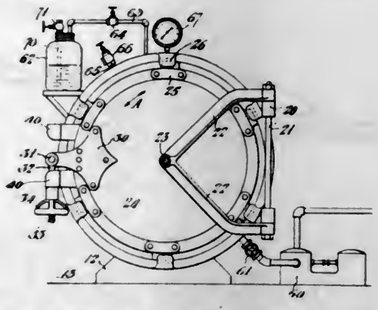
1,501,955. LISTER PLOW. ALEXUS C. LINDGREN, Evanston, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 12, 1921. Serial No. 514,508. 11 Claims. (Cl. 97—84.)

1. In a furrow forming machine, the combination of a furrow forming tool, a frame on which the tool is mounted, supporting means on the frame adapted to engage the ground at either of two definite distances on each side of the tool with the point of support on one side of the tool substantially twice as distant from the tool as the point of support on the other side, and means for shifting from one supporting position to the other thereby reversing the respective locations of the points of support with reference to the tool.



1,501,956. DRY-PIPE SYSTEM. ALBERT J. LOEPSINGER, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 554,911. 7 Claims. (Cl. 169—9.)

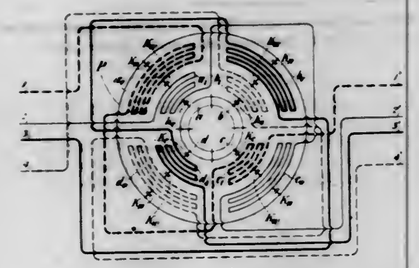
1. A dry pipe system comprising a distributing pipe, means open to atmosphere for holding a supply of liquid therefor, whose location and connections afford free passage for the liquid into the distribution pipe, and yet normally hold it back therefrom, as by gravity; means having a supply of compressed air adapted when released to flow into said holder; means actuated by in-



rush of air for closing said holder to atmosphere whereby said air forces said liquid into said pipe; and temperature controlled means for releasing said air.

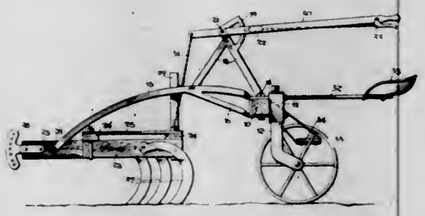
1,501,957. DISK OR RETAINING MEANS FOR WELL PACKERS. PATRICK H. MACK, Bradford, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 341,175. 2 Claims. (Cl. 166—10.)

1. A retaining device for use in connection with well packers or the like consisting of a pair of longitudinally arranged overlapping bridge members each having a socket engaging terminal, one member being provided with an inner transversely concave face and the other with an inner transversely convex face respectively, of a common radius in continuous normal bearing contact one with the other, and a middle transverse connecting bolt and resilient washer, whereby to resiliently hold the members together and effect cumulative friction between said contacting faces upon deflection.



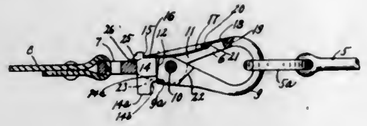
1,501,958. APPARATUS FOR DESTROYING ANIMAL LIFE. DAVID B. MACKIE, Los Angeles, Calif. Filed Jan. 8, 1921. Serial No. 435,892. 5 Claims. (Cl. 292—300.)

1. In a container the combination of a shell; a cover fitting tightly over one end of said shell; a support for said cover; means for pivoting said support on said shell; means for pivoting said cover on said support; a series of lugs on said shell; a series of lugs on said cover engaging said lugs on said shell, one of said series



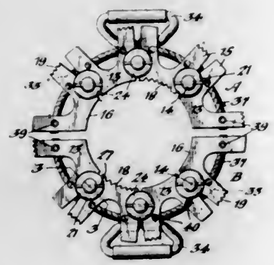
being so formed that said cover is forced against said shell when said cover is rotated; a projection on said cover; a pin turning in said projection; a bolt secured to said pin; a hand wheel threaded on said bolt; and ears on said shell above and below said projection, said ears being so formed that either may be engaged by said hand wheel by turning said bolt.

1,501,959. LOADED TRANSMISSION CIRCUITS. WILLIAM H. MARTIN, New York, N. Y., and THOMAS SHAW, Hackensack, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 30, 1922, Serial No. 571,893. Renewed Nov. 22, 1923. 11 Claims. (Cl. 178—45.)



1. In a transmission system comprising a phantomed group of conductors, the side circuits of which are loaded by coils spaced at intervals such as to give satisfactory transmission for a range of frequencies higher than that transmitted over the phantom and the phantom circuit of which is loaded by coils spaced at greater intervals than the side circuits, a loading unit to be included in the phantomed group of conductors at the phantom loading points, said loading unit comprising a phantom loading coil and side circuit loading coils, the inductance of the side circuit loading coils being less than that of the side circuit loading coils at non-phantom loading points by an amount equal to the leakage inductance introduced into the side circuit at the phantom loading point by the phantom loading coil.

1,501,960. PLOW-OPERATING APPARATUS. CHARLTON S. MATTHEWS, Little Mountain, S. C. Filed Aug. 9, 1923. Serial No. 656,617. 2 Claims. (Cl. 97—100.)

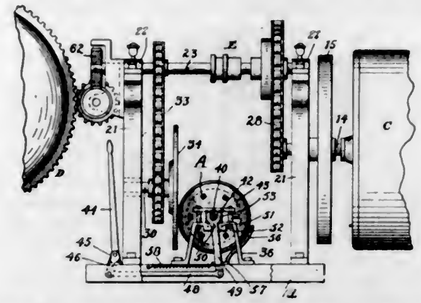


1. An apparatus of the class described, comprising a rear support mounted for movement over the ground, a carrier frame including spaced side members extending forwadly of the support, a frame carrying plow elements and connected to swing at its forward end to the forward ends of said carrier frame side members, guide devices rising from said plow frame and slidably engaged by said carrier frame side members, and means attached to said plow frame for swinging the same on its pivotal connection to the carrier frame.

1,501,961. SNAP HOOK. JOHN P. MATTSON, Minneapolis, Minn. Filed Nov. 8, 1923. Serial No. 673,618. 6 Claims. (Cl. 24—233.)

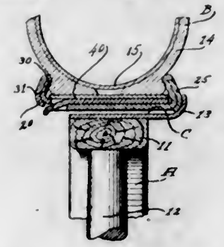
1. A snap hook comprising a body member having an eye for securing it in place of service, said member having a longitudinal slot, a second member having a flat and angular end pivoted in the slot in spaced relation to the terminal of the slot nearest said eye, the other end of the second member being hook shaped and arranged to close with its point against the free end of the body member, a key fitted to slide tansversely in the slot snugly between the terminal thereof and the angular end of the pivoted hook member, whereby the latter is normally held in closed position, a spring arranged to normally hold the key with the hook closed, said key having its rear end protruding through the slot to give a chance to push it endways when the hook is to be opened, said key having a clearance allowing the hook to be swung open when the key is sufficiently pushed against the resistance of its spring.

1,501,962. CASING SLIP FOR DRILLING APPARATUS. GUSTAVUS A. MONTGOMERY, Titusville, Pa., assignor to Titusville Forge Co., Titusville, Pa., a Corporation of Maryland. Filed Apr. 10, 1923. Serial No. 631,236. 18 Claims. (Cl. 24—263.)



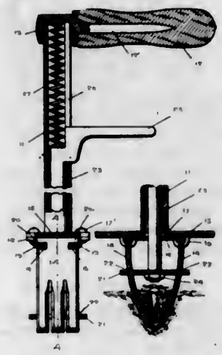
1. A casing slip of the character described, comprising a plurality of separate slip units, each unit including a plurality of sectors, and means for hingedly connecting the sector of each unit to one another and limiting them to pivotal movement about the axes of said hinge means.

1,501,963. HOIST. JAMES B. MCQUEEN, Preston, Idaho. Filed April 11, 1921. Serial No. 460,331. 2 Claims. (Cl. 254—186.)



1. A hoisting mechanism comprising a supporting frame, a bracket carried by said supporting frame having a slot therein, a member connected to said bracket providing a slot therein in aligning relation with the slot of said bracket, a shaft having one end thereof provided with an opening therethrough, a bolt connected through said shaft opening and extending through the aligning slots of said bracket and member, a nut for clamping said bolt in a determined relation along the aligning slots whereby the shaft may be pivotally

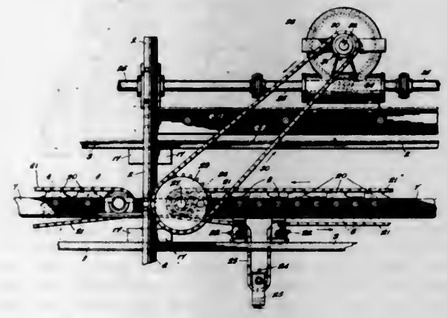
connected between the bracket and the member, a driving mechanism including a drive wheel, a drum rotatably



carried by the shaft remote from its pivotal connection, a driven wheel affixed to said drum, and means for moving the shaft upon its pivot whereby the driven wheel may be moved into engagement with the drive wheel.

1,501,964. DEMOUNTABLE RIM. JOHN N. MCQUEEN, Preston, Idaho. Filed Dec. 19, 1921. Serial No. 523,477. 5 Claims. (Cl. 301—35.)

1. A wheel rim for vehicle tires comprising band sections telescopically connected together, locking seats formed in one of the sections adjacept to the outer edge thereof, and rigid locking tongues carried by the other section, adjacent to the outer edge thereof for engaging in said seats when the sections are disposed in their assembled operative tire engaging position.

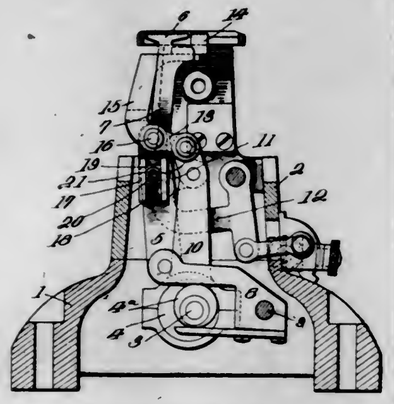


1,501,965. WEED EXTRACTOR. WALTER C. MOORS, Owensboro, Ky. Filed Sept. 10, 1923. Serial No. 661,858. 4 Claims. (Cl. 55—68.)

1. An extractor comprising a shank, a pair of superposed plates secured to the shank, jaws having their upper ends abutting the upper plate and having hinge portions, the lower plate having portions receiving said hinge portions and holding them between the plates, and operating means connected to the jaws.

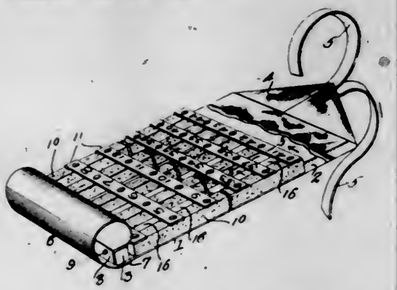
4. An extractor comprising a tubular shank, a pair of plates, one of the plates being fitted on the end of the shank and the other plate abutting the end of the shank, to secure the plates to the shank, jaws having hinge portions, said plates having portions receiving and holding said hinge portions between them, and operating means connected to the jaws and including a rod slidable in said shank and secondnamed plate.

1,501,966. DRYING APPARATUS. TREADWAY B. MUNROE, New Orleans, La., assignor to C. F. Dahlberg, New Orleans, La. Filed Dec. 3, 1921. Serial No. 519,748. 13 Claims. (Cl. 34—12.)



1. In a drier for heat insulating fiber boards, the combination of a frame work; a plurality of sets of conveyer rollers mounted for rotation in said frame work; a separate driving means for each set of rollers comprising a driving and a driven sprocket chain; a power shaft for driving a plurality of said driving chains; a plurality of sets of steam coils associated with said conveyer rollers; and means to admit high pressure or low pressure steam at will into each set of coils, substantially as described.

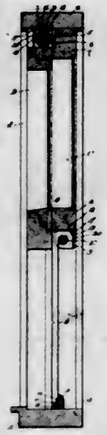
1,501,967. DISH AND PLATE LIFTER. ROBERT NADEAU, Fort Kent, Me. Filed May 24, 1922. Serial No. 563,328. 1 Claim. (Cl. 294—30.)



In a device of the class described, a flat handle member having centrally positioned spaced apertures therethrough, a rigid U-shaped jaw member extending at right angles from said handle and parallel with the under surface thereof, each leg of said jaw member having a loop at a point removed from the inner end and further extended through said aperture and looped around one side edge of said handle and further extended against the lower face of the handle and around the other side edge and onto the top thereof whereby said jaw will be firmly fixed to the handle and an auxiliary jaw member loosely linked with the loops on the legs of the other jaw.

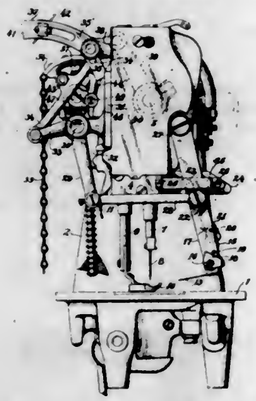
1,501,968. FEEDING MECHANISM FOR SEWING MACHINES. LANSING ONDERDONK and AUGUST J. WOHLPART, New York, N. Y., assignors to Union Special Machine Company, Chicago Ill., a Corporation of Illinois. Filed Apr. 8, 1922. Serial No. 550,883. 8 Claims. (Cl. 112—209.)

1. A sewing machine including in combination, a supporting frame, a work supporting post extending vertically therefrom, a main feed dog, a feed bar extending vertically of the work supporting post on which said main feed dog is mounted, means for raising and lowering said main feed bar and for oscillating the feed bar imparting to the feed dog its movements, an auxiliary feed dog, and devices actuated from the main feed bar for imparting movements to said auxiliary feed dog.



1,501,969. CORN TESTER. JOHN WILLIAM PAULS, Bundy, Mont. Filed Jan. 31, 1922. Serial No. 533,118. 7 Claims. (Cl. 47—15.)

2. In an apparatus of the class described, the combination of a sheet, a transverse strip on said sheet, a coiled cylinder forming strip extending transversely of the sheet and having one end fastened to the sheet and its other end to said strip, and means on the sheet forming seed-retaining compartments when the sheet is rolled around the cylinder.

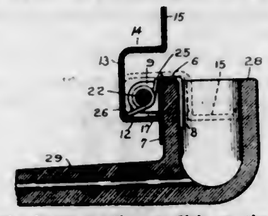


1,501,970. WINDOW SCREEN. SAM REEL, Evansville Ind., assignor of one-half to Emma Rick, Marion, Ill. Filed Oct. 10, 1922. Serial No. 593,555. 1 Claim. (Cl. 156—39.)

A window screen fixture comprising a housing of sheet metal having rectangularly disposed side sections and end sections lying in planes at right angles to the length of the housing, a screen roller journaled in the end sections, one of the side sections being provided at its outer edge portion with recesses leading in from the edge thereof and disposed at right angles to the said edge, the other side section being provided with apertures located in the vicinity of the inner edges of

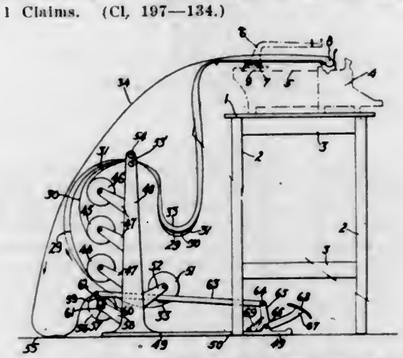
both side sections and pins having angularly disposed end portions, one end portion of each pin adapted to engage in a support and the other end portion of each pin adapted to engage the inner surface of the recessed side section when the housing is applied.

1,501,971. SEWING MACHINE. JOHN C. RINGE, Stratford, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed July 8, 1919. Serial No. 309,378. 12 Claims. (Cl. 112—136.)



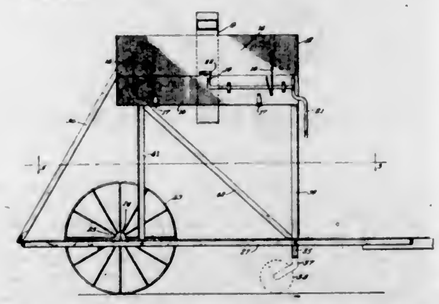
1. In a ruffling mechanism for sewing machines, in combination, a driving shaft, a ruffling-blade, connections between the driving shaft and said ruffling-blade for imparting operative movements to the latter, and treadle controlled means constructed and arranged to impart to said ruffling-blade during the operation of the machine a movement of greater amplitude than the normal range to throw said ruffling-blade into an inoperative position in alinement with but beyond its normal path of operating movement.

1,501,972. FINGER GUARD FOR SMOKING PIPES. ARAM SHENHAN, Providence, R. I. Filed Mar. 7, 1923. Serial No. 623,365. 3 Claims. (Cl. 131—12.)



1. In a guard for a smoking pipe, a clamping member comprising a base, and resilient fingers depending from the base, lateral lugs on one of the fingers, an operating

arm comprising an intermediate portion, a horizontally disposed lower portion, an upper portion disposed in the

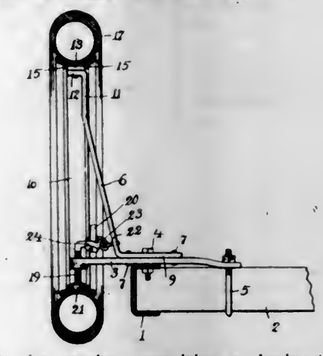


direction of the lower portion, a disk on the upper portion, ears on the lower portion, and a pintle mounted in the lugs and ears.

1,501,973. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 11, 1922. Serial No. 560,031. 11 Claims. (Cl. 197—134.)

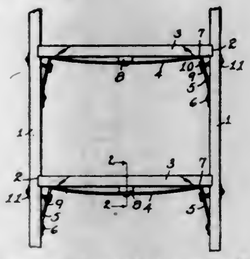
1. The combination with a typewriting machine and stand therefor; of a web-holder; means for feeding the web from the holder to the platen; a pick-up roll for the typewritten portion of the web, mounted near the floor and at a sufficient distance below the typewriting machine to permit relative travel of the machine-carriage and the pick-up roll without fouling the web; and a foot-controlled device for intermittently and at will rotating the pick-up roll.

1,501,974. HOPPER ATTACHMENT FOR HARVESTERS. MILTON D. STOCKING, Lindenwood, Ill. Filed Dec. 19, 1922. Serial No. 607,823. 8 Claims. (Cl. 214—65.)



1. In combination with a harvester having an elevator, a hopper adapted to receive the material discharged by the elevator, a supplemental wheel-supported frame carrying the hopper, draft means for said supplemental frame, and means operative between the harvester and supplemental frame for maintaining the hopper in operative relation to the elevator, said means including a transverse bar fixed to the supplemental frame and pivotally attached to the harvester at the side thereof remote from its elevator discharge end whereby said discharge end and the hopper will swing laterally substantially in unison when passing over uneven ground.

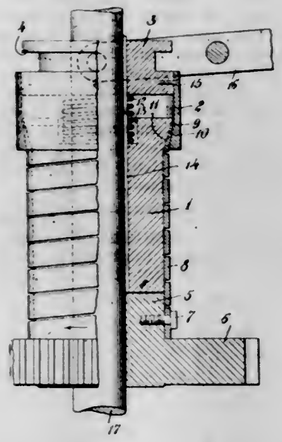
1,501,975. BUILDING MATERIAL AND METHOD OF MANUFACTURING THE SAME. ROBERT W. STREHLENERT, Nol, Sweden. Filed Sept. 18, 1923. Serial No. 663,474. 2 Claims. (Cl. 106—39.)



1. A method of manufacturing building stones of a mixture of clay, wood cuttings and waste sulphite liquor, characterized thereby, that these substances are mixed together with so small a quantity of water that the mass will be of a granular consistency, whereafter the mass under pressure is pressed in moulds to stones and then during a short period subjected to a rapid heating to about 200° C. or therenbove in order that the waste sulphite liquor may be partially decomposed and the stone hard and not hygroscopical.

1,501,976. TIRE CARRIER. STANLEY F. WALDEN, West Newton, Mass. Filed May 9, 1923. Serial No. 637,666. 3 Claims. (Cl. 224—29.)

1. A tire carrier comprising a horizontal member adapted to be attached to the frame of a truck and the like, a member rising from said horizontal member and attached thereto at an intermediate point and inclined to present its upper end in substantially the same vertical line with the outer end of the horizontal member, a head attached to the upper end of the inclined member, and a bolt having a crank arm turning in the outer part of the horizontal member, said head and bolt being disposed for engaging diametrically opposite points of a tire-rim.

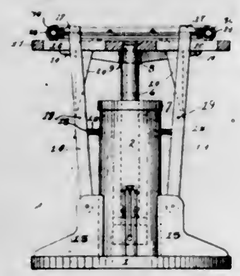


1,501,977. LADDER. EARL L. WEAVER, Goshen, Ind., assignor to The Goshen Manufacturing Company, Goshen, Ind. Filed Sept. 14, 1923. Serial No. 662,633. 3 Claims. (Cl. 228—58.)

3. A ladder comprising risers, a step, a truss member having arms at the ends thereof disposed beneath said step to engage the same adjacent the ends thereof, a truss

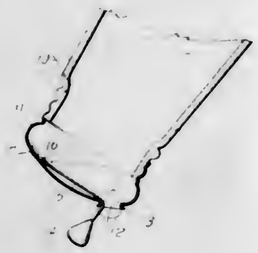
block between said step and truss member, and tension members connecting the arms of said truss members to said risers.

1,501,978. FRICTION CLUTCH. ERNEST H. WEBB, New Brunswick, N. J., assignor to The Webb Wire Works, New Brunswick, N. J., a Corporation of New Jersey. Filed Feb. 4, 1922. Serial No. 534,077. 12 Claims. (Cl. 192—81.)



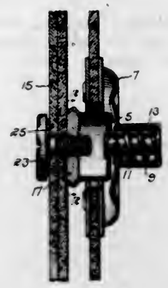
11. In friction clutches, a clutch drum, a cooperating clutch member having secured thereto a resilient helical clutching coil provided with a continuous conical actuating collar and an actuating member adapted to cooperate with the actuating collar on said clutching coil to cause frictional clutching engagement between the turns of the clutching coil and the drum.

1,501,979. OPTICAL INSTRUMENT. ROBERT W. WILLSON, Cambridge, Mass.; Arthur H. Brooks administrator of said Robert W. Willson, deceased. Filed Nov. 23, 1921. Serial No. 517,176. 13 Claims. (Cl. 88—28.)



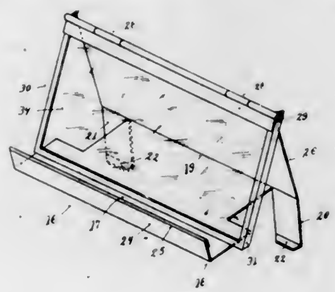
1. An optical instrument, comprising a tube containing cross wires, and an optical element mounted at the outer end of the tube and formed to deflect parallel rays from a circular object so as to produce in the plane of the cross wires a circular image with a spot at its center having a different degree of illumination from the rest of the image.

1,501,980. RIM-ATTACHING TABLE. CARL G. ANDERSON, Akron, Ohio. Filed Mar. 4, 1920. Serial No. 363,186. 8 Claims. (Cl. 18—2.)



1. In a device of the class described, a suitable base, a body extending upwardly therefrom, said body provided with a vertical bore, a piston operatively mounted in said bore, a piston shaft extending upwardly therefrom, a table mounted on said shaft, arms pivotally mounted on said body and extending upwardly through slots in said table, a claw extending outwardly from the free end of each arm, means to introduce fluid under pressure under said piston and automatic means to move the free ends of said arms outwardly in said slots as the piston is forced upwardly in said cylinder.

1,501,981. JAR FOR SUGAR AND THE LIKE. CHARLES S. BARON, Tiffin, Ohio. Filed Feb. 24, 1921. Serial No. 447,513. 2 Claims. (Cl. 221—13.)



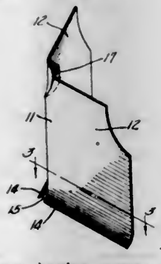
2. An article of the class described having a pouring hole in its top, a stopper for such hole located on the exterior of the top, and means pivotally supporting the stopper from within the cap and playing through the hole, the stopper and the portion of such means playing through the hole being in a position to one side of the hole when the stopper uncovers the hole, such means comprising an L-shape arm reaching from the stopper to the point of pivotal connection within the top, the stopper itself having sufficient weight to cause the gravitation thereof toward and from the hole.

1,501,982. TURNBUTTON FASTENER. DAVID BOURQUE, Amesbury, Mass., assignor to G. W. J. Murphy Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1921. Serial No. 515,402. 3 Claims. (Cl. 24—221.)

1. A turnbutton fastener of the type having the spring in the head or button and having a hollow base, a nut in the base and a screw tapping into the nut from the rear to provide means for securing the fastener to a support.

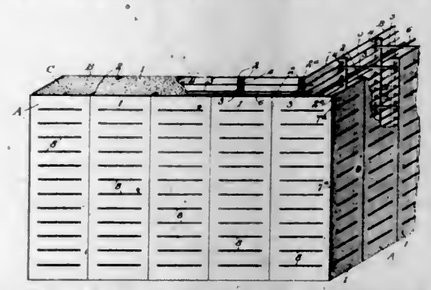
1,501,983. DISPLAY AND VENDING APPARATUS. EDWARD BRUNHOFF, Cincinnati, Ohio. Filed Nov. 18, 1922. Serial No. 601,855. 3 Claims. (Cl. 211—28.)

1. A display and vending apparatus comprising a sheet metal supporting structure having front, bottom, and rear sections bent at substantially right angles to one another and open at its ends, legs formed as cutout portions of said structure to support said structure in an inclined position, and a transparent lid hinged to the upper edge of the rear section and adapted to rest upon the open mouth of an original package resting upon the bottom section of said structure.



1,501,984. SCREEN FOR DUST COLLECTORS. MICHAEL A. EIBEN, Cleveland, Ohio. Filed Sept. 27, 1923. Serial No. 665,176. 2 Claims. (Cl. 183—44.)

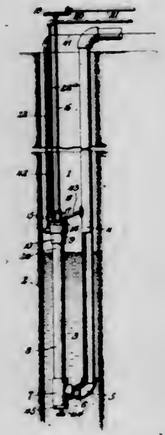
1. In a dust collector, the combination with a housing having an air inlet and outlet, and supports arranged upon opposite walls of the housing; of a set of dust and air separator screens, each screen comprising a pair of vertical end studs, a pair of horizontally spaced head beams connecting the studs and secured to opposite faces and at the upper ends of said studs, said head beams having their ends extended to take over the supports, a bottom beam connecting the lower ends of the end studs and having a set of longitudinally spaced alined openings, a packing strip covering the lower side of said beam, a channel member arranged over the packing, a set of bolts



extended through the beam between the openings and securing the packing and channel member in position and a fabric covering for the screen.

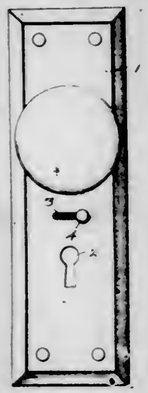
1,501,985. METAL BUILDING CORNER. EVAN EVANS, Los Angeles, Calif. Filed Apr. 24, 1923. Serial No. 634,291. 5 Claims. (Cl. 20—5.)

1. A building corner having rearwardly bent flanges separated by a notch and adapted to fit the contour of the siding members with which they are employed, and a filler portion oppositely disposed from said flanges and arranged to fill the notch existing between the inner ends of said flanges of a successive building corner.



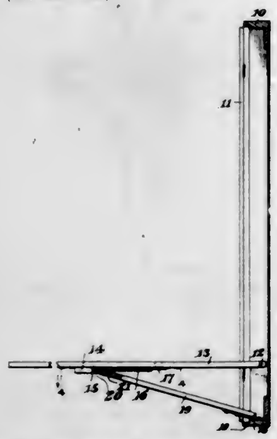
1,501,986. BUILDING CONSTRUCTION. WILLIAM LEWIS EVANS, Jr., Washington, Ind. Filed July 27, 1921. Serial No. 487,919. 14 Claims. (Cl. 72—30.)

1. In building construction, the combination of elongated sheet-metal trough-like elements having longitudinal angle flanges at the edges meeting face to face, fastening means securing the flanges of the elements together, where meeting, to form a continuous wall-



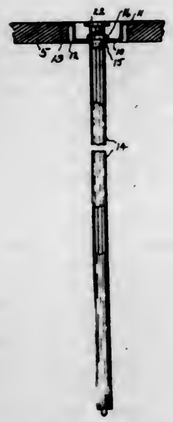
facing, with said flanges having matching perforations in alignment, and reinforcing rods smaller in diameter than the perforations and traversing said perforations, said elements being adapted to receive a filling-in-material, embedding the rods and flanges and passing through the perforations and filling the spaces between said flanges.

1,501,987. PUMP. CHARLES H. FOX, Bakersfield, Calif. Filed July 30, 1920. Serial No. 400,106. 20 Claims. (Cl. 103—250.)



1. The method of propelling liquids from a supply thereof to a point of utilization, which consists in igniting an explosive mixture in contact with a guided body of liquid to thereby propel the liquid in a determined direction to a point of discharge, and causing the momentum of the propelled liquid to create vacuum conditions so as to draw in a new supply of liquid and at the same time utilizing the incoming liquid, as well as the momentum of the propelled liquid, to extract the spent gases of explosion and carry them along with the discharging liquid.

1,501,988. ATTACHMENT FOR DOOR-LOCK ESCUTCHEONS. ERNEST W. FREDRICKSON, Kinbrae, Minn. Filed April 10, 1923. Serial No. 631,155. Renewed June 2, 1924. 1 Claim. (Cl. 70—7.)



In combination, an escutcheon including a key hole, a slot, a pin projected through the slot, a plate mounted on the pin and provided with a key hole and a slot projecting therefrom, said pin being movable to actuate the plate so that its key hole may be placed in and out of registry with the key hole of the escutcheon, a resilient plate carried by the pin, a guide bar fastened to the escutcheon, said resilient plate adapted to bear on said bar so as to brake the movement of the first mentioned plate whereby accidental movement thereof will be prevented.

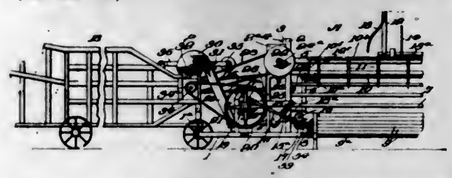
1,501,989. IRONING BOARD. HENRY GIESE, Ames, Iowa. Filed Feb. 20, 1922. Serial No. 537,926. 1 Claim. (Cl. 68—10.)

In a device of the class described, a supporting structure, an ironing board pivoted at one end to the supporting structure above the bottom thereof, a cleat attached transversely to the underface of the ironing board intermediate the ends thereof, a guide rod connected at one end to the cleat and at the other end to the board, a brace member swingingly coupled at one end to the support and spaced below the pivoted point of the same, and a plate perforated to movably engage said guide rod and attached to said brace.

1,501,990. OIL-LEVEL-INDICATING ATTACHMENT FOR CRANK CASES. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation of Nebraska. Filed Mar. 25, 1921. Serial No. 455,416. 1 Claim. (Cl. 73—120.)

In an oil indicating attachment for the crank case of a vehicle having a floor provided with an aperture, a pipe coupling threaded in the crank case, an apertured cup provided with a flange and adapted to be disposed in the aperture of the floor, a tubular container including a horizontal part communicating with the pipe coupling and a vertical part adapted to loosely engage in the aperture of the cup and connecting with said horizontal part and having a collar adapted to bear upon the upper surface of the bottom of said cup for a support of said tubular container, and an indicating rod provided with a handle and adapted to be inserted in the vertical part of the tubular container with its handle normally disposed in the cup in line with the flange thereof.

1,501,991. FIRE ESCAPE. FRANK GIUDICE, New York, N. Y. Filed Feb. 27, 1924. Serial No. 695,505. 1 Claim. (Cl. 227—12.)



In a fire escape a vertically shiftable cage consisting of a pair of rods of substantial length, a curved side bar having its ends secured to the ends of each of said rods and projecting outwardly therefrom, spaced bracing means integral with each side bar and respective rod, a series of transversely extending bars forming the front of the cage and fixedly secured to said side bars, a transversely extending bar arranged at the bottom of the front of the cage and pivotally connected to one of said side bars and removably engaging in the other of said side bars, means carried by one of said side bars and engaging with said pivoted bar for detachably securing it in closed position, a support having said rods slidably mounted therein, and means connected with the support and cage for vertically shifting the latter.

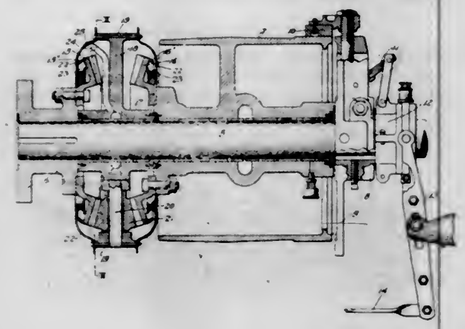
1,501,992. DENTAL BRIDGE. ERNEST H. GOEBING, Duluth, Minn. Filed Mar. 5, 1923. Serial No. 622,723. 2 Claims. (Cl. 32—12.)

1. The combination with a dental bridge having a metal tooth receiving cup, of an inwardly projecting inclined continuous ridge within said cup adjacent the base thereof, and an artificial tooth having an inclined recess about the inside wall thereof for cooperative engagement with the ridge within the cup and a stepped portion above the recess for overlapping engagement with the upper portion of the cup.

1,501,993. FEEDER FOR THRASHING MACHINES AND THE LIKE. DAVID M. GRAHAM, Juanita, N. Dak., assignor of one-half to Angus Ferguson and Andrew H. Wentland, Borduiac, N. Dak. Filed May 5, 1916, Serial No. 95,694. Renewed Dec. 15, 1923. 33 Claims. (Cl. 214—1.)

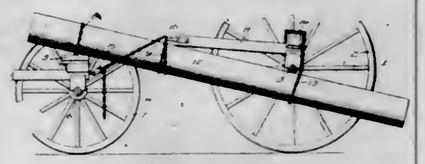
1. The combination of an engine, thrashing machinery, a stack holder having walls and having an opening in a vertical wall of the same adapted to have an entire stack of grain, in the form in which such grain is stacked in the field after cutting, inserted therein through said opening by sliding on its bottom, and means for removing grain from said stack when in the stack holder and feeding the same to said thrashing machinery.

1,501,994. DRILL OR GRIEF STEM FOR ROTARY DRILLING MACHINES. EDGAR E. GREVE, Bellevue, Pa. Filed Aug. 2, 1919. Serial No. 314,919. 2 Claims. (Cl. 255—28.)



1. A grief stem for rotary drilling operations comprising an integral member having its intermediate portion of non-circular cross section, a threaded extension at one end of the member of less diameter than the greater transverse dimension of the noncircular portion, a threaded circular extension on the other end of the member of greater diameter than the non-circular portion, whereby an annular shoulder is provided between the circular extension and non-circular portion, said circular extension having substantially the same diameter throughout its length and having a portion only of its length threaded, an intervening smooth surface being provided between the annular shoulder and the threaded portion.

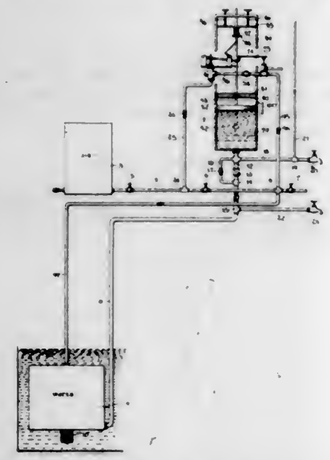
1,501,995. LUBRICATING DEVICE FOR REVERSING CLUTCH MECHANISM. EDGAR E. GREVE, Bellevue, Pa. Filed Dec. 20, 1921. Serial No. 523,611. 8 Claims. (Cl. 74—34.)



1. The combination with a reversing gear having opposed gear members with interposed planetary gearing.

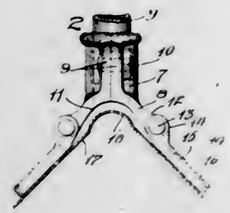
of a revoluble casing surrounding the gear, which casing has annular side flanges thereon, said flanges having

reversely formed inwardly extending annular channels thereon within the periphery of the opposed gear members.



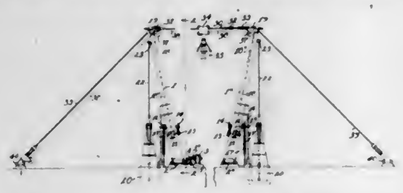
1,501,996. VEHICLE FOR TRANSPORTING POLES. GEORGE F. GROOMS, Sabinal, Tex. Filed Jan. 22, 1923. Serial No. 614,196. 1 Claim. (Cl. 214—3.)

The method of trucking stems or poles, consisting in disconnecting the rear reach of a four wheeled vehicle from the front truck, and positioning the rear truck over the pole to be transported, between the center and front end thereof, then swinging the reach and rear bolster upon the rear axle as a center of rotation, to lower the bolster between the axle and pole, securing the pole to the bolster, then swinging the reach and bolster back to normal position to raise the front end of the pole, then moving the front truck to position its bolster beneath the raised end of the pole, then securing the front bolster and overlying pole together, then again swinging the reach and rear bolster over as in the first movement, disconnecting the rear bolster from the log, then moving the rear truck back to the rear end of the log, and securing the still lowered rear bolster thereto, then swinging the reach and rear bolster back to normal position to raise and suspend the rear end of the pole beneath the axle of the rear truck, and then securing together the free end of the reach, the pole and the bolster of the front truck.



1,501,997. WATER-SUPPLY SYSTEM. JAMES G. HAMPTON, Lafontaine, Kans. Filed May 19, 1923. Serial No. 640,177. 1 Claim. (Cl. 103—245.)

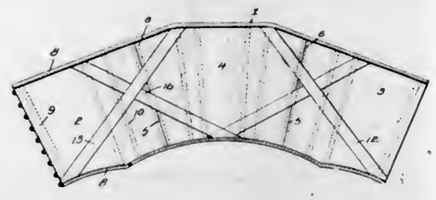
A water supply system comprising a compressed air receptacle, a water collecting vessel, a compressed air conduit leading from the receptacle to said vessel, a water receiving tank, a vertically movable spring controlled fluid operated element within and extending from said tank, a water conduit leading from the vessel to the tank, a pair of spaced valve mechanisms interposed in the air conduit for closing the latter to said vessel and opening it to the atmosphere, a support mounted on one of mechanisms, a pair of lever arms linked together and each seating on one of said mechanisms, one of said arms pivoted to said support, and a spring controlled cam pivotally mounted on said support and connected to said element for simultaneously actuating said arms when



said element is shifted by fluid pressure whereby said valve mechanisms are synchronously operated to close the air conduit to said vessel and to open it to the atmosphere.

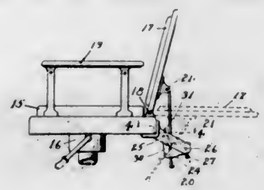
1,501,998. RADIO MAST SEAT. HARRY C. HANFORD and MARTIN H. LANG, Minneapolis, Minn. Filed Mar. 12, 1923. Serial No. 624,390. 2 Claims. (Cl. 248—37.)

1. A mast seat comprising an approximately semi-cylindrical body adapted to clear a ridge roll, said semi-cylindrical body at its intermediate portion having an upstanding socket and having anchoring flanges directly hinged to its opposite edges.



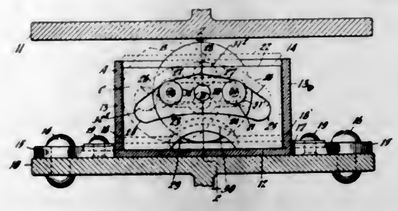
1,501,999. LOADING AND UNLOADING APPARATUS. NORMAN T. HARRINGTON, Cleveland, Ohio. Filed May 6, 1920. Serial No. 379,377. 19 Claims. (Cl. 212—76.)

1. The combination, with a pair of angularly moving towers, a cableway extending between and supported by said towers and a load handling device on said cableway, of means including a drum for rocking one of said towers, a drum in the other tower, cables connecting said drums,



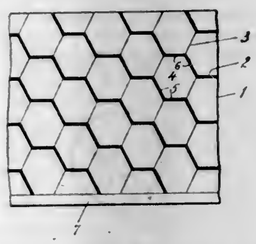
a shaft, means for driving the same, connections between said shaft and the drum of the first mentioned tower, a brake for each drum, means operated by the rocking of each tower for applying the brake to its drum when such tower shall have been rocked to a predetermined extent from a vertical position, means operative by the breaking of either of said cables for applying said brakes to said drums, and means operated by the rocking of the towers and by the breaking of either of said cables for making the driving connections between said shaft and the first mentioned drum inoperative.

1,502,000. BRASSIÈRE. UNA B. HERRICK, Bozeman, Mont. Filed June 11, 1921. Serial No. 476,863. 1 Claim. (Cl. 2—42.)



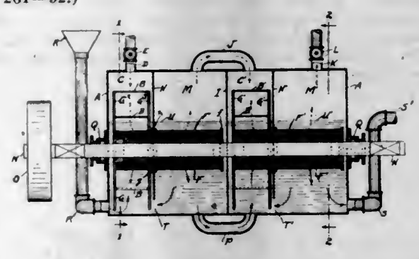
A brassière shaped to conform to the figure of the wearer and having reinforcing strips along the top and bottom edges thereof, elastic fabric straps connected at one end to the front lower portion of the garment and extended diagonally in opposite directions and secured at the opposite end to the upper rear portion of the garment, and other elastic fabric straps, the end of one strap overlapping the end of the other, and the overlapping ends secured to the center of the back at the lower edge of the garment, each strap extending diagonally toward the front and secured at its other end to the upper portion thereof.

1,502,001. ADJUSTING AND LOCKING APPARATUS. FREDERICK KOENIGKRAMER, Cincinnati, Ohio. Filed Dec. 14, 1922. Serial No. 606,781. 7 Claims. (Cl. 155—162.)



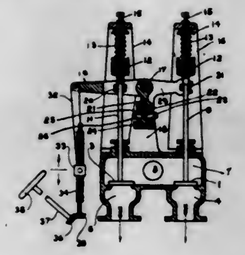
1. In combination a rigidly positioned member, a movable member, an adjusting bar pivotally attached at one end to the rear of the movable member, a bracket extending rearwardly from the rigidly positioned member, a latch member pivotally supported upon said bracket and provided with a latching perforation through which the free end of said bar projects, and a lever pivotally attached to said latch-member and having a limited movement relative to said latch member, said lever serving as an adjustable wedge movable into and out of engagement between said bar and a projection on said latch member at one side of said perforation to exert a frictional tension on the movement of said bar relative to said latch member.

1,502,002. SIDE BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 9, 1923. Serial No. 650,207. 10 Claims. (Cl. 64—64.)



8. In a side bearing, the combination with a casing; of a counter-weighted roller mounted therein; and a vertically sliding weight coacting with said roller to effect return of the latter to normal position.

1,502,003. DECORATIVE ROOFING. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed Nov. 18, 1921. Serial No. 516,039. 3 Claims. (Cl. 91—67.9.)

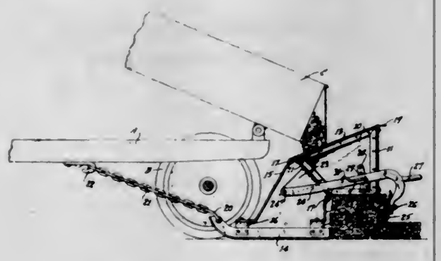


1. A decorative roofing sheet having a surface ornamentation composed of a series of heavy parallel lines extending obliquely of the sheet and connected at regular intervals to form uniform symmetrical figures.

1,502,004. GAS AND LIQUID CONTACT DEVICE. RANDALL PORTER AKINS, JOHN WILLIAM BUCHER, and FREDERICK DANIEL GROSS, Denver, Colo. Filed June 19, 1920. Serial No. 390,204. 2 Claims. (Cl. 261—92.)

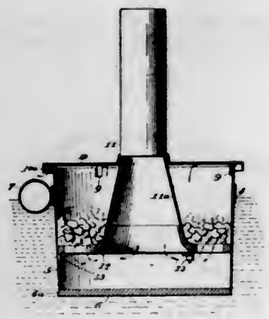
1. Liquid and gaseous contact apparatus comprising a tank having a pair of adjoining compartments, means for maintaining liquid in said compartments, a rotor mounted in one of said compartments on a horizontal axis and partly submerged in the liquid, said rotor having a tubular central portion and passages leading from the periphery to said tubular portion arranged to entrap liquid and gas and convey it to said portion, said tubular portion projecting into the other compartment beneath the liquid level therein.

1,502,005. MANEUVERING VALVE. ROBERT C. ALLEN, Esslogton, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 16, 1920. Serial No. 374,451. 11 Claims. (Cl. 137—158.)



1. A valve mechanism comprising in combination three separately operative valves, means for actuating one of the valves, and a selecting means for alternatively operatively connecting either one of the remaining valves with the said valve actuating means.

1,502,006. EDUCATIONAL ARTICLE. CHARLES CLINTON ALVORD, Worcester, Mass. Filed Sept. 4, 1923. Serial No. 660,751. 13 Claims. (Cl. 35—12.)



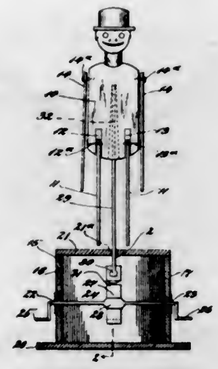
1. An educational device composed of a soluble body partially covering a relatively insoluble substance which bears an educational feature, a portion only of said feature normally being concealed by said body.

1,502,007. STONE DISTRIBUTOR AND LEVELER. FRANKLIN E. ARNDT, Gallon, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Nov. 20, 1922. Serial No. 602,122. 11 Claims. (Cl. 94—44.)

1. A distributor for road material comprising a hopper having side and end walls and being open at the bottom thereof, road engaging supports for the hopper, and a striking off blade disposed rearward of the lower end of the hopper and normally extending below the level of the bottom of the hopper, members supporting said blade and pivoted for vertical adjustment, and means engaging said members and adapted to hold the blade in any vertically adjusted position.

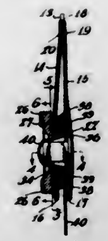
1,502,008. TANK HEATER. FRED A. BAGLEY, Cedar Rapids, Iowa. Filed Apr. 13, 1922. Serial No. 552,336. 1 Claim. (Cl. 126—367.)

In a heating device for tanks having a centrally apertured marginal grate carried by a supporting receptacle and provided with an upwardly and inwardly inclined annular flange surrounding said aperture, a flue carried by the grate and arranged centrally of the receptacle, the wall of the supported end of the flue being uniformly, downwardly and outwardly flared and adapted to be seated upon the annular flange surrounding the aperture in the grate whereby to form a fire box above the grate having a gradually decreasing width from the top of the receptacle to the grate, and a flue passage having a gradually decreasing diameter from the grate to the top of the receptacle.



1,502,009. NONSKID CHAIN ATTACHMENT FOR MOTOR VEHICLES. CHARLES F. BALL, Peoria, Ill., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 4, 1920. Serial No. 356,168. 16 Claims. (Cl. 305—3.)

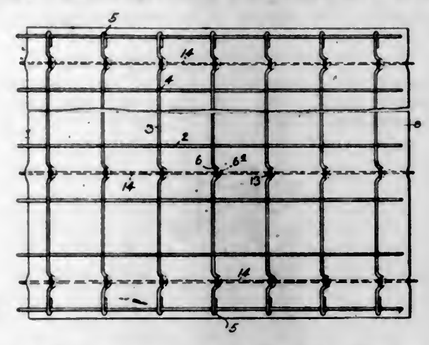
1. The combination with a traction wheel of a vehicle, of an endless tread, an idler member co-operating with the wheel to maintain the tread in operative position on the latter, means for supporting the idler from the vehicle and means revolubly mounted upon said supporting means, having rolling contact with a portion of the wheel.



1,502,010. TOY. ALFONSO A. BANKS, New York, N. Y. Filed July 13, 1920. Serial No. 396,038. 1 Claim. (Cl. 46—40.)

In a toy, a figure representation of an animate object, comprising a body and swingingly mounted limbs, said body having a conical recess extending vertically and centrally therein, a pedestal for the toy, a vertical standard reciprocally held in the pedestal and having its upper end bearing against the apex of said conical recess

whereby the body may oscillate and rotate on said standard, and be moved upwardly thereby, and a manually operable cam-means for lifting said standard.

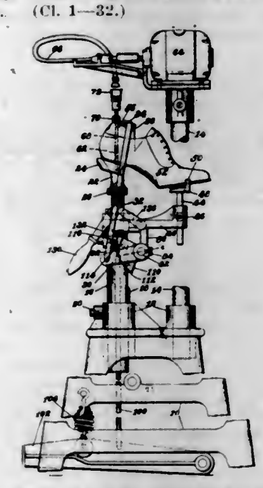


1,502,011. GARTER CLASP. JOSEPH P. BAUMGARTNER, Philadelphia, Pa., Filed Aug. 26, 1922. Serial No. 584,474. 6 Claims. (Cl. 24—245.)

4. In a garter clasp, depending inner and outer straps, an outwardly projecting button fixed to the inner strap and having an undercut oval head, a bearing member fixed to the outer strap larger in internal diameter than and in registry with the button, a turnable button-hole member upon the bearing member having an oval hole adapted to fit over the oval head and to interlock therewith by turning upon its axis from the position of registry, a shank upon the buttonhole member extending through the bearing member and outer strap, and circumferentially grooved at the inner side of the outer strap, and a detachable resilient washer having separate resilient inwardly-directed portions adapted to be sprung over the shank and snapped into the groove to detachably hold the button-hole member in place upon the bearing member.

1,502,012. WIRE FABRIC. EDWARD L. BENEDICT, Sewickley, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 15, 1921. Serial No. 484,924. 7 Claims. (Cl. 72—119.)

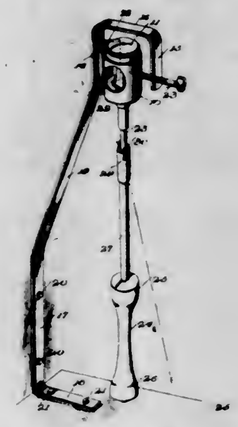
7. A wire fabric composed of strand-wires and stay-wires connected at their points of intersection, bends formed in said wires between the points of intersection off set from the plane of the fabric, a backing sheet



spaced from the plane of the fabric, and means for attaching said backing sheet to said fabric.

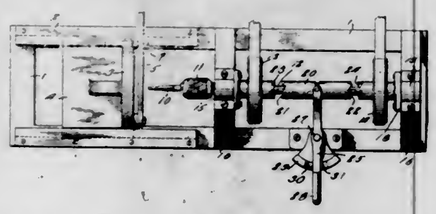
1,502,013. ORNAMENTAL BOX. EDOUARD P. BENOIS, Paris, France, assignor to Coty, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1923. Serial No. 635,195. 8 Claims. (Cl. 206—37.)

1. A method of attaching an insert to a metal box so as to fill up an opening in said box which consists in holding said insert in position in the said opening by means of a holding metal disc having a contour corresponding to the contour of the portion of said box adjacent said opening and then expanding the said disc so as to cause it to firmly grip the portion of said box adjacent said opening.



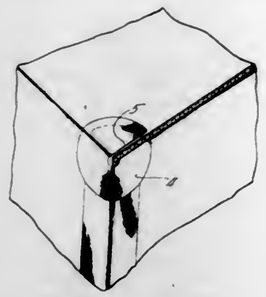
1,502,014. HEEL-CLAMPING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 9, 1920. Serial No. 402,281. 43 Claims. (Cl. 1—32.)

1. In a machine of the class described, a support for a heel and for a shoe on a last, a member engaging the front part of the cone of the last and leaving the rear portion of the last unobstructed, and means to move said



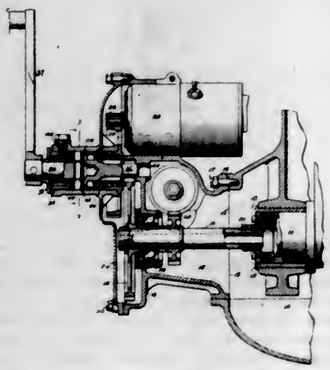
member toward the support to clamp the shoe and last against the heel to receive a fastening, said means being constructed and arranged to enable said member to swing relatively to said support to facilitate the removal of the shoe.

1,502,015. VALVE-GRINDING DEVICE. MARION SAMUEL BISHIR, Canyon, Tex. Filed Mar. 22, 1923. Serial No. 626,809. 1 Claim. (Cl. 51—217.)



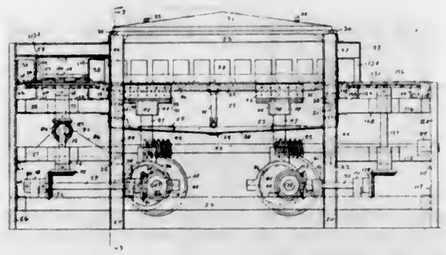
In a valve grinding device, a support for a valve cage and its valve including a body formed of a bar having a lower upright portion and an angular extension at the lower end of the upright portion and having an inclined portion at the upper end of the said upright portion and a downwardly opening U-shaped head at the upper end of said inclined portion thus offset by the inclined portion from the lower upright portion, said head having a V-shaped valve cage seat at the inner portion of one side theerof, and a clamping screw working through the opposite side thereof and located at approximately the center of the said seat as described.

1,502,016. TAPPING MACHINE. JOHN E. BYRNE, Platteville, Wis. Filed Aug. 12, 1921. Serial No. 491,713. 1 Claim. (Cl. 10—136.)



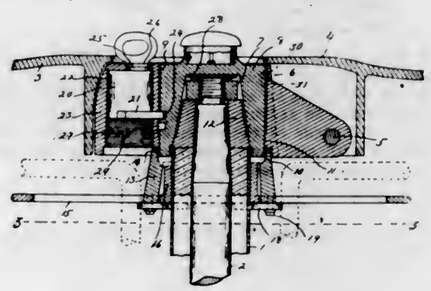
A tapping machine of the character described, comprising a base, a shoe support slidably mounted on the base, means carried by said support for maintaining a shoe in position, comprising a swinging lever for holding a shoe between said lever and said support, a keeper into which said lever is positioned, tapping mechanism comprising a rotating tap, a shaft for rotating said tap, driving pulleys loosely mounted upon said shaft, a detachable face clutch interposed between said pulleys and splined to the shaft, means for shifting the said clutch so as to engage either of the pulleys to rotate the shaft in a forward or reverse direction, said shifting means comprising a lever engaging the clutch, a handle therefor, a segment over which said handle travels, and means formed in the segment for locking the handle in adjusted positions.

1,502,017. REENFORCING CORNERS FOR BOXES. ROBERT C. CARLSON, Chicago, Ill. Filed Sept. 18, 1922. Serial No. 588,777. 3 Claims. (Cl. 229—49.)



1. In combination with a box having a rectangular corner formed by side walls and superposed flaps, a corner reenforcing member of textile fabric having an open ended slot and adhering to the side walls and flaps, those portions of the reenforcing member adjacent the open end of said slot adhering to the flaps and lying in superposed relation, said reenforcing member being folded over the side wall junction and the junctions between the side walls and flaps along lines substantially at 45° to both the warp and the weft of the fabric, whereby said warp and weft strands substantially equally resist disruption of the reenforcing member along the lines of the folds.

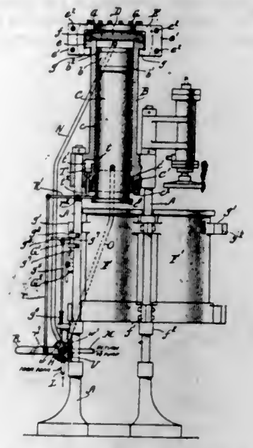
1,502,018. INTERNAL-COMBUSTION-ENGINE STARTER. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane and Motor Company, a Corporation of New York. Filed May 19, 1921. Serial No. 471,002. 24 Claims. (Cl. 74—7.)



1. In an engine starter, the combination with a casing provided with means at one end for securing the same to the engine to be started, said casing including a pair of parallel walls defining its opposite end, a driving shaft journalled adjacent one end in one of said walls and having its other end projecting from the casing and fashioned to engage a movable element of the engine, a motor carried by the casing as a part thereof, and a reducing gear train contained within the casing and operatively connecting the motor and the driven shaft, said train disposed between the parallel walls and including a sliding gear element journalled at two spaced apart points in both walls.

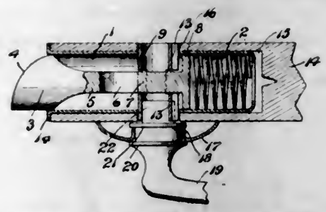
1,502,019. EXHAUST BOX. CHARLES J. CLEAR and GEORGE M. WEBBER, Portland, Oreg. Filed Sept. 21, 1922. Serial No. 589,709. 9 Claims. (Cl. 126—272.)

1. An exhaust box for canned goods having straight channels passing through a heated compartment adapted to hold cans vertically for exhaust purposes, in combination with horizontal shifter bars in the central portion of each of said channels, upwardly and rearwardly inclined lugs along each side of each shifter bar, said bars being adapted to raise said cans from the floors of said channels, move same forward and then set said cans upon the floors of said channels repeatedly until said cans have traversed the length of said channels.



1,502,020. STEERING WHEEL. JACOB CARL DANZIGER, Detroit, Mich., assignor to Detroit Motor Castings Company, Detroit, Mich., a Corporation of Michigan. Filed July 3, 1922. Serial No. 572,682. 7 Claims. (Cl. 70—129.)

2. The combination with a steering wheel post and rotatable shaft, and a steering wheel secured to said shaft, of a longitudinally movable locking member non-rotatably secured to said steering wheel, means upon said post with which said locking member is engageable upon adjustment in one direction for holding said locking member from rotation, means shiftable at an angle to the axis of said shaft for locking said locking member when in engagement with said means, and means for automatically moving said locking member in the opposite direction to disengage the same from said holding means upon releasing said locking means, said locking means also locking said locking member when disengaged from said holding means.

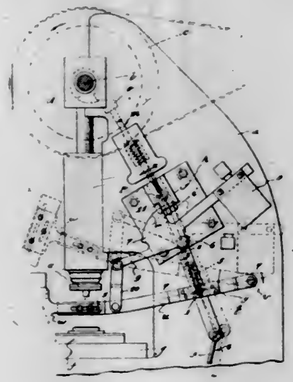


1,502,021. MACARONI PRESS. JOSEPH DE FRANCISCI, Brooklyn, N. Y. Filed Dec. 1, 1921. Serial No. 519,108. 18 Claims. (Cl. 138—16.)

1. In an apparatus of the class described, the combination with a plunger cylinder, and means for feeding a motive fluid thereto, of a controlling valve positioned in the line of flow of the motive fluid, and arranged for its movable part to be held to a seat by the pressure of said

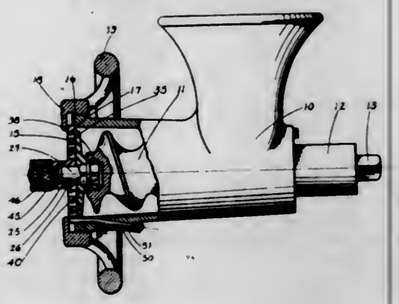
motive fluid, and plunger operated means for relieving said moving valve part from the pressure of the motive fluid.

1,502,022. LATCH CONSTRUCTION. LUCIEN A. DEXTER, Grand Rapids, Mich. Filed Jan. 3, 1922. Serial No. 526,465. 6 Claims. (Cl. 292—169.)



1. In a latch construction, an elongated housing open at one end, a spring located within the housing adjacent the opposite end, a latch bolt slidably mounted within the housing and formed with an outer end cylindrical head at its end formed with a cam surface from which a flat bar extends inwardly and terminates in an inner end disk bearing against said spring, said bar having an opening therethrough into the rear portion of which a lug having inclined sides projects, a cylindrical operating member passing through opposite sides of the housing and the opening in said bar portion of the bolt, said operating member having openings in opposed sides between its ends and said lug extending thereinto, an inwardly pressed rib on the operating member, and a handle member provided with two spaced apart lugs for entering an end of the operating member, one at each side of the rib, whereby said operating member may be turned to retract the bolt, substantially as described.

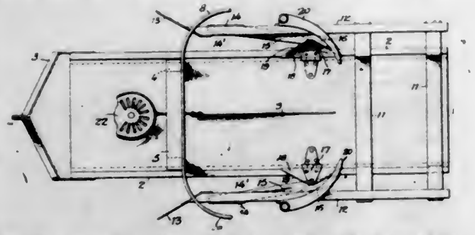
1,502,023. PUNCH-PRESS GUARD. FRANK M. EDGAR, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 30, 1923. Serial No. 677,650. 4 Claims. (Cl. 74—105.)



1. In a guard for a punch press or similar machine, the combination of operating mechanism, means for controlling the operating mechanism and provided with a tripping mechanism having a slidable member, a draft member having a lost motion connection with the tripping

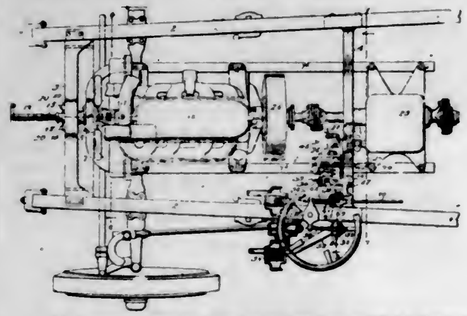
mechanism, a stop in the form of a sector which is swung in the path of said slidable member which is part of said tripping mechanism for preventing the same from being actuated, and a guard yieldably connected to said draft member and positively connected to the stop, whereby the

operating mechanism is held in an inoperative position until the guard is lowered to a position in front of the work thereby retracting the stop to allow the draft member to actuate the tripping mechanism and preventing the operator from inserting his hands while the machine is in operation.



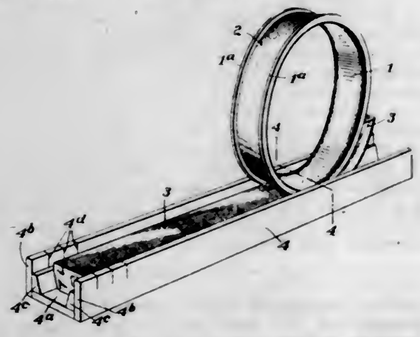
1,502,024. GRINDING APPARATUS. BERNARD M. ELY, Troy, Ohio. Filed May 3, 1923. Serial No. 636,405. 5 Claims. (Cl. 146—189.)

1. In a grinding device of the character described, a chopper cylinder; a worm therein; a flat perforated plate positioned at one end of said cylinder, having an opening therein; a stud mounted in said opening, a knife removably mounted on one end of said stud, and means carried by said stud and independent of said worm for varying the positioning of the plate and knife relative to each other.



1,502,025. CORN HARVESTER. ISAAC N. FICKES, York, Pa. Filed Oct. 20, 1923. Serial No. 669,785. 3 Claims. (Cl. 56—99.)

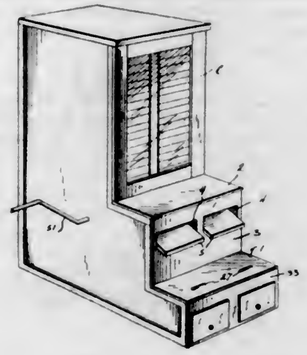
1. A corn-harvester comprising a platform, side arms carried thereby, outwardly extending guides on said side arms, yieldable plates on said side arms, cutter arms carried by said plates, cutting blades on said cutter arms, hinged shields overlying said blades and adapted to be raised by engagement with a corn stalk and to be lowered by their own weight, adjustable collector arms associated with said carriage near the forward end thereof, and



spring actuated pressure fingers on said side arms adapted to throw severed corn stalks upon said carriage and into said collector arms.

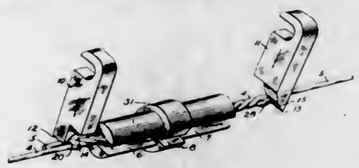
1,502,026. MOTOR VEHICLE. REUBEN E. FIELDER, New York, N. Y. Filed June 17, 1922. Serial No. 569,122. 12 Claims. (Cl. 180—64.)

1. In a motor vehicle, the combination with a chassis frame provided with a cross member, of a gear shift control box supported by said cross member, a gear shift lever journaled in and supported by said box and extending to the outside of the same, and means operatively connected with said lever and adapted to be connected with the gear shift mechanism for actuating it.



1,502,027. METHOD OF MANUFACTURING CUSHION TIRES. FRED D. FOWLER, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1923. Serial No. 672,607. 7 Claims. (Cl. 154—12.)

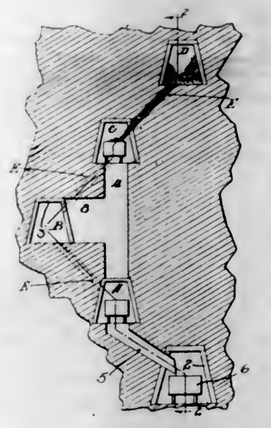
2. The method of making cushion tires, which consists in depositing a strip of rubber of given weight in a guide trough and subjecting said strip to force exerted in an endwise direction to cause its end to properly align with



a suitable designated indication on the trough, thereafter rolling the rim over the cushion portion to cause the said portion to adhere to the rim, and subsequently vulcanizing.

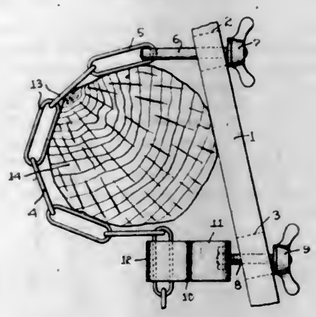
1,502,028. DISPENSING APPARATUS. FELIX R. FUQUAY, Durham, N. C. Filed Sept. 15, 1923. Serial No. 662,870. 3 Claims. (Cl. 194—58.)

1. In a check controlled apparatus, a sliding member supported for sliding movement, a second member supported for swinging movement and positioned adjacent the sliding member, a check chute carried by the sliding member and disposed toward the swinging member, a runway carried by the swinging member and underlying the chute during a portion of the movement of the sliding member, said runway oprating to limit the passage of a coin through the chute, means for normally maintaining the swinging member in one position, coacting means carried by both of the members for holding the sliding member against movement when the swinging member is in its normal position, said swinging member being provided with means for coaction with a check wit in the chute for moving said swinging member into a position to release the sliding member.



1,502,029. TWISTED KNOT FOR SECURING SHIPPING PACKAGES. ALEC J. GERRARD and PARVIN WRIGHT, Chicago, Ill. Filed Mar. 29, 1923. Serial No. 628,592. 3 Claims. (Cl. 24—27.)

1. A knot adapted to be formed by a wire tying machine composed of a pair of bights of a wire twisted together and when in position on a package having the extreme ends of the twisted strands severed at the extremities of the twisted knot and said severed ends bent down and permanently set below the top surfaces of the untwisted strands.

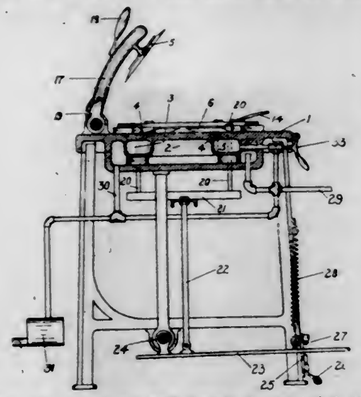


1,502,030. PROCESS OF MINING SOFT ORE. SAMUEL JOHN GOODNEY, Crystal Falls, Mich. Filed July 1, 1922. Serial No. 572,249. 5 Claims. (Cl. 262—1.)

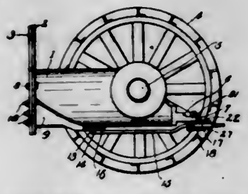
1. The herein described steps in a process of mining soft ore which consists in sinking a shaft in the vein of ore, extending a cross-cut from the bottom of the shaft digging a substantially vertical raise which communicates with the cross-cut, constructing a sub-level that communicates with said raise at one point, and constructing a second similar sub-level at a different elevation from

the first sub-level and out of alinement with the first named sub-level, thus relieving the portion of the ore adjacent to the sub-levels from too great a strain.

1,502,031. CROSS ARM. ROBERT E. GRAY, Snoqualmie Falls, Wash. Filed Dec. 17, 1923. Serial No. 681,274. 3 Claims. (Cl. 304—41.)



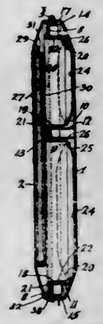
1. A means for securing a cross arm to a mast or the like, consisting in forming said cross arm with elongated apertures, providing bolts to be passed loosely through said apertures, a chain member connected to one of said bolts, a relatively broad link connected to the other of said bolts and having an opening therethrough formed in part of a size to freely permit the passage of the chain links therethrough and in part of a size to permit the edgewise passage of the chain links therethrough, and means for drawing the bolts through the cross arm.



1,502,032. PROCESS AND MACHINE FOR CREASING. CLAUDE H. HALL and GEORGE KNUDSEN, Baltimore, Md. Filed Jan. 30, 1922. Serial No. 532,820. 10 Claims. (Cl. 223—15.)

1. The process of creasing consisting of, turning the edge of a fabric and pressing the same, maintaining

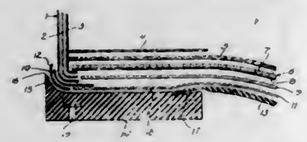
said fabric at a predetermined temperature above operating room temperature and while being so pressed admitting steam on to said fabric for a brief period of time.



1,502,033. DRAWBAR ATTACHMENT FOR FORDSON TRACTORS. OLE E. HANSON, Poulsbo, Wash. Filed June 2, 1923. Serial No. 643,947. 1 Claim. (Cl. 280—33.12.)

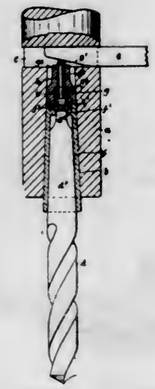
A drawbar attachment for tractors, comprising a connecting plate having a round and slotted opening in the free end thereof, with an extension drawbar held by pivotal means through the slot at one end and the other end of the bar extending beyond the rear end of the tractor, guide plates attached to the rear of the tractor above and below the extending bar, and means for holding the rear end of the bar at a predetermined position between the guide plates, notches across the back edges of the guides and a pin through the bar for seating in the notches.

1,502,034. VANITY CASE. MILO O. HART, Euclid, Ohio, assignor to The Pompeian Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1923. Serial No. 644,302. 4 Claims. (Cl. 132—83.)



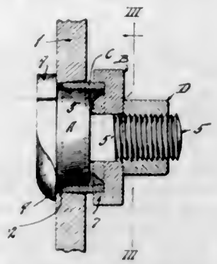
4. In a vanity box, having a bottom and a cover, a flanged plate secured in the under side of the cover, a reflecting surface positioned in the plate, a locking member for holding the mirror in position comprising a plate having a flange against which the mirror may bear, and a holding flange frictionally engaging with the flange of the first named plate.

1,502,035. PROCESS FOR PREPARING CRYSTALS OF CHROME ALUM. PETER HASENCLEVER, Hamburg-Billwarder, Germany. Filed Nov. 11, 1922. Serial No. 600,451. 2 Claims. (Cl. 23—13.)



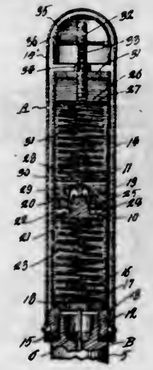
1. The process for preparing crystals of chrome alum which consists in adding potassium dichromate, sulphuric acid and sulphurous acid to solutions of chrome alum and crystallizing.

1,502,036. HEEL CONSTRUCTION FOR FOOTWEAR. EUGENE C. HEILHECKER, Bristol, R. I., assignor to National India Rubber Company, a Corporation of Rhode Island. Filed Jan. 14, 1921. Serial No. 437,159. 8 Claims. (Cl. 36—35.)



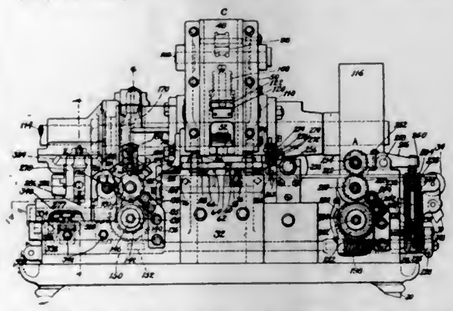
1. An article of footwear comprising an upper, a sole, and a heel of vulcanized material united to said upper by a thin layer of vulcanized rubber, said heel having a substantially vertical upstanding flange curved on its inner side to conform to the heel portion of the upper, said flange terminating in a thin truncated edge.

1,502,037. TOOL HOLDER. GIUSEPPE IVALDI, Paterson, N. J. Filed Apr. 20, 1923. Serial No. 633,459. 2 Claims. (Cl. 279—103.)



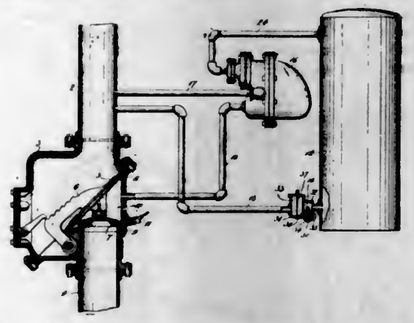
1. In combination, a tool holder having a socket and a drift-hole arranged transversely of and communicating with the socket, a container in the socket, the socket and container having their respective interior and exterior surfaces tapered from the mouth of the socket in conformity with, and thereby gripping, each other and the container being divided transversely through its tapered portion into two sections separably screwed together, and an ejector arranged in and removable from the container on separating the said sections and movable longitudinally of the socket and adapted, when a tool is entered into the holder, to be displaced by the tool so as to project into the drift-hole.

1,502,038. BOILER PLUG. FREDERICK E. KEY, St. Louis, Mo., assignor to Key Boiler Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 1, 1920. Serial No. 370,540. 2 Claims. (Cl. 220—25.)



1. In a closure for tapered holes in boiler walls, a tapered spreader comprising a head having a tapered portion located within the hole to be closed, the largest diameter of said tapered portion being smaller than the diameter of the hole, said spreader also having flanges adapted to pass through the hole and engage the inner face of the boiler wall to prevent outward displacement of the spreader, the spreader taper being at an angle to the tapered face of the hole so as to provide the converging faces, a sealing ring having its inner margin entirely within the hole to be closed, said inner margin being interposed between and in contact with said converging faces of the hole and spreader, the outer margin of said sealing ring being extended from the wall of the boiler, a thrust member seated on the outer edge of said sealing ring and provided with an annular reinforcing flange overlapping and closely fitted to the extended outer margin of the sealing ring, a screw threaded stud formed integral with and extending outwardly from said spreader, the periphery of said spreader being so small that the spreader can be tilted and inserted through the hole without displacing the screw threaded stud relative to the spreader, said stud having a non-circular portion and said thrust member being slidably mounted thereon to prevent independent rotation of said thrust member and spreader, and a nut on said stud, said thrust member being movable toward the wall of the boiler in response to rotation of the nut so as to force said inner margin of the sealing ring into firm contact with said converging faces.

1,502,039. TIRE ALARM. WILLIAM KNUTSON, Fort Shaw, Mont. Filed May 21, 1923. Serial No. 640,614. 1 Claim. (Cl. 116—34.)

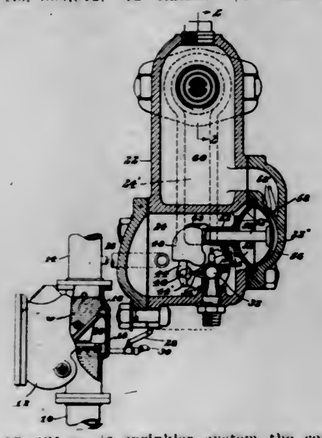


The combination with an ordinary tire air filling valve including a body and a valve stem, of an attachment therefor, including a body arranged to receive the outer end of the air valve filling body, a valve seat adjustably carried by the body of the attachment, a normally closed valve carried by the body of the attachment for fitting upon the seat, an adjustable plate threaded into the body of the attachment opposite of said valve seat, a spring engaging said adjustable plate for unseating the valve when the pressure in the air filling tire valve falls below a predetermined value, means for indicating the position of said adjustable plate, and a whistle carried by said means adapted to be sounded by the escape of air through said valve body.

1,502,040. FORMING MACHINE. ALBERT LATHAM, Beverly, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Feb. 16, 1920. Serial No. 358,962. 97 Claims. (Cl. 164—15.)

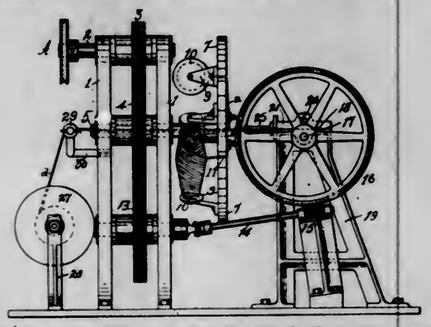
1. In a machine for forming a mounting-strip having a series of fastener-receiving perforations, a plurality of operating instrumentalities spaced from one another longitudinally of the strip and arranged to act successively thereon to produce each fastener-receiving perforation, and means for feeding the strip step by step to present a series of receiving areas to the operating instrumentalities for the production of the completed mounting-strip.

1,502,041. AUTOMATIC SPRINKLER SYSTEM. ALBERT J. LOEPSINGER, Edgewood, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed May 19, 1917. Serial No. 169,653. 15 Claims. (Cl. 169—22.)



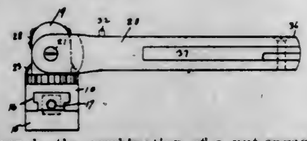
1. In an automatic sprinkler system, the combination of a dry-pipe valve normally held closed by fluid pressure in the system, and means rendered operative by a quick reduction but not by a slow reduction of the system pressure, for subjecting the valve to an opening force acting in opposition to said pressure.

14. An attachment for automatic sprinkler systems, comprising a fluid pressure receptacle, means for connecting it to a sprinkler pipe system and permitting a restricted flow of fluid under pressure from the system to the receptacle, a supplementary receptacle adapted to be connected to a supply of fluid under pressure, pipe connections leading from the latter receptacle, a valve normally closing said pipe connections, a movable member located in the supplementary receptacle and oper-



able by a difference in pressures between the sprinkler pipe system and the first-mentioned receptacle, and means operated by said movable member for opening said valve.

1,502,042. AUTOMATIC SPRINKLER SYSTEM. ALBERT J. LOEBSINGER, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 554,912. 12 Claims. (Cl. 169—22.)

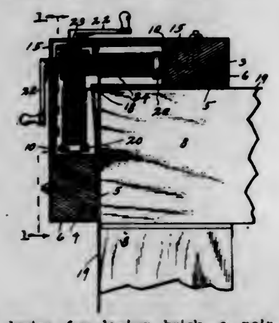


1. In an automatic sprinkler system the combination with a dry pipe valve of a passage from the air system to the intermediate chamber, comprising in part a casing; a valve in the casing closing said passage; said passage being so ample that it is quickly sensitive to changes of pressure in the air system; and a motor and pressure storage means, also in said casing, the storage means being slowly responsive to changes of pressure in the air system and arranged to operate the motor; and said motor being operatively exposed to said sensitive passage, responsive to a quick rate of fall of pressure therein: the motor being arranged to actuate the valve therein.

1,502,043. ELECTRIC HEATING-CORD MACHINE. CHARLES L. MCBRIDE, Jr., Toledo, Ohio, assignor to The C. L. McBride Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 25, 1921. Serial No. 464,416. 11 Claims. (Cl. 117—34.)

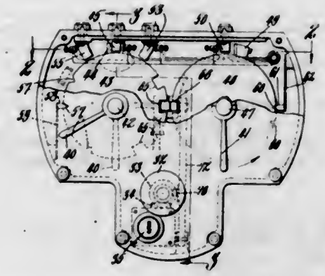
1. In a machine of the described character, a rotary member having therethrough a central opening, means for drawing a strand of yarn as a core through said central opening, a retarding device opposing the drawing means for holding the core therebetween taut, a series of spools carried by said rotary member, devices for guiding other strands from said spools to spaced intervals along said core mechanism for pulling the strands taut independently of disturbing the straight line of the taut core, and devices for actuating said rotary member and said feeding means in harmony, whereby the strands from the spools are wound about said core.

1,502,044. WRENCH. JAMES T. MCCANN, Glen Ellen, Calif. Filed July 15, 1922. Serial No. 575,394. 1 Claim. (Cl. 81—63.)



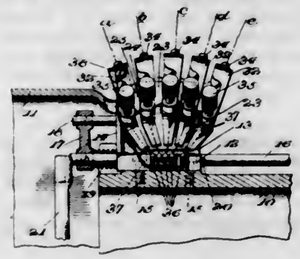
In a wrench, the combination of a nut-engaging means consisting of a rotatable body member having its under side dove-tailed and having one end of said dove-tailed portion closed by a projecting jaw, a sliding jaw in said dove-tailed member, a clamp screw passing through said fixed and sliding jaws, a ratchet wheel formed on the top of said body member, a grooved shank rising from the center of said ratchet, a flat shank-receiving wrist plate rotatably attached to said shank by screws passing through said wrist plate, a slotted lever hinged to said wrist plate on said screws, a slidable pin within said slotted lever adapted to lock said lever in relation to said wrist plate, and pawls on said wrist plate adapted to engage said ratchet in opposite directions.

1,502,045. OIL BURNER. WILLIAM H. MCCARRY, Pittsfield, Mass. Filed Dec. 12, 1923. Serial No. 680,202. 1 Claim. (Cl. 158—91.)



In a device of the class described, the combination of a body provided with a bottom and upstanding walls, one of the walls having its inner surface provided with horizontally extending grooves positioned one above another, said bottom provided with a guarded air inlet opening and between the opening and grooved wall provided with a thickened boss having an opening therein, a distributor pipe in said body and having its lower end extending into the opening in said boss and its upper end portion curved and terminating above the upper groove for depositing oil therein, and a supply pipe having its inner end extending into said boss for supplying oil to said distributor pipe.

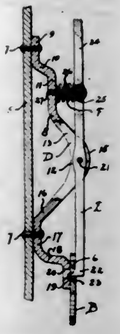
1,502,046. BRICKLAYING DEVICE. OSCAR F. MANN, Indianapolis, Ind. Filed Apr. 10, 1922. Serial No. 551,040. 4 Claims. (Cl. 33—85.)



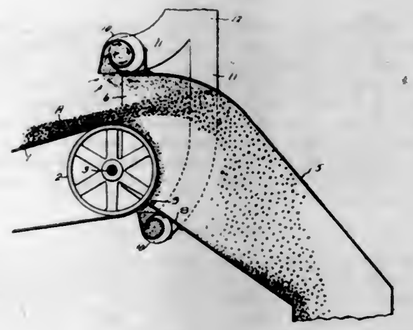
1. In a device for laying brick, a pair of vertical frame members spaced apart on opposite sides of a corner of a wall, metal straps securing the members together, and an angular gauge-box slidingly supported by hand between said frame members.

1,502,047. AUTOMOBILE SWITCH LOCK. EDGAR J. MARTEL, Laconia, N. H. Original application filed July 1, 1921, Serial No. 481,769. Divided and this application filed Nov. 11, 1922. Serial No. 600,320. 4 Claims. (Cl. 200—44.)

1. In an automobile, an ignition switch, a lighting switch, each of said switches including a pivoted disk, said ignition switch disk having a peripheral notch therein, and said lighting switch having a plurality of such notches therein, a bolt projectable through the notch in said ignition switch disk and any one of said notches in said lighting switch disk to lock said ignition switch and said lighting switch in any of a plurality of positions, and a cam member carried by said ignition switch disk and engageable by said plunger when said switch is in "on" position to move it to "off" position as the bolt is projected.



1,502,048. THREAD-TENSIONING MEANS FOR SEWING MACHINES. ARTHUR A. MERRITT, Providence, R. I., assignor to Willcox & Gibbs Sewing Machine Co., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1921. Serial No. 443,932. 11 Claims. (Cl. 112—238.)

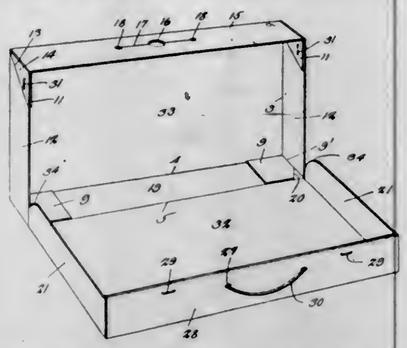


1. In thread-tensioning means for sewing machines, the combination of a presser plate or anvil member, a plurality of tension springs for directly engaging and separately pressing threads into direct contact with the surface of said anvil member to tension said threads, adjusting means for separately determining the degree of pressure to be exerted by each spring upon its thread, and means operable to effect movement of the anvil member out of and into active position with relation to the tension springs to simultaneously release or impose tension upon all of the threads.

1,502,049. CHECK HANGER FOR MINE CARS. JOHN MERVIN, Johnstown, Pa. Filed July 19, 1923. Serial No. 652,625. 4 Claims. (Cl. 40—13.)

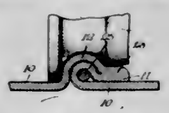
1. A check hanger comprising a bracket including an intermediate portion and end portions, one end of said bracket being bent to extend outwardly beneath the intermediate portion and having an extension forming a foot, said foot being provided with a perforation, an arm pivoted to said intermediate portion having a hook at one end thereof, said hook adapted to project into said perforation in said foot for extending through a perforated article to be engaged by said hook, and into the perforation of the foot and means for yieldably holding said arm in a normal position with the hook extending into the perforation of the foot.

1,502,050. VENTILATING MEANS FOR THE RECEIVERS OF BELT CONVEYERS. RAYMOND H. MOORE, Chicago, Ill. Filed July 29, 1921. Serial No. 488,381. 12 Claims. (Cl. 130—17.)



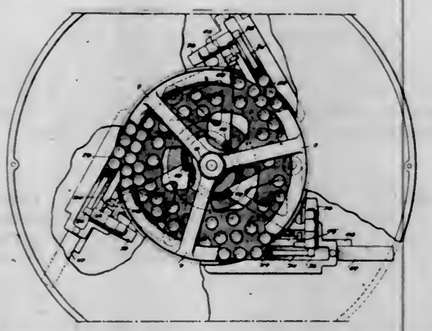
2. In combination with a belt conveyer, a receiver into which the belt discharges its load, and a pair of suction hoods situated adjacent the mouth of the receiver, one above and one below the plane at which the load is discharged, said hoods being adapted to have communicative connection with a suction system.

1,502,051. COLLAPSIBLE FOLDING BOX. EDWARD K. MORRIS, Baltimore, Md., assignor to Fiber Specialty Company, Incorporated, Baltimore, Md., a Corporation of Maryland. Filed July 16, 1923. Serial No. 651,720. 2 Claims. (Cl. 229—52.)



1. A paper box having a bottom and a top each provided with a front side, the front side of the top overlapping the front side of the bottom and being provided intermediate its ends with a longitudinal slit, and having a large central finger opening and end openings wherewith the slit communicates, the front side of the

bottom being provided with a string handle secured at each end to said front side at points opposite the said

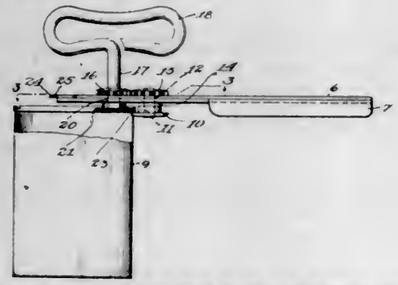


end openings, said large central opening affording means wherethrough the string handle may be grasped to pull the same into operative position.

1,502,052. SPIRALLY-WOUND PIPE AND THE METHOD OF MAKING IT. CARL G. NAYLOR, Chicago, Ill., assignor to Naylor-Robertson Company, a Corporation of Delaware. Filed Feb. 10, 1921. Serial No. 443,983. 8 Claims. (Cl. 113—35.)

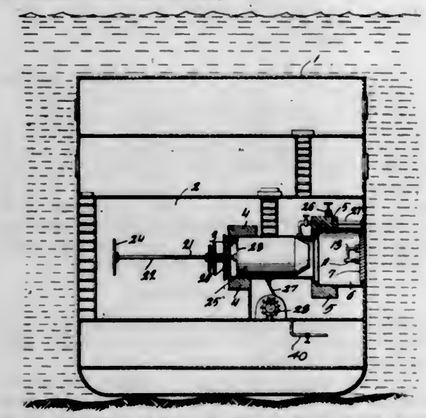
1. The method of making seams in spiral pipe which consists in bending the longitudinal edges of the strip, of which the pipe is made, to form an angular flange at each edge; forming the strip into a spiral and bringing the flanges into face to face contact so that the longitudinal edges may be welded; curving the strip flanges about the axis of the pipe; welding the longitudinal edges of adjacent flanges together; then bending the joined-together flanges toward the axis of the pipe to complete the seam.

1,502,053. ARTICLE-FEEDING HOPPER. ELOF NORDSTROM, East Orange, N. J., assignor to American Dan Bottle Seal Corporation, Dover, Del., a Corporation of Delaware. Filed Sept. 19, 1922. Serial No. 589,154. 9 Claims. (Cl. 226—2.)



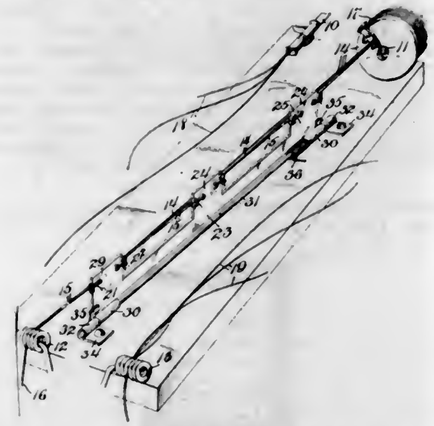
1. In an article feeding mechanism the combination of a hopper and an article selecting means located at the base of the hopper and consisting of a rotating member having two parts spaced rigidly with respect to each other with a space between them that will admit but one layer of the article.

4. An article feeding machine comprising a feeding hopper, a rotating distributor in the bottom of the hopper and an agitator for alining the articles at their point of exit from the hopper, the said agitator having a reciprocating motion from a point just outside to a point just inside of the perimeter of the distributor.



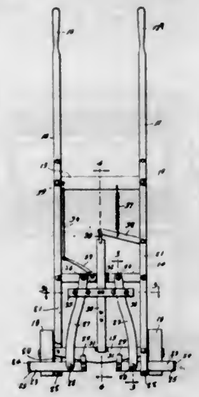
7. An article feeding mechanism comprising a hopper, a rotating distributor in the bottom of the hopper, a vertical shaft carrying said distributor, an agitator for alining the articles, means for depressing the articles into a receptacle and means articulately connecting said shaft with said agitator and depressing means.

1,502,054. CAN OPENER. ELON A. ORMSBY, Centerville, Calif. Filed Mar. 21, 1924. Serial No. 700,828. 3 Claims. (Cl. 30—3.)



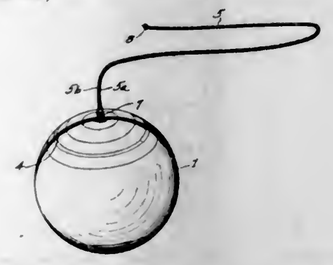
1. A can opener comprising a pair of pivoted handles each having an arcuate slot concentric with the pivot, a rotary cutter having a shaft mounted in a bearing in one handle and extending thru one of said slots, a crank shaft mounted in a bearing in the other handle and extending thru the other arcuate slot, a knurled wheel on the crank shaft, said cutter and wheel being disposed opposite to each other and movable toward and from each other by closing and opening the handles, and pinions mounted on the cutter shaft and the crank shaft and adapted to mesh with each other when the handles are closed.

1,502,055. MARINE DISASTER SIGNAL. ATHANASIOS PAPANASTASIOU, East Pittsburgh, Pa. Filed Sept. 14, 1921, Serial No. 500,526. Renewed June 9, 1924. 1 Claim. (Cl. 114—16.5.)



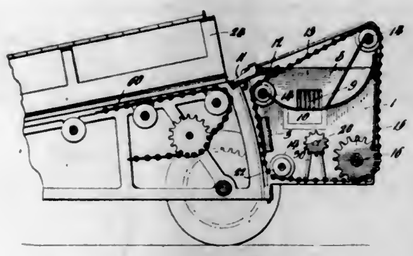
In combination, a boat having a signal buoy, a compartment in the boat leading to the exterior thereof for holding the signal buoy, a door on the exterior of said compartment, and a second door on the interior of said compartment, a socket disposed on the exterior of the compartment and provided with a slot, said compartment provided with a slot registering with the socket, a ball situated in the socket and formed integral with a crank wheel having a threaded bore extending therethrough, a threaded rod engaged with said threaded bore and with the first mentioned door, means for opening and closing the second door from the interior of the boat, and means for pushing said signal buoy from the compartment.

1,502,056. MACHINE FOR SPLICING CORDS. WILLIAM H. PEARSON, Passaic, N. J. Filed May 5, 1923. Serial No. 636,798. 8 Claims. (Cl. 112—6.)



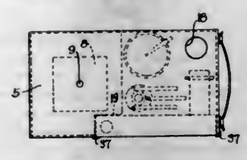
1. A machine for splicing cord comprising rotatable arbors, holding means, said arbors being adapted to untwist cords held by their respective holding means, and clamps for holding the ends of lightly twisted overlapping ends of strands in said untwisted cords and adapted to permit the release of said ends under a normal twisting strain.

1,502,057. HAND TRUCK. ALONZO S. PIPER, Riverside, Calif., assignor to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed June 14, 1922. Serial No. 568,175. 10 Claims. (Cl. 214—65.5.)



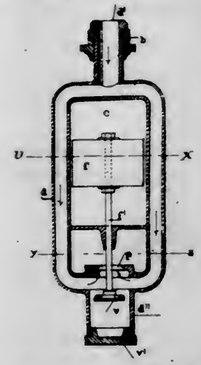
1. In a hand-truck, a frame, load gripping members mounted to slide transversely on the frame towards and away from each other, oppositely curved cam links each pivoted to the frame and to one of said members, and a manually operated slide bar having means cooperating with said links with a cam action to separate said members during a movement of the bar in one direction and to force said members towards each other during a reverse movement of the bar to grip a load to be transported.

1,502,058. BALL. CHARLES W. QUIN, Centralia, Wash. Filed July 17, 1922. Serial No. 575,688. 2 Claims. (Cl. 46—4.)



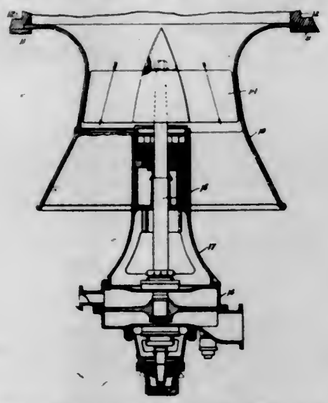
1. A ball having a diametrical opening and a circumferential groove in its outer surface passing through the ends of said opening and a cord doubled at its center with the looped end thereof extended through said opening and having its opposite ends extended about the ball within said groove and through the loop.

1,502,059. AGRICULTURAL ASSORTING MACHINE. CLIFFORD B. ROWLAND, Trenton, N. J. Filed Jan. 19, 1922. Serial No. 530,343. 3 Claims. (Cl. 130—32.)



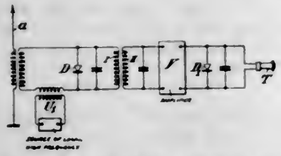
1. An agricultural assorting machine of the class described including a hopper of V-shaped sectional formation having an opening in one side, a cleaning device at the top of the hopper, and a rotary separator mounted adjacent to the opening in the side of the hopper, said rotary separator being disposed with its sides in parallelism with said side of the hopper so as to be inclined.

1,502,060. PORTABLE PHONOGRAPH. SOLOMON SACHS, New York, N. Y. Filed Mar. 3, 1924. Serial No. 696,446. 2 Claims. (Cl. 274—2.)



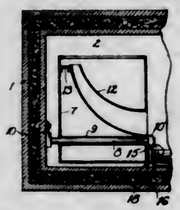
1. A portable phonograph comprising a flat camera-like casing, a sound amplifying chamber in said casing having an open mouth, a tone arm for said phonograph, said tone arm when not in use being adapted to serve as a closure for the mouth of said chamber.

1,502,061. AUTOMATIC WATER CONTROLLER SUITABLE FOR BATHTUBS AND SUCH LIKE RESERVOIRS. MEYER SAMPSON, Chicago, Ill. Filed Jan. 31, 1922. Serial No. 533,010. 2 Claims. (Cl. 137—104.)



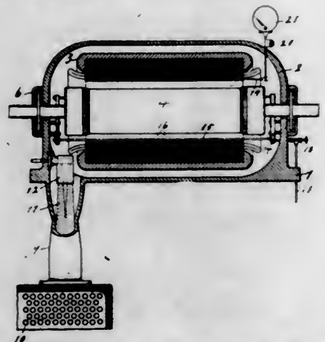
1. In a water controller for bath tubs, the combination of a float receptacle, a pipe surrounding said receptacle and disposed in a vertical plane, the upper portion of said pipe having an inlet, and the lower portion of said pipe having an outlet port, a valve chamber communicating with the lower portion of said pipe and disposed opposite said outlet port, a float within said float receptacle, a valve rod suspended from the float and passing through said outlet port, a valve mounted on said rod and movable in said chamber, the said valve being upwardly seated to close said outlet port whenever the float ascends to its highest position in the float receptacle substantially as shown and described.

1,502,062. VERTICAL DESTROYER TYPE BLOWER. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 29, 1920. Serial No. 420,469. 8 Claims. (Cl. 230—11.)



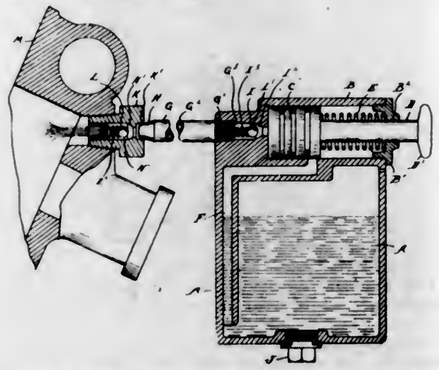
1. A blower comprising a converging-diverging member having a flange adapted to be fitted in a compartment wall, fastening means adapted to secure the flange portion to the compartment wall, a propeller within the converging-diverging member, driving means for the propeller including a casing element, said casing element and converging-diverging member forming a symmetrical air passage, means for supporting the casing element from the converging diverging member, and a frusto-conoidal member contiguous to the discharge side of the propeller for providing a divergent stream line passage of annular cross section for the discharge of air.

1,502,063. ELECTRIC-WAVE RECEIVER. WALTER SCHOTTKY, Wurzburg, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Grman Corporation. Filed Nov. 6, 1920. Serial No. 422,339. 2 Claims. (Cl. 250—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



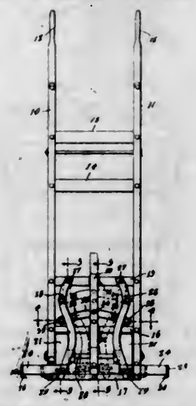
1. A receiving system for high frequency electric waves comprising in combination a local source for superimposing on the received frequency a local frequency different from that received and adapted to produce a beat frequency current above the limit of audibility, a rectifier adapted to rectify said beat frequency current, means tuned to said beat frequency for transforming said rectified current into alternating current, an amplifier tube for amplifying said current, and means for rectifying said amplified current to produce an audible signal.

1,502,064. REFRIGERATOR. JOHN SCHULDE, St. Louis, Mo. Filed Jan. 2, 1923. Serial No. 610,195. 1 Claim. (Cl. 62—69.)



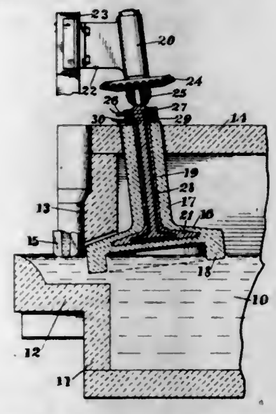
A refrigerator having a cooling compartment and a storage compartment, a refrigerant tank mounted in said cooling compartment, a horn disposed within said tank and spaced from the sides thereof, said horn having an inlet near the top of the tank for receiving the warm air from the top of the storage compartment, and an outlet near the bottom of the tank leading into the storage compartment near the bottom thereof, said horn gradually increasing in cross-sectional area from the intake to the outlet thereof.

1,502,065. TURBOGENERATOR. ALBERT W. SMITH, Los Angeles, Calif. Filed Dec. 24, 1923. Serial No. 682,591. 3 Claims. (Cl. 171—252.)



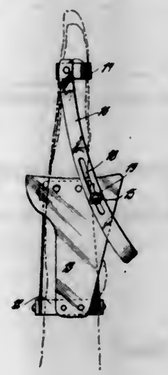
2. The combination with a turbogenerator, of one or more spray pipes therein connected with a source of superheated water supply, for forming a water mist at the temperature of the boiling point in the generator, to absorb the heat losses by radiation at a temperature above that of said boiling point therefrom, and a valve in said supply pipe for admitting the superheated water to the generator at the rate required to maintain said superboiling point temperature therein.

1,502,066. OILER FOR PNEUMATIC TOOLS. WILLIAM A. SMITH, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 5, 1922. Serial No. 586,292. 1 Claim. (Cl. 221—78.)



An oiler for pneumatic tools comprising a lubricant container adapted to be carried in the operator's pocket, a nozzle secured thereto having its outer end adapted to seat in a fitting, a cylinder, a manually operable plunger in said cylinder, a check valve between said cylinder and nozzle, a valveless inlet port in said cylinder overrun by said piston and communicating with said container, resilient means for normally holding said plunger in a position to seal said inlet port, and a handle for reciprocating said plunger to eject the lubricant, the nozzle forming a seal with the fitting by the pressure exerted upon said plunger during its ejecting stroke, the cross-sectional areas of the piston and the nozzle being so proportioned as to provide for the ejection of the lubricant through the nozzle with sufficient force to overcome the fluid or line pressure of the tool.

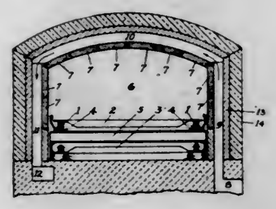
1,502,067. HAND TRUCK. FRED STEBLER, Riverside, Calif., assignor to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed June 14, 1922. Serial No. 568,205. 4 Claims. (Cl. 214—65.5.)



1. In a hand-truck, a frame having relatively spaced side-rails, opposed transversely movable gripper members slidable on the frame towards and from each other and extending beyond the side-rails, opposed cam links extending in a general direction longitudinal of the frame with their upper ends pivoted on the frame adjacent the respective side-rails, said links being each curved downwardly and inwardly with their lower ends pivotally connected to the inner ends of the respective gripper members, and a longitudinally movable slide bar having a cam engagement with said links and manually operable to effect an opening or closing of the gripper members.

1,502,068. GLASS-CIRCULATING MECHANISM. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 2, 1922. Serial No. 591,751. 9 Claims. (Cl. 49—54.)

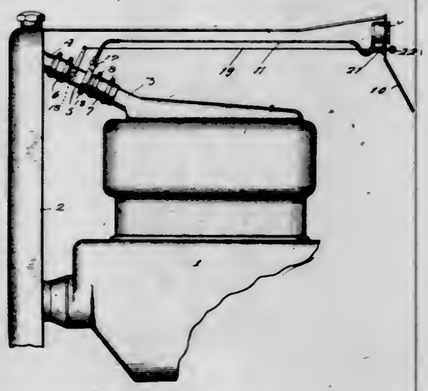
1. The combination of a tank to contain molten glass, said tank comprising a main portion and a forehearth projecting beyond a wall of the tank to expose a surface of the glass, a glass circulating device within said main portion of the tank behind said wall, and means to actuate said device and thereby maintain a continuous circulation of the glass forming said surface.



1,502,069. CORNCUTTER. WILLIAM SVEJKOVSKY, Oklahoma City, Okla. Filed May 24, 1921. Serial No. 472,299. 1 Claim. (Cl. 30—9.)

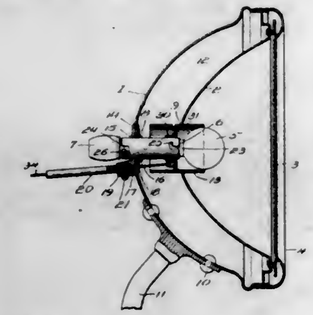
A corn cutter comprising, in combination, a metallic guard substantially U shaped when viewed in cross section, adapted to fit the hand of the operator, a pair of retaining straps, one of which straps is adapted to fit to the palm of the hand while the other encircles the wrist, a metallic blade connected to the guard and arranged to lie along one side of the palm of the hand

and at right angles to the general extent whereby it will assume a vertical position when the hand is held in a horizontal position, a projecting pin provided adjacent the forward end of the said metallic blade and spaced from the edges of the latter, a knife blade provided intermediate its ends with an elongated slot to receive the projecting pin of the said metallic blade, means engaging the pin for holding the knife blade in place, and a securing strap having adjustment to one end of the said knife blade and being adapted to encircle the fingers of the hand.



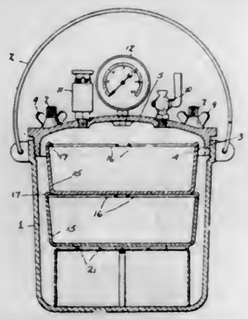
1,502,070. OVEN OR FURNACE. FRANK J. TONE, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed July 6, 1922. Serial No. 573,151. 6 Claims. (Cl. 49—47.)

1. A muffle flue for furnaces, composed on three sides of clay tile and on the heat radiating side of silicon carbide, substantially as described.



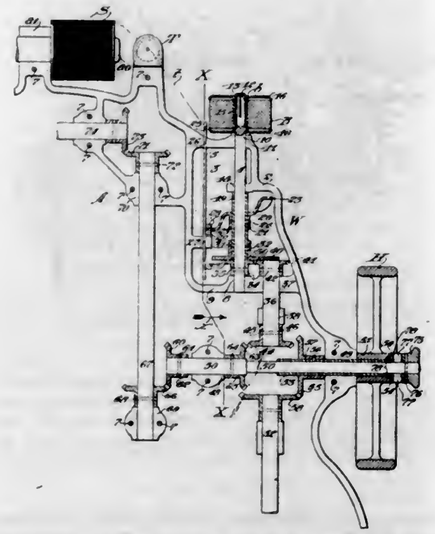
2. A muffle lehr having an article-receiving chamber and flues having portions thereof forming parts of the chamber wall and formed of material having relatively high heat conductivity, the flues having other portions of material having relatively low heat conductivity, and means for passing combustion products through said flues, substantially as described.

1,502,071. TEMPERATURE INDICATING AND REGULATING MEANS FOR ENGINE-COOLING SYSTEMS. GEORGE H. TOWNSEND, Bronxville, N. Y. Filed Feb. 14, 1920. Serial No. 358,683. 3 Claims. (Cl. 123—170.)



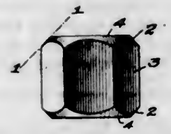
1. In combination with an internal combustion engine having a water cooling system including a radiator, a fitting adapted to be inserted in the water cooling system between the engine and the radiator, comprising a hollow body portion, a tubular extension at each side thereof adapted to receive a hose, said body portion having an opening therein adapted to receive a temperature responsive element which will be influenced by the temperature of the cooling water, a valve located in said hollow body portion and adapted to control the flow of water therethru, and means operable from the outside of said fitting for controlling the position of said valve.

1,502,072. HEADLIGHT ATTACHMENT. HOMER H. TRAVIS, Columbus, Ohio. Filed Apr. 21, 1923. Serial No. 633,682. 3 Claims. (Cl. 240—44.)



1. A headlight attachment for the purpose set forth comprising a sleeve adapted to be secured intermediate its end to the reflector of a headlight centrally thereof, a combined guide and supporting member adapted to be secured to the rear of the headlight casing and formed of a forwardly extending collar extended into said casing, a shiftable carrier having means for connecting an illuminating element and a connecting ping respectively with the front and rear ends thereof, said carrier supported by said collar and extending into said sleeve and projecting rearwardly from the collar, a hub mounted on said carrier and provided with means arranged within and engaging said sleeve to constitute a combined guide and support for the forward end of the carrier, and means extending through said member below the collar and connected with said hub for shifting the carrier to move said element forwardly and rearwardly, with respect to the reflector to provide for the increasing and diminishing of the glare of the light rays from the illuminating element.

1,502,073. COOKING UTENSIL. BERNARD P. WAGNER, Sidney, Ohio, assignor to The Wagner Manufacturing Company, Sidney, Ohio, a Corporation of Ohio. Filed Dec. 21, 1922. Serial No. 608,313. 5 Claims. (Cl. 53—2.)

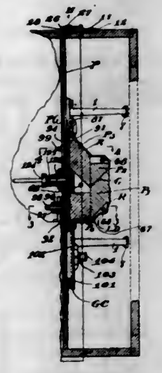


1. In a cooking utensil, the combination with a pot-like vessel provided with a sealing cover; of a plurality of pans adapted to fit in superposed relation within said vessel, said pans being provided with balls pivotally mounted on the pan and being supported by the edge of said pan, when in a substantially horizontal, inwardly extending position, whereby one pan may be thus supported on the other.

1,502,074. BOBBIN WINDER. SIMON W. WARDWELL, Providence, R. I.; Carl V. J. Christensen, Edwin C. Smith, Arthur A. Armington, and Willard W. Bardsley executors of said Simon W. Wardwell, deceased. Filed Apr. 30, 1919. Serial No. 293,589. 11 Claims. (Cl. 242—18.)

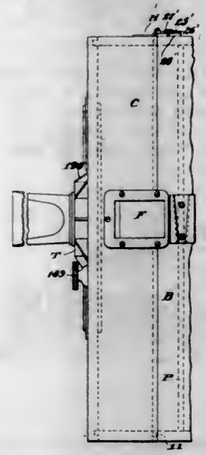
1. In a bobbin-winder for sewing-machines, the combination with the hollow arm of the machine head, of a winding-spindle projecting from bearings in the arm, a thread-guide consisting of a single bar mounted to slide in bearings in the arm and projecting outwardly therefrom in opposite parallel relation to the winding-spindle, a traverse-cam mounted free to turn on the spindle within the arm and engaging directly with the guide to reciprocate the latter, and means within the arm for driving the spindle and cam at different speeds.

1,502,075. GAUGE-BLOCK FORM. FLOYD C. WEAVER, Washington, D. C. Filed Nov. 28, 1922. Serial No. 603,800. 5 Claims. (Cl. 33—168.)



1. A block of the class described comprising a body provided with non-measuring side surfaces and with accurately lapped upper and lower measuring surfaces, and bevelled faces intersecting the accurately lapped measuring surfaces, said bevelled surfaces extending continuously about said block and each forming a frustrum of a cone.

1,502,076. METHOD OF REVIVIFYING CARBONACEOUS FILTERING MEDIUMS. MORIZ WEINRICH, New York, N. Y.; Dorothea Josephine Elizabeth Weinrich executrix of said Moriz Weinrich, deceased. Filed Nov. 29, 1920. Serial No. 427,139. 1 Claim. (Cl. 252—3.)

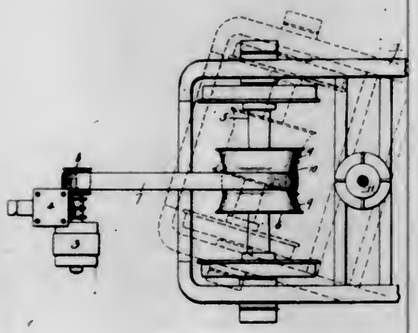


The method of revivifying vegetable carbon after it has been kept in contact with solutions to be purified and thereafter run into filter presses, and while it remains in the presses, which consists in first washing the carbon cakes with hot water until the escaping water is colorless, then washing the cakes with a hot ammonia solution thereby freeing the remaining color and impurities from the cakes, then again washing the cakes with hot water to remove the remaining ammonia solution from the cakes, then subjecting the cakes to compressed air to partly dry the same, and finally discharging the revivified carbon from the presses.

1,502,077. CINEMATOGRAPHIC MACHINE. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Original application filed Sept. 11, 1916, Serial No. 119,377. Divided and this application filed Apr. 25, 1921, Serial No. 464,205. 12 Claims. (Cl. 88—16.4.)

1. Optical apparatus comprising a film gate, a film gate cover having a plurality of spaced exposure apertures therein, light dividing means mounted on said cover to divide a beam of light into a plurality of similar beams and means to project the divided parts of the beam through said apertures respectively.

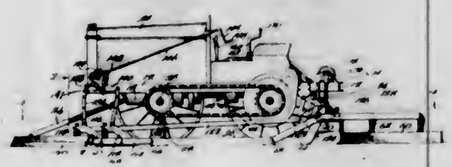
1,502,078. LENS SYSTEM. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Original application filed Sept. 11, 1916, Serial No. 119,377. Divided and this application filed Apr. 25, 1921. Serial No. 464,206. 4 Claims. (Cl. 95—42.)



1. Photographic apparatus comprising a light-tight casing having a plurality of optical paths therewithin, said paths having respectively parallel portions adjacent

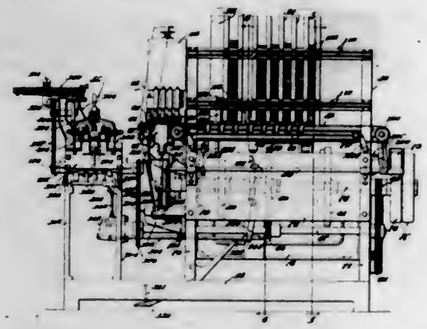
each other and in line with an opening in the casing, a rotatable member mounted in said opening in light-tight engagement with said casing, and a lens mounted on said member and movable on rotation of the latter into alignment with each of said optical paths.

1,502,079. PROCESS OF MAKING LEAD NITRATE AND HYDRATED MANGANESE DIOXIDE. ERIC HJALMAR WESTLING, Redwood City, Calif., assignor to Emory Winship, San Francisco, Calif. Filed Oct. 4, 1923. Serial No. 666,444. 6 Claims. (Cl. 23—13.)



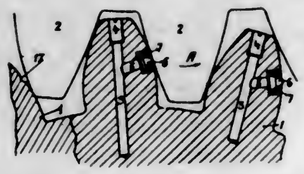
1. The process of producing hydrated manganese dioxide and lead nitrate which comprises reacting manganese nitrate with lead peroxide.

1,502,080. AXLE PULLEY FOR CAR LIGHTING. DON C. WILSON, East Orange, N. J. Filed Apr. 18, 1923. Serial No. 632,881. 2 Claims. (Cl. 105—101.)



1. In a belt drive, the combination of a pulley turning on a fixed axis, a pulley turning on a swivelling axis and a belt connecting the two pulleys, the swivelling pulley being characterized by a central crown portion on which the belt normally runs and flaring side portions, upon which the belt runs when the pulleys are out of parallelism for maintaining constant belt length.

1,502,081. HIGHWAY-MAINTENANCE MACHINE. FRED D. WILSON and LEONARD S. BURNS, Harvey, Ill., assignors to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed July 6, 1923. Serial No. 649,832. 42 Claims. (Cl. 37—176.)

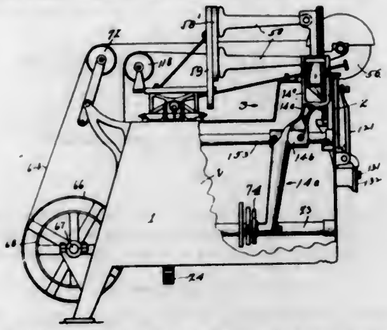


1. In combination with a power driven vehicle, a vertically movable cutting blade in front of the vehicle, power operated means for raising and lowering said blade, and manually controlled means for independently vertically positioning an end of the blade.

1,502,082. HEEL-BUILDING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 20, 1919. Serial No. 283,693. 127 Claims. (Cl. 12—5.)

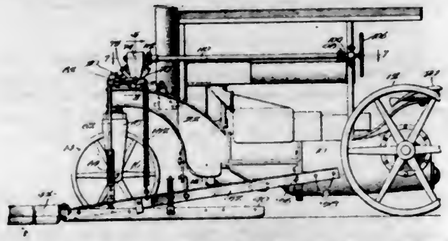
1. A heel building machine having, in combination, a plurality of lift magazines, means for producing therefrom a series of lifts in a row, means for operating upon the lifts, and an endless conveyer for conveying the lifts so produced in succession to said operating means.

1,502,083. LUBRICATING DEVICE FOR TOOTHED GEARINGS. HEINRICH ZOELLY, Zurich, Switzerland. Filed Oct. 23, 1922. Serial No. 596,445. 8 Claims. (Cl. 74—41.)



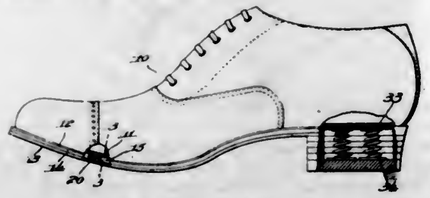
1. Co-acting gear wheels having at least one channel in a tooth of a pair of co-acting teeth, and means controlled by the other tooth to effect the discharge of lubricant from said channel when the teeth co-act.

1,502,084. AIRSHIP. MARION W. ADKINS, Kansas City, Mo. Filed May 1, 1922. Serial No. 557,620. 1 Claim. (Cl. 244—29.)



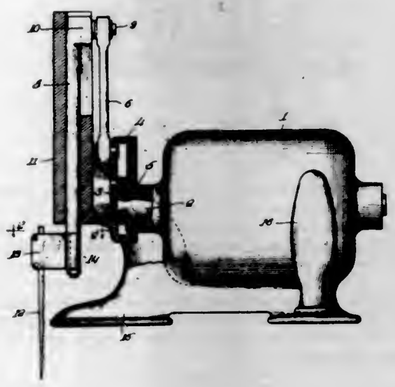
In an airship, a frame including a longitudinal supporting plane at the top thereof, and including two parallel vertical longitudinal trusses, the upper ends of which are attached to the under side of the plane at points spaced apart from the lateral edges of the plane respectively, braces connecting said lateral edges with said trusses respectively, and braces respectively secured to said trusses and attached to the under side of the plane at the inner sides of said braces, substantially as set forth.

1,502,085. SAW-SHARPENING MACHINE. EDWARD P. ARMSTRONG, Portland, Oreg. Filed Apr. 6, 1922. Serial No. 550,007. 24 Claims. (Cl. 76—40.)



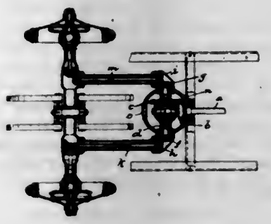
1. In a saw sharpening machine, a rocker-arm, a saw-feeding arm pivoted to one end of said rocker arm, a housing through which said end of said rocker-arm projects, and a supporting surface located under and covered by said housing, said saw-feeding arm having a piece extending under said housing and sliding on said supporting surface.

1,502,086. DOUBLE CONTROL FOR ROAD-ROLLER SCRAPER ATTACHMENTS. WILLIAM T. BEATTY, Flossmoor, FRANK S. DAVIS, Homewood, and FRED D. WILSON, Harvey, Ill.; said Davis and said Wilson assignors to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1923. Serial No. 670,494. 20 Claims. (Cl. 37—146.)



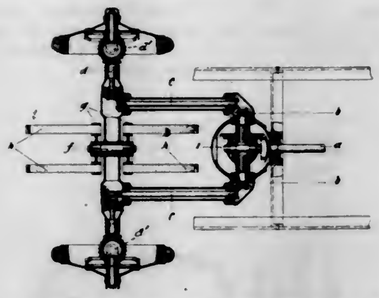
20. In mechanism of the class described, in combination with a traveling roller, a maintainer to be controlled thereby, a pair of pivoted lever arms (68 and 72) equipped with mechanism for pressing the maintainer on the ground, means for so actuating said lever arms, an oppositely extending arm projecting from each of said first arms and a spring (150 or 152) connecting said arm and the maintainer.

1,502,087. BOOT OR SHOE. JULIUS BUNNS, Malden, Mass. Filed Feb. 8, 1924. Serial No. 691,491. 3 Claims. (Cl. 36—28.)



3. A shoe having an inner and outer sole and a welt; a member interposed between said welt and said outer sole and arranged to provide a chamber between said soles; a plurality of spring metal frames each adapted to support and be reinforced by a plurality of other springs; and a plurality of springs carried by each of said frames and adapted to coact with said frames to form a resilient foot tread in a shoe.

1,502,088. CUTTING AND SAWING DEVICE. VINCENT V. COLBY, Chicago, Ill., assignor to Charles A. Brown, Hinsdale, Ill. Filed Feb. 14, 1921. Serial No. 444,966. 5 Claims. (Cl. 143—72.)



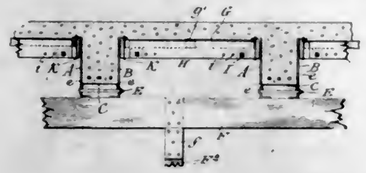
1. In a device of the class described, a reciprocating member, a support carried by said member and mounted thereon to rotate about an axis parallel to the reciprocation of said member, a free-ended saw with teeth in substantially a straight line mounted on said support with the line of its teeth parallel to and distanced from said axis, a table and a disk mounted flush with said table and rotatable on said axis and having a slot therein through which said saw extends, said disc being free to rotate by said saw turning with said rotatable support.

1,502,089. TOOTHED WHEEL-DRIVING MECHANISM FOR MOTOR VEHICLES. PAUL DAIMLER, Cannstatt, Germany, assignor to Daimler-Motoren-Gesellschaft, Unterturkheim, Germany, a Corporation of Germany. Filed May 27, 1919. Serial No. 300,222. 3 Claims. (Cl. 180—73.)

1. In a toothed wheel driving mechanism for motor vehicles, the combination of a hollow ball joint, one member of which is adapted to be connected with a chassis, sleeves connected with the other member of said ball joint, driving shafts located in said sleeves and a differential gear located within and enclosed by said ball joint and having its central point coincident with the spherical centre of said ball joint.

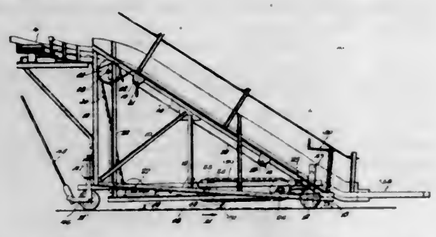
1,502,090. RUNNING GEAR FOR MOTOR CARS. PAUL DAIMLER, Cannstatt, Germany, assignor to the Firm Daimler-Motoren-Gesellschaft, Unterturkheim, Germany. Filed Aug. 7, 1920. Serial No. 402,059. 4 Claims. (Cl. 180—70.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a motor vehicle, the combination of a frame, a housing, a pivot on said housing extending in the longitudinal direction of the vehicle, vehicle springs, spring supports carrying said vehicle springs and mounted upon said pivot so as to rock in vertical planes transversely to the axis of said pivot, steerable wheels, means whereby said wheels are pivotally mounted upon said housing, and longitudinal driving shafts operatively connected with said wheels and located close to both sides of said spring supports.



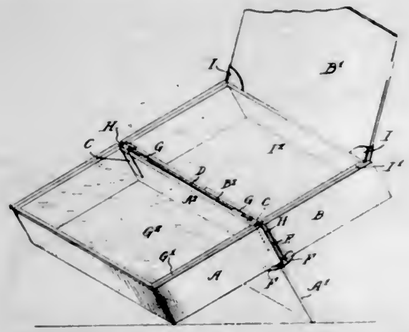
1,502,091. METALLIC DOOR. ROGER W. DISBRO, Cleveland Heights, Ohio, assignor to The W. S. Tyler Co., Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1921. Serial No. 464,437. 2 Claims. (Cl. 189—46.)

1. A metallic door comprising parallel side members and transverse end members constructed of metallic tubular stock, the ends of said transverse members being abutted against the adjacent faces of said side members and integrally united therewith.



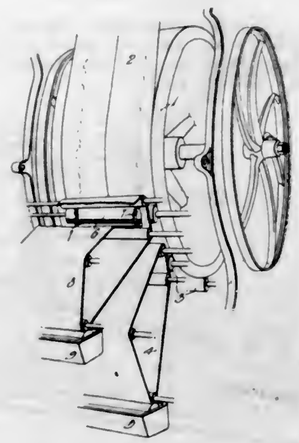
1,502,092. CONCRETE FORM. JAMES H. DUNCAN and SYDNEY ROGOW, New York, N. Y. Filed July 13, 1922. Serial No. 574,616. 15 Claims. (Cl. 25—131.5.)

2. A concrete form of the class described embodying a plurality of joist molding members positioned in side by side relation, each joist molding member being a continuous plate substantially Z shaped in cross section a soffit member of channeled cross section, said soffit member being free from direct attachment to the joist molding members and positioned intermediate said members, bolts passing through said joist molding members and upon which bolts are imposed the flanged edges of



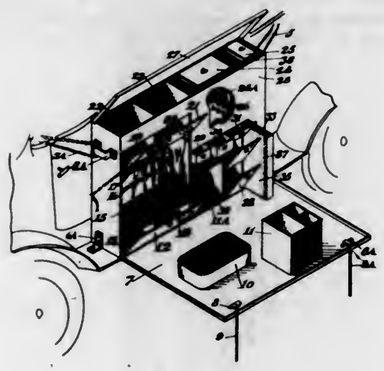
said channelled soffit member, and slab molding members carried by the joist molding members independently of the shoring for supporting the joist molding members.

1,502,093. PORTABLE ATTACHMENT FOR CONVEYERS. GRADY E. FAIRCLOTH and WILLIAM M. MOSELEY, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Nov. 28, 1919. Serial No. 341,145. 20 Claims. (Cl. 198—203.)



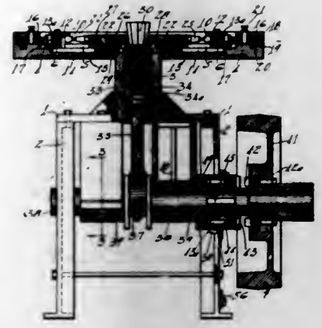
12. A conveyer attachment comprising a frame, a plurality of fixed gravity chutes mounted thereon, an inclined chute movably mounted on said frame, and means for actuating said chute to produce a lateral movement thereof to co-operate with one of said gravity chutes.

1,502,094. CIGAR-DISPLAY DEVICE AND CLAMP FOR ASSEMBLING THE SAME. DANIEL A. GALLAGHER, Cleveland Heights, Ohio. Filed Dec. 12, 1922. Serial No. 606,391. 4 Claims. (Cl. 206—44.)



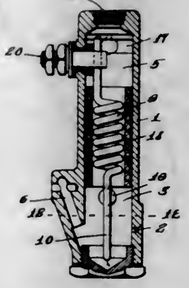
1. A clamp for securing two cigar boxes together in aligned relation consisting of U shaped clamping means adapted to extend over the edges of abutted boxes in combination with an arm secured to said movable clamping means and having clamping fingers at its other end adapted to extend under the bottoms of the boxes and hold them in aligned position.

1,502,095. MACHINE FOR TRIMMING SHEET MATERIAL. JOHN E. GARTSIDE, York, Pa. Filed May 4, 1923. Serial No. 636,655. 4 Claims. (Cl. 101—178.)



1. The combination with a printing machine having means for printing a design on a sheet; of means for printing a line with acid along the edge of the design to weaken the sheet and permit its edge to be easily torn off.

1,502,096. TOURIST'S KITCHENETTE OR CABINET. LOU SHIELDS GILMORE, El Reno, Okla. Filed Sept. 16, 1922. Serial No. 588,596. 1 Claim. (Cl. 190—12.)

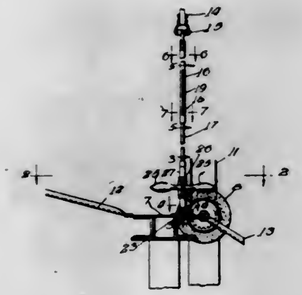


A device of the character stated comprising a casing, a closure at the front, a multiplicity of compartments accessible when said closure is open, a hinged top and compartments accessible when said top is opened, said compartments including an ice receptacle and a juxtaposed drinking-water container, a series of compartments intermediate the front and top compartments, and an independent closure therefor, said last-named closure being in position to be concealed by the first-named closure when closed.

1,502,097. RIM-PUNCHING MACHINE. EMANUEL J. GRACE, Erie Pa. Filed July 12, 1922. Serial No. 574,478. 4 Claims. (Cl. 164—90.)

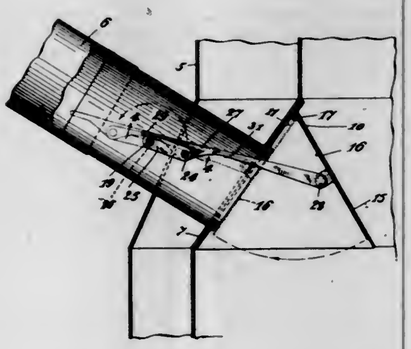
1. In a rim punching machine, the combination of a plurality of radially and inwardly extending dies; a plurality of radially and outwardly movable punches operating in punching relation with said dies; an adjusting ring arranged outside of the dies; and means actuated by the rotation of said ring for simultaneously adjusting said dies.

1,502,098. PRIMER CONSTRUCTION. CHARLES P. GRIMES, Syracuse, N. Y. Filed July 31, 1923. Serial No. 654,957. 5 Claims. (Cl. 123—180.)



3. A primer for internal combustion engines, comprising a casing, confining an upright chamber, the chamber being formed with a laterally extending portion in its upper portion formed with an auxiliary air passage therein, an outlet leading from the upper portion of the chamber out of alignment with the auxiliary air inlet, a primary air inlet opening into the lower portion of the chamber, a fuel inlet opening into the lower portion of the chamber, a heating element extending lengthwise of the chamber and having a portion extending into the lower end of the chamber in which the liquid fuel is located, and a portion located in the upper part of the chamber above the liquid fuel, and a suction operated valve normally closing the auxiliary air intake.

1,502,099. RING-GRINDING MACHINE. GEORGE H. HIGGINS, Rockford, Ill., assignor to Burd High Compression Ring Company, Rockford Ill., a Corporation of Illinois. Filed Feb. 1, 1921. Serial No. 441,616. 12 Claims. (Cl. 51—129.)

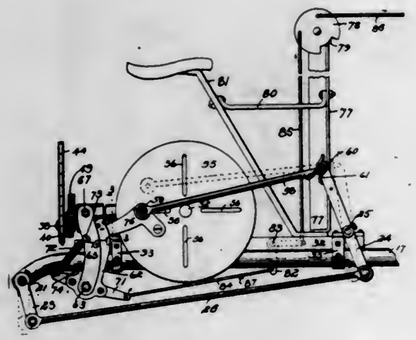


1. The combination with a grinding wheel and a table upon which a ring is adapted to rest and be moved into

and out of peripheral contact with the grinding wheel, of a device for internally gripping a ring on said table, said device being driven from overhead for revolving the ring and having a handle above the ring adapted to be manip-

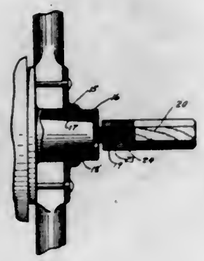
ulated for freely moving the ring on the table and for bringing said device into and out of operative relation to the ring.

1,502,100. HOT-AIR DAMPER. CYRUS S. HOOD, Corning, N. Y. Filed June 1, 1922. Serial No. 565,149. 5 Claims. (Cl. 126—285.)



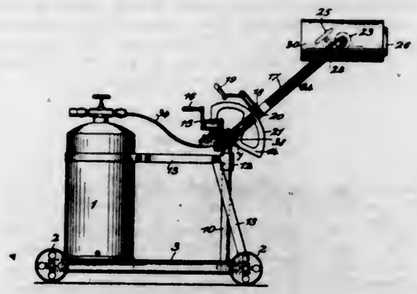
1. A hot air furnace having an inwardly inclined or conical top and a tap pipe extending therefrom, in combination with an inverted V-shaped open-bottom hood having one of the V-faces shaped to fit said furnace top around the tap pipe exit and the opposite face projecting into the draft and formed with a large vent opening; and a flap valve hinged in the apex of said hood; and toggle means for operating it to close either one of said openings, said toggle means being proportioned and arranged so that the toggle elements approach dead center relations as the valve approaches each of its closed positions.

1,502,101. PROCESS OF MANUFACTURING VISCOSE. CHARLES A. HUTTINGER, Lakewood, Ohio, assignor to The Acme Artificial Silk Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 28, 1922. Serial No. 571,567. 3 Claims. (Cl. 106—40.)



1. In processes of manufacturing viscose, the steps which consist, in saturating wood pulp with a water solution of sodium hydroxide of substantially a specific gravity of 1.17, and subjecting the mixture of said wood pulp and said solution to great pressure so that the resultant alkali cellulose will equal substantially three times the amount of wood pulp utilized, and of which the cellulose will comprise substantially 27 per cent; adding carbon bisulphide to the alkali cellulose of substantially one-third the amount of the original wood pulp utilized; adding a comparatively large amount of water; and filtering.

1,502,102. CARRIER-OPERATING MECHANISM FOR BINDERS. LAURITS KRISTIAN OLESEN BAKKE, Emmetsburg, Iowa. Filed Jan. 29, 1921. Serial No. 441,036. 6 Claims. (Cl. 56—475.)

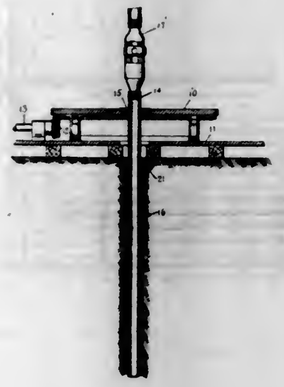


1. The combination of a binder having a bundle carrier capable of moving from carrying to discharging position and back, with a carrier operating mechanism arranged to be operated from a moving part of the binder, means for moving said carrier operating mechanism to position for such operation, and means for varying the position of the carrier operating mechanism relative to the bundle carrier whereby the amount of movement of the bundle carrier may be varied.

1,502,103. WHEEL PULLER. DANIEL S. LAMBERT and CRANSTON B. RADER, Denver, Colo. Filed Feb. 23, 1922. Serial No. 538,633. 2 Claims. (Cl. 29—85.)

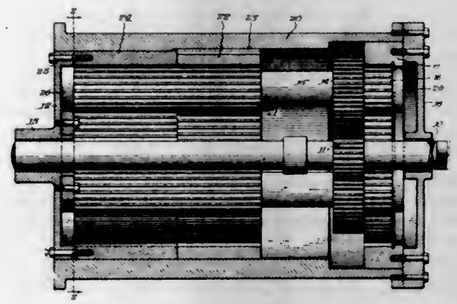
1. A wheel removing tool, comprising a hard metal body provided with a socket, that is adapted to encompass the threaded end of an axle arm extending through the hub of its wheel, which socket is of a depth substantially less than the length of said axle arm's threaded end, being threaded for a portion of its length and terminating at its rear end in an annular chamber, that is peripherally unobstructed from said threaded portion to its rear wall, with means projected from the rear thereof to engage the end face of the thread end of an axle arm when extended therein.

1,502,104. LIQUID-FUEL BURNER. JEAN LIEBER, Lausanne, Switzerland. Filed Mar. 24, 1921. Serial No. 455,373. 6 Claims. (Cl. 158—73.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a liquid fuel torch, a nozzle, a cover having an outwardly flared rear end through which atmospheric air is admitted in the longitudinal direction of the torch, a member arranged inside said cover adapted to support said cover and said nozzle, trunnion pins on said member to permit of a swingable mounting of said torch, and means to supply fuel to said nozzle through a central bore in one of the trunnion pins.

1,502,105. TOOL FOR REMOVING CASING FROM WELLS. JAMES W. LOY, Burnett, Calif., assignor of one-half to F. M. Fishback, Long Beach, Calif. Filed Feb. 12, 1923. Serial No. 618,699. 8 Claims. (Cl. 255—35.)

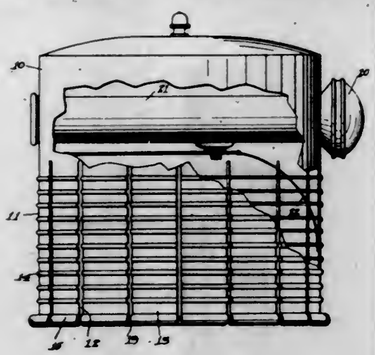


1. In a tool of the character referred to, a part adapted to be turned in one direction, a part adapted to be turned relative to said first part, reversal transmission mechanism between said parts adapted when said first part is turned in one direction to turn the other part in the opposite direction, said second part being open to receive an object inserted therein, and gripping means in said second part adapted to be closed upon said object to turn it therewith.

1,502,106. DEVICE FOR OIL AND GAS WELLS. WILLIAM H. LYNE, Houston, Tex. Filed June 10, 1922. Serial No. 567,382. 6 Claims. (Cl. 166—15.)

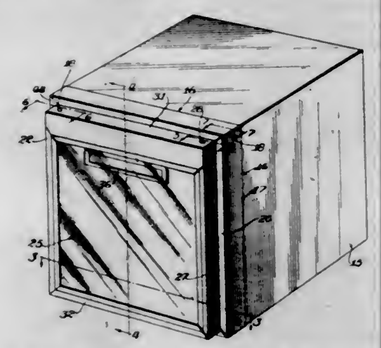
1. In hydraulic well drilling apparatus, a well casing, a pipe connection adapted to be attached to a hollow drill stem and having an external periphery of greater diameter than that of the well casing, and a valve positioned within said connection.

1,502,107. SPEED-REDUCING DEVICE. EARL E. MCCOLLUM, Downers Grove, Ill. Filed Sept. 28, 1922. Serial No. 591,041. 2 Claims. (Cl. 74—34.)



1. In a speed reducing mechanism, the combination of a casing, a drive shaft having a pinion, a pair of internal gear rings of the same pitch diameter and of a different number of teeth, shafts mounted for planetary movement about said drive shaft, pinions on said shafts, each pinion engaging said gear rings whereby to effect relative movement thereof, and a gear of larger diameter than said last named pinions, said gears being fixed to said planetary shafts and engaging said drive pinion whereby to reduce the speed of said planetary shafts.

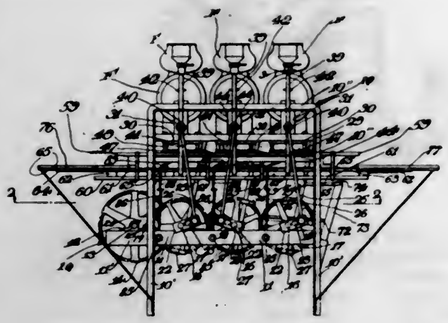
1,502,108. MARINE HAT. JAMES E. MCWILLIAM, North Oxford, Mass. Filed Mar. 7, 1923. Serial No. 623,373. 4 Claims. (Cl. 240—8.4.)



1. As an article of manufacture, a hat formed of sheet metal having a continuous crown and a lower por-

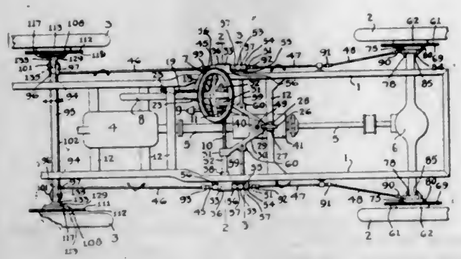
tion formed of a plurality of independent yielding tongues of sheet aluminum integral with the crown and

free from each other at the bottom to permit adjustment of the size of the hat.



1,502,109. FOOD-DISPLAY COVER. MYER METZGER, Chicago, Ill. Filed Sept. 21, 1922. Serial No. 589,609. 12 Claims. (Cl. 220—82.)

1. A food display cover embodying a receptacle engaging frame, a supplemental frame swingingly connected with the first recited frame, a transparent element forming a covering for the opening in the said supplemental frame, one of the peripheral walls of the supplemental frame being separate from the remaining walls, and means detachably securing the said separate wall to the remaining walls.

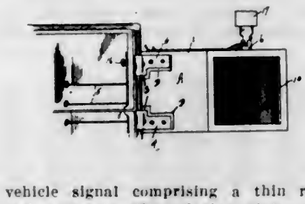


1,502,110. ICE-CREAM-BRICKING MACHINE. JULIUS JOHN MOJONNIER and HARLEY R. PHILLIPS, Oak Park, and HENRI B. WARREN, deceased, late of Oak Park, Ill., by Lewis W. Warren, administrator, Oak Park, Ill., assignors to Mojonnier Bros. Co., Chicago, Ill., a Corporation of Illinois. Filed July 3, 1922. Serial No. 572,653. 11 Claims. (Cl. 226—99.)

1. The combination with an upper plate having a supply opening and a cylinder opening therein, of a cylinder mounted in said cylinder opening, a plunger mounted for reciprocation in said cylinder, a lower plate disposed parallel to said upper plate and having discharge openings therein, pins interposed between and operating through said plates, means mounted on said pins for forcing said plates toward one another, a valve mounted for reciprocation between said plates having a pocket therein with discharge openings in the bottom and a block at one end thereof, the valve at one end of its path of movement being positioned with the discharge openings thereof in registration with the discharge openings of the lower plate and the block sealing the supply opening in the upper plate and at the opposite end of its path of movement being positioned with the discharge openings thereof out of registration with the like openings of the lower plate and the pocket thereof connecting the aforesaid supply opening with said cylinder, a valve stem fixed to said valve, having an oblique slot therein, an oscillatory rod for operating said valve, and an arm secured to the rod aforesaid and in the oblique slot of the valve stem.

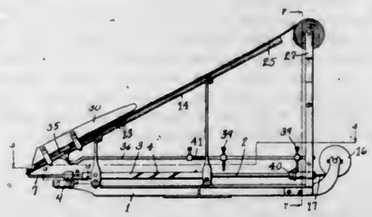
9. A machine of the class described including a carrier for advancing containers step by step through the machine; a series of filling units spaced according to said steps, to which each container is moved in succession to be filled in part at each unit, each unit comprising a fixed cylinder, a piston movable therein and valve means for connecting the cylinder for loading upon one movement of the piston and for discharging upon the opposite movement of said piston; means for operating said units by actuating said pistons and valve means, one operating means being provided for each piston and valve means; and means under the control of the containers for controlling said operating means, one such control means being provided for each operating means and being responsive to the positioning of a container at the corresponding filling unit to set the operating means of that unit into operation.

1,502,111. BRAKE MECHANISM FOR ROAD VEHICLES. GEORGE E. MOLYNEUX, Bayonne, N. J., assignor of one-half to John F. Alvord, New York, N. Y. Filed Mar. 10, 1921. Serial No. 451,131. 43 Claims. (Cl. 188—106.)



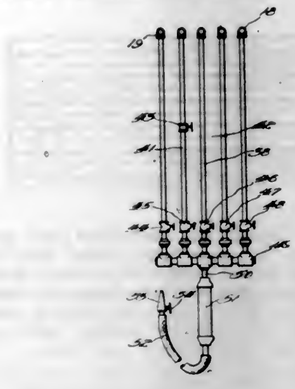
1. A brake mechanism for road vehicles comprising a plurality of flat friction producing members of large area arranged in pairs and operable upon all four wheels of the vehicle, and means for controlling the operation of the said members including a service device, the said members being mounted so that one of each pair shall have bodily movement in a right line relatively to the other, and the members of the pairs shall have simultaneous frictional contact throughout their functional surfaces.

1,502,112. METAL RECEPTACLE. CHARLES L. MOORMAN, Chicago, Ill. Filed Sept. 18, 1922. Serial No. 588,767. 10 Claims. (Cl. 220—75.)

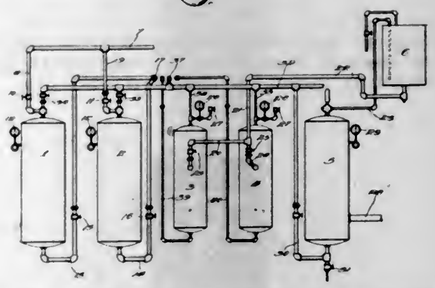


1. A sheet metal receptacle having an interlocking seam further secured by distortions at intervals in one side only of said seam.

1,502,113. VEHICLE SIGNAL. WILLIAM R. MUDD, Evanston, Wyo. Filed June 20, 1921. Serial No. 478,974. 2 Claims. (Cl. 116—53.)

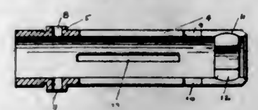


1. A vehicle signal comprising a thin rectangularly shaped casing; a plurality of sign plates operable entirely within said casing and spaced from each other by guide strips; a lock positioned centrally on said casing whereby any one of said sign plates may be fastened in display position to indicate the vehicle is being operated contrary to the sign displayed; a light shade on said casing to direct rays of light on said sign plates when exposed to sight; a light globe mounted on said casing to be electrically illuminated; and connecting rods fastened on the respective sign plates and protruding through one end of said casing to move said sign plates as desired.

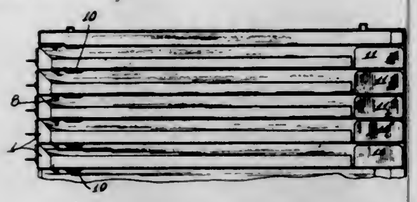


1,502,114. BAG-TYING MACHINE. LEWIS D. NELSON, Coldwater, Mich. Filed Sept. 11, 1922. Serial No. 587,615. 11 Claims. (Cl. 140—93.)

1. In a machine for tying bag ties, the combination of a spindle mounted for longitudinal and rotative movement, means for rotating said spindle comprising a tubular member having a spiral slot therein with a longitudinal extension at the rear end of the slot, tie engaging hooks pivotally mounted on said spindle, a pin at the forward end of said spindle, and positioning means coacting with said pin and comprising a pair of plates spaced to provide a guiding groove, one of said plates having a forwardly projecting curved finger.

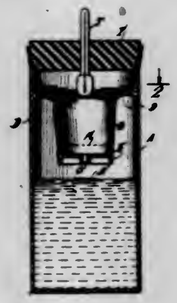


1,502,115. APPARATUS FOR CLEANING MOTOR VEHICLES. JACOB P. NICHOLSON, Chicago, Ill., assignor to Klean Rite Auto Laundry, Chicago, Ill., a Corporation of Illinois. Filed Oct. 14, 1922. Serial No. 594,662. 3 Claims. (Cl. 299—84.)



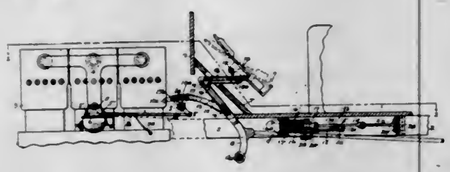
1. In a vehicle cleaning apparatus, the combination with a vehicle support, of a plurality of independent vessels adjacent said support for containing water, a detergent and a grease solvent, a mixing chamber in communication with certain of the vessels, a compressed air line in communication with said mixing chamber, means for introducing substances to each of said vessels, discharge lines from said vessels, independent valves in each discharge line, a common header in communication with each of said discharge lines, and a turbulator adjacent said header for receiving materials passing therethrough whereby predetermined mixtures of the various substances of the turbulator are thoroughly intermixed and placed in a vaporous form, and a discharge nozzle leading from said turbulator.

1,502,116. FEED CHUCK. JAMES R. O'CONNELL, Rochester, N. Y., assignor of one-half to John O. Bennett, Rochester, N. Y. Filed Oct. 19, 1923. Serial No. 669,485. 3 Claims. (Cl. 29—62.)



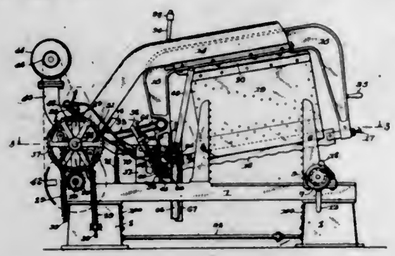
1. In a feed chuck, the combination of a tubular body member, a pair of spring fingers formed at one end of said tubular body section, a radial channel formed on the inside of said spring fingers, a pair of gripping members adapted to be inserted between said spring fingers, said gripping members having a spherical perimeter corresponding to the inside diameter and outline of said radial channel, said radial channel being adapted to engage and hold said gripping members against endwise movement within said spring fingers.

1,502,117. CABINET SUCH AS USED FOR VISIBLE INDEX. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, a Corporation of New Jersey. Filed Dec. 5, 1921. Serial No. 520,192. 5 Claims. (Cl. 45—96.)



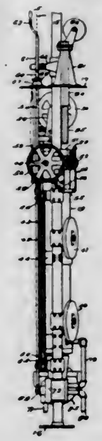
2. In a filing cabinet, the combination with upper and lower ledges, the upper ledge having stops and resilient frictional braking surfaces at the rear of said stops, a tray slidable upon said lower ledges, an anchor hinged to the rear of said tray and having a raised abutment adapted for yieldingly passing under said braking surfaces and be arrested by said stops.

1,502,118. VISCOSITY-TESTING DEVICE. WILLIAM F. OSBORNE, Westwood, N. J. Filed Dec. 11, 1919. Serial No. 344,002. 19 Claims. (Cl. 265—11.)



1. In a viscosity testing device, the combination of an outer receptacle for holding the liquid to be tested and an inner measuring receptacle having an opening in the bottom through which the liquid to be tested will flow, and having upper openings connecting the inner and outer receptacles permitting the liquid to flow freely from one to the other.

1,502,119. FOOT ACCELERATOR FOR AUTOMOBILES. GEORGE A. PURDY, Watertown, N. Y. Filed Oct. 3, 1923. Serial No. 666,324. 3 Claims. (Cl. 74—81.)

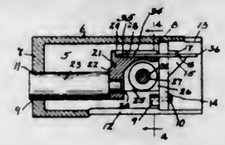


1. In combination with a throttle and a brake pedal of an automobile, a foot rest pivoted on the brake pedal, the latter having a transverse slot, a lever pivoted in said slot, means connecting one end of the lever to the foot rest, and a play connection between the opposite end of the lever and the throttle.

1,502,120. MACHINE FOR CUTTING RUBBER AND THE LIKE. CHARLES RASMUSSEN, Racine, Wis., assignor of one-half to Ralph T. Ingalls, Racine, Wis. Filed Apr. 5, 1920. Serial No. 371,437. 20 Claims. (Cl. 164—48.)

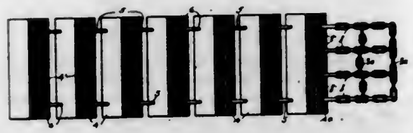
1. In a machine for cutting rubber and the like, the combination of a cutting blade and means for continuously conducting under confinement a lubricating liquid and delivering it to the blade adjacent its cutting edge within a cut.

1,502,121. HYDRAULIC HOIST. CHARLES DE LOS RICE, West Hartford, Conn. Filed Feb. 15, 1923. Serial No. 619,245. 19 Claims. (Cl. 254—189.)



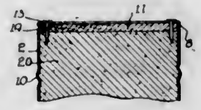
1. A hydraulic hoist having co-operating stationary and traveling pulleys for paying out and drawing up cable, a hoisting cable passing around said pulleys, means for causing said pulleys to approach and recede with relation to each other, and auxiliary means adapted to grip the hoisting cable for paying out cable, operated in conjunction with the movements of the means for causing the approach of the traveling pulleys.

1,502,122. STOKER RAM. GILBERT WAYNE RUGGLES, Youngstown, Ohio. Filed Nov. 26, 1920. Serial No. 426,341. 12 Claims. (Cl. 198—226.)



1. In an apparatus for feeding material, the combination of two ram members having contiguous faces adapted to engage with and push the material to be fed, means for reciprocating one of said members, and means interconnecting said members so as to render same conjointly operable, said means permitting one of said members to become inoperative under abnormal conditions.

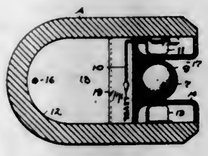
4. In an apparatus for feeding material, the combination of two ram members having contiguous faces adapted to engage with and push the material to be fed, means directly connected with one of said members for reciprocating the same, and a frangible element operatively interconnecting said members so as to render the same normally conjointly operable, said element being arranged and constructed so as to be under tension during the feeding movement of said members.



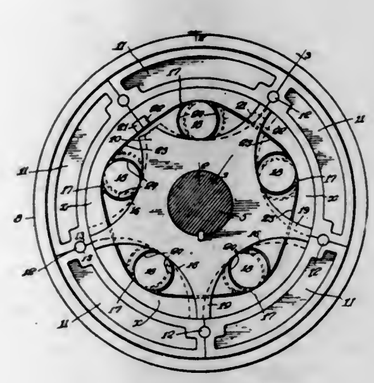
11. In an apparatus for feeding material, the combination of a ram member, a reciprocatory cross-head within said member, said cross-head being adapted directly to engage with said member to retract same; and a frangible element interconnecting said member and cross-head, said element being arranged so as to be under tension during the feeding movement of said member and constructed to break under a predetermined strain.

1,502,123. TRACTION MAT. SAM SALL, Syracuse, N. Y. Filed Apr. 10, 1924. Serial No. 705,487. 3 Claims. (Cl. 238—14.)

1. A traction mat comprising a plurality of parallel transversely disposed angle irons, single links connecting the opposite ends of the adjacent edges of the said irons and evenly spacing the same, and a woven chain section projecting from one end of the angle-iron body adapted to provide initial traction for a mired vehicle wheel.



1,502,124. METHOD OF MAKING PACKAGES. WILLIAM A. L. SCHAEFER, Chicago, Ill., assignor to Jointless Fire Brick Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,270. 1 Claim. (Cl. 220—55.)

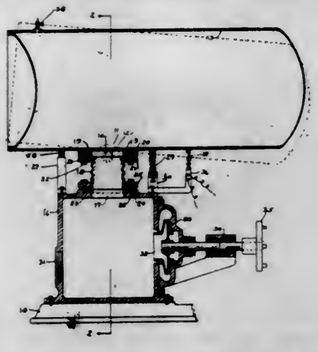


The method of making a package comprising filling an open top closed bottom container with loose material to a level near the top thereof, supporting a cover on said material within the margin of said container above said level, bending the top peripheral margin of said container inwardly over said cover, and driving fastening means through said margin into said cover, utilizing said material to support said cover while said fastening means are being so driven in.

1,502,125. LIQUID-LEVEL INDICATOR. DUDLEY H. SCOTT, Cleveland, Ohio. Filed Feb. 24, 1921. Serial No. 447,467. 6 Claims. (Cl. 73—82.)

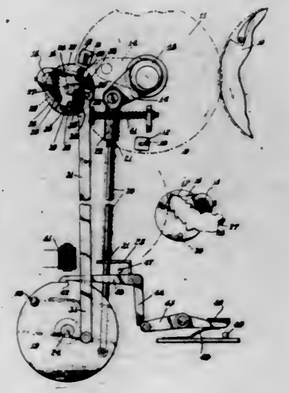
1. A liquid level indicator for ammonia receivers and other apparatus, comprising a non-magnetic gauge column containing a movable magnetic element adapted to settle within the liquid in the column, and a magnetic device slidably engageable with the exterior of said column and carrying an armature adapted to be deflected by said magnetic element in raising or lowering said device longitudinally of said column.

1,502,126. DIFFERENTIAL CLUTCH FOR POWER-DRIVEN VEHICLES, ETC. BERNHARD SETTERGREN, Chicago, Ill. Filed May 20, 1920. Serial No. 382,704. 15 Claims. (Cl. 192—50.)



1. In a clutch of the kind specified the combination with a drive axle, of a hollow casing loosely mounted thereon whose inner circumference is concentric to said axle, an inner clutch member securely mounted upon said axle within said casing, an outer expansible clutch member whose outer circumference has a slipping engagement with the inner circumference of the casing and a cylindrical rolling element interposed between said clutch members and movable circumferentially independently thereof which when said inner member revolves engages and causes said outer member to expand and engage the inner circumference of and transmit the motion of the axle to said casing.

1,502,127. TANK OR LIQUID RECEIVER. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed July 20, 1922. Serial No. 576,201. 10 Claims. (Cl. 103—25.)

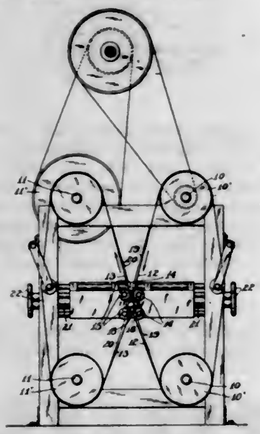


1. In combination, a tilting receiving chamber controlled in its movement by the accumulation of liquid therein, a combined inlet and outlet for liquid adjacent

but separate from the pivot of the chamber, and means connecting said inlet and outlet with the return line

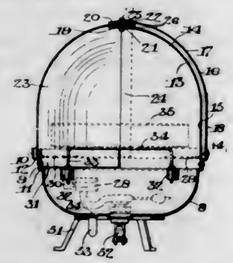
of a steam heating system, the said means embodying a flexible pipe section.

1,502,128. NUMBERING MACHINE. AMOS H. SMITH, Brooklyn, N. Y., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed June 16, 1922. Serial No. 568,733. 15 Claims. (Cl. 101—77.)



1. A numbering machine embodying therein an impression cylinder, a numbering head cylinder, a numbering head carried by said numbering head cylinder, a movable striker member adapted to be brought into or out of the path of movement of said numbering head, means adapted to operate upon said last named member, an eccentric bushing operative upon a bearing for said numbering head cylinder, an oscillatory member, operative connections between said oscillatory member and said eccentric bushing, and said means for imparting movement to said striker member, and means whereby said oscillatory member may be actuated by the operator of the machine.

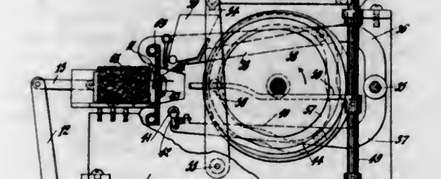
1,502,129. PROCESS OF MELTING SCRAP METAL AND RECOVERING BY-PRODUCTS THEREFROM. GEORGE H. STARMANN and HENRY LINDENBERGER, Chicago, Ill., assignors to U. S. Reduction Co., a Corporation of Illinois. Filed Dec. 18, 1919. Serial No. 345,780. 5 Claims. (Cl. 75—17.)



1. A method of obtaining ammonia from scrap aluminum including melting the scrap aluminum beneath a fused layer of a soluble salt, the subsequent leaching of the salt with water to dissolve the salt and simultaneously convert the aluminum nitride collected by the salt during the melting operation into aluminum hydroxide and ammonia and separating the ammonia so formed from the other materials.

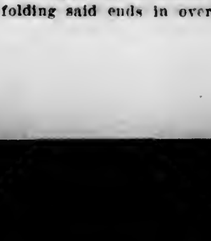
1,502,130. SANDING MACHINE. JOHN A. ST. CLAIR, Indianapolis, Ind. Filed Dec. 7, 1922. Serial No. 605,335. 4 Claims. (Cl. 51—140.)

1. A sanding machine comprising an abrading belt and cooperating feed belt, means for driving said two belts at different speeds and in opposite directions at adjacent portions, and an article guide leading to and from a point between adjacent portions of said belts at an angle, other than right angle, to the direction of travel of one of said belts.



1,502,131. DISHWASHER. JOHN VAUDREUIL, Milwaukee, Wis. Filed Feb. 15, 1922. Serial No. 536,627. 4 Claims. (Cl. 141—9.)

1. In a dish-washing machine, the combination of a fixed casing provided with an opening, and a movable door completing said casing and pivotally connected to the top thereof, a part of the casing having a double wall receiving the door when said door is moved to open position, the edges of the door projecting into the space between said double walls when in closed position.

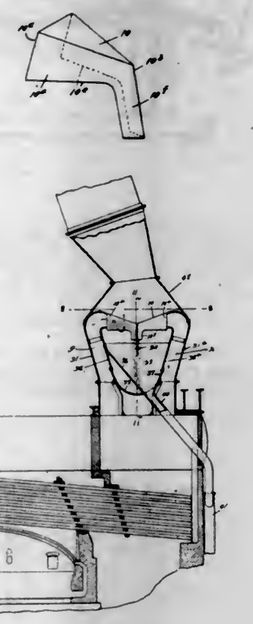


1,502,132. CASEMENT-WINDOW OPERATOR. ROLAND B. WORTHINGTON, Miami, Fla., assignor to Miami Manufacturing Company, Miami, Fla., a Corporation of Florida. Filed Dec. 26, 1922. Serial No. 609,047. 8 Claims. (Cl. 268—15.)

1. A casement window operator comprising a relatively long and narrow horizontally disposed casing adapted to be secured upon a window sill within a rectangular notch in the lower end of a window screen, opposite sides of the casing having slots, a window operating arm extending through said slots, and a spring-

pressed plunger disposed longitudinally in said casing and engaging said arm to effect holding of the latter in adjusted position.

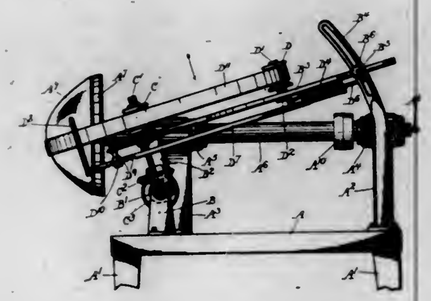
1,502,133. PROCESS OF FORMING TURNBUCKLES. CARL E. ANDERSON, Grand Haven, Mich., assignor to Bolling Manufacturing Company, Grand Haven, Mich., a Corporation of Michigan. Filed Oct. 5, 1921. Serial No. 505,630. 3 Claims. (Cl. 29—175.)



1. The process of forming a turnbuckle, which comprises the operations of cutting a sheet metal blank to form a member having parallel transverse parts connected by parallel arms, and bending said transverse parts to form two cylinders and to bring said arms into parallel planes connecting said cylinders.

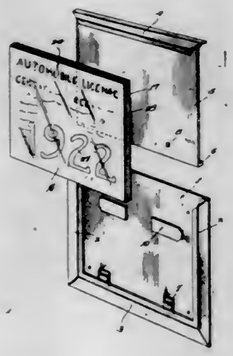
1,502,134. TUBULAR-BAND-MAKING MACHINE. MAX OTTO CLAUSS, New York, N. Y. Filed May 25, 1921. Serial No. 472,533. Renewed Oct. 20, 1923. 11 Claims. (Cl. 93—81.)

1. In a mechanism for forming paper bands, a magazine, means movable towards and from the magazine for successively receiving single paper blanks therefrom, means movable with respect to said blank receiving means and with which the latter is adapted to coact to fold the ends of the blanks in parallel relation to each other, additional means for applying an adhesive to one end of the blank and folding said ends in overlapping relation to adhesively connect the same, individual actuating cams for the several blank folding means to operate the same in timed relation to each other, and a common operating shaft for the several actuating means.



1,502,135. APPARATUS FOR SEPARATING SOLID PARTICLES FROM A GAS STREAM CONTAINING THEM. MAURICE W. CARTY, Boston, Mass. Filed June 28, 1920. Serial No. 392,390. 32 Claims. (Cl. 183—109.)

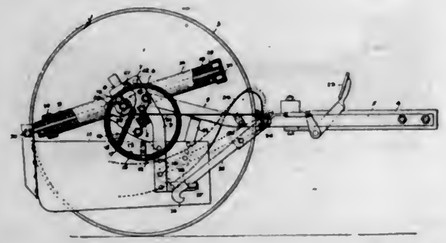
6. A cinder separator having a top-wall and downwardly extended side-walls having substantially horizontal bottom edges, said side walls inwardly inclined and contiguous at one end whereby to form a V-shaped compartment which has its length extended in the direction of gas entrance, and which has an open end, a closed end opposite the open end, and an open bottom extended in the direction of gas entrance, said compartment arranged to receive the cinder-laden gas stream through its open end and deflect it downwardly to cause it to pass through the open bottom under the bottom edges of the side-walls upwardly out of the separator, whereby cinders will be projected from the gas stream into the apex of the V-shaped compartment and fall out of the separator beyond the gas stream, and also out of the gas stream as it passes under the bottom edges of the side-walls of the separator.



32. The combination of a boiler uptake, a dust hopper arranged to enclose a dead gas space disposed in said uptake to divide it in two opposed, substantially vertical passages, said passages having opposed gas outlets at the top disposed in substantially free and unobstructed communication with said dust pocket, said gas outlets arranged to direct opposed gas streams into said receptacle substantially horizontally over the dead gas space in said hopper, said passages having horizontally long and vertically thin opposed gas outlets at the top arranged to direct vertically thin opposed gas streams substantially horizontally into said uptake over the dead gas space in said hopper, and said passages and uptake arranged to cooperate to change the direction of motion of the opposed gas streams abruptly upward.

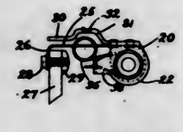
1,502,136. GLASS-POLISHING MACHINE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 2, 1922. Serial No. 591,783. 9 Claims. (Cl. 51—145.)

1. In a polishing machine, means for rotating the work, a polishing belt adapted to be looped about the work, and means for driving it across the face of the work in a plane inclined to the axis of rotation thereof.



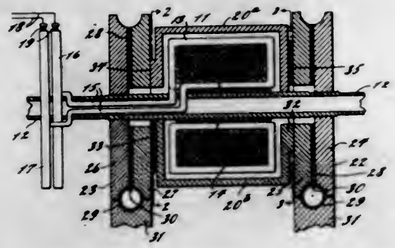
1,502,137. IDENTIFICATION TAG. EARL J. W. DE FOREEST and FREDRICK W. BAILEY, Tulsa, Okla. Filed Nov. 7, 1922. Serial No. 599,527. 7 Claims. (Cl. 40—15.)

1. The combination with a holder for an identification medium and which holder is open at its front and adapted to be sealed against intact removal of the said medium, of a transparent pane in said holder exposed at the open front thereof, a protective plate within the holder in rear of the pane, and an identification medium having a portion disposed between the pane and plate and another portion disposed in rear of the plate and protected thereby.



1,502,138. LAND LEVELER AND GRADER. FELIX E. DUNN and JULIUS E. PATTERSON, Klamath Falls, Oreg. Filed Apr. 16, 1923. Serial No. 632,225. 10 Claims. (Cl. 37—132.)

1. Land leveling and grading apparatus comprising an axle having a crank portion, wheels mounted for free rotation on extremities of the axle, a draw bar, means for pivotally connecting the draw bar with the crank portion of the axle, clutch means associated with the wheels and axle for locking the wheels to and causing movement of the axle upon movement of the wheels, a scoop, members rigidly connected with the scoop and pivotally connected with the crank portion of the axle and spring devices connected with the crank portion of the axle

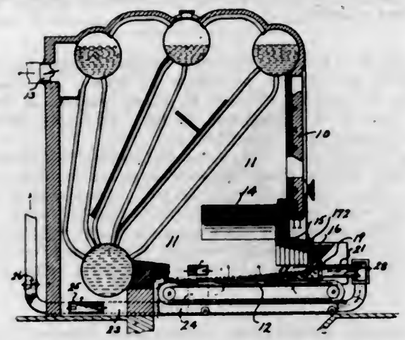


and with the rear portion of the scoop, which spring devices are placed under tension when the scoop is moved into and maintained in scooping position.

1,502,139. BRUSH HOLDER. ROBERT W. ELLIOTT, WARREN A. JOHNSTON, and LEWIS J. BUERKLE, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed July 13, 1921. Serial No. 484,426. 11 Claims. (Cl. 171—324.)

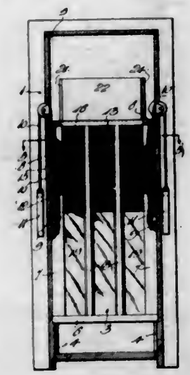
1. In a dynamo electric machine the combination with the commutator thereof and a brush for engaging the commutator; of means for holding said brush in engagement with the commutator so that different portions thereof will engage said commutator under varying speeds.

1,502,140. WELDING APPARATUS. THOMAS M. HUNTER, Newark, N. J., assignor, by mesne assignments, to Newark Tube Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 24, 1922. Serial No. 546,336. 16 Claims. (Cl. 219—3.)



1. A transformer for heating and the like, comprising a single rotatable primary and a compound rotatable secondary having a plurality of insulated sections.

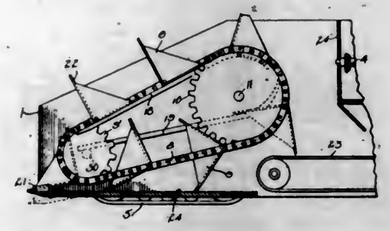
1,502,141. FUEL-COMBUSTION APPARATUS. DAVID J. IRISH, Barberton, Ohio, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Sept. 21, 1921. Serial No. 502,221. 24 Claims. (Cl. 110—24.)



1. In a fuel combustion apparatus, a fuel hopper, a grate, a perforated ignition plate between the hopper and

the grate over which the fuel passes to the grate, and means to draw gases from above the grate first through

the fuel on the ignition plate and then through said perforations and return them to the gases from the fuel on the grate.

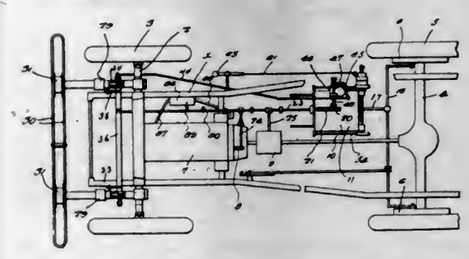


1,502,142. WINDOW. CARL JOHAN JACKSON, Superior, Wis. Filed July 19, 1923. Serial No. 652,564. 2 Claims. (Cl. 20—52.1.)

1. A window structure comprising a frame having a downwardly opening pocket in its upper end, a sealing strip at one side of said pocket, said strip having its ends rabbeted and spaced from the adjacent sides of the window frame, upper and lower slidable sashes in said frame, said upper sash comprising a lower rail, a pair of vertical side rails rabbeted on their inner edges for firm sliding engagement with the rabbeted ends of said sealing strip and having sash cord grooves on their outer edges, a vertical saw-cut opening through their upper ends and inner and outer edges, a screen stretched between said vertical side rails and having its edge portions passed through said saw-cuts, bent laterally and secured in said grooves, and an upper rail to which said screen is secured said upper rail having its ends rabbeted into the upper ends of said side rails.

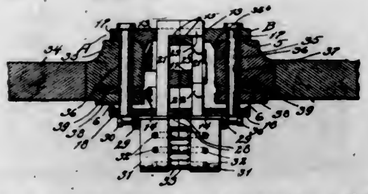
1,502,143. COMBINED SHOVELING AND LOADING DEVICE. ERNEST THOMAS KELL, Benton, Ill. Filed June 5, 1922. Serial No. 566,096. 4 Claims. (Cl. 198—8.)

1. A device of the type described comprising a movable frame, an endless bucket conveyor disposed adjacent to one end of said frame and being adapted to convey a pile of loose material into said frame, said conveyor comprising chains, buckets pivotally carried by said chains, said buckets having laterally extending projections, guide members carried by said frame and being disposed so as to engage with the projections of said buckets during the



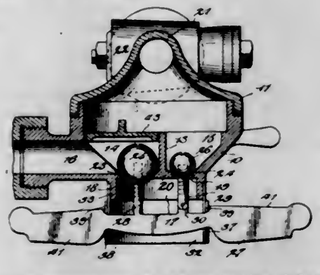
digging operation of said buckets, whereby said buckets are held in the same plane during a part of their movement and means for moving the guide members with respect to the frame.

1,502,144. COMPOUND FOR BRAZING AND WELDING. ARTHUR J. KNOWLES, Wilmington, Del. Filed Jan. 3, 1923. Serial No. 610,517. 3 Claims. (Cl. 148—24.)



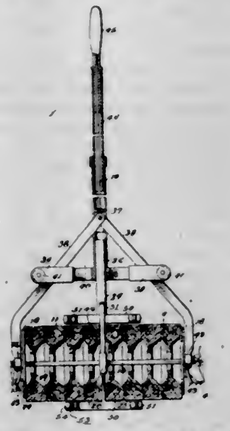
1. A compound of the character described containing calcium hydroxide, alumina, aluminum, borax and potassium chlorate.

1,502,145. BUMPER-OPERATED BRAKE AND CLUTCH MECHANISM. ANGELOS KURTIS, Jacksonville, Fla. Filed Jan. 15, 1924. Serial No. 686,352. 8 Claims. (Cl. 180—83.)



1. A device of the class described including an operating mechanism, connections between said mechanism and and the drive connection between the power unit and the rear axle of the vehicle and a brake operating mechanism for disconnecting the drive connections and applying the brakes when the mechanism is released for operation, releasable means for holding the operating mechanism set for operation, and bumper controlled means for releasing the last mentioned means having a pair of brackets mounted on the front axle of the vehicle formed with spaced parallel bearings, a pair of spaced parallel bumper bars connected at the end portions extending transversely of the vehicle and forwardly thereof, the forward bar having rod projections in line with the bearings of the brackets, the rear bar having sleeves slidably mounted therein and in the bearings and extending around the rod projections, the resilient means between the sleeves and the front bar for permitting relative movement between the sleeves and the front bar for permitting a relative movement between the sleeves and the rods when the bumper engages an object, connections between the rods and the releasable means adapted to operate said means in the operation of the rod to release said operating means, and connections between said sleeves and the operating means whereby the operations of said mechanism will retract the bumper from the object during the operation thereof and will project the bumper to its forward position in the resetting thereof.

1,502,146. CAR COUPLER. ONESIME H. LE COMPTE, St. Louis, Mo., assignor to Le Compte Standard Automatic Drawbar and Connector Company, Denver, Colo., a Common Law Trust. Filed Feb. 16, 1921. Serial No. 445,471. 9 Claims. (Cl. 213—88.)

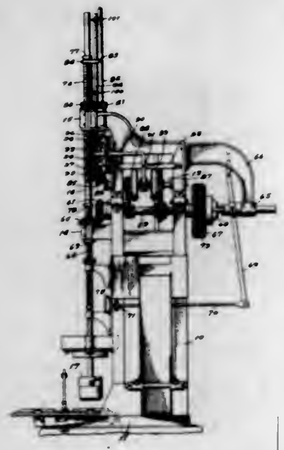


1. In a coupling construction, a draw bar, a shell like coupling head provided with an integral stationary knuckle and carried pivotally and vertically movable by said draw bar, a gravity actuated locking pin passing completely through the coupling head, and means for automatically elevating the locking pin by the knuckle of a companion coupler during coupling engagement.

1,502,147. FAUCET. BENJAMIN H. MCDUFFIE, Brooklyn, N. Y. Filed Mar. 28, 1921. Serial No. 456,356. 8 Claims. (Cl. 277—20.)

1. A faucet comprising a casing having inlets and an outlet, and valve-means between the inlets and the outlet, said valve-means including seats and gravitate members which coact with the seats, and a manipulator connected to and suspending from said gravitate members.

1,502,148. FLOOR-SCRUBBING MACHINE. SILVIO MAGATON, New York, N. Y. Filed Sept. 10, 1921. Serial No. 499,732. 5 Claims. (Cl. 15—98.)

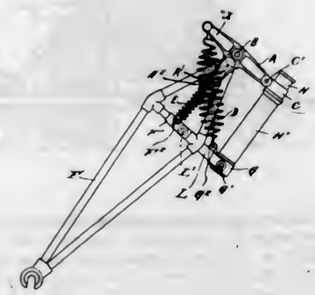


1. A scrubbing implement including a support, an absorbent scrubbing element carried thereby for rotation, means to lock the element to the support against rotation, a handle, a pair of members mounted thereon to engage said element between them to expel the water from the element by compressing the same when the members are moved together.

1,502,149. PURIFYING AND DEODORIZING ISOPROPYL ALCOHOL. MATTHEW D. MANN, Jr., Roselle, N. J., assignor to Seth B. Hunt, trustee, of Mount Kisco, N. Y. Filed Sept. 8, 1921. Serial No. 499,234. 9 Claims. (Cl. 260—156.)

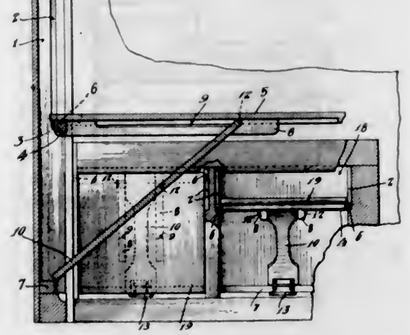
1. The method of purifying and deodorizing isopropyl alcohol derived from hydrocarbon gases containing olefins which comprises treating the alcohol with a relatively small proportion of active halogen material.

8. The method of deodorizing isopropyl alcohol prepared from hydrocarbon material which comprises treating it with chlorine and active decolorizing carbon.



1,502,150. REVERSING MECHANISM. GEORGE CUSHING MARTIN, Los Angeles, Calif. Original application filed July 31, 1920, Serial No. 400,525. Divided and this application filed Apr. 18, 1922. Serial No. 555,482. 7 Claims. (Cl. 74—14.)

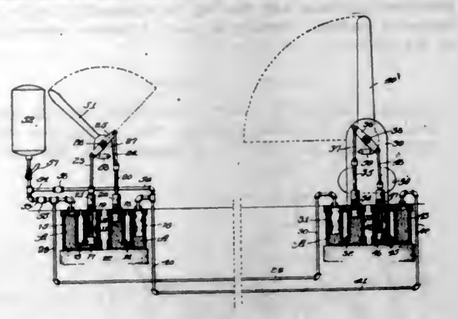
1. In combination with a shaft journaled in bearings, said shaft being adapted for rotary and endwise movement in said bearings; means operated at each end of the path of movement of said shaft for reversing the direction of said shaft; said means comprising a rod, a sleeve slidable on said rod; a lever attached by one arm to the sleeve; a drive shaft; a countershaft; driving connections between the drive shaft and countershaft; said driving connections being adapted to be alternately brought into action to drive the countershaft in opposite directions; means for bringing the driving connectons alternately into action comprising clutch devices associated respectively with each of the drive connections, and a wedge device reciprocated by said lever to bring the clutches into action; and means operable by the lever for locking the wedge in operative position.



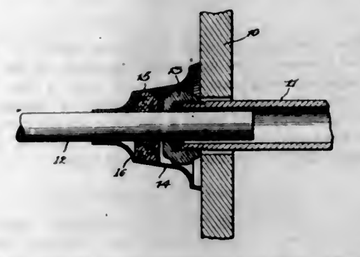
1,502,151. MOTOR-CYCLE SPRING FORK. FREDERICK WILLIAM MEREDITH, South Farnborough, England. Filed Aug. 21, 1923. Serial No. 658,525. 2 Claims. (Cl. 208—97.)

2. A spring fork mechanism for vehicles comprising, a steering post, a fork member, a lever member connecting the fork member to the post, a main spring connecting the lever member and the post and so arranged that the effective leverage at the point of connection on the lever member decreases as the tension of the spring increases, a restoring spring connecting the lever member

and fork member, said restoring spring being normally inoperative but operative when the main spring is under tension, the effective leverage at the point of connection of the restoring spring to the lever member increasing as the first mentioned effective leverage decreases.



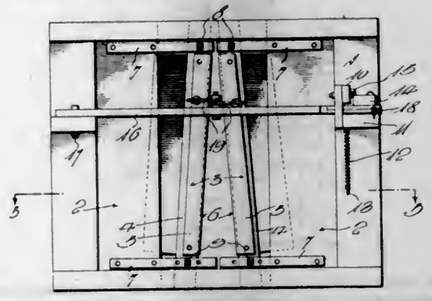
1,502,152. COLLAPSIBLE SUPPORT. JOHN I. MILLETT, Los Angeles, Calif., assignor of three-fourths to Carl J. Ike, Los Angeles, Calif. Filed Mar. 10, 1923. Serial No. 624,166. 4 Claims. (Cl. 45—51.)



1. In a collapsible support, the combination of a cantalever member having projections extending from below its rear end, means forming slideways engaging said projections and permitting the rear of the cantalever member to slide upwardly during a collapsing movement, a brace, and means pivotally mounting the brace, said cantalever member having a groove arranged to engage the brace and support the member on the brace in a horizontal movement and to permit the brace to slide during the collapsing movement of the cantalever member so that such member may completely cover said brace.

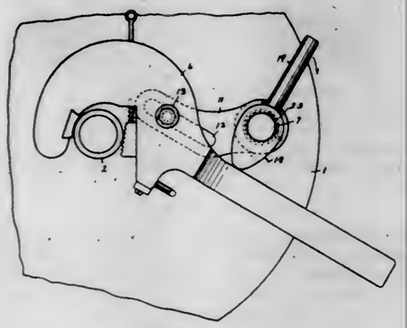
1,502,153. REMOTE CONTROL DEVICE. FRANK W MILLS, Chicago, Ill. Filed Nov. 7, 1921. Serial No 513,616. 3 Claims. (Cl. 138—23.)

1. In combination, two pairs of cylinders, the cylinders of each pair being connected by a pipe line, a piston in each cylinder, gas in said lines, a liquid between said gas and said pistons and means for simultaneously moving the pistons of one pair in opposite directions to cause the other pistons of said pairs to be moved correspondingly.



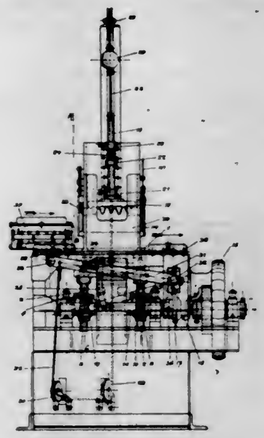
1,502,154. NOSLIP FLANGE. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed May 25, 1923. Serial No. 641,425. 8 Claims. (Cl. 137—111.)

1. A no-slip flange comprising a hollow escutcheon having a flaring base and a reduced tip, and a friction ring of cork inserted in the bore of said escutcheon under compression to frictionally lock it to the wall thereof and constrict its pipe engaging orifice.



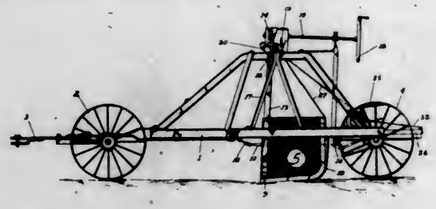
1,502,155. HOG TRAP. JOSEPH A. O'BRIEN, Brookston, Ind., assignor of one-half to James N. Kirkpatrick, La Fayette, Ind. Filed Dec. 9, 1921. Serial No. 521,236. 14 Claims. (Cl. 119—98.)

1. A device of the class described comprising a pair of animal engaging devices normally positioned in alinement and adapted to assume divergent relations when operative, a separate pivotally mounted rack bar, said bar being independently operable with respect to said devices, and means for rendering said bar operative, said means being controlled by said devices, being nor-



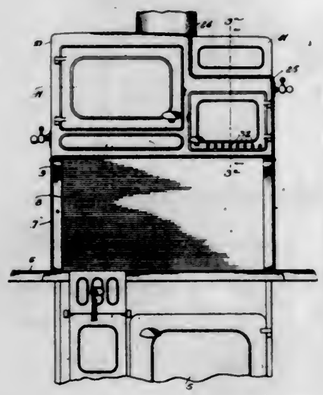
mally disconnected from said bar, but being engaged with the teeth thereof when the devices assume predetermined divergent positions and the bar is released to move to operative position, whereby to prevent further movement of the devices in one direction.

1,502,156. BACK-UP POST. LOUIS M. PEARCE and ROLLAND H. NEWTON, Houston, Tex. Filed Oct. 30, 1922. Serial No. 597,779. 3 Claims. (Cl. 255—35.)



3. The combination with a rotary table, of a post mounted thereon, a swinging arm mounted on the post, a pipe engaging tong carried by said arm, a cam shaped head pivotally mounted on said post, a manipulating handle carried by said head, a yieldable member connected to the head and normally holding said head in position to engage against the handle of said tong.

1,502,157. MANUFACTURE OF MOLDED ARTICLES. EMILE VICTOR PRÉUSS, Kelles, near Brussels, Belgium. Filed June 26, 1922. Serial No. 571,045. 24 Claims. (Cl. 25—41.)



1. The herein-described process of manufacturing molded articles from material in a state of division in a mould, comprising the steps of supporting a rammer upon the surface of the material in the mould; and then imparting automatically to the support whereon the mould rests a succession of abrupt vertical movements, thereby to effect successively, after each such movement, the fall of the mould upon its support and the fall of the rammer upon the material.

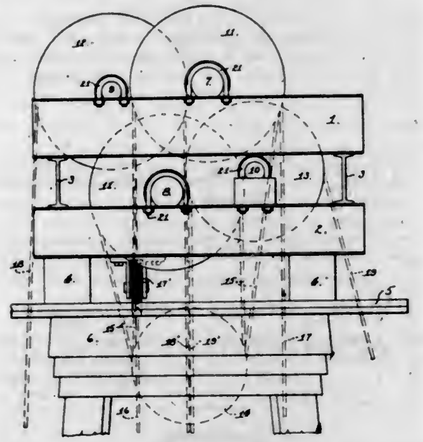
1,502,158. LAND LEVELER. ALBERT PURVIANCE, Linden, Calif. Filed May 14, 1923. Serial No. 638,804 14 Claims. (Cl. 37—126.)

1. A land leveler comprising a wheel-supported frame, a bowl arranged in connection therewith and having a cutting blade at its lower forward end, means for raising and lowering the blade end of the bowl at will, means normally supporting the rear end of the bowl independently of the forward end and means whereby when the blade is moved into engagement with the ground the bowl may upset forwardly with the forward movement of the frame and means whereby the bowl may be then righted while still suspended and be lowered to the ground by gravity.

1,502,159. STOVE. MAURUS C. RECK, Rochester, N. Y., assignor to Sill Stove Works, Rochester, N. Y., a Corporation of New York. Filed Sept. 2, 1922. Serial No 585,869. 4 Claims. (Cl. 126—39.)

1. The combination with a cooking stove, of a standard extending upwardly thereabove, a baking oven carried by the standard at a substantial distance above the top of the stove, a broiling oven carried by the standard at one side and adjacent the bottom of said baking oven with its top located at a substantial distance below the top of said baking oven to provide on the top of said broiling oven a warming shelf within easy reach of the attendant, and gas burner means for each of said oven.

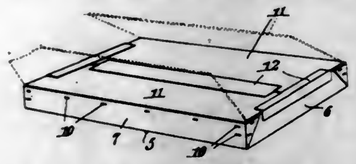
1,502,160. WINTER OR STORM CAP. SOL REINTHAL, Cleveland, Ohio, assignor to The Bamberger Reinthal Company, Cleveland, Ohio, a Corporation. Filed Aug. 3, 1922. Serial No. 579,321. 2 Claims. (Cl. 2—201.)



2. A convertible cap, comprising a knitted tube having rounded end edges and doubled back within itself with said end edges in register and sewed together and forming a crown seam extending from front to rear of said

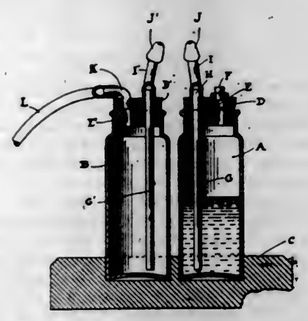
cap, and a flat knitted tube of smaller dimensions and finer yarn than said first tube sewed at its opposite

extremities on lines parallel to the middle seam to opposite sides of said first tube a substantial distance back from the bottom folded edge thereof.



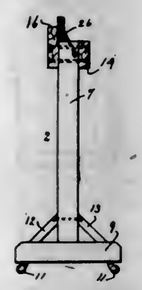
1,502,161. CROWN BLOCK FOR WELL-DRILLING APPARATUS. CHARLES C. SCHARPENBERG, Bakersfield, and LEROY G. GATES, Whittier, Calif., assignors to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Nov. 2, 1923. Serial No. 672,408. 4 Claims. (Cl. 254—100.)

1. A crown-block for well-drilling apparatus, comprising a supporting frame; a pair of substantially parallel shafts carried by said frame in different planes both horizontally and vertically; and a plurality of casing sheaves supported by and apportioned between said shafts, the sheaves of one shaft overlapping those of the other shaft.



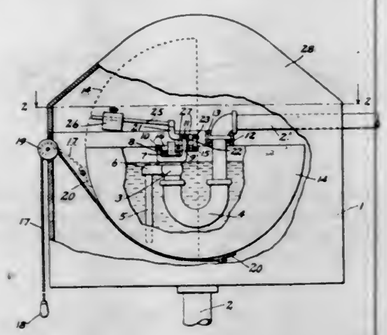
1,502,162. SHIPPING BOX. HARRY L. SHULMAN, New York, N. Y., assignor to Levy Shulman & Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1923. Serial No. 631,847. 1 Claim. (Cl. 229—43.)

In a device of the class described, a box tray having the usual upstanding side and end walls, a pair of supplemental cover members, a wall portion hingedly carried by each member, the said wall portions being of equal breadth and length with the side walls of the tray, means for securing the said wall portions to the said side walls of the tray, the said cover members adapted to overlap



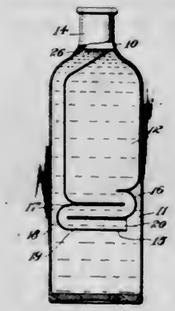
each other when lowered and to cover the tray, adhesive members connecting the free ends of the cover members and with the end walls of the tray, and a main cover to telescope over the said tray.

1,502,163. NASAL DOUCHE. WILLIAM P. SPRAGUE, San Anselmo, Calif. Filed Dec. 19, 1922. Serial No. 607,825. 10 Claims. (Cl. 128—250.)



10. In a nasal douche of the class described, a pair of receptacles, a separate communication in each receptacle for connecting with a nostril of a patient's nose, a hollow, elastic bulb connected to one of the receptacles and a manually manipulated stopper controlled opening in the other receptacle.

1,502,164. BAG HOLDER. ALBERT J. STRAUB, Fresno, Calif. Filed Apr. 23, 1923. Serial No. 634,015. 4 Claims. (Cl. 211—2.)

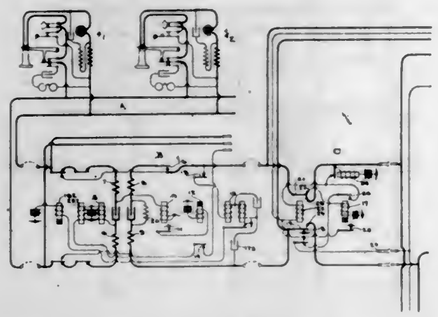


1. A rack for holding bags comprising a pair of spaced vertically extending end members, a bag supporting rail connecting the upper ends of said end members at the rear edges thereof; a bar connecting the upper ends of said end members opposite said bag supporting rail; a plurality of bag holding members mounted on the inner face of said bar adapted to engage and hold bags against said bag supporting rail.

1,502,165. FLUSHING APPARATUS. CHARLES LEWIS STURGES, Claremont, Calif. Filed June 17, 1922. Serial No. 569,153. 2 Claims. (Cl. 4—32.)

1. A flush tank comprising an outer box having a drain, an inlet pipe leading into the top of the box and extending downwardly, a return bend secured to the inlet pipe, a fitting extending upwardly from the return bend, a discharging pipe extending downwardly from the fitting, a vertically movable valve in the fitting and provided with upstanding arms, one arm being longer than the other, a lever pivoted to the short arm for operating the valve, a long pivot rod extending through the movable end of the lever, a secondary receptacle connected to the ends of the pivot rod and supported thereby, means for tilting the secondary receptacle to empty the receptacle, a link connected to the pivot rod, a second lever pivotally mounted upon the long arm and connected to the link, a rod extending from the second lever, and a weight adjustably mounted upon the rod so that when the secondary receptacle is empty the weight will open the valve and so that when the secondary receptacle is sufficiently filled the weight of the receptacle and water will counterbalance the adjustable weight and close the valve.

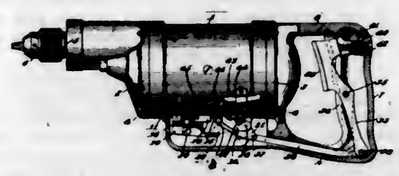
1,502,166. CONTAINER. AQUASIE E. WEITKAMP, New York, N. Y. Filed Feb. 12, 1921, Serial No. 444,368. Renewed May 20, 1924. 5 Claims. (Cl. 215—61.)



1. A vessel for dispensing units of fluid comprising a dispensing compartment, a containing compartment, and a communication between said dispensing and containing compartments serving normally to prevent access of liquid from said dispensing compartment into said containing compartment, said communication being adapted to permit the flow of a measured quantity of fluid from said containing compartment into said dispensing compartment for dispensing through said dispensing compartment.

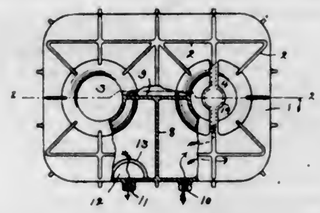
1,502,167. LAMINATED SPRING. FREDERICK THOMAS WESTON, London, England. Filed Oct. 22, 1923. Serial No. 670,082. 10 Claims. (Cl. 267—49.)

1. An improved anti-friction device for laminated springs comprising two flexible perforated blades co-extensive with the leaves of the springs and fastened flat against each other with the perforations in register and anti-friction devices retained in and protruding through the said perforations forming a self-contained structure free to partake of the flexure of the springs, substantially as set forth.



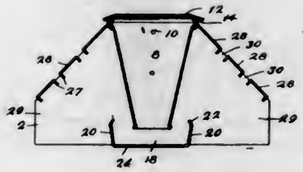
1,502,168. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1919. Serial No. 300,924. 50 Claims. (Cl. 179—17.)

1. In a telephone system, a subscriber's line, a repeater for said line, means for connecting with said line and for projecting ringing current thereover, and means responsive to said ringing current for disconnecting said repeater from the line.



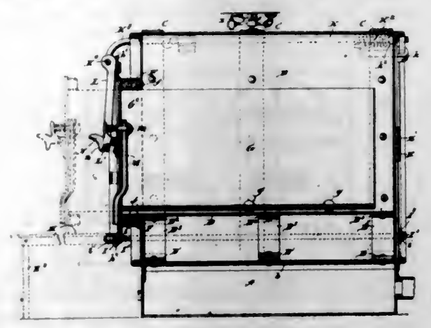
12. The combination of a ring back in a telephone system and an instantaneous ring cut off connector for extending connection to said ring back, and means associated with said ring back for transmitting signalling current from the ring back back through the connector to the calling line from which the connector has been operated to extend connection to the ring back, said connector including means for automatically signalling a called subscriber's line independent of said ring back.

1,502,169. ELECTRIC TOOL. CHARLES B. BENNETT, Louisville, Ky., assignor to James Clark, Jr. Electric Company, Louisville, Ky., a Corporation of Kentucky. Filed Nov. 5, 1921. Serial No. 513,037. 10 Claims. (Cl. 172—36.)



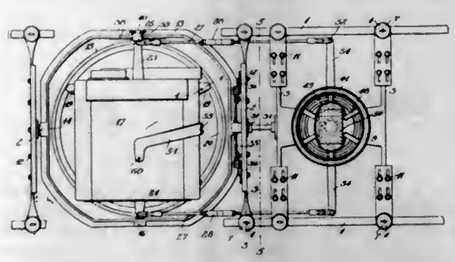
1. An electric tool comprising a motor casing, a tool spindle projecting at one end of the casing, a removable handle for the casing, an electric switch for starting and stopping the motor and mounted upoh the motor casing, and located in front of the handle, and a hand-operated switch-actuating means carried by the removable handle and detachably associated with the switch.

1,502,170. WATER-HEATING GAS PLATE. JOHN ALBIN BERGQUIST, Duluth, Minn. Filed Sept. 22, 1923. Serial No. 664,161. 2 Claims. (Cl. 126—53.)



1. The combination with a gas plate of the character described having two spaced burner holes therein, of a water chamber within the plate about the holes, a vertical division wall within the chamber extending horizontally between the holes, a second division wall extending from the center of the last mentioned division wall to one side of the plate, and water entrance and discharge openings through the outer wall of the plate one upon either side of the last mentioned division wall, substantially as and for the purpose described.

1,502,171. POULTRY FEEDER. JESSE BOOTH, Blythedale, Mo. Filed Aug. 21, 1922. Serial No. 583,116. 2 Claims. (Cl. 119—52.)



1. A self-feeder consisting of two end plates having sloping sides and upper and lower flanges, a lid slidable on said flanges, a hopper arranged beneath said lid and fixed to the end plates, a trough beneath said hopper and provided with end flanges engaging over the lower flanges on the end plates, and spaced guards secured to the sloping sides of the end plates.

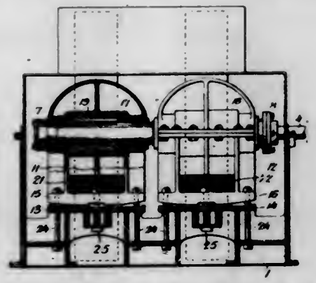
1,502,172. STEAM COOKING APPARATUS. JAMES L. CARBERY, Rock Hill, S. C. Filed Jan. 2, 1918. Serial No. 209,922. 14 Claims. (Cl. 126—20.)

1. A steam cooker comprising a sheet metal casing, reinforcing bands extending across the top and sides of the casing at the exterior thereof, and brace members located interiorly of the casing and connected at opposite ends with said reinforcing bands and opposite sides of the casing.

1,502,173. AERIAL CAMERA. BENJAMIN DAY CHAMBERLIN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 16, 1922. Serial No. 537,099. 13 Claims. (Cl. 95—12.5.)

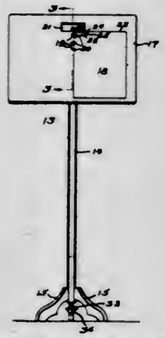
1. In an aerial photographic apparatus, the combination with a horizontal frame and a universally movable camera mounted therein with the axis of its lens vertically disposed, said camera being adapted to rock in two vertical planes normal to each other, of a vertically disposed controlling device therefor similarly mounted in the frame and connections between the controlling device and camera for communicating the movements of the former to the latter.

1,502,174. FUMIGANT. ROYAL NORTON CHAPMAN, St. Paul, Minn. Filed Dec. 15, 1923. Serial No. 681,009. 2 Claims. (Cl. 167—6.)



1. A fumigant comprising carbontetrachloride and chloropicrin.

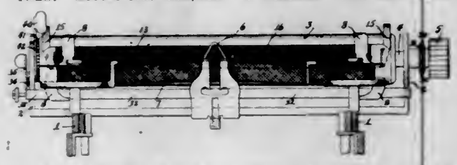
2. A fumigant comprising carbontetrachloride and chloropicrin in equal parts by volume.



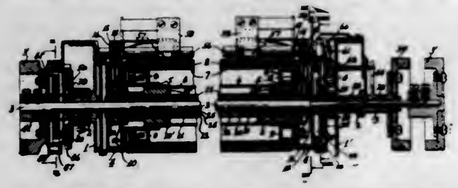
1,502,175. HIGH-SPEED REDUCTION GEARING. CHARLES F. CLAPHAM, Newport News, Va. Filed Nov. 9, 1920. Serial No. 422,802. 6 Claims. (Cl. 74—7.)

1. In transmission gearing, the combination of a rigid frame having bearings, a shaft with gear wheels adapted to rotate in the bearings, movable frames adapted to rock on the rigid frame, bolts adapted to prevent

lateral displacement of the movable frames, bolts adapted to resiliently restrain movement of the lateral frame, bearings on each movable frame, hollow pinions meshing with the gear wheel and mounted in the bearings of the movable frames, and the shaft extending through the pinions and connected thereto.



1,502,176. SHEET-TURNING DEVICE. JOHN D. CONTI, Philadelphia, Pa. Filed Feb. 23, 1921. Serial No. 447,026. 8 Claims. (Cl. 84—517.)

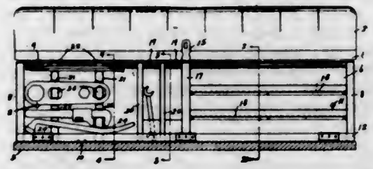


1. A sheet turning device including a desk; a shaft mounted on the desk; an auxiliary arm pivotally mounted on the shaft; a carrier pivotally connected with the auxiliary arm and having abutting and supporting blades adapted to engage a sheet; a swingable arm carried by the shaft and engaging with the carrier, and means for imparting longitudinal and rotary movement to the shaft to cause the blades to engage and turn a sheet.

1,502,177. MANIFOLDING ATTACHMENT FOR TYPEWRITERS. MALCOLM L. COSSITT, Oakland, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed Aug. 21, 1923. Serial No. 658,640. 7 Claims. (Cl. 197—126.)

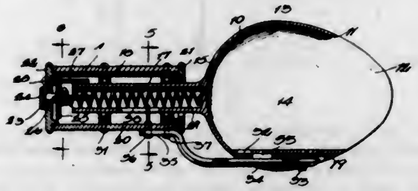
1. A manifolding attachment for typewriters comprising a rotatable member mounted on the machine; a plurality of independently movable pairs of spaced arms; a manifolding member carried by each pair of arms and adapted by the movement of said arms to be placed in and removed from functional position in the line of type impact; an arm-operating member fitted upon said rotatable member for rotation therewith and for linear movement thereon; means for controlling the linear movement of said arm-operating member; and coacting devices on said arm-operating member and said arms for independently selectively moving each pair of arms about their pivotal centers by the rotation of the rotatable member, consisting of lugs of graduated length on the arms, an independently controllable pawl carried by said arm-operating member, and a cam on said member to selectively determine the contact of said pawl with said length-gradnated arm-lugs.

1,502,178. MANIFOLDING PLATEN FOR TYPEWRITERS. MALCOLM L. COSSITT, Oakland, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed Sept. 26, 1923. Serial No. 664,814. 17 Claims. (Cl. 197—126.)



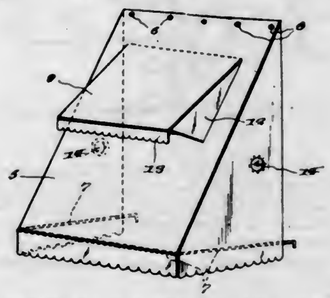
1. A manifolding platen comprising a rotatable platen member; a connected pair of peripherally slotted housings one at each end of and independent of the platen member; an arm pivotally connected to and within each of said housings and thence extending through and adapted to play in the slotted periphery thereof; a manifolding member carried by and between the outer extremities of said pair of arms and adapted by their movement to be placed in and removed from functional position in the line of type impact; and means for linearly shifting said pair of housings to reciprocate the manifolding members lengthwise of the line of type impact.

1,502,179. APPARATUS FOR AND METHOD OF CEMENTING OIL-WELL CASINGS. ERD V. CROWELL, Tulsa, Okla. Filed June 15, 1920. Serial No. 389,151. 4 Claims. (Cl. 166—1.)



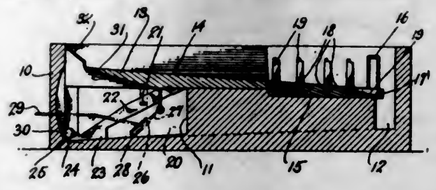
1. Means for sealing a well before opening the bore into a productive stratum, comprising a well casing adapted to rest on the formation seat of the bore, with a plurality of valved ports; and tubing let down in the casing, with packing means for securing a joint therebetween and the casing, having perforations through which sealing material is ejected to fill the casing up to the packing means, and then escape through said ports to fill the surrounding bore.

1,502,180. TOOL HOLDER FOR AUTOMOBILES. WALTER H. DEVER, Jr., Houston, Tex. Filed June 4, 1923. Serial No. 643,296. 3 Claims. (Cl. 224—295.)



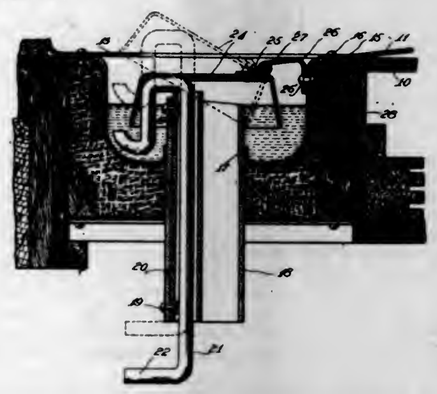
1. A tool holder formed with a back, a top, and bottom and end walls, a retaining strip across the front of the holder at the bottom, front wall hinged to said strip at its lower edge, and forming a door, means for locking said door in closed position, shelves in said holder spaced apart, one above the other, and whose forward edges are upturned, said door resting against said upturned edges when it is in closed position.

1,502,181. SELF-WEIGHING SCOOP. HARRY FINE, Hartford, Conn. Filed Aug. 20, 1923. Serial No. 658,438. 3 Claims. (Cl. 265—66.)



1. In a self-weighing scoop, a scoop body for receiving the material to be dispensed, a hollow shank formed on the scoop body, a hollow handle for slidably receiving the shank, an expansion spring engaging the scoop body at one end and the handle at its opposite end, the shank having a scale plate for cooperation with the inner end of the handle, and an escape opening formed in the body portion of the scoop, and a gate carried by the handle for closing said opening when the desired amount of material has been placed in said scoop body.

1,502,182. AWNING. ROLLAND FORREST, Philadelphia, Pa. Filed Dec. 1, 1922. Serial No. 604,339. 2 Claims. (Cl. 156—15.)

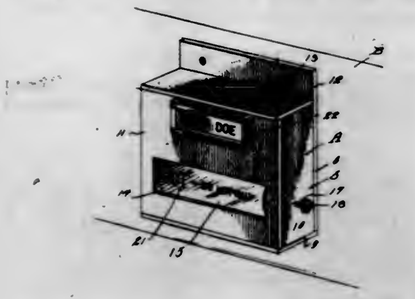


1. An awning having a main roof and triangular side walls, said main roof being provided with an opening, a supplemental awning overhanging said opening and having side walls and a roof, said last-named walls terminating below the opening and secured at their inner edges to said main roof, and a metallic loop having an outer side engaged with the lower edge of the roof of the supplemental awning and having an inner side connected to the lower wall of the opening, said loop comprising end members connecting said side members and having their inner portions bent and extended upwardly and secured flatly in engagement with said main roof whereby said supplemental awning is held in position over said opening.

1,502,183. GAME. EDWARD E. FRANCE, Racine, Wis. Filed Nov. 5, 1923. Serial No. 672,937. 5 Claims. (Cl. 46—61.)

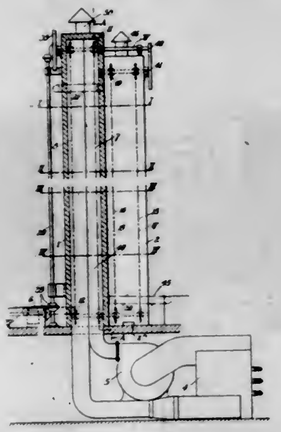
1. A game device of the character described comprising a box like casing having the bottom inclined downwardly toward its forward end, an alley member mounted in the top of the casing and inclined in the opposite direction, a table mounted within the other end of the casing and carrying a plurality of pivotally mounted pins, and a lever actuated treadle device mounted at the forward end of the casing for lifting a ball up onto the alley member.

1,502,184. DRAIN TRAP. WILLIAM R. GILLIES, Chicago, Ill., assignor to The Equipment Specialties Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1923. Serial No. 655,922. 4 Claims. (Cl. 182—8.)



1. In a drain trap, a bowl, a drain pipe, a hingedly mounted drain pipe cap and a combined agitator and lifter extending through said drain pipe, said combined agitator and lifter being capable of longitudinal movement to lift said cap and being capable of rotary movement to agitate solid and semi-solid matter accumulated in said bowl.

1,502,185. VISITOR'S INFORMATION BUREAU. HAROLD GRAY, Newark, N. J. Filed July 18, 1923. Serial No. 652,419. 1 Claim. (Cl. 40—68.)

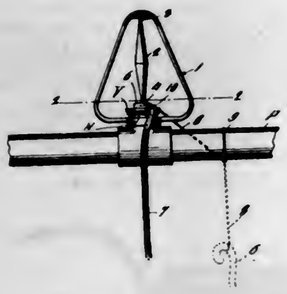


As a new article of manufacture, a silent visitor's information bureau comprising a casing including front and rear walls, top and bottom walls, and end walls, the rear wall being extended above the top wall defining an attaching flange, fastening elements extending through the attaching flange for engaging a supporting device, the front wall having a sight slot therein, a shaft extending horizontally through the casing jour-

nailed in the side walls, an operating handle carried by one end of the shaft, a roller secured to the shaft and arranged directly in rear of the sight slot, a strip bear-

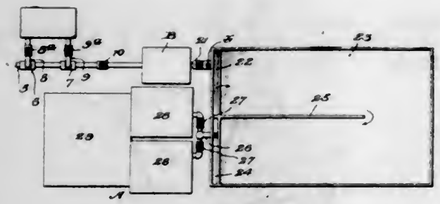
ing different indicia carried by the periphery of the roller, a name plate holder secured to the outer surface of the front wall above the slot, and a name plate in said holder.

1,502,186. APPARATUS FOR BAKING OR DRYING SUBSTANCES AT HIGH TEMPERATURES AND FOR SUBSEQUENTLY COOLING SAME. ROWLAND GREENWOOD, Carlisle, England, assignor of one-half to Carr & Company Limited, Carlisle, England, a British Company. Filed Dec. 6, 1921. Serial No. 520,377. 26 Claims. (Cl. 197—57.)



2. A baking apparatus comprising an oven, an air heater, a plurality of inlets for heated air in said oven, means rendering said inlets independently controllable, means for conveying substances upwards through said oven, a cooling tower, means for automatically transferring baked substances from the oven to said cooling tower, and means in the base of said tower for introducing cooling air.

11. A baking apparatus comprising an oven, an air heater, air inlet trunks and air exhaust trunks to said oven, communications between all of said trunks and the air heater, a plurality of openings in said inlet trunks, independently operable baffles controlling said openings, conveying means maintaining continuous movement within said oven of the substances being baked, a plurality of deflectors disposed adjacent each hot air inlet, independently operable means controlling each set of deflectors, a cooling chamber, conveying means maintaining continuous movement therethrough of substances baked in said oven, and means for causing a continuous movement of cooling air through said chamber.

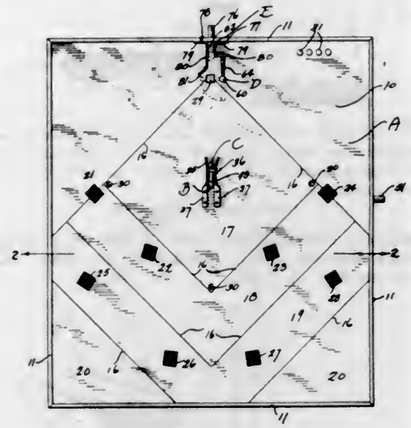


21. A baking apparatus comprising an oven, a casing connected to said oven, a plurality of heated conduits disposed within said casing, a plurality of heat distributing devices projecting from the top of each conduit, means causing air to be heated to pass across the tops of said conduits, means for causing a continuous circulation of air through said oven and casing, a cooling tower adjacent said oven and means causing substances under treatment to ascend through said oven and to descend through said cooling tower.

1,502,187. SPRINKLER HEAD. JOHN W. GRONROS, Bronx, N. Y. Filed Mar. 31, 1920. Serial No. 370,112. 4 Claims. (Cl. 169—38.)

1. The combination with a fusible locking element; of a slow burning element associated with said lock with a readily inflammable member connected with said element, and a non-fusible member fastened to said slow burning element to provide for the removal of said element when necessary.

1,502,188. PROCESS FOR SOFTENING WATER. FRANK E. HARTMAN and HARRY BEXTON HARTMAN, Scottdale, Pa., assignors to Electric Water Sterilizer & Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1922. Serial No. 545,508. 1 Claim. (Cl. 204—25.)

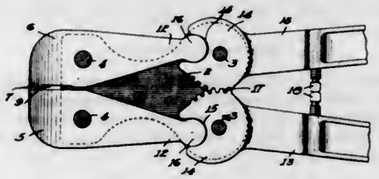


A process for aiding the chemical softening of water, which consists in injecting a softening reagent under pressure into the feed line, next predisposing the water under pressure to rapid reaction by electrolysis, and subsequently conducting the chemically and electrically treated water through a relatively capacious sedimentation basin.

1,502,189. GAME APPARATUS. ALBERT E. HATCH, Wakonda, S. Dak. Filed June 2, 1921. Serial No. 474,474. 3 Claims. (Cl. 46—61.)

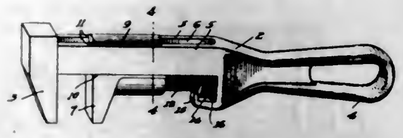
1. A game apparatus, comprising in combination a playing support simulating a base ball field, a ball, mechanical means for pitching said ball, mechanical batting means, and catching means mounted to the rear

of the abutment means and including vibratory gripping arms extending towards the batting means in spaced relation to each other and adapted to be vibrated



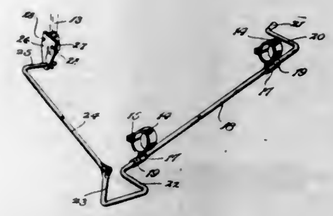
towards and away from each other through being struck by the batting means whereby the ball may be buffeted between said arms when caught.

1,502,190. INSECTICIDE. WALTER HEERDT, Frankfort-on-the-Main, Germany. Filed June 9, 1923. Serial No. 644,519. 4 Claims. (Cl. 23—11.)



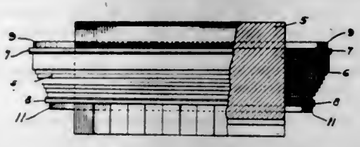
1. A composition of matter for use as insecticide consisting of a porous body and fluid hydrocyanic acid filling the pores of said body.

1,502,191. METAL-PRESSING TOOL. JOHN HELWIG, St. Paul, Minn. Filed Mar. 23, 1916, Serial No. 86,167. Renewed Nov. 18, 1921. Serial No. 516,244. 3 Claims. (Cl. 81—15.)



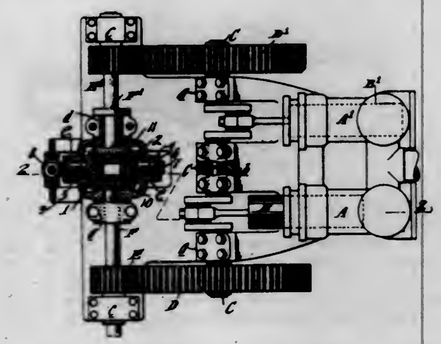
1. A tool of the class described comprising a head composed of plates and bolts passing therethrough for holding said plates in parallel relation, spaced from each other, a pair of levers mounted on a corresponding number of said bolts at the outer ends of said plates, the outer ends of said levers projecting beyond the corresponding ends of said plates and laterally turned with respect thereto, one of said projecting ends having a socket therein and a male die fitting within said socket and provided with a rounded outer end, the projecting end of the other lever having a concave depression therein to register with the rounded end of said male die and form a female die therefor, said projecting ends being adapted to clamp the interlocking edges of sheet metal together and form a boss on one side thereof and a corresponding depression on the other side for securing said edges together, and operating levers having hand grips mounted on bolts at the other end of said plates for simultaneous movement and having means for engaging and actuating said first named levers.

1,502,192. WRENCH AND PROCESS OF MANUFACTURING THE SAME. JOHN HELWIG, St. Paul, Minn. Filed Mar. 1, 1917, Serial No. 151,670. Renewed Oct. 20, 1921. Serial No. 509,202. 4 Claims. (Cl. 76—114.)



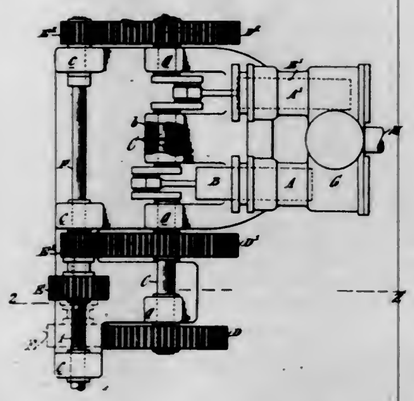
1. A process of manufacturing a monkey wrench which consists in first forming a longitudinal opening in the wrench shank, bowing the side bars of the shank outwardly to widen said opening and then inserting the web and head of the movable jaw into said opening and finally pressing said side bars toward one another to form guides for said head and web thereon.

1,502,193. HEADLIGHT-SWITCH-OPERATING DEVICE FOR MOTOR VEHICLES. WILLIAM C. HERSHEY and REX J. HANCHETTE, McAlester, Okla. Filed Sept. 11, 1922. Serial No. 587,630. 2 Claims. (Cl. 74—39.)



1. The combination with a motor vehicle including a steering post, instrument board and headlight switch, of a manually operable switch operating rod rotatably mounted on the steering post and having its lower end offset and terminating in an upstanding arm, a clamp engaging the headlight switch lever, and a pitman rod lying behind the plane of the lower edge of the instrument board and having one end thereof pivotally connected to the upstanding arm of the operating rod and its other end provided with a laterally directed terminal pivotally connected with the lower end of said clamp.

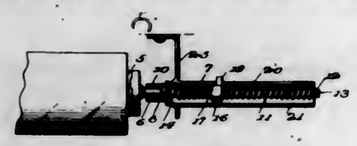
1,502,194. COIL SUPPORT. CHARLES TRUMAN HIBBARD, Minneapolis, Minn., assignor to Electric Machinery Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 2, 1922. Serial No. 591,853. 4 Claims. (Cl. 171—252.)



2. A pole body having apertures in its upper and lower portions substantially U-shaped coil supports having ends fitting snugly into said apertures, and a field coil supported between said coil supports.

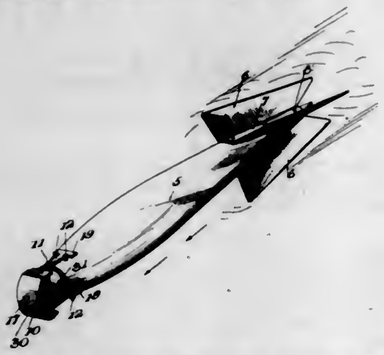
1,502,195. PUMP. GEORGE C. HICKS, Jr., St. Louis, Mo., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 7, 1922. Serial No. 566,486. 8 Claims. (Cl. 103—37.)

1. A variable capacity pump, comprising a plurality of plungers, a plunger chamber common to said plungers, a plurality of longitudinally alined plunger driving shafts, a power shaft and separate driving connections between said power shaft and each of said plunger shafts, and means for changing the timed relation of the plunger strokes.



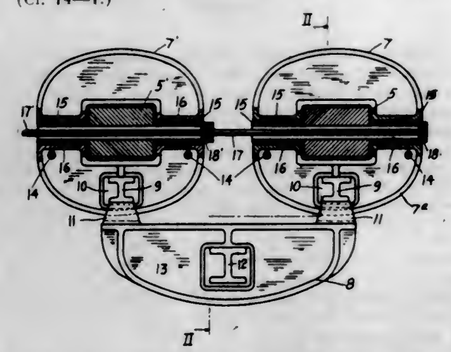
1,502,196. PUMP. GEORGE C. HICKS, Jr., St. Louis, Mo., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 7, 1922. Serial No. 566,487. 5 Claims. (Cl. 103—37.)

1. A variable capacity pump, comprising a plurality of plungers, a plunger chamber common to said plungers, a plunger-actuating shaft divided into a plurality of parts, a power shaft, driving connections between said power shaft and each of said plunger-actuating shaft parts, and means for throwing one of said driving connections out of operation to permit the relative timing of the plunger strokes to be varied.



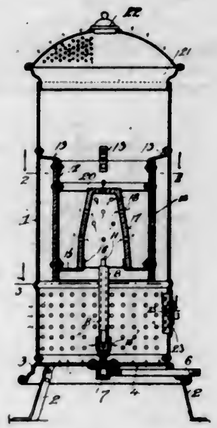
1,502,197. SHADE, CURTAIN, OR AWNING ROLLER STOP. GEORGE D. HILL, Norfolk, Va. Filed Apr. 17, 1922. Serial No. 553,657. 12 Claims. (Cl. 156—29.)

1. The combination with a roller having a socket, of a spindle received in said socket, a convolute spring secured on said spindle and having one end free and formed with a return bend, a collar mounted on said spring having lugs engaging the convolutions of the convolute spring, and a housing arranged in said roller



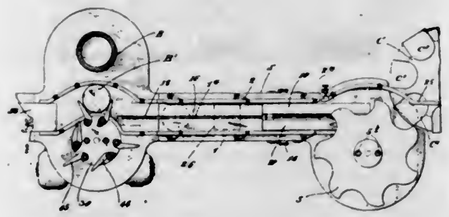
and receiving said spindle and said convolute body, said housing being provided with a longitudinal slot receiving a portion of said collar to hold the collar against turning.

1,502,198. DETONATING TOY. HARRY WALLACE HILL, West Hanover, Mass. Filed Dec. 26, 1923. Serial No. 682,814. 3 Claims. (Cl. 46—46.)



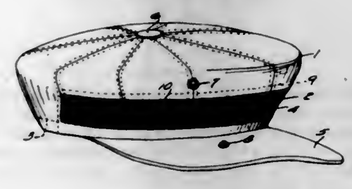
1. A toy of the character specified comprising a body having its forward end provided with pairs of oppositely projecting pins, a head having attaching arms recessed along their edges to receive said pins, the ends of the recesses in said arms constituting shoulders to limit the sliding movement of the arms, a weight positioned in said head, said head being formed from a single blank of metal having portions bent into parallel relation to define side walls engaging the sides of said weight.

1,502,199. FLOATING FRAME. FRANCIS HODGKINSON, Edgewood, Pa., assignor to Westinghouse Gear & Dynamometer Company, a Corporation of Pennsylvania. Filed July 19, 1919. Serial No. 311,971. 13 Claims. (Cl. 74—7.)



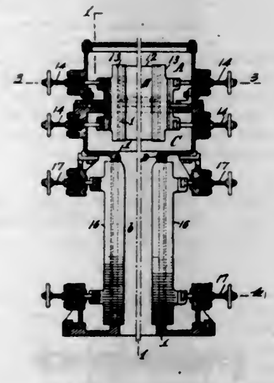
11. In gearing of the character described, coacting gears, each of said gears including a pair of sections having gear teeth, the gear teeth of the sections of one of said gears meshing with the gear teeth of the other of said gears, the separate sections of one of said gears being hollow and flexibly connected, a separate bearing for each of said hollow sections, a rocking frame carrying each of said bearings, and separate means for resiliently resisting rocking movement of each of said frames.

1,502,200. GAS STOVE. WILLIAM T. HOWLETT and HENRY O. SMITH, New York, N. Y. Filed Jan. 14, 1922. Serial No. 529,127. 2 Claims. (Cl. 126—85.)



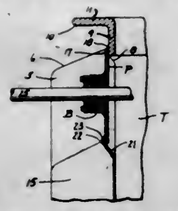
1. In a gas heater, an outer shell having a perforated lower area and an unperforated upper area, a perforated bottom for said outer shell, an inner shell supported from said outer shell in spaced relation therefrom, said inner shell extending from said perforated area and terminating in said unperforated area to thereby provide a free air inlet area below said inner shell and a large heat mixing chamber above said inner shell, a radiator supported in spaced relation within the inner shell, and a burner extending into said radiator.

1,502,201. PACKAGE-TRANSFERRING MACHINE. MAX JAEGER, Long Island City, N. Y., assignor to Anchor Cap & Closure Corporation, New York, N. Y., a Corporation of New York. Filed May 26, 1920. Serial No. 384,305. 18 Claims. (Cl. 198—22.)



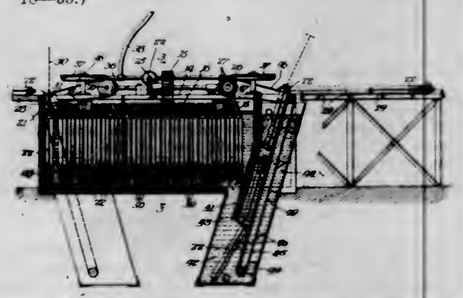
1. In a machine of the class described, the combination of an accelerating device effective upon successive packages to move them progressively at accelerating speed, spacing means cooperating with the accelerating device for placing the packages at definite space intervals and effective to move them in a substantially straight line at a constant speed, and positioning mechanism operable to take successive packages from the spacing means while in motion and move them severally at a constant speed to a definite position of rest.

1,502,202. CAP. ABRAHAM JOSEPHS, New York, N. Y., assignor to The Crofut & Knapp Company, New York, N. Y. Filed Jan. 15, 1924. Serial No. 686,259. 1 Claim. (Cl. 2—176.)



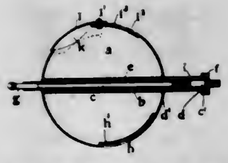
A ventilated cap comprising a circumferential supporting tape, a plurality of sectors secured thereto, a peak, a plurality of radial tapes located at the edges of said sectors and extending to and connected with the said supporting tape, certain of the sectors at the forward part of the cap being of less length than the rear sectors, and having a tape supporting their lower ends and attached to the radial tapes, and openwork fabric ventilating material mounted upon and supported by said tapes and filling the space between the short sectors and the rim of the cap, said space extending on either side beyond the outer edges of the peak of the cap so that when the forward part of the cap is held down upon the peak, the sides of the ventilating fabric are still exposed to provide ventilation within the cap.

1,502,203. EJECTOR AND NOZZLE THEREFOR. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 1, 1923. Serial No. 622,027. 12 Claims. (Cl. 230—13.)



2. An ejector having an operating fluid nozzle and a diffuser or combining tube, each formed with at least two opposite sides parallel to each other in cross-section, the expansion or contraction of the operating fluid nozzle and combining tube being in the same planes, and means for adjusting the length of the space between the two parallel opposite sides of the operating fluid nozzle to vary its capacity.

1,502,204. TANK FOR TRANSFORMERS AND THE LIKE. LEWIS G. MCCLINTOCK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Sept. 26, 1923. Serial No. 664,948. 6 Claims. (Cl. 220—85.)

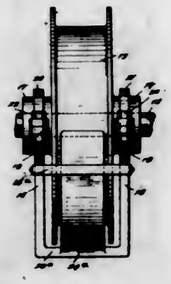


1. The combination in a tank for transformers and the like, of a sheet steel tank body formed with corrugations having a portion cut away, a plate steel member fitted in said cut away portion and welded to the adjacent edges of the tank body, and a pipe connection carried by said plate.

1,502,205. VULCANIZING PROCESS AND APPARATUS. LEE R. MCGUIRE, Chicago, Ill., assignor to Morgan & Wright, a Corporation of Michigan. Filed May 27, 1922. Serial No. 564,004. 38 Claims. (Cl. 18—53.)

10. The vulcanizing process comprising the steps of subjecting the mold having an article of raw material therein to a liquid which solidifies at ordinary temperatures but which melts at a temperature below that employed for vulcanization, permitting the mold to remain in such liquid at a vulcanizing temperature for a sufficient period of time to produce vulcanization, and transferring the mold from said vulcanizing liquid to a cooling liquid having a boiling point below the vulcanizing temperature employed so that when said mold enters said liquid the boiling of the liquid will be produced to clear the mold of the material used for heating the same during vulcanization.

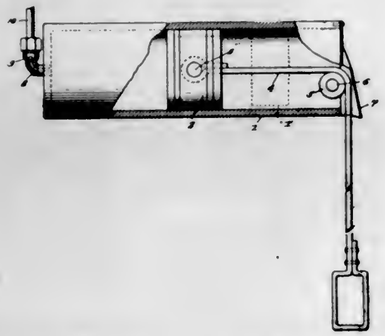
1,502,206. MATCH HOLDER AND BOX. DOWNES ELAND NORTON, Hampton Hill, London, England. Filed May 28, 1921. Serial No. 473,390. 6 Claims. (Cl. 206—33.)



1. A match box, means upon said match box for the reception of a match holder in position transversely through the box, and in combination a match holder and means respectively upon the match holder and the match box by which the match holder may be secured in its position therein, substantially as described.

1,502,207. PROCESS FOR PREPARING CONFECTIONS COATED WITH FONDANT. HOWARD S. PAINE, Chevy Chase, Md., and JOHN HAMILTON, Washington, D. C., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed Mar. 4, 1924. Serial No. 696,886. 8 Claims. (Cl. 99—16.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

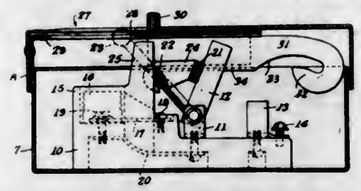
4. A procedure for preparing a fondant-coated confection, wherein invertase is added to the fondant coating and the confection is warmed to a temperature of 80° to 120° F., with addition of water vapor to increase the humidity of the atmosphere during heating.



5. A confection with a center and fondant coating, both of which contain invertase.

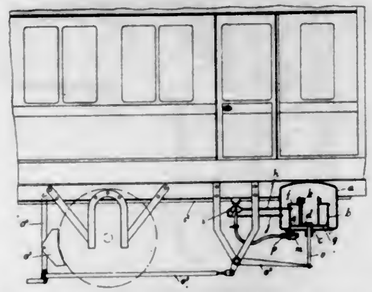
1,502,208. CABLE GUARD FOR GROOVED PULLEYS. MICHAEL PASTORE, Bridgeport, Conn. Filed Oct. 3, 1923. Serial No. 666,278. 2 Claims. (Cl. 254—190.)

1. In combination with a grooved pulley, a guard device comprising a pair of side arms at each side of the pulley and adapted to extend vertically downwardly, split eyes loosely engaging the axis of the pulley whereby said arms are adapted to hang free, each split eye including a semi-circular portion integral with an arm and a semi-circular portion secured to the portion first mentioned by means of a bolt, a transverse portion extending between the lower ends of and connecting the arms, and an integral arcuate portion upon said transverse portion extending into the groove of the pulley and projecting at each side from said transverse portion, the arcuate portion with transverse portion enveloping the pulley for approximately one-half of its circumference.



1,502,209. SHOCK ABSORBER. WALTER S. PETERSON, Denver, Colo. Filed May 25, 1922. Serial No. 563,682. 4 Claims. (Cl. 267—65.)

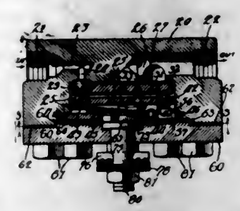
1. A shock absorbing device for automobiles comprising a cylinder closed at one end and open to the atmosphere at the other, a piston therein, means extending out of the open end for connecting the piston to the running



gear, and means including an outwardly opening check valve for connecting the closed end of the cylinder with an air exhausting means associated with the power plant of the vehicle.

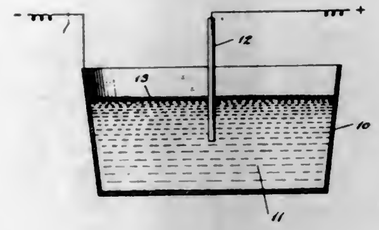
1,502,210. INCLOSED ELECTRIC SWITCH. CLARENCE D. PLATT, Bridgeport, Conn. Filed Feb. 3, 1923. Serial No. 616,656. 10 Claims. (Cl. 200—50.)

1. In an inclosed switch, a box having an opening, a shutter for said opening, a switch mounted in said box including fuse plug sockets accessible through said opening and movable blades in the other end of said box, an operating member for said blades and an interlocking bar carried by said shutter having a hook engaging said operating member to prevent the operation of said shutter except the switch is fully open and having a portion for engaging said member to prevent movement of said operating member except said shutter is closed.



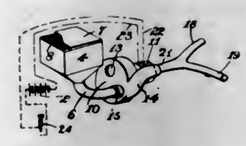
1,502,211. FLUID-PRESSURE BRAKING APPARATUS. EDWARD CECIL POULTNEY, Llandudno, Wales. Filed Dec. 28, 1921. Serial No. 525,405. 8 Claims. (Cl. 303—23.)

1. Fluid pressure braking apparatus for railway trains, comprising a brake cylinder on each vehicle, differential compartments within the said cylinder and corresponding piston faces acted upon by pressure admitted to the cylinder, mechanical connections from the pistons to the brake blocks, and means for admitting fluid pressure to the different compartments of the brake cylinder to apply at will a selected resultant braking pressure to the brake blocks of any vehicle of the train.



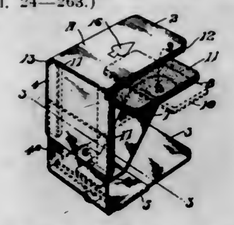
1,502,212. PRESSURE-REDUCING VALVE. WALTER W. ROBINSON, Beloit, Wis., assignor of one-half to Benjamin F. Lyons, Beloit, Wis. Filed July 18, 1921. Serial No. 485,783. 5 Claims. (Cl. 50—25.)

1. In a pressure-reducing valve, the combination of an integral casing part having a main inner chamber in the form of a recess from one side of the casing part, there being an inlet port and an outlet port in communication with said chamber, a removable closure for the main chamber, a valve for opening and closing the passage-way, from the inlet port to said chamber, spring means arranged to operate in a direction against the pressure from said inlet port for normally maintaining said valve closed against the pressure from said inlet port, a diaphragm between said casing part and said closure, spring means for forcing the diaphragm inwardly against the low pressure normally within said chamber, and operative connections including a pair of levers providing a compound movement



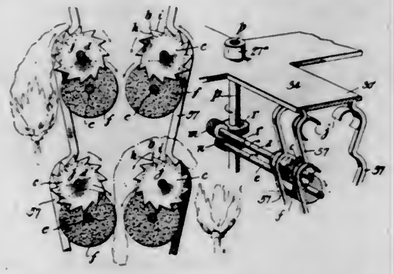
between said diaphragm and said valve for opening the valve a relatively great amount against its spring pressure in response to spring pressure moving the diaphragm a relatively small amount.

1,502,213. ELECTROLYTIC PROCESS FOR THE PRODUCTION OF SULPHIDES. RICHARD RODRIAN, New York, N. Y., assignor to Rodrian Electro-Metallurgical Co., Incorporated, New York, N. Y., a Corporation of Delaware. Filed Apr. 26, 1922. Serial No. 556,720. 6 Claims. (Cl. 204—9.)



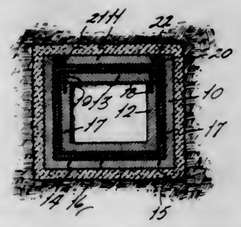
1. The process of producing sulphides, which consists in passing an electric current through a solution of a hydrate of an alkali or through a solution of a hydrate of an alkaline earth, spreading comminuted sulfur on top of said solution, and continuing the passage of such current until the sulfur forms a sulphide.

1,502,214. SAND BLOWER FOR AUTOMOBILES. REIDAR T. SHERWIN, New York, N. Y. Filed Nov. 26, 1923. Serial No. 676,964. 1 Claim. (Cl. 291—3.)



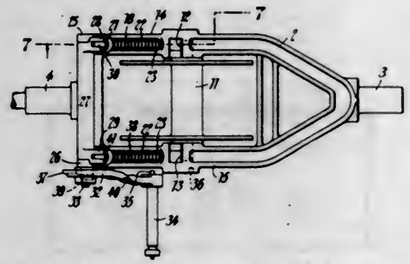
A sanding device for vehicles comprising a sand receptacle, a substantially drum shaped blower casing having its lower part below the level of the receptacle bottom and provided with an air inlet, a blade rotatable in the casing, means for operating the fan, a peripheral delivery extension on said casing extending outwardly and upwardly therefrom and provided with a lateral tubular terminal portion, a delivery pipe leading from the bottom of the receptacle to the casing and opening through a side wall thereof adjacent the lower end of the peripheral extension, and a tubular means extending from the tubular terminal to deliver sand to desired points, the blade fan having its blades arranged to intersect the path of sand flowing into the casing from the receptacle.

1,502,215. CLAMP. MARTIN A. SOHST, San Francisco, Calif. Filed Nov. 1, 1922. Serial No. 598,241. 3 Claims. (Cl. 24—263.)



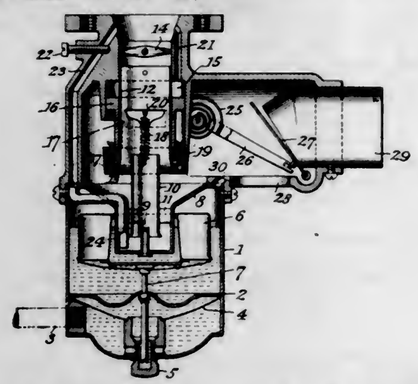
1. In a clamp of the character described, an upper and a lower leg, means permitting vertical adjustment of said legs, a right-angular extension on each leg, a clip slidably mounted on the extension of the lower leg, a leaf-spring secured to said clip, a clamping plate carried by said leaf-spring and resiliently supported thereby, said clamping plate cooperating with the right-angular extension of the upper leg to form a clamp, and means permitting turning movement of the clamping plate with relation to the leaf-spring.

1,502,216. MACHINE FOR PICKING COTTON. WILMER THREADGILL, Laredo, Tex. Filed June 11, 1920. Serial No. 388,279. 15 Claims. (Cl. 56—44.)



7. In a cotton-picking machine, a pair of laterally spaced rotary picker elements, and a pair of cylinders positioned on opposite sides of each picker element and having their ends which face said elements provided with doffing means, the respective pairs of cylinders being parallel and rotatable in opposite directions to receive therebetween and convey the material doffed from the picker elements, said cylinders rotating in the same direction as and at a higher speed than the picker elements.

1,502,217. BURIAL VAULT. ARMSTEAD E. TRIPLETT, Dallas, Tex. Filed June 29, 1923. Serial No. 648,467. 3 Claims. (Cl. 72—7.)

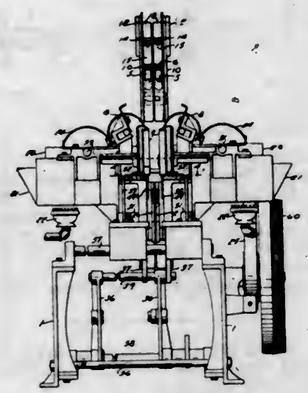


1. A burial vault composed of an outer container, an inner concentric container, a core wall between the containers poured in a liquid state, and space blocks between the containers composed of material fusing with the core material when the latter congeals, the core wall and block being formed into an integral and continuous core impervious to moisture.

1,502,218. LOCKING DEVICE FOR SPOOLS. CHARLES F. VAN HOOK, Paterson, N. J., assignor to The Watson Machine Company, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 17, 1923. Serial No. 657,840. 12 Claims. (Cl. 64—10.)

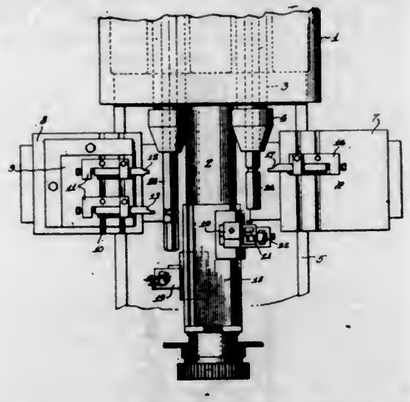
1. In a device of the character specified the combination of a member having a trunnion, a member having a pocket bearing for said trunnion, a rock sleeve pivotally mounted on said bearing member, an arm upstanding on said sleeve, a bolt pivotally connected at one end thereof with said arm, the other end of said bolt being adapted for entering said bearing, means for urging said bolt toward said bearing, and hand operated means for withdrawing said bolt.

1,502,219. CARBURETOR. CHARLES F. WALLACE, Westfield, N. J. Filed June 26, 1920. Serial No. 392,134. 6 Claims. (Cl. 261—63.)



1. In a carburetor, the combination with means for mixing fuel and air of a valve to regulate the mixture controlled by the vacuum above the throttle and an opposing resistance, the position of the valve varying in such manner that the mixture is rich at maximum vacuum gradually leaned as the vacuum decreases to a predetermined value and again enriched on a further decrease in vacuum.

4. In a carburetor, the combination with a means for delivering fuel, of a tube surrounding said means, a port in said tube to admit air to the mixture, a piston valve surrounding said tube and connected with the space beyond the throttle, and controlling the area of said port in accordance with the degree of vacuum beyond the throttle, and springs of different force connected with said piston valve.

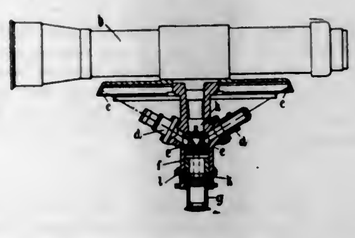


6. In a carburetor, the combination with means for mixing fuel and air of means for regulating the fuel content of the mixture, controlled by a vacuum above the throttle and a varying opposing force which produces a rich mixture at maximum vacuum a leaner mixture as the vacuum deceases to a predetermined value and a richer mixture on a further decrease of vacuum and thermostatic means for controlling the temperature of the air in the mixture.

1,502,220. PAPER-BOX MACHINERY. ISAAC ALLEN WATROUS, Bridgeport, Conn., assignor to Union Paper Company, New York, N. Y., a Corporation of New York. Filed Nov. 16, 1923. Serial No. 675,097. 16 Claims. (Cl. 93—55.)

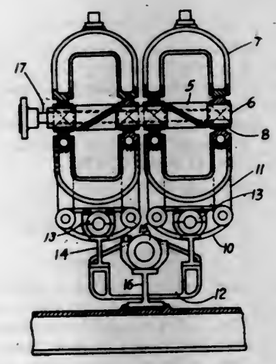
1. A machine for applying caps to the ends of paper boxes comprising means for propelling the box body in a direction at right-angles to its longitudinal axis; means for feeding caps in a direction substantially at right-angles to the plane of travel of said axis, into the path of travel of the box, said means arranged to deliver the caps at an angle to the axis of the box to permit of the box passing the rearward portion of the flange of the cap and engaging the forward portion thereof; cam surfaces between which said box is advanced, adapted to press the caps upon the ends of the box; and spring plate means for pressing the caps home.

1,502,221. METHOD OF MAKING BOLT BLANKS. CHARLES F. WHITMAN, Detroit, Mich. Filed May 24, 1923. Serial No. 641,080. 4 Claims. (Cl. 10—27.)



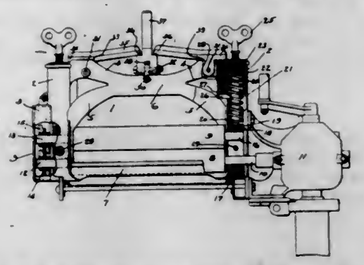
1. A method of forming bolt blanks in a four stage multiple spindle automatic machine, which method consists in turning down and chamfering a blank at the first stage; cutting off and chambering a blank at the second stage; turning down a chamfered blank at the third stage, and cutting off a chamfered and turned down blank at the fourth stage, said operations being carried on in sequence and synchronously so eight blanks are produced in one cycle of the machine.

1,502,222. PROCESS FOR PREPARING CAFFEINE-FREE COFFEE BEANS. KARL HEINRICH WIMMER, Bremen, Germany, assignor to Coffee Products Corporation, New York, N. Y. Filed Oct. 30, 1923. Serial No. 671,757. 4 Claims. (Cl. 99—11.)



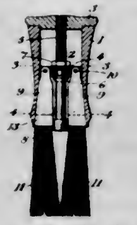
1. A process of preparing caffeine-free coffee which comprises extracting the caffeine from coffee with a normally liquid halogenated hydrocarbon derivative having a boiling point lower than 45° C.

1,502,223. THEODOLITE, SPECTROSCOPE, AND THE LIKE. ROBERT M. ABRAHAM, Westminster, London, England. Filed May 12, 1923. Serial No. 638,530. 4 Claims. (Cl. 88—2.6.)



1. In a theodolite, the combination of a frame; a telescope mounted to turn about a horizontal axis in a part of said frame forming bearings for said telescope, a vertical conical scale fixed to said telescope to turn therewith and an optical system carried by one of said bearings and comprising microscope tubes directed towards two portions of said scale and at right angles to its surface and thus inclined to said horizontal axis to direct rays of light from the scale to a point within said bearing, means for reflecting the rays of light axially through said bearing and means for viewing the portions of said scale side by side.

1,502,224. GEARING. ROBERT C. ALLEN, Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed Sept. 29, 1920. Serial No. 413,640. 11 Claims. (Cl. 74—7.)

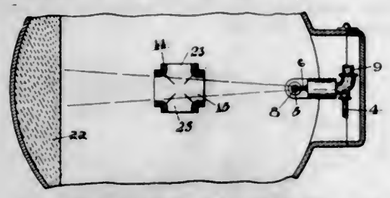


1. In a gear set, the combination of a support, a floating frame, a flexible member carried by the support, and a pivotal connection between the floating frame and the flexible member.

1,502,225. WRINGER. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Apr. 23, 1923. Serial No. 634,149. 9 Claims. (Cl. 68—32.)

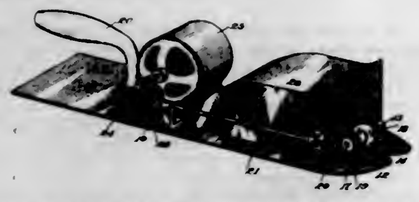
1. In a wringer, in combination, a frame having upstanding barrels at each end, wringer rolls journaled in said frame, springs in said barrels coacting with said rolls, means in the barrels to compress said springs, mean to release the compressing means and cushion springs in the barrels adapted to act upon the release of said compressing means.

1,502,226. SHAVING BRUSH. DUNCAN MACKENZIE ANDERSON, Toronto, Ontario, Canada. Filed Jan. 25, 1923. Serial No. 614,799. 6 Claims. (Cl. 15—201.)



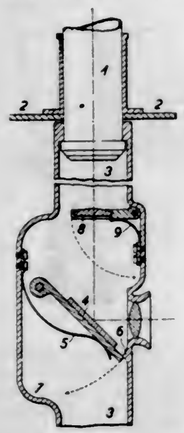
1. The combination, in a brush, of a handle, a carrier, a plurality of bristle holders each movably secured at one end to the carrier and provided at its other end with a bunch of bristles projecting in line with the body of the holder, a shank arranged centrally through the carrier and provided with a free end for the bodies of the holders to abut against, and means on the handle cooperating with said shank for detachably attaching the carrier to the handle with the bristle holders parallel with each other.

1,502,227. PANELWORK FOR LIGHT STRUCTURES. KARL ARNSTEIN, Friedrichshafen, Germany, assignor to the Firm Luftschiffbau Zeppelin, Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,485. 2 Claims. (Cl. 189—37.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



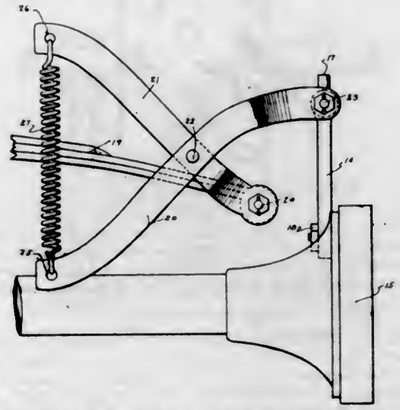
1. A structural member having a high moment of elasticity and a low degree of permanent set under repeated strains for use in aircraft construction, comprising two strips of bands of thin sheet metal each bent into channel form with rounded corners and of a substantially uniform thickness throughout its cross section, said strips extending substantially parallel to one another with their middle webs facing one another and a plurality of transverse strips spaced apart from each other and extending across the channels and fixed to the flanges thereof on both sides of said channels.

1,502,228. OIL BURNER. MICHAEL A. ATTALLAH, Toronto, Ontario, Canada. Filed Mar. 27, 1923. Serial No. 628,107. 1 Claim. (Cl. 158—76.)



In oil burning apparatus, the combination of an upwardly directed fuel nozzle having its sides flattened and formed with a narrow slit like aperture parallel to the sides; and an air nozzle substantially at right angles to and directed across the fuel nozzle, the said flattened sides of the fuel nozzle extending parallel to the axis of the air nozzle whereby oil dripping down the sides of the fuel nozzle is swept off by the air current from the air nozzle.

1,502,229. TACK PULLER. HANS B. BEETZ, San Francisco, Calif. Filed Sept. 22, 1923. Serial No. 664,220. 5 Claims. (Cl. 254—18.)



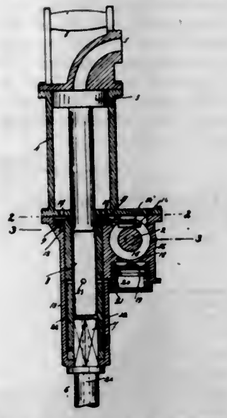
1. A portable tack puller comprising a flat base having a recess formed therein for engaging tacks, a revoluble extracting member carried by the base above said recess and adapted to engage and extract tacks, and means carried by the base and operatively connected to the extracting member for revolving the same.

1,502,230. PERISCOPE. ULRICH BLUM, Kiel, Germany. Filed Aug. 29, 1921. Serial No. 496,735. 3 Claims. (Cl. 88—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a periscope a stationary part, containing an ocular, a sliding tube containing optical elements and admitting of the rays of light emerging in a downward direction, the sliding tube being movable in the direction of its axis, the stationary part being adapted to allow the sliding tube on descending to pass through the stationary part, and the sliding tube being adapted to remove the optical parts situated within the stationary part in the path of the sliding tube out of the operative position of them.

1,502,231. SHOCK ABSORBER. ANDREW J. BOCKWITZ, Twin Falls, Idaho. Filed Oct. 21, 1921. Serial No. 509,413. 1 Claim. (Cl. 267—17.)

In combination with a spring, axle housing and spring perch, a shock absorber having pivotally connected cross arms of unequal lengths between points where said arms pivotally connect together and where they pivotally connect with the spring perch and pivotally connect to the main vehicle spring, a tension coil spring connecting the opposite ends of said pivoted arms, said constructon absorbing and preventing any abrupt upward motion of the main spring and vehicle body.

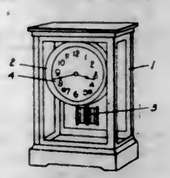


1,502,232. SPRING HOLDER FOR ATTACHING DUST CAPS. JUNIUS A. BOWDEN, Los Angeles, Calif., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 3, 1920, Serial No. 356,054. Renewed Aug. 16, 1922. Serial No. 582,644. 5 Claims. (Cl. 152—12.)

1. A new article of manufacture formed entirely of sheet metal for mounting a quick detachable cap upon a tire valve stem, comprising a spring collar having means integral therewith adapted to detachably secure the collar directly to the exterior of said stem, said collar having a spring portion integral therewith adapted to frictionally hold a dust cap in engagement with said spring collar.

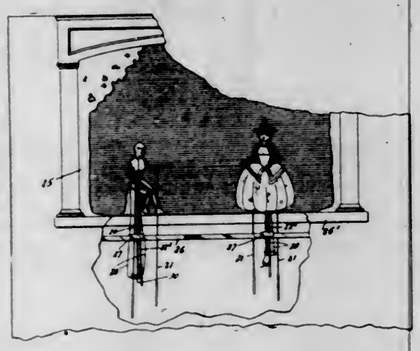
1,502,233. PNEUMATIC HAMMER. ERNESTO CURTI, Milan, Italy. Filed Aug. 11, 1920. Serial No. 402,763. 1 Claim. (Cl. 255—42.)

In a pneumatic hammer, a cylinder provided at one end with an air passageway adapted to be connected with a pulsator, a hammer slidably mounted in said cylinder and provided with a stem, a cylinder extension connected to one end of the cylinder and provided with a rotatable bushing in which said stem is slidably mounted, a tool rotated by said bushing, a second cylinder carrying reciprocating piston and provided with an air passageway adapted to communicate with a pulsator, and a ratchet and pawl mechanism adapted to rotate said bushing and actuated by said piston, a chamber, a pressure actuated valve controlling the passage of air from the interior of the second cylinder to the chamber, a duct arranged in said tool, air conduits placing the interior of said chamber in communication with said duct and with the interior of said bushing, and ports placing the interior of the first mentioned cylinder in communication with the interior of the second cylinder.



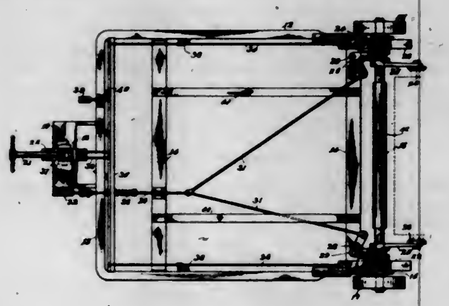
1,502,234. OIL AND WATER CIRCULATING SYSTEM FOR EXPLOSIVE ENGINES. GLEN L. DAVIS, San Francisco, Calif. Filed Jan. 23, 1922. Serial No. 531,018. 6 Claims. (Cl. 103—4.)

1. An oil and water circulating unit for explosive engines, comprising a relatively long approximately horizontal tubular housing, a single continuous relatively long horizontal shaft the major portion of which is confined within the tubular housing and extended slightly beyond the front end thereof and provided at its extension with a belt receiving pulley; and oil and water pumps contained in the tubular housing and directly actuated by the said shaft for circulating oil and water.



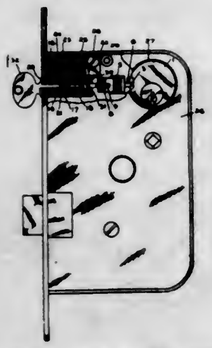
1,502,235. WATCH AND CLOCK. SIEBREN G. DE VRIES, Grand Rapids, Mich. Filed Oct. 14, 1921. Serial No. 507,667. 2 Claims. (Cl. 58—125.)

1. In a double-faced clock, the combination of oppositely facing dials, a main shaft or arbor, driving means therefor, a minute hand mounted on one end of said



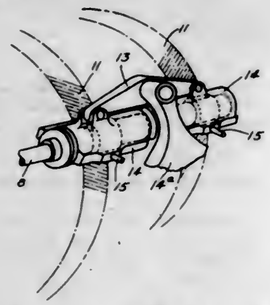
arbor to rotate therewith, an hour hand provided with a sleeve rotatably mounted at such end, a train of driving gears connecting said sleeve to said arbor, a driving gear mounted on and having frictional engagement with the opposite end of said arbor, a minute hand sleeve rotatably mounted on said arbor and provided with a gear disposed adjacent to said fixed gear thereon, a minute hand mounted on said sleeve, driving connections for said fixed gear to said gear on said minute hand sleeve, whereby the said sleeve is driven at the same speed as said arbor but in an opposite direction, an hour hand gear provided with a sleeve mounted upon said minute hand sleeve, and a reducing train of gears connecting said minute hand gear with said hour hand gear, all coacting for the purpose specified.

1,502,236. MARIONETTE. MATHURIN M. DONDO, New York, N. Y. Filed July 1, 1922. Serial No. 572,318. 8 Claims. (Cl. 46—40.)



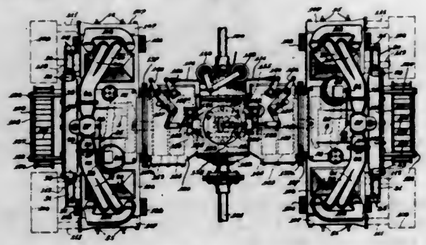
1. The combination with a stage, of a guide, a marionette or figure and means for movably supporting the latter on said guide, including a slide and a member carrying said figure and rotatably borne and vertically adjustable in said slide.

1,502,237. TRUCK. MAX GUSTAV DRESCHER, San Francisco, Calif. Filed Feb. 26, 1923. Serial No. 621,160. 8 Claims. (Cl. 214—65.)



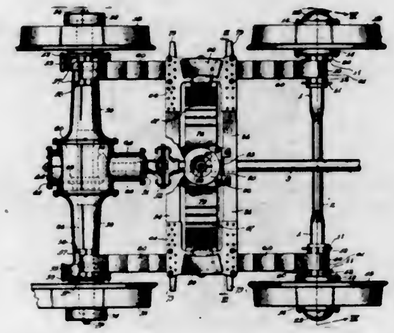
1. A truck comprising a frame having a running gear, a pair of gripper members arranged on the frame, operative means for moving said members toward and away from each other whereby they may be caused to grip the opposite sides of an object, and other means for swinging said arms whereby they may be caused to shift an object gripped onto or off the frame.

1,502,238. LOCK. JOSEPH ANTONIO DUFRESNE, Montreal, Quebec, Canada. Filed Apr. 24, 1923. Serial No. 634,380. 9 Claims. (Cl. 70—46.)



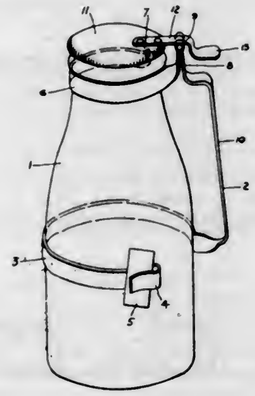
1. In a lock, a lock casing and a removable member projecting into said casing and fastened therewithin, and an auxiliary lock forming an operating member for securing and releasing the fastening of said removable member.

1,502,239. REDUCTION GEARING. RAYMOND N. EHRHART, Jeannette, Pa., assignor, by mesne assignments, to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed Sept. 18, 1918. Serial No. 254,664. Renewed Jan. 16, 1924. 17 Claims. (Cl. 74—7.)



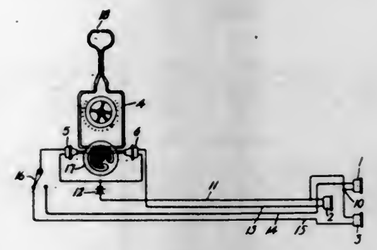
1. In a reduction gearing, two large gears having oppositely inclined teeth formed thereon, two pinions each having gear teeth meshing with the teeth of one of said gears, an independent movably mounted bearing for each of said pinions, and a shaft connecting the pinions together.

1,502,240. LOCOMOTIVE POWER PLANT. HENRY FORD, Dearborn, Mich. Filed Jan. 3, 1922. Serial No. 526,539. 2 Claims. (Cl. 74—7.)



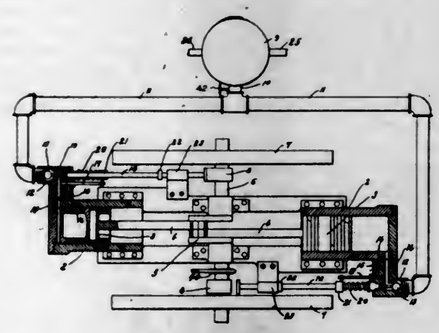
1. A railway car power plant consisting in the combination of a horizontally extending transmission gear system embodying a pair of opposed transmission units arranged one at either end of the system, a shaft arranged between and transversely of said units, a bevel gear driving connection interposed between said shaft and transmission units, and a pair of horizontally disposed motors arranged one at either end of said gear system.

1,502,241. RAILWAY-CAR TRUCK. HENRY FORD, Dearborn, Mich. Filed July 8, 1922. Serial No. 573,624. 17 Claims. (Cl. 105—197.)



1. A railway car truck comprising axle assemblies, means disposed in parallelism and connecting said axle assemblies so that one of said axle assemblies may move to and from the other axle assembly, and means transmitting power to one of said axle assemblies, one of said axle assemblies including an axle having a depressed portion providing clearance for said power transmitting means.

1,502,242. HOLDER FOR MILK BOTTLES AND THE LIKE AND METHOD OF MAKING SAME. EARL FRENCH, Vancouver, British Columbia, Canada. Filed Dec. 9, 1922. Serial No. 605,917. 1 Claim. (Cl. 215—100.)

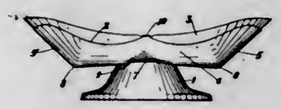


A bottle holder comprising a single strip of metal bent to provide a handle member having its lower end turned substantially at right angles and curved to provide a bottle embracing clip of circular formation, the end of said clip being bent upon itself to provide a ticket holder, the upper end of said handle being bent upon itself to provide a vertical supporting standard and a curved clip extending therefrom and a lever pivoted to said standard and carrying a cap at one end.

1,502,243. SYSTEM FOR DETERMINING THE DIRECTION OF PROPAGATION OF WAVE ENERGY. THORNTON C. FRY, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1920. Serial No. 423,922. 5 Claims. (Cl. 181—26.)

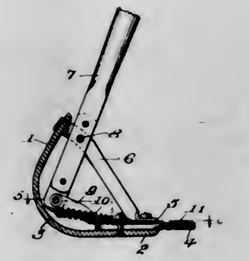
4. In a system for determining the direction of propagation of wave energy, the combination of a plurality of detectors including diaphragms and supports therefor of identical configuration and dimensions, means for supporting said detectors with the diaphragms in vertical planes and facing the same direction, and means for binaurally comparing the response of the detectors.

1,502,244. ENGINE. ROBERT J. K. GORE, Detroit, Mich., assignor of one-half to William J. Grandchamp, Detroit, Mich. Filed May 8, 1920. Serial No. 379,926. 1 Claim. (Cl. 121—167.)



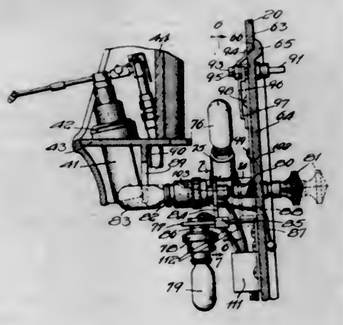
The combination with a crank shaft, a cylinder and a piston mounted for reciprocation in the cylinder and connected to the crank shaft, of an inlet port and an exhaust port in communication with one end of the cylinder, means for directing fluid under pressure to the inlet port, a ball valve for closing the inlet port, a slide valve for closing the exhaust port, a plunger mounted for reciprocation by the crank shaft, a pin actuated thereby for unseating the ball valve, a connection between the slide valve and the plunger, yielding means for holding the plunger at one extreme position with the pin out of contact with the ball valve and with the slide valve in open position, said plunger being shiftable to simultaneously unseat the ball valve and close the exhaust port.

1,502,245. HOLDER. WILLIAM A. GREEN, Toronto, Ontario, Canada. Filed Nov. 6, 1919. Serial No. 336,222. 12 Claims. (Cl. 65—61.)



1. In a device of the character described, a holder including an elongated concavity the end walls of which curve transversely of the holder, the side walls having

inwardly extending stops, in combination with a resilient paper dish lining seated in said concavity with its edges

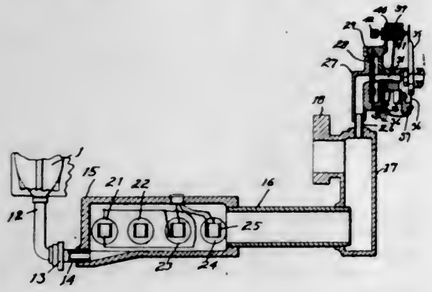


beneath said stops, said dish lining comprising free overlapping contiguous portions lying against the end walls and held in position by engagement therewith.

1,502,246. PLANT PULLER. SIMON HAGOPIAN, Petaluma, Calif. Filed Mar. 12, 1923. Serial No. 624,530. 2 Claims. (Cl. 254—132.)

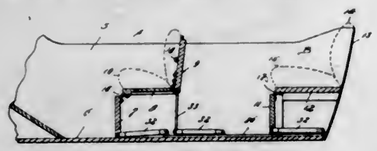
2. A device of the class described comprising a base having a flat front part and an upwardly curved rear part, a pair of jaw members pivoted to the front part, a brace connecting the upper end of the base with the front end thereof, a handle pivoted to the base, links connecting the handle with the inner ends of the jaw members and a spring for holding the jaw members in closed position.

1,502,247. DENTAL APPLIANCE. JOHN V. HANBERG, Chicago, Ill., assignor to A. C. Clark & Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1921. Serial No. 485,390. 23 Claims. (Cl. 32—5.)



2. In a dental unit, the combination with a hollow pedestal, of a socket extending through a wall thereof and adapted to receive a holder for liquids, an incandescent lamp within the pedestal adjacent the socket, a support for the lamp extending through the pedestal movable to vary the position of the lamp relative to the socket, and means extending through the pedestal for controlling the lamp operable in any position of the support.

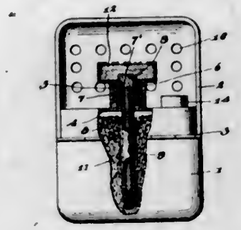
1,502,248. CARD-DISPLAY STAND. ERNEST P. HAWLEY, Nashville, Tenn. Filed Dec. 18, 1923. Serial No. 681,419. 5 Claims. (Cl. 40—7.)



1. A display box provided with a compartment and a display easel hingedly connected to the box and normally contained in said compartment in collapsed condition.

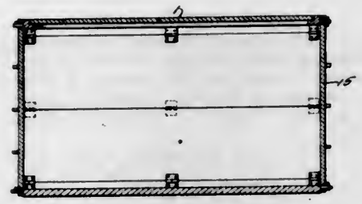
1,502,249. ELECTRIC STEAM RADIATOR. ANSEL C. HULBERT, San Carlos, Calif. Filed Sept. 8, 1921. Serial No. 499,290. 2 Claims. (Cl. 219—38.)

1. An electric steam radiator, comprising a plurality of connected radiator sections, legs to support the radiator sections above the floor level, and means for regulating the current supplied to the heating elements whereby the danger of exceeding a safe pressure within the radiator is avoided one of said elements being unregulated to keep the radiator warmer than the atmosphere when connected.



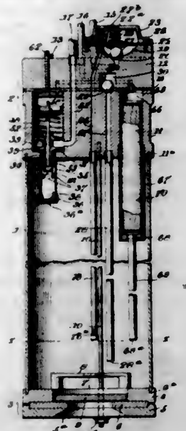
1,502,250. AUTOMOBILE SEATING ARRANGEMENT. CARL HURST, Glenwood, Iowa. Filed Apr. 13, 1923. Serial No. 631,779. 1 Claim. (Cl. 155—7.)

A convertible automobile seat structure comprising a front and a rear seat, fixed in spaced relation in the body of the automobile, bars mounted for sliding movement upon the floor of the body, and disposed longitudinally of the seats, heel boards hingedly connected with the forward portions of the front and rear seats, links pivotally connected at one end with the free edge portions of the heel boards and pivotally connected at their other ends with the end portions of the bars, a back hingedly mounted at the rear edge of the front seat, arms fixed in



relation to the said hinged back, and having end portions disposed at the opposite side of the hinge from that side at which the back is located, and links pivotally connected at one end with the free ends of the arm, and pivotally connected at their other ends with intermediate portions of the bars and means carried by the hinged back for locking the same in a position at an angle to the level of the front seat, the upper end of said back being adapted to abut the lower edge of the rear heel board to form a bed, when the back is lowered, and the rear heel board raised into the plane of the seat.

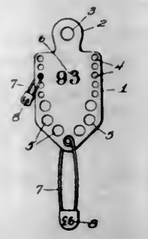
1,502,251. POCKET STOVE. SABANOSUKE KANAZAWA, Tokyo, Japan. Filed June 28, 1923. Serial No. 648,372. 2 Claims. (Cl. 126—38.)



1. A pocket-stove consisting of a receptacle for volatile liquid fuel provided with a top plate having a central opening, an outer sleeve secured to the said top plate and concentric with said central opening, an inner sleeve formed with a plurality of longitudinal channels on its periphery and also formed with an inwardly projecting lug or lugs, and a wick passed into said inner sleeve and held in its position by said lug or lugs, the arrangement being such that the vapor produced in the receptacle rises through the channels formed on the periphery of the inner sleeve.

1,502,252. FOLDING CRATE. JOHN R. KLUG, Munday, Tex. Filed July 17, 1923. Serial No. 652,096. 2 Claims. (Cl. 217—47.)

1. A collapsible shipping crate having a top, bottom, side and end walls, a top frame comprising longitudinal retaining bars and transverse retaining bars forming a rectangular frame, the top wall being hingedly mounted in the frame, the said side walls being of sectional construction and consisting of upper and lower sections hingedly connected at their meeting edges for inward folding movement of the said side walls, the remote edges of the said side wall sections being hingedly connected to the said longitudinal retaining bars in the said frame, the end edges of the said top frame, side walls, and bottom wall being provided with outwardly projecting pins, the end walls having their marginal edges equipped with openings to receive the said pins whereby the end walls may be attached to the said end edges of the other walls, and latch hooks to retain the said end walls in position on the said pins.

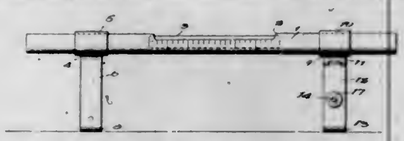


1,502,253. PNEUMATIC PUMP. JOHN L. LATTA, Hickory, N. C. Filed Oct. 13, 1922. Serial No. 594,282. 48 Claims. (Cl. 103—246.)

1. A pneumatic pump comprising a vertical cylinder, a head member therefor comprising upper and lower separable sections, and provided with ports for the inlet and exhaust of motive fluid, and inlet and exhaust valves controlling said ports and carried respectively wholly by said upper and lower sections.

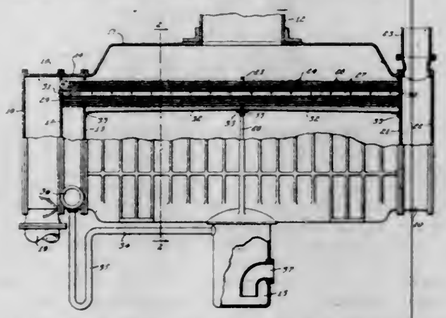
45. A pneumatic pump comprising a vertical cylinder, a check valve at the lower end and a head structure closing the upper end thereof, a liquid discharge pipe carried wholly by said head and extending down into said cylinder, an air admission valve, an air exhaust valve, an exhaust valve operating motor, and a float for controlling said motor, all of said parts being carried and supported entirely by said cylinder head structure and either within the same or wholly inside the cylinder.

1,502,254. PIN CARRIER. DAVID LEGGOTT, Battle Creek, Mich., assignor to The Keyes-Davis Company, Inc., Battle Creek, Mich., a Corporation of Michigan. Filed May 31, 1923. Serial No. 642,576. 1 Claim. (Cl. 40—19.5.)



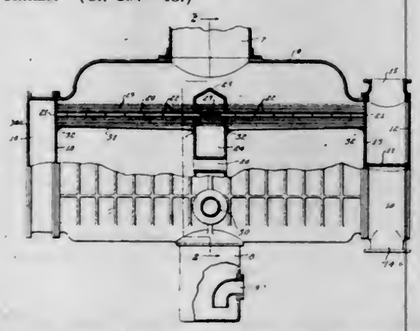
A laundry marking unit comprising, in combination, a plate having openings of different sizes in its marginal portions and a plurality of laundry pins of different sizes, pins of one size being insertable through the openings of one size, the larger pins being insertable through the larger openings and vice versa, the plate and all of the pins having similar identifying indicia.

1,502,255. LEVEL ATTACHMENT. DARIE LEMIEUX, Leeds, N. Dak. Filed June 14, 1922. Serial No. 568,209. 3 Claims. (Cl. 33—207.)



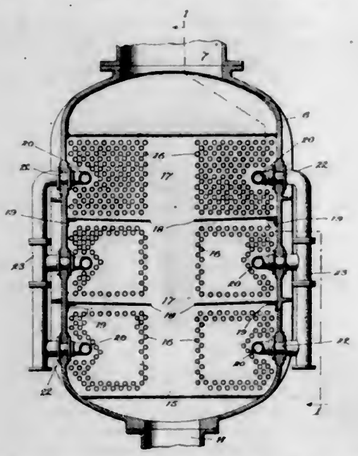
1. A device of the class described including an elongated body member provided with an intermediately dis-

posed cavity, a spirit level in said cavity, a pair of supporting devices one at each end of the body and adjustable longitudinally thereon, each of said supporting



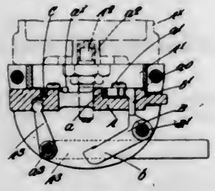
devices being provided with diverging legs and means provided upon one of said supporting devices for adjusting the angle between its diverging legs.

1,502,256. CONDENSER. WILLIAM LONSDALE, Roselle Park, N. J., assignor to Wheeler Condenser & Engineering Company, Carteret, N. J. Filed Oct. 3, 1922. Serial No. 592,174. 9 Claims. (Cl. 257—43.)



1. A surface condenser of the water tube type comprising in combination a shell, water tubes arranged in a plurality of clusters within said shell and spaced therefrom and from each other to permit the entrance of gases and vapors from all sides of the various clusters; a plurality of offtakes for non-condensible gases, said offtakes being surrounded by and positioned centrally among the tubes of corresponding clusters, and having inlet ports at points substantially throughout the length of said water tubes; and a manifold for said offtakes mounted within said condenser shell and arranged to be cooled by said tubes.

1,502,257. CONDENSER. WILLIAM LONSDALE, Roselle Park, N. J., assignor to Wheeler Condenser & Engineering Company, Carteret, N. J. Filed Oct. 3, 1922. Serial No. 592,175. Renewed June 16, 1924. 7 Claims. (Cl. 257—43.)

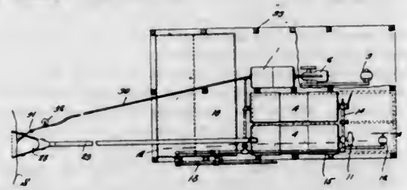


1. The combination with a surface condenser having a shell and a plurality of water tubes mounted therein; of a smaller shell enclosing a vacuum chamber, said smaller shell being mounted in the condenser shell so as to be traversed by and give support to said water tubes at or near the mid-length thereof; a suction connection leading from said vacuum chamber; and vacuum tubes interspersed among said water tubes and serving to conduct air from a plurality of points within the condenser shell to the vacuum chamber.

1,502,258. CONDENSER. WILLIAM LONSDALE, Roselle Park, N. J., assignor to Wheeler Condenser & Engineering Company, Carteret, N. J. Filed Oct. 3, 1922. Serial No. 592,176. 4 Claims. (Cl. 257—43.)

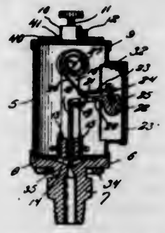
1. In a condenser, the combination of a shell having an exhaust steam inlet; water tubes mounted in said shell and arranged in two main groups spaced apart to provide a substantially vertical steam lane to which said steam inlet leads; condensate deflecting plates extending substantially from the walls of said shell to the margin of said steam lane and serving to divide each main group of water tubes into a plurality of subgroups; conduits for the withdrawal of non-condensible gases mounted among the water tubes of the various subgroups; and vacuum pump connections for said conduits.

1,502,259. PERCUSSIVE FIRING MECHANISM FOR BREECH-LOADING GUNS. OWEN DAVID LUCAS, Bayswater, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Mar. 5, 1923. Serial No. 622,765. 4 Claims. (Cl. 89—27.)



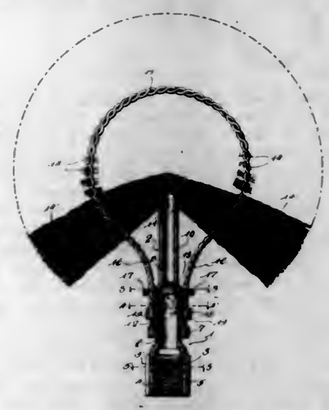
1. Percussive firing mechanism comprising a firing pin, a pivoted hammer adapted when actuated to strike the firing pin, a firing member mounted to slide transversely of the firing pin, a firing spring operatively interposed between the firing member and a part of the pivoted hammer, a sear for normally holding the hammer in its inoperative position, means to actuate the sliding firing member, and means operative during the sliding movement of the firing member to disengage the sear from the hammer to permit the latter to be actuated by said spring.

1,502,260. PREPARATION OF CATALYTIC BODIES. OWEN DAVID LUCAS, Westminster, London, England, assignor to V. L. C. Processes, Limited, Westminster, London, England. Filed Oct. 23, 1923. Serial No. 670,240. 6 Claims. (Cl. 23—28.)



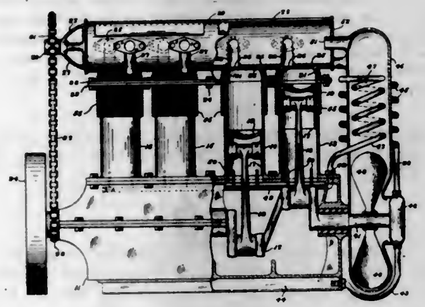
1. A process for the production of a catalytic body of the kind set forth, by reduction of a mixture of a metallic oxide and an organic metal compound, which consists in manufacturing the catalytic body in two distinct stages, in the first of which partial reduction of the metallic oxide is effected by the aid of a carbonaceous reducing agent mixed therewith, whereupon the partially reduced material is ground, mixed with a second portion of reducing agent and heated in the second stage to a higher temperature than in the first stage, so as to sinter but not to melt the reduced metal.

1,502,261. METHOD OF AND APPARATUS FOR TREATING OIL SAND. WILLIAM MCARTHUR, Seattle, Wash. Filed Apr. 27, 1923. Serial No. 635,066. 4 Claims. (Cl. 262—2.)



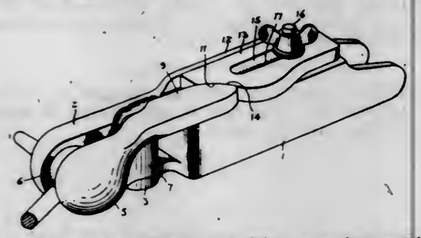
1. The herein described method of treating oil sand which consists in subjecting the same to the action of an oil solvent directed thereagainst under pressure, subsequently agitating the sand and solvent in a container, allowing the mixture to settle, draining the liquid from the mixture, and finally subjecting the sand to the action of a chemical cleansing agent.

1,502,262. OIL CUP. ROBERT HARRY MCCOY, Conda, Idaho, assignor of one-third to Joseph B. Bell, Evanston, Wyo. Filed Apr. 4, 1923. Serial No. 629,771. 3 Claims. (Cl. 184—78.)



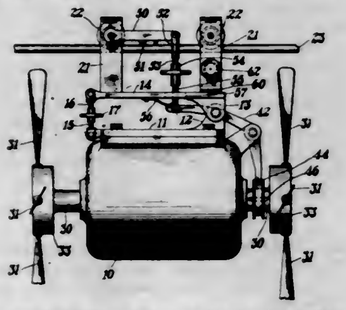
2. An oil cup for attachment to movable members, including an oil receiving casing having an oil outlet, and unit carried means having a supporting member formed with a threaded sleeve for co-operation with a threaded projection in the casing, and a pair of arms extending from said sleeves in spaced parallel relation, a lever pivotally mounted intermediate its ends in and between said arms, carrying a rod at one end thereof formed with a valve at the lower end for co-operation with the oil outlet to close the same and weighted at the opposite end, a winding shaft rotatable transversely between the upper ends of said arms, a hair spring mounted on said shaft having the free end extending and connected to said lever for normally operating the same to close the valve and outlet opening, means for rotating the shaft for adjusting the tension of said hair spring, means for normally holding said shaft in adjusted position, a bifurcated projection on said arm extending outwardly over the weighted end of the lever and an adjustable member mounted in the lever extending through the bifurcation of said projection and co-operating therewith for limiting the movement of the lever and thereby the opening of the valve, for governing the oil outlet of the casing.

1,502,263. FOUNTAIN BRUSH. GEORGE A. MEISNER, Oak Park, Ill. Filed Sept. 6, 1923. Serial No. 661,287. 1 Claim. (Cl. 15—128.)



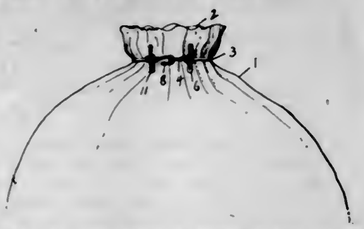
A fountain brush comprising a brush head composed of bristles and a looped twisted wire core constituting a retainer for said bristles, the free ends of said core being extended inwardly beyond said head, a fluid supply nozzle having an elongated distributor disposed for discharging fluid into the center of said head, said nozzle being equipped with substantially diametrically opposed apertured ears, the free ends of said core passing through and inwardly beyond said ears, and a clamping band encircling said nozzle and having diametrically opposed outwardly bent portions forming pockets for reception of the extremities of said free ends.

1,502,264. INTERNAL-COMBUSTION ENGINE. HARRY G. MOORE, Philadelphia, Pa. Filed Dec. 10, 1921. Serial No. 521,490. Renewed June 9, 1924. 5 Claims. (Cl. 123—59.)



2. In an internal combustion engine having a multiplicity of cylinders, an enclosed crank case and a rotary cylindric valve, the combination of a blower casing, a fan in said casing driven by the engine crank shaft, an extension on said casing having an outlet nozzle directed into the aforesaid rotary valve, a ram's-horn manifold from said extension having outlets directed about the cylinder heads whereby said cylinder heads and the rotary valve are cooled, and means for circulating the lubricating oil constantly about the blower casing.

1,502,265. QUICK-RELEASE PITMAN. WILLIAM PATERSON, Toronto, Ontario, Canada, assignor to David Paterson, Lindsay, Ontario, Canada. Filed June 10, 1921. Serial No. 476,627. 1 Claim. (Cl. 287—89.)

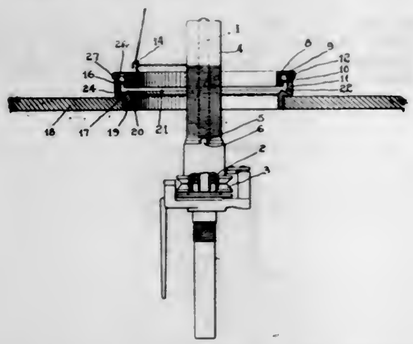


A quick release pitman, comprising, a socket member adapted to receive the pitman and having a ball socket extension, a socket member pivotally secured to the aforesaid member and having a lug extending over the pitman socket, a rib formed on the upper side of the pitman socket, toothed projections formed on the face of the rigid member adjacent to said rib, a cam plate slidably engaging said rib and having a toothed under surface and a curved end surface to engage the projecting lug on the pivotal socket member, said cam plate having a longitudinal slot therein, and a bolt extending through the pitman socket and the slot in the cam plate.

1,502,266. TRAVELING ELECTRIC FAN. STEVEN RADIMAK, New York, N. Y., assignor of one-half to David Schiffer, New York, N. Y. Filed Nov. 4, 1922. Serial No. 599,114. 4 Claims. (Cl. 230—1.)

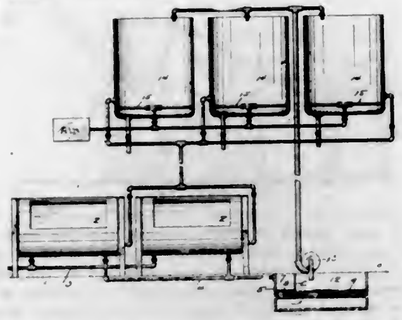
1. In combination, a motor, a fan having helical blades driven by said motor and adapted to propel the latter along a track, a brake for retarding the travel of the motor along the track, and a unitary means for adjusting said brake and varying the pitch of the fan blades.

1,502,267. BAG TIER. FREDERICK H. RASCHER, Arlington Heights, Ill. Filed Mar. 16, 1923. Serial No. 625,668. 1 Claim. (Cl. 24—30.5.)



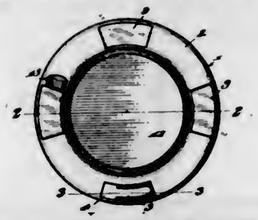
A bag tier comprising a single strand of wire having an eye formed at one end thereof, said wire being given a complete turn at this point around the strand and passed downwardly and upwardly to provide a finger grip adjacent the rear end of the eye, a hook provided at the opposite end of the wire and being doubly reinforced by overlapping the back of the strand upon itself, said strand being given a second complete turn at this point to provide loops on opposite sides thereof which act in the capacity of a finger grip at the rear end of the first mentioned hook.

1,502,268. AUTOMOBILE FENDER BRACE. ALBERT A. RIBLETT, Burkburnett, Tex. Filed Aug. 14, 1923. Serial No. 657,338. 1 Claim. (Cl. 280—152.)



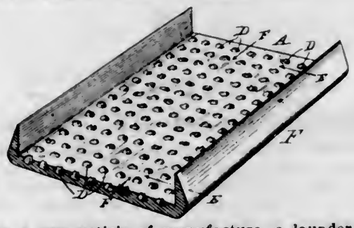
A bracing device for the front fenders of an automobile, said bracing device comprising a horizontally disposed brace structure having its outer end portions provided with fender engaging means, and a pair of depending supporting legs connected with the brace structure and each having its lower free end provided with a depending finger for engaging the front face of a permanent portion of the automobile, the lower end of the supporting legs being further provided with a rearwardly extending arm for resting upon the upper face of the permanent portion of the automobile and terminating in a depending finger for engaging the rear face of the said permanent portion of the automobile.

1,502,269. TRAVELER GUIDE FOR SPINNING, TWISTING, ETC. ELWIN HOLBROOK ROONEY, Providence, R. I. Filed Mar. 23, 1921. Serial No. 454,659. 3 Claims. (Cl. 118—56.)



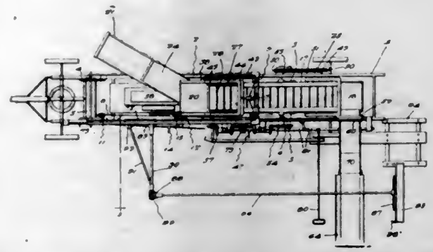
1. A rotary traveler guide adapted for cooperation with a spindle for the spinning or twisting of yarn comprising a supporting and bearing member adapted to be secured to a supporting rail and provided with an annular race-way and formed with an annular grooved shoulder portion underlying the race way and having outlet openings for the drainage of the groove, a rotary guide ring provided with an annular race-way related to the race-way of the supporting member to provide a ball race, rotatable bearing members or balls fitted within the ball race so formed and providing roller bearings for the rotary guide ring and a protective covering extension provided on the guide ring member and positioned to overlie the upper opening of the race-way in close proximity thereto and a thread guide or eyelet carried by the ring, substantially as described.

1,502,270. PROCESS OF RECOVERING LAUNDRY MATERIAL. FRANK L. ROSENAU, San Francisco, Calif. Filed Mar. 16, 1920. Serial No. 366,308. 2 Claims. (Cl. 210—26.)



1. The process of recovering soap, water-softening material and water for re-use in washing operations, which comprises flowing the second suds and subsequent rinses used in washing into a settling tank, treating the mixture to increase the specific gravity of the impurities, whereby the impurities are caused to settle and withdrawing the supernatant liquid for re-use.

1,502,271. PROTECTOR FOR PIPE CONNECTIONS. ERNEST J. SALLENBACH, Joliet, Ill. Filed Sept. 14, 1922. Serial No. 588,207. 2 Claims. (Cl. 137—99.)



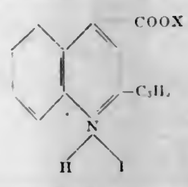
1. The combination with a waste pipe connection, having a laterally extending flange with bolt receiving openings therein, boxes arranged below said openings and having bendable tongues, a disk-like cover having slits for the reception of said tongues which are designed to be bent into clamping engagement with said cover to retain it in operative position.

1,502,272. LAUNDER TROUGH. WILLIAM H. SAYRE, Glen Ridge, N. J.; William Heysham Sayre, William M. Beard, and Elizabeth Bartholomew Sayre, executors of said William H. Sayre, deceased, assignors to American Abrasive Metals Company, a Corporation of New York. Filed Feb. 14, 1920, Serial No. 358,700. Renewed May 17, 1924. 7 Claims. (Cl. 137—75.)

7. As a new article of manufacture, a launder trough section composed of a metal body having a bottom and uprising edge flanges, and a series of inserts of a material harder than the metal of the body embedded in the bottom of the trough.

1,502,273. ELEVATOR. FRED SCHULTZ, Decatur, Ill. Filed July 15, 1922. Serial No. 575,200. 8 Claims. (Cl. 214—44.)

1. An apparatus of the class described comprising a wheeled frame, an elevator mounted therein, a chute for delivering the material into the lower end of the elevator, a reciprocating member for dragging the material from a wagon body into the chute, and means for agitating the material in the chute.

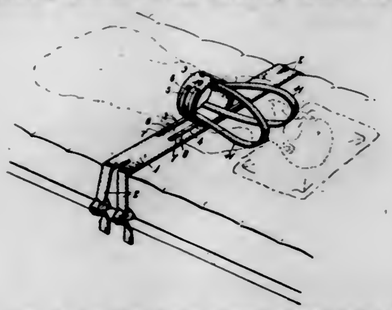


1,502,274. CLOTHESPEG. ROBERT D. SCOTT, Powell River, British Columbia, Canada. Filed June 28, 1923. Serial No. 648,293. 1 Claim. (Cl. 24—137.)

The method of making a clothes peg which consists of striking a single blank having a bar portion at the end of one side of which a pair of prongs extend to define an intervening recess, a tongue extending from the side of the bar at the opposite end between which and the inner of the pair of prongs is defined a further intervening recess equal in width to the pair of prongs, their intervening recess and the tongue.

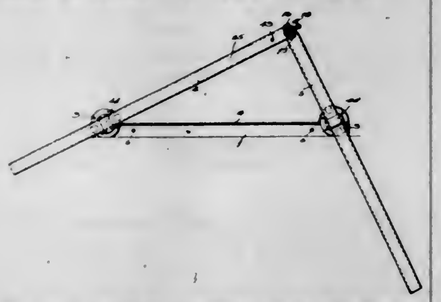
1,502,275. HYDRIODIDE OF THE ESTER OF 2-PHENYL QUINOLINE 4-CARBOXYLIC ACID. HORACE A. SHONLE and ASHER MOMENT, Indianapolis, Ind., assignors to The Eli Lilly & Company, Indianapolis, Ind., a Corporation of Indiana. Filed July 18, 1921. Serial No. 485,639. 3 Claims. (Cl. 260—39.)

1. The hydriodide of an ester of 2-phenyl quinoline 4-carboxylic acid, represented by the following structural formula:



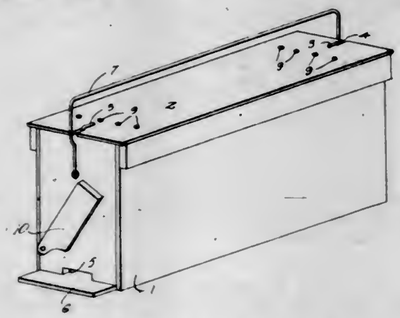
in which X represents any hydrocarbon radicle which combines with 2-phenyl quinoline 4-carboxylic acid to produce an ester thereof.

1,502,276. BABY HARNESS. ANNA G. SIEBERT, Reno, Nev. Filed Feb. 23, 1923. Serial No. 620,760. 2 Claims. (Cl. 128—134.)



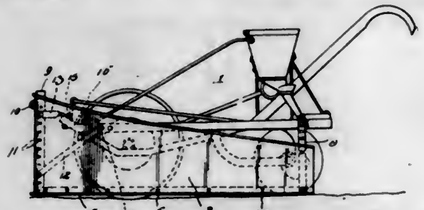
1. In a baby harness, the combination with a fastening band adapted to be secured to a bed, of a flexible body band, and means for connecting said body band to said fastening band to permit a relative movement thereof laterally in either direction, said means comprising a pair of separated rolling tapes adapted to occupy paral-

lel planes, the opposite ends of adjacent tapes being permanently secured to said fastening band, with the



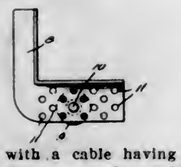
other end of each tape being secured to said body band to permit a substantial lateral movement of said body band relative to said fastening band.

1,502,277. UNIVERSAL CIRCULAR ARC TEMPLATE. THEODORE SPEIDEN, Chicago, Ill. Filed June 29, 1923. Serial No. 648,585. 12 Claims. (Cl. 33—27.)



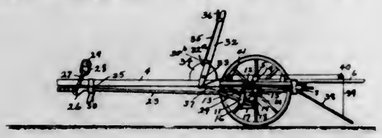
1. An arc template comprising a base member adapted to be secured to a fixed support, legs pivotally and slidably mounted intermediate their ends at the ends of the base member, means for removably locking the ends of the legs to form a predetermined angle, means for pivotally supporting an arc describing element at the vertex of the angle formed by the connected legs, and cooperating means for adjusting the arc describing element through an arc of a circle.

1,502,278. BEE TRAP. WILLIAM L. STEVENS, Elgin, Nebr. Filed Apr. 12, 1923. Serial No. 631,627. 2 Claims. (Cl. 6—7.)



1. A bee trap comprising a box having an entrance for the bees, a cover detachably fitted to the top of the box and adapted to fit a hive and standard size hive frames detachably connected to the cover and held suspended in the box thereby whereby said top and frames may be unitarily moved from the trap and transferred to the hive and the cover thereafter detached from the frames.

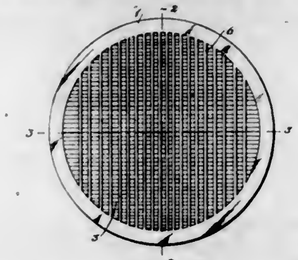
1,502,279. CORN-TURNER ATTACHMENT FOR GRAIN DRILLS. ALONZO L. STEWART, Rushville, Ind. Filed Nov. 1, 1921. Serial No. 512,126. 1 Claim. (Cl. 97—192.)



A corn turner attachment for drills including a U-shaped body formed of sheet material, the free ends of which are directed rearwardly at opposite sides of the drill, a bracket mounted on each free end of the body and adapted for adjustable connection to a portion of a drill, a vertical standard mounted on the forward inner side of the body, upper draw bars adjustably mounted on the upper end portion of the standard and extending rearwardly in a substantially horizontal plane for attachment to the drill, and lower draw bars adjustably mounted at the lower end of the standard and extending upwardly and rearwardly in inclined relation for attachment to the drill, whereby torsional strains on the U-shaped body are distributed through the upper and lower draw bars and the brackets to the drill, the draw bars and brackets cooperating in this distribution of stress, for preventing distortion of the body.

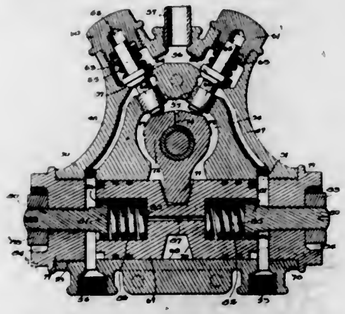
1,502,280. BRACKET. WILLIAM A. TASKER, Vindex, Md. Filed Feb. 13, 1922. Serial No. 536,238. 1 Claim. (Cl. 254—190.)

The combination with a cable having manually controlled means secured to one end and its opposite end associated with an actuated means, of a fixed integrally constructed angle shaped bracket including securing plates formed on each angle portion, a pair of spaced outwardly extending flattened members arranged on the plates and following the angle thereof, a guiding pulley adjustably associated with a portion of the members through the medium of a plurality of aligned openings staggeredly arranged thereon and the said pulley receiving the cable therein in a manner whereby the ends thereof are angularly disposed with respect to each other.



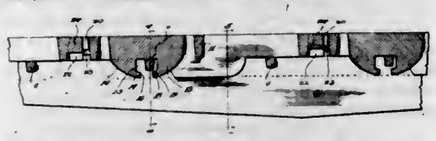
1,502,281. DRAWN VEHICLE. GEORGE TURNER, Union Township, Crawford County, Pa. Filed Aug. 11, 1919. Serial No. 316,786. 1 Claim. (Cl. 188—117.)

In a drawn vehicle, the combination of an axle; wheels on the axle; a draft and guiding bar extending from the axle; a frame on the axle; a brake comprising a beam mounted on the frame operating on said wheels; vertical levers mounted on the axle; links extending from one end of the levers to the brake; a hold-back device carried by the draft and guiding bar; a connection between the hold-back device and the opposite ends of said levers; a hand lever mounted on the guiding bar; means for locking the lever; a connection between the lever and



the hold-back device for locking out the bracket; a hold-back strut; a connection between the hold-back strut and the hand lever whereby when the brake is locked out the strut is locked out.

1,502,282. SCREEN FOR AUTOMOBILE HEADLIGHTS. ORAS T. UMBENHOWER, Garrett, Ind. Filed Feb. 8, 1923. Serial No. 617,817. 3 Claims. (Cl. 240—48.4.)

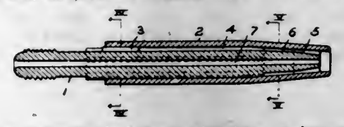


1. A screen device for headlights comprising a lens, a series of parallel faced integral panels extending vertically from the inner face of the lens, said panels reflecting rays of light impinging thereon but preventing their passage therethrough.

1,502,283. LOCOMOTIVE DRIFTING VALVE. EUGENE B. WHELAN, Omaha, Nebr. Filed Apr. 27, 1923. Serial No. 635,153. 5 Claims. (Cl. 121—137.)

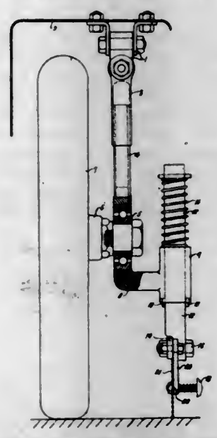
4. A saturated steam supply valve having a steam intake chamber and spaced steam outlet channels, valve members normally controlling communication between said chamber and said channels, a lengthwise shiftable pressure actuated piston whose ends are exposed within said channels, and a cam-oscillatable by movements of said piston and having means to unseat one of said valve members upon oscillation thereof in either direction.

1,502,284. SECTIONAL GRATE BAR. JAMES S. WILSON, Scranton, Pa. Filed Oct. 17, 1922. Serial No. 595,102. 7 Claims. (Cl. 126—179.)



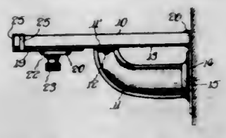
7. In a stationary grate, in combination, a bearing bar, a plurality of grate sections disposed thereon, coacting locking means upon the bearing bar and one end portion of each section for preventing upward displacement of the said end of the section, means on the sections to prevent upward displacement of the ends thereof remote from said coacting locking means, and means on the ends of the sections to maintain them in spaced relation and permit limited endwise movement thereof whereby each section may be removed independently of all the other sections.

1,502,285. METHOD OF PRECIPITATING AN INSOLUBLE SULPHIDE FROM A SOLUBLE SULPHOSALT. NORMAN R. WILSON, Belleville, N. J., assignor to David A. Shirk, Glen Ridge, N. J. Filed July 19, 1921. Serial No. 485,922. 15 Claims. (Cl. 23—13.)



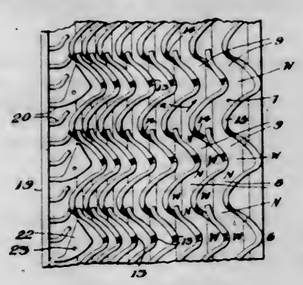
1. The process that comprises treating a solid water-soluble sulpho-salt with an acid capable of decomposing the said salt and precipitating a sulphide therefrom.

1,502,286. GAS BURNER. JAMES B. ANDERSON, Shaler Township, Allegheny County, Pa. Filed Aug. 18, 1923. Serial No. 658,026. 3 Claims. (Cl. 158—27.4.)



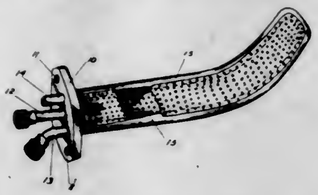
1. In a blow-torch burner structure a burner body provided with an oxygen passageway and with a plurality of gas passageways concentrically arranged about the axis of the said oxygen passageway and converging toward their exit, the said gas passageways individually flaring to their exit.

1,502,287. SPLASH PREVENTER. CHARLES ANDERSON, New York, N. Y. Filed Feb. 29, 1924. Serial No. 695,988. 1 Claim. (Cl. 280—156.)



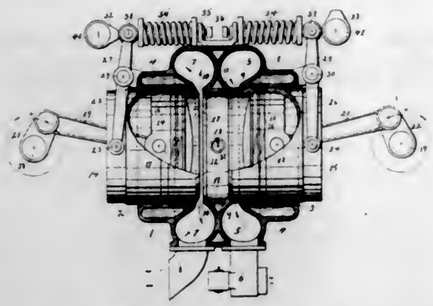
In a splash preventing device for motor vehicles in combination with a hub member, a support attached to said hub member, a socket sustained by said support, said socket having spaced featherways separated by notched stoppers, a rod having feathers engaging said socket, a spring acting on said rod and serving normally to maintain said feathers in engagement with said stoppers, a splash guard proper adjustably carried on said rod, resilient pads fitted to said guard, said pads so disposed relatively to the axis of the rod that, when the pads engage an obstacle, the rod is rocked on its axis to cause the feathers to vacate the notches in the stoppers and to enter featherways in said socket permitting the spring to force the rod and therewith the guard to move upwardly clear of the obstacle.

1,502,288. SHELF SUPPORT. JAMES H. BOYE, Chicago, Ill. Filed Sept. 16, 1922. Serial No. 588,602. 5 Claims. (Cl. 248—19.)



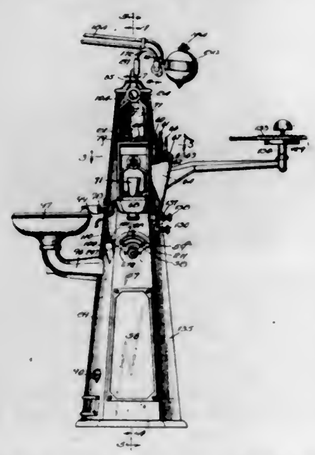
1. A shelf-supporting bracket comprising, in combination, a flat horizontal plate on which the shelf rests, supporting means for said plate adapted for attachment to a wall, and an arm attached to said plate with capacity for both endwise adjustment and angular adjustment in a horizontal plane, said arm having at its forward end a pair of upstanding hooks adapted to engage respectively with the front and a side edge of the shelf adjacent to a corner of the latter.

1,502,289. FLUID-JET MOTOR. ORAM A. BOYER, Chester, Pa. Filed Feb. 28, 1923. Serial No. 621,850. 8 Claims. (Cl. 253—65.)



1. A direct action fluid jet motor including a cylinder, a rotor revoluble therein and provided with a plurality of circumferentially extending endless steam channels of sinuous form with each channel providing a communicating series of obliquely extending chamber portions, alternate chamber portions extending in opposite directions, said chamber portions tapering smaller in the direction of rotation of the rotor certain of said chamber portions of each of said channels being in communication with the chamber portions of the next succeeding channel

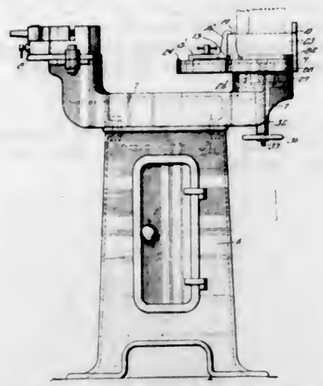
1,502,290. OIL-STRAINER HEATER. CLYDE W. COLEMAN, Lincoln, Nebr. Filed Feb. 19, 1924. Serial No. 693,944. 4 Claims. (Cl. 123—196.)



1. A combined heater and oil strainer which is adapted to be used on the crank case of an internal combustion engine, said combined heater and oil strainer comprising an elongated strainer, a tubular coil within said strainer, said coil being provided with intake and outlet ends positioned outside said strainer, and a tubular by-pass which is adapted to be connected with the exhaust of the engine and with the intake end of the said coil.

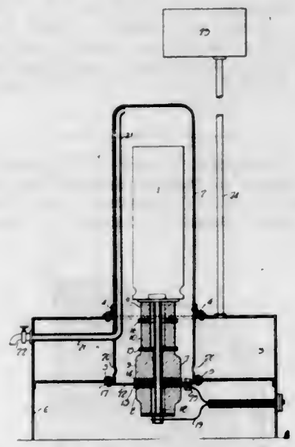
1,502,291. VALVE FOR MOTORS. GEORGE E. CONWAY, Tenafly, N. J. Filed Sept. 7, 1920. Serial No. 408,411. 3 Claims. (Cl. 123—51.)

1. A casing having a continuous bore therethrough, with a partition and annular inlet and exhaust passages and annular inlet and exhaust ports communicating therewith, the opposite faces of said partition serving as valve seats, reciprocatory valves one upon each side of said partition and controlling said ports respectively and fitted to said bore, a reciprocatory piston in each of said valves, and means for actuating said valves independently for controlling the inlet and exhaust through said ports for both pistons.



1,502,292. DENTAL APPLIANCE. ROBERT G. CRANE, Chicago, Ill., assignor to A. C. Clark & Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1921. Serial No. 485,167. 43 Claims. (Cl. 32—5.)

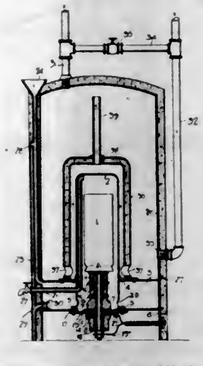
1. In a dental unit, the combination with a hollow pedestal extending vertically upward from the bottom thereof, of a spittoon bowl at one side thereof, a hollow bracket from the pedestal to the bowl, a motor mounted on the top of the pedestal, an arm extending from the pedestal on the side opposite the bowl, a Bunsen burner at the end of the arm, and valves carried by the pedestal for controlling the water supply to the bowl and gas to the Bunsen burner.



1,502,293. MOTOR STAND. FRANK DANIELSON, Chicago, Ill. Filed June 17, 1920. Serial No. 389,655. 14 Claims. (Cl. 29—89.)

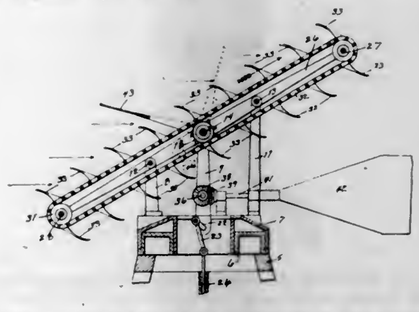
13. A device of the character described comprising a bed, projections on said bed for supporting an engine cylinder block thereon, and a member for clamping said cylinder block on said bed comprising a body portion and a

holding jaw having cylinder block engaging faces extending substantially at right angles to each other.



1,502,294. METHOD OF REGULATION OF HEAT GENERATED BY ELECTRICITY. LOUIS G. DE KERMOR, Edmonton, Alberta, Canada, assignor to De Kermor Electric Heating Company Limited, Edmonton, Province of Alberta, Canada. Filed Dec. 2, 1921. Serial No. 519,425. 2 Claims. (Cl. 219—40.)

1. In an electrical heater of the type described, a casing closed at the top, a second casing enclosing the first casing positioned at the lower end thereof, means to establish communication between said casings, means to completely fill the said casings, means to take up the expansion displacement in said casings, means to completely remove the air at the top of the first casing, and means to insulatingly support an electrode in said first casing.

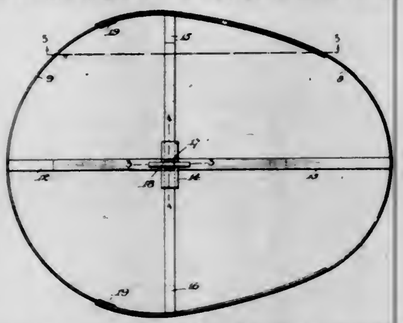


1,502,295. SELF-REGULATING WATER HEATER. LOUIS G. DE KERMOR, Edmonton, Alberta, Canada, assignor to De Kermor Electric Heating Company, Limited, Edmonton, Province of Alberta, Canada. Filed Dec. 2, 1921. Serial No. 519,427. 2 Claims. (Cl. 219—40.)

1. In a self-regulating water heater, a casing closed at the bottom, a water heating casing of smaller capacity mounted therein, a supplementary tank forming part of the main casing positioned above the closed bottom thereof, communication ports between said supplementary tank and the water heating casing, an electrode support mounted through the bottom of the supplementary tank

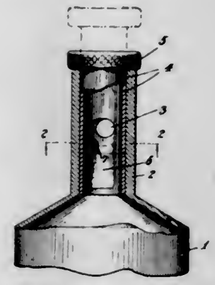
and insulated therefrom, means to fill the tank with water, and means inside of the water heating casing to completely remove the air therefrom.

1,502,296. FLUID-CURRENT MOTOR. JAMES S. DOAK, Glenn, Calif. Filed May 2, 1923. Serial No. 636,191. 2 Claims. (Cl. 170—6.)



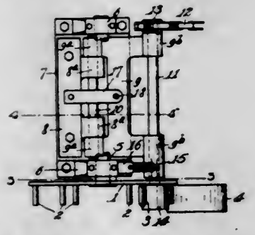
1. In a device of the character described, a support, a turn-table mounted on said support, a plurality of upwardly extending supports mounted on said turn-table, said last mentioned supports being of varying length, a spreader extending between said supports and extending beyond the same, pulleys carried upon the ends of said spreader, chains passing over said pulleys, a plurality of impellers secured to said chain, means for imparting motion from said chains to a remote point, a shaft positioned between said chains, a freely rotatable sprocket mounted on said shaft, a controlling vane rotatable on said shaft and secured to said sprocket, a vane secured to said turn-table and adapted to normally maintain said impellers toward the direction of travel of the wind, a second vane positioned at right angles to said first mentioned vane and adapted to normally have its edge presented toward the direction of travel of the wind, gears connecting said vanes so as to produce simultaneous rotation of said vanes, a sprocket connected to one of said vanes and a chain extending between said freely rotatable sprocket and said last mentioned sprocket for the purpose specified.

1,502,297. HAT TREE. GEORGE E. DOUGHTY, New York, N. Y. Filed Jan. 17, 1922. Serial No. 529,870. 6 Claims. (Cl. 223—33.)



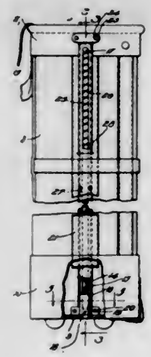
1. A device of the character described, comprising an endless band formed of a pair of opposed flexible, arched members, the open end of one member engaging within the open end of the other member, means for preventing separation of the members, said means permitting

movement of the members toward and away from each other, a frame comprising two elements crossing each other at right angles and resting one upon the other, the



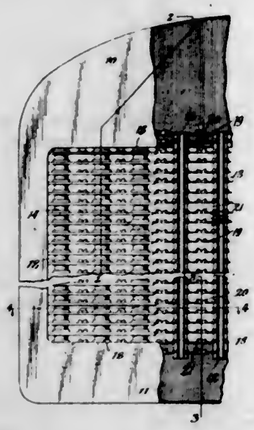
ends of the elements being secured to the band, means for varying the lengths of the elements, and means engaging the elements one with the other for securing the same together.

1,502,298. MEASURING DEVICE FOR COLLAPSIBLE TUBES. FRANK L. DYER, Montclair, N. J. Filed Sept. 28, 1921. Serial No. 503,718. 9 Claims. (Cl. 221—60.)



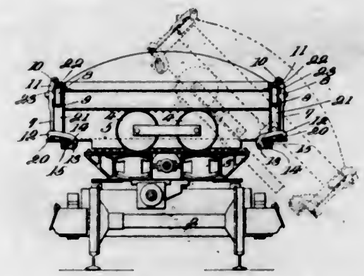
1. A collapsible tube formed with an integral tubular body having a discharge opening therein, means for uncovering and closing said opening including a plunger movable slidably and rotatably with respect to said tubular body, whereby material forced from the tube by collapsing the latter will move the plunger outwards and a reverse movement of the plunger will eject a measured quantity of material through said opening, substantially as set forth.

1,502,299. DEVICE FOR REMOVING DEFORMITIES IN COLLAPSIBLE METAL TUBES. ALONZO L. EDWARDS, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Aug. 4, 1922. Serial No. 579,605. 2 Claims. (Cl. 153—32.)



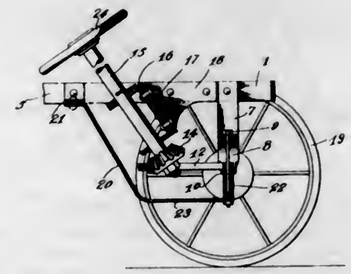
1. In a collapsible-tube coating mechanism, the combination with a base, supports carried by said base, a shaft journaled on said supports, and a carrier-disk carried by an end of said shaft, said disk having tube-carrying spindles on a face thereof, of shaft-bearings having hinged connection with said base, a shaft journaled in said bearings, a roller carried by said shaft, and yielding means normally supporting said bearings in a position in which a portion of the periphery of said roller is presented in the path of travel of tubes borne by said spindles.

1,502,300. GOLF BAG. WALTER H. FAIRCHILD, Chicago, Ill. Filed July 11, 1922. Serial No. 574,280. 4 Claims. (Cl. 150—1.5.)



1. The combination with a golf bag, of a stake movably mounted thereon and adapted to extend beyond the bottom of the bag and into the ground to hold the bag in an upright position, and means for positively locking the stake in its extended and operative position, both when it is in and out of the ground.

1,502,301. RADIATOR. JOHN M. FEDDERS, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Sept. 6, 1922. Serial No. 586,520. 1 Claim. (Cl. 257—129.)



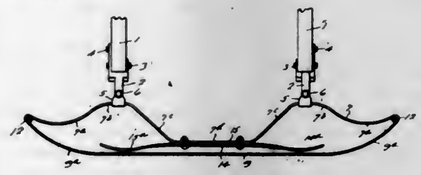
A radiator comprising a plurality of tubes, and radiating fins having a plurality of tube openings in which said tubes are fitted and a plurality of air openings between said tube openings, each of which is of almond shape with the major axis arranged fore and aft of the radiator, and a flange arranged around each of said air openings and consisting of the metal displaced from the fin by the formation of said air opening and having an irregular edge.

1,502,302. DUMP CAR. HENRY FORT FLOWERS, Findlay, Ohio. Filed June 2, 1923. Serial No. 643,110. 8 Claims. (Cl. 105—276.)

7. In a dump car, a body portion having a floor and ends and side doors, swinging brackets pivotally mounted on said body portion at points adjacent the floor of the body portion, said brackets being adapted to extend upwardly to a position above the side doors when said side doors are raised and closed, locking means for holding said brackets in raised position, brackets rigidly secured to the door and hinged to said swinging brackets at their upper ends whereby said side doors may swing about said brackets when in raised position, and means for rigidly holding said brackets and said side doors when in lowered position.

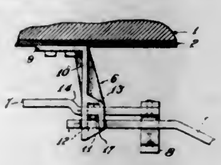
1,502,303. STEERING DEVICE FOR PEDACYCLES. JOHN S. GANKE, Wilmington, Del. Filed June 5, 1923. Serial No. 643,539. 6 Claims. (Cl. 208—114.)

1. A steering device including a frame; an axle pivoted to the frame; a gear rack fixed to the axle; a bracket fixed to the frame and having an inclined part; bearings fixed to the inclined part; a steering post journaled in the bearings, and a gear carried by the post and meshing with the gear rack.



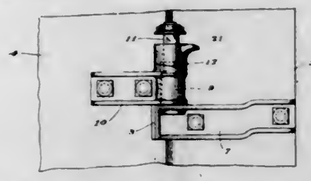
1,502,304. ART STAND LAMP. JOHN T. GAINES, Indianapolis, Ind. Filed June 12, 1922. Serial No. 567,791. 4 Claims. (Cl. 240—81.)

1. An art stand lamp including a base, a tapered column upon the base, a cap secured to the top of the column, a hollow stem secured to the cap, a hollow head secured to the stem to support a lamp, a tube extending through the base and the column and also into the stem



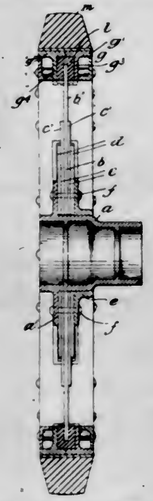
and nearly to the top of the stem, and rods arranged in the column and extending into the base and also upward nearly to the cap.

1,502,305. BUMPER. CHRISTIAN GIRL, Kalamazoo, and JOHN G. UTZ, Detroit, Mich., assignors, by direct and mesne assignments, to the C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 28, 1921. Serial No. 503,941. 18 Claims. (Cl. 293—55.)



2. In a bumper, the combination of an impact section comprising a plurality of spaced yieldable members and a rear yieldable member having a portion spaced rearwardly from such members, and yieldable means carried by such portion of the said rear member and positioned to engage the corresponding portions of the front members as the latter are deflected rearwardly.

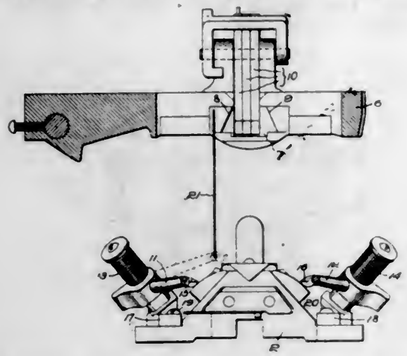
1,502,306. RELEASE RIGGING. THEODORE H. GOODNOW, Oak Park, and WILLIAM S. SCHROEDER, Chicago, Ill. Filed July 21, 1920. Serial No. 397,841. 12 Claims. (Cl. 213—164.)



1. In a release rigging, the combination with the hand and pin levers of a lever bracket adapted to be secured to the car, the adjacent ends of said levers passing through the bracket and fulcrumed thereon, and means upon each lever co-acting with the bracket for limiting longitudinal movement of the levers.

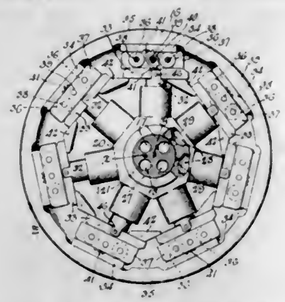
1,502,307. DOORSTOP FOR END-DOOR AUTOMOBILE FREIGHT CARS. CHARLES HARTER, St. Louis, Mo. Filed Oct. 3, 1921. Serial No. 504,865. 2 Claims. (Cl. 16—144.)

1. A door stop for end door automobile freight cars comprising hinge members on the door and door frame positioned in different horizontal planes rotatable on a hinge pin carried by one member in line with the door hinges, and a member on the door frame hinge member adapted to be engaged by the door and limit its outward movement, and means upon the hinge pin for engaging the door hinge member in its outermost position to lock the door to the door frame member when the door engages that member, said means comprising a sleeve vertically and non-rotatably mounted on the hinge pin having a shoulder thereon and a stationary shoulder on the door frame member adapted to be engaged thereby in the open position of the door to prevent the closing of the door.



1,502,308. STEEL WHEEL. EDWARD R. HEWITT, Midvale, N. J., and AUGUST H. LEIPERT, College Point, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 4, 1923. Serial No. 610,546. 7 Claims. (Cl. 152—28.)

1. A wheel having a web built up to a plurality of juxtaposed metal sections secured together and to the hub, one of the sections extending out to the felly and the other sections being of less diameter and resilient non-metallic connecting means interposed between said first mentioned section and the felloe.

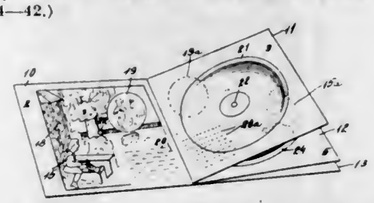


1,502,309. PICKER MOUNTING FOR CIRCULAR-KNITTING MACHINES. FRANK E. JONES, Pawtucket, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Jan. 18, 1922. Serial No. 530,047. 7 Claims. (Cl. 66—124.)

1. In a small diameter, latch needle, circular, hosiery, knitting machine having a needle cylinder and a cam carrier the diameter of the former of which does not exceed substantially two and a quarter inches, a cam block on said cam carrier having knitting cams and a pair of narrowing pickers at opposite sides of said knitting cams, and subsidiary supporting blocks carrying said narrowing pickers for the purpose set forth, a latch

ring having a throat with bevelled edges, one or more movable yarn guides adapted to be positioned in said throat opening, the blocks for the narrowing pickers being supported in such relative position to the opening in the latch ring that each narrowing picker functions to elevate needles to the inactive level before such needles can enter the throat of the latch ring.

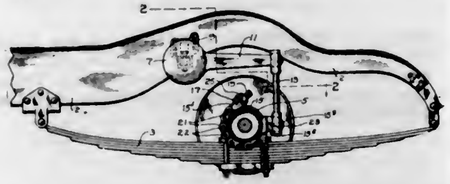
1,502,310. PUMP OR MOTOR. WILLIAM E. MAGIE, Beloit, and WALTER FERRIS, Milwaukee, Wis., assignors to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Mar. 25, 1918, Serial No. 224,503. Divided and this application filed Nov. 14, 1923. Serial No. 674,640. 20 Claims. (Cl. 103—161.)



1. In a pump or motor the combination of a pintle, a radial series of piston and cylinder assemblies grouped about said pintle, a reaction member, and separate load transmitting means between said member and each of said assemblies producing a thrust upon the associated assembly substantially coincident with the axis of reciprocation thereof and thereby substantially eliminating side thrusts between the piston and cylinder of each assembly, said means comprising a reaction face on said member extending substantially normal to the axis of reciprocation of each assembly, a crosshead connected with each assembly and reciprocable substantially parallel to the associated reaction face, a set of roller elements between each crosshead and face freely movable with respect to and upon said face and crosshead during reciprocation thereof, each element of a set producing a thrust on the associated crosshead in a direction parallel to the axis of reciprocation of the associated assembly, a positioning cage for each set of elements freely movable therewith, and means for controlling the movement of said cage.

20. In a pump or motor the combination of a cylinder barrel having a radial series of cylinder bores and a central bore communicating therewith, a piston reciprocable in each cylinder bore, a crosshead associated with each piston, a reaction member, and a separate set of load transmitting roller elements between said member and crosshead operable to prevent relative rotation between said cylinder barrel and reaction member.

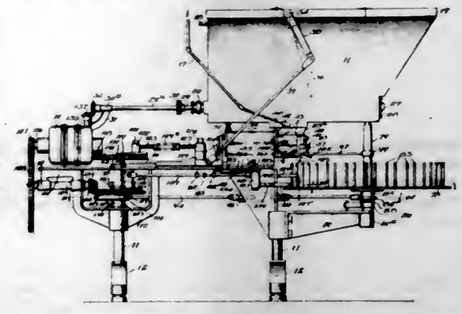
1,502,311. PROCESS OF TREATING LUMBER. WILLIAM H. MASON, Laurel, Miss. Filed Dec. 17, 1920. Serial No. 431,474. 8 Claims. (Cl. 99—12.)



8. In the process of preserving resinous sawn lumber and producing by-products therefrom, the steps which include subjecting the lumber to heat and moisture, passing the hot softened lumber through pressure rolls whereby it is compressed to substantially less than its original thickness, subjecting it to heat and moisture whereby it is permitted to expand to substantially its original thickness, drying the expanded lumber, and collecting and saving the resinous matter separated from the lumber in the various steps of treatment.

1,502,312. MOUNTING MEANS FOR PHONOGRAPH RECORDS. RALPH MAYHEW, New York, N. Y. Filed May 3, 1917. Serial No. 166,080. 3 Claims. (Cl. 274—42.)

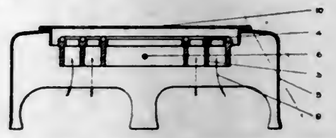
1. An article comprising folding leaves or sections having one or more of the same provided with a sound record disk, each leaf being provided with a perforation registering with the perforation in the sound record disk and with each other.



1,502,313. SHOCK-ABSORBER AXLE BRACKET. CHARLES W. MEGGENHOFEN, Indianapolis, Ind., assignor to Robert H. Hassler, Indianapolis, Ind. Filed Oct. 16, 1922. Serial No. 594,951. 6 Claims. (Cl. 267—9.)

1. An axle-attaching means for shock absorbers comprising a bracket, said bracket having a base portion adapted to partially encircle the axle, a flexible axle-clamping member adjustably attached to said base portion, and means for tightening said clamping member for holding said base portion in rigid contact with the axle.

1,502,314. ICE-CREAM-PACKAGING MACHINE. JULIUS JOHN MOJONNIER and HARLEY RAY PHILLIPS, Oak Park, and HENRI B. WARREN, deceased, late of Oak Park, Ill., by Lewis W. Warren, administrator, Oak Park, Ill., assignors to Mojonnier Bros. Co., Chicago, Ill., a Corporation of Illinois. Filed July 13, 1922. Serial No. 574,642. 29 Claims. (Cl. 226—100.)



13. In apparatus of the class described, means whereby a carton may be supported and advanced to a definite position, flap controlling means for bending and holding a flap of the carton against a wall of the carton body as the carton is being advanced to said position, and auxiliary means for bearing against the same carton wall to prevent its bulging due to lateral pressure resulting from the placing of material in the carton.

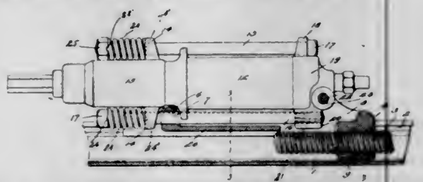
17. In apparatus of the class described, the combination of a hopper, partitions dividing said hopper into compartments, said compartments having openings in their bottoms side by side, cooperating valves arranged side by side beneath said openings in position to deliver simultaneously into a single carton therebeneath, one valve being provided for each opening, similarly arranged fixed cylinders cooperating each with one of said valves, pistons reciprocable in said cylinders, said valves in one position providing communication between said compartments and cylinders and in another position between said cylinders and outlet ports above said carton, and means for simultaneously operating said valves to move them alternately into said positions.

20. In apparatus of the class described, the combination of means for advancing containers in a substantially horizontal direction to a filling point, substantially horizontal cylinders and cooperating pistons positioned above said advancing means and serving as measuring units, cooperating rotary valve means outside of said cylinders extending horizontally in the same direction as said cylinders and serving to guide the substance under distribution to and from the same, and means for operating said advancing means, pistons and valve means in definite relation to each other.

1,502,315. ELECTRICAL HEATING UTENSIL. FREDERIK JOHAN MÖLLER, Copenhagen, Denmark. Filed Mar. 20, 1922. Serial No. 545,194. 2 Claims. (Cl. 219—37.)

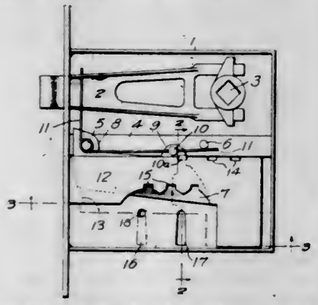
1. In an electric heater, a supporting structure for cooking utensils having a vertical opening therethrough to permit the passage of air, and a plurality of electrical heating elements supported in said supporting structure below the upper surface thereof and spaced one from the other whereby to permit of the passage of air therethrough.

1,502,316. GARMENT FASTENER. CHARLES A. MOSGROVE, Watertown, Conn., assignor to The Autoyre Company, Inc., a Corporation of Connecticut. Filed Feb. 6, 1924. Serial No. 690,918. 4 Claims. (Cl. 24—197.)



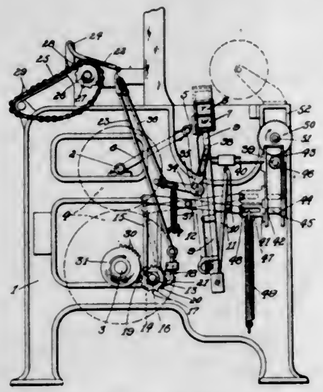
4. A garment fastener or strap comprising the combination of a slide buckle consisting of a strap loop, a button-receiving loop, and a pair of cross bars formed

integrally with the loops and lying between them, each cross bar in turn comprising a pair of opposed loops of unequal length having their proximate ends in spaced relation, the sides of the loops being spaced apart a



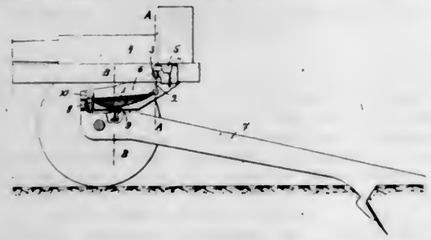
substantial distance and the positions of the loops in the two cross bars being in reversed relation, and a strap terminating in an open loop passed through the strap loop, to one side of one cross bar and around the other to enclose the latter.

1,502,317. DRILL MOUNTING. GUSTAVE M. NELL, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Filed Jan. 8, 1923. Serial No. 611,291. 2 Claims. (Cl. 255—41.)



2. The combination with a drill having side rods provided with threaded ends and adapted to be applied to the drill from opposite directions to locate the threaded end of the rods, respectively, adjacent the front and rear ends of the drill, of a guide shell, a slide frame slidable thereon and having a head, said drill having a lug for alinement with said head, one of said side rods being engaged in the head and having its threaded end engaged in the lug.

1,502,318. LOCK. GEORGE RACONOVICH, Sacramento, Calif., assignor of fifteen per cent to O. G. Hopkins, Sacramento, Calif. Filed June 20, 1921. Serial No. 478,819. 1 Claim. (Cl. 70—75.)

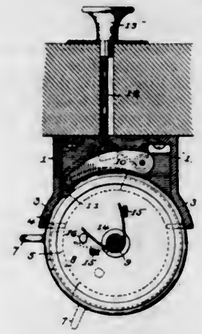


In a lock, a casing having oppositely placed key-holes, a slidable bolt, said bolt having a series of three equally spaced notches on its under side and adapted to be engaged by a key inserted through either keyhole, the keyhole in one side of the casing being offset with respect to that on the opposite side, said notched portion of the tumbler being so arranged with respect to said keyholes that when inserted through one keyhole it is adapted to engage two of said notches in succession, and when inserted through the other to engage only one of said notches, thereby throwing the bolt a greater distance when locked from one side of the door than when locked from the opposite side, the said bolt having a guard portion adapted to cover an exterior keyhole when the bolt is moved to its extreme locking position, the bolt having also notches on its upper face, three in number, a tumbler having a lug adapted to engage one of said notches in each of the three positions of the bolt, a pin carried by the tumbler, a pin fixed above the tumbler, and a spring secured at one end and passing through the tumbler pin and having its free end resting under the fixed pin.

1,502,319. WEFT-REPLENISHING LOOM. WILLIAM H. RANKIN, Waltham, and HENRY R. MARSH, Canton, Mass., assignors to Randolph Crompton, Worcester, Mass. Filed Sept. 21, 1920. Serial No. 411,788. 9 Claims. (Cl. 139—232.)

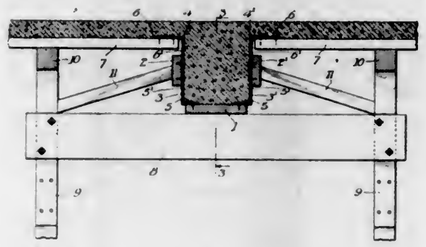
1. In a loom, the combination with a lay provided with shifting shuttle-boxes, a set of shuttles having filling-carriers with different kinds of filling, and a filling-feeder holding a plurality of filling-carriers with different kinds of filling, of means dependent upon each shifting of said shuttle boxes for turning said filling-feeder successively in the same direcetion of rotation, whereby the said feeder is always in position for the transfer therefrom of a filling-carrier having filling corresponding with that in the active shuttle.

1,502,320. EQUILIBRATING DEVICE. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges & Acieries de la Marine & d'Homecourt, Paris, France. Filed Aug. 14, 1923. Serial No. 657,446. 4 Claims. (Cl. 89—37.)



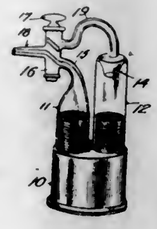
1. Piece of ordnance comprising a carriage, a cradle, a barrel placed in this crade, trunnions placed upon this cradle at the rear of the center of gravity of the whole constituting the gun-cradle, a support for these trunnions upon the said carriage, and a leaf spring maintained upon the carriage at one of its ends and connected at the other end with the cradle in order to maintain the balance of the whole about the trunnions.

1,502,321. BEARING METAL ALLOY. KARL MÜLLER and WILHELM SANDER, Essen, Germany. Filed Aug. 29, 1921. Serial No. 496,632. 3 Claims. (Cl. 75—1.)



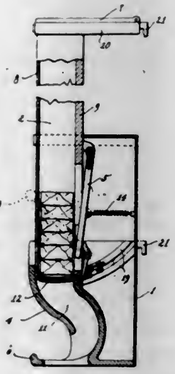
1. A bearing metal alloy comprising approximately eighty per cent of lead, the balance including antimony and tin in amounts not less than ten per cent and five per cent respectively, and approximately 0.5 per cent of phosphorus.

1,502,322. MILK-BOTTLE HOLDER. JAMES G. WELCH, North Chicago, Ill., assignor to Welch Brothers Company, North Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1923. Serial No. 668,067. 8 Claims. (Cl. 232—41.)



1. In a bottle holder, the combination of a fixed open front shell having a closed top web and bottom web formed with a receiving recess at front, a semi-rotary member pivoted to the top web of the aforesaid fixed shell and having a depending semi-circular wall carrying at its lower end an inturned flange, and means within said fixed shell for locking the semi-rotary member in a bottle engaging condition.

1,502,323. ADJUSTABLE MOLD FORM FOR CONCRETE BEAMS. ALBERT H. ACHER, Lake Forest, Ill. Filed Aug. 20, 1923. Serial No. 658,347. 2 Claims. (Cl. 25—131.5.)

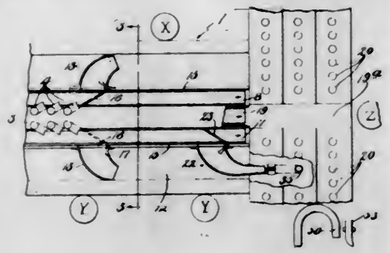


1. A mold form for casting concrete floor beams comprising bottom and side boards, and two sets of angle bars, flanges of all of which are adapted to be secured to the side boards of the mold form and to define the sides thereof, the other flanges of said sets of angle bars, respectively, being adapted to be secured to the bottom board of the mold form and to extend over and be secured to the decking on which the floor is to be laid.

1,502,324. APPARATUS FOR USE IN SAMPLING GAS FOR ANALYSIS. CAMERON VERNON BAILEY, New York, N. Y. Filed Aug. 20, 1921. Serial No. 493,941. 5 Claims. (Cl. 23—3.)

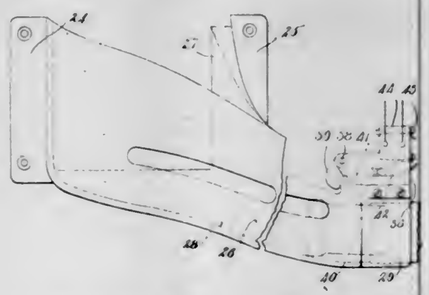
1. In an apparatus for collecting and drawing off samples of gas for analyzing or other purposes, a gas container and a reservoir communicating with each other, said reservoir having a mouth and being open to the atmosphere at one end thereof, and the gas container terminating at one end in a capillary tube, in combination with a socket having a nozzle, and means controlling communication between said nozzle and capillary tube and means to deliver from said control means to said mouth of the reservoir.

1,502,325. SANDWICH DISPENSER. GRANT ABNER BANNISTER, Bridgeport, Conn., assignor of one-half to Mary Emma Dentler, Bridgeport, Conn. Filed Feb. 20, 1922. Serial No. 537,725. 9 Claims. (Cl. 211—8.)



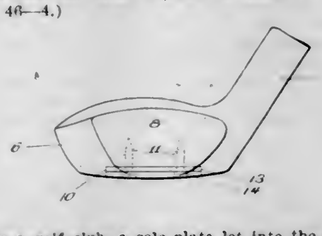
1. In a machine for dispensing compressible units, a magazine for receiving a supply of said units, suitable mechanism incorporated in said machine for dispensing one unit at a time, a member provided with a surface adapted to engage two or more units above the unit to be dispensed, said member arranged to be moved to engage the units and to slightly press them against another part of said machine to hold them and the units thereabove within said magazine while the one unit is being dispensed.

1,502,326. CARRIER DISPATCH SYSTEM. JOHN A. BAUER, Boston, Mass., assignor to The Lamson Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1922. Serial No. 580,883. 19 Claims. (Cl. 243—1.)



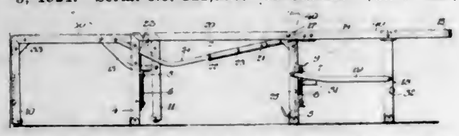
1. A carrier dispatch system comprising a central station having a bank of delivery terminals and an operator's station, means for causing all carriers discharged

from said terminals to move along a predetermined path past the operator's station, and means for conveying all carriers not previously removed from said path at said



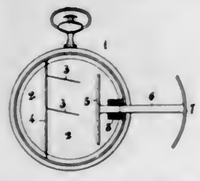
operator's station and irrespective of their respective points of origin from said path to a point remote from said station.

1,502,327. SIGNAL-ACTUATING DEVICE FOR DISPATCH SYSTEMS. JOHN A. BAUER, Boston, Mass., assignor to The Lamson Company, Syracuse, N. Y., a corporation. Original application filed Aug. 10, 1922, Serial No. 580,883. Divided and this application filed Feb. 3, 1923. Serial No. 616,766. 8 Claims. (Cl. 243—37.)



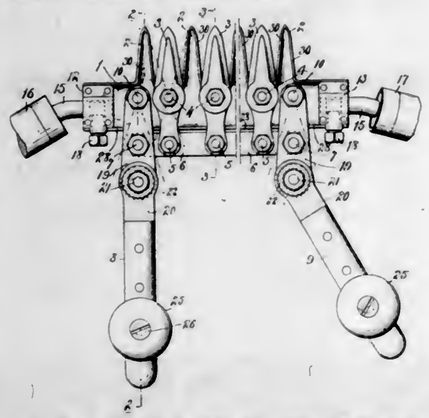
1. A carrier dispatch system having a central station comprising a trough along which carriers may move, said trough having sides gradually merging into a tubular sleeve at its delivery end, a conveyer tube secured to the delivery end of the trough for receiving carriers therefrom, and signal means adjacent to the tubular delivery end of the trough for indicating the clogging of the delivery end of the trough with carriers.

1,502,328. GOLF CLUB. WILLIAM N. BEAT, Cicero, Ill. Filed Jan. 22, 1923. Serial No. 614,176. 2 Claims. (Cl. 46—4.)



1. In a golf club, a sole plate let into the sole of the head and secured thereto, the edge portion of the plate adjacent the driving face of the head, being rabbeted, and a heavier metal strip, fitting in, and secured in said rabbeted portion of said plate.

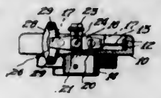
1,502,329. BEDIVAN. PERCIVAL P. BEBRY, Brooklyn, N. Y., assignor to The Englander Spring Bed Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 5, 1921. Serial No. 512,997. 13 Claims. (Cl. 5—41.)



9. A bedivan comprising a main section, a sliding section, a swinging back section hinged to said main section and provided with a forwardly extending bar, means connecting said bar with the sliding section whereby the latter is shifted by the swinging back section, automatically operative locking means in position to engage said bar thereby to maintain the back in its upright position, and means for releasing said locking means from said bar.

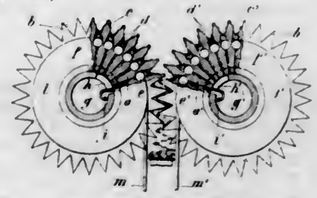
1,502,330. ELECTROSCOPIC APPARATUS FOR TESTING THE GENUINENESS OF WOOLEN AND SILK MATERIALS. ARCIERO BERNINI, Genoa, Italy. Filed Sept. 20, 1922. Serial No. 589,385. 2 Claims. (Cl. 175—183.)

1. An apparatus for testing the genuineness of woolen and silk materials, comprising a metal case provided with two outside walls of transparent and insulating material and having the shape and size of a watch, electroscopic leaves inside said case, means for supporting said leaves, and means insulated from the said supporting means and adapted to be electrified from the outside of said case and to transmit an electric charge to the said electroscopic leaves, the said supporting means and the said other means being adjustable relative to each other.



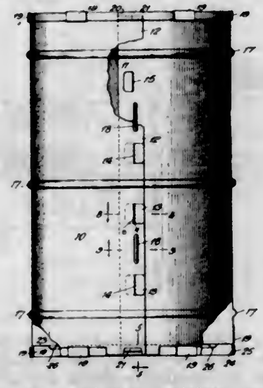
1,502,331. SHRUBBERY CLIPPER. ALFRED F. BISHOP, Audubon, N. J. Filed Aug. 3, 1922. Serial No. 579,377. 3 Claims. (Cl. 30—11.)

1. A clipper having a base bar, fixed blades upon the base bar, said blades having double cutting edges thereon, movable blades loosely pivoted upon the base bar having double cutting edges adapted to co-act with two adja-



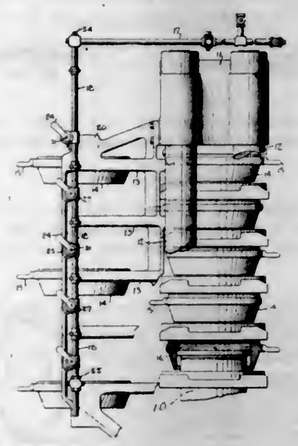
cent fixed blades, a rib upon the base bar forming a bearing surface for the movable blades tending to press the cutting edge of the movable blades against the cutting edge of the fixed blades during the cutting action, a connecting bar to which the movable blades are operably associated, and a part for reciprocating the connecting bar.

1,502,332. REPRODUCER FOR TALKING MACHINES. STUART BERTRAM BOOTY, Dulwich Hill, near Sydney, New South Wales, Australia. Filed June 7, 1922. Serial No. 566,462. 1 Claim. (Cl. 274—35.)



In a sound-reproducing device, a casing, a stylus bar, a platform carried by said bar, bearing members between said platform and casing, yielding means for holding one end of said platform against one of said bearing members, a spring extending transversely of and in contact with the other end of said platform for holding it against the other bearing member, and means for adjustably supporting the ends of said spring on said casing.

1,502,333. DEVICE FOR INTERFOLDING SHEETS OF PAPER. ROGER BRAUNSTEIN, Paris, France. Filed June 19, 1922. Serial No. 569,540. 3 Claims. (Cl. 270—39.)



1. A machine for interfolding sheets of paper, comprising, two toothed wheels, a hollow portion in each wheel, which hollow portions are in communication with a source of vacuum, the teeth on the wheels being of V-shape to receive a sheet of paper previously folded in V form, and means connecting the peripheries of the wheels with the hollow portions.

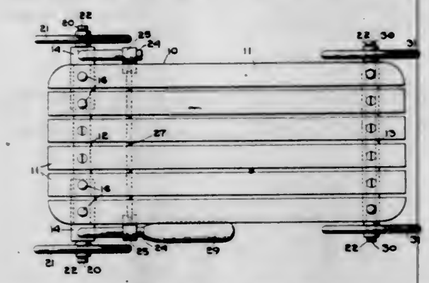
1,502,334. KNOCKDOWN SHIPPING CONTAINER. JOHN J. CAIN, Bayonne, N. J. Filed Jan. 23, 1923. Serial No. 614,396. 7 Claims. (Cl. 220—4.)

1. A knock-down shipping container, consisting of a body portion and two head pieces having peripheral upturned flanges reversely folded to form annular channels, adapted to receive the ends of the body when set up ready for use and tongues at the ends of the body adapted to fold against the outer side wall over the upper part of and downwardly against the inner wall of the flanges of the heads to secure them to the body.

1,502,335. FILLING APPARATUS FOR PRESSES. FRED S. CARVER, East Orange, N. J. Filed Mar. 16, 1920. Serial No. 366,364. 14 Claims. (Cl. 100—50.)

1. In a press the combination of press pots movable into filling and pressing positions, and valved means for simultaneously supplying fluent material to such pots while in filling position.

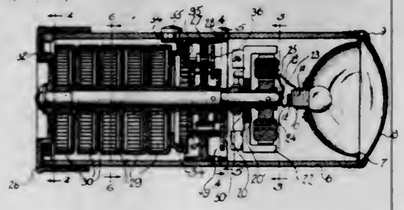
9. In a press, centrally located pressing means, runways extending out on opposite sides of said pressing means, press pots adapted to be run in on said runways to pressing position and out thereon to filling position, a conduit for supplying material under pressure for filling said pots, lateral branches of said conduit extending over the pots when in filling position and provided thereat with discharge openings, valves for controlling the discharge openings, and handles for manipulating the valves extending outwardly beyond the runways.



1,502,336. METHOD OF MAKING CATALYST. LUIGI CASALE, Rome, Italy, assignor to Casale Ammonia Company, Lugano, Switzerland. Filed Aug. 22, 1923. Serial No. 658,828. 4 Claims. (Cl. 23—28.)

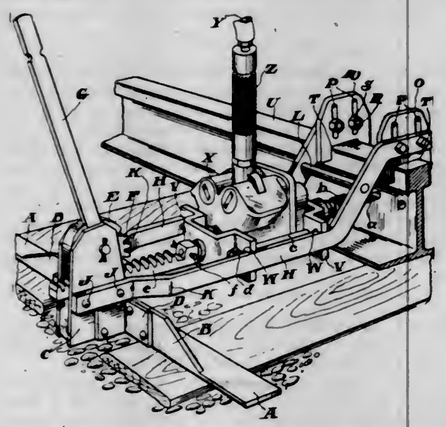
1. A catalyst-preparing process wherein, as a purifying step, the impure mixture of oxides is subjected to a temperature so far exceeding the melting point of the mixture as to vaporize not only a considerable proportion of the useful oxides but also all elements in the nature of poisons, capable, if remaining in the ultimate product, of exercising a detrimental effect on its catalytic properties.

1,502,337. COASTER WAGON. CLARENCE E. HASS and WILLIAM R. JAMES, Chicago, Ill. Filed Dec. 18, 1920. Serial No. 431,564. 7 Claims. (Cl. 280—87.5.)



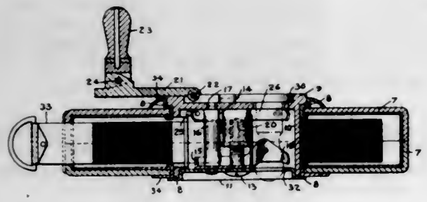
1. In a coaster, the combination with a wagon body portion, and wheels for supporting the same, of a steering mechanism including two stub axles, means for pivoting each of said axles about a separate vertical axis, means to control simultaneously and equally the movement of said axles about their pivoting axes, and a steer-

ing handle positioned adjacent one side of the wagon body portion and normally parallel thereto, said handle



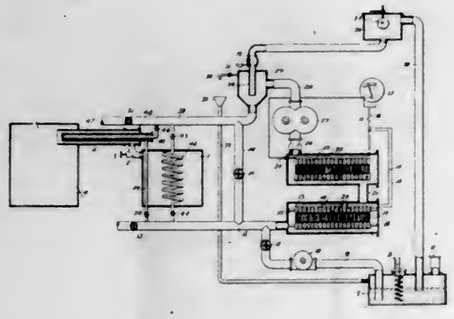
being in a lower plane than the body portion, whereby to swing beneath the latter when moved in the direction thereof.

1,502,338. PORTABLE ELECTRIC LAMP. JOHN HOLL and GALLUS E. BOETTCHER, Richardson, N. Dak. Filed Aug. 14, 1922. Serial No. 581,862. 14 Claims. (Cl. 240—8.5.)



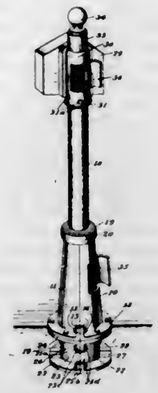
1. In a portable lamp, the combination of a case, a generator in said case, an electric lamp connected to be actuated by current from said generator, a mechanical motor for driving said generator, and a stationary shaft disposed in the case and on which the generator and mechanical motor are mounted.

1,502,339. BONDING DRILL. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 17, 1923. Serial No. 663,062. 2 Claims. (Cl. 77—8.)



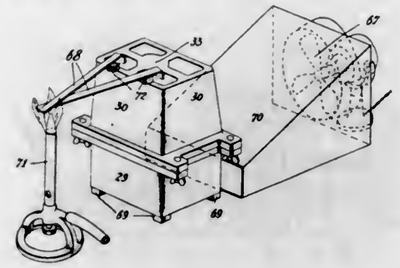
1. As an article of manufacture, a bonding drill comprising base members, a bracket connected to the base members, a sector pivoted to the bracket and provided with a plurality of gear teeth, a handle for actuating the sector, side straps connected to the bracket, adjustable plates adapted to engage a rail mounted on the outer ends of said straps for adjusting said straps vertically relative to said rail, a rotary drill slidably mounted on the side straps and a rack meshing with the teeth on the sector for moving the drill horizontally on the side straps to and from the rail.

1,502,340. TAPE REEL. WILLIE U. E. KEUFFEL, Weehawken Township, Hudson County, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a Corporation of New Jersey. Original application filed May 2, 1922, Serial No. 558,038. Divided and this application filed Apr. 14, 1923. Serial No. 632,013. 3 Claims. (Cl. 242—84.8.)



1. In a tape reel the combination with a tape case of a top and bottom plate, a tape drum rigidly secured to said plates between the same, suitable bearings in said case adapted to receive said plates for rotation, and means for retarding the rotation of said tape drum consisting of a shoe mounted under constant spring pressure in said drum and adapted to contact with one of said bearings.

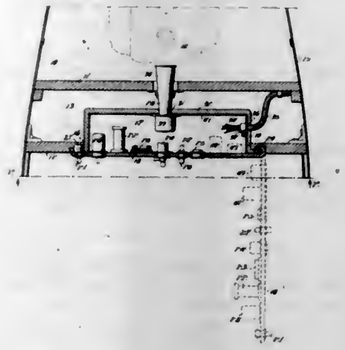
1,502,341. HEATING SYSTEM. EVARTS G. LOOMIS, Newark, N. J. Filed Feb. 28, 1922. Serial No. 539,860. 14 Claims. (Cl. 219—38.)



1. A heating system comprising a fluid medium circulating means, means for heating said medium, a heated supply tank for the circulating means, and an expansion reservoir connected to the system, the expansion reservoir being connected by an overflow pipe to the supply tank.

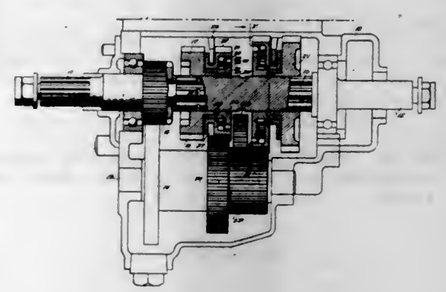
1,502,342. PEDESTAL FOR FIRE-ALARM BOXES. WILLIAM C. LUCAS, Meriden, Conn. Filed June 26, 1923. Serial No. 647,884. 8 Claims. (Cl. 189—38.)

1. In a pedestal for fire-alarm boxes, police boxes, or the like, a pair of channel members adapted to be bolted together at their bottom portions and adapted to form a closed tube, and an upwardly detachable ring for clamping the top portions of said hollow members together.



1,502,343. PROCESS AND APPARATUS FOR MAKING ELECTRICAL CONDENSERS. BYRON MACPHERSON, Roxbury, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed May 26, 1920. Serial No. 384,501. 15 Claims. (Cl. 250—41.)

1. That improvement in the process of enclosing a sheet condenser in a body of wax which consists in placing it in a receptacle substantially higher than the condenser, filling the receptacle with melted wax to a point substantially above the top of the condenser, supplying heat by means independent of the receptacle to the upper part of said body of wax, and cooling the receptacle to cause the wax to harden gradually from the bottom upwardly.

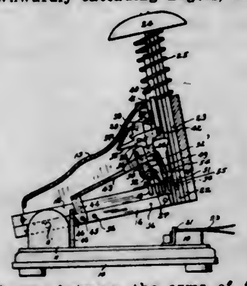


1,502,344. INSTRUMENT SAFE FOR AUTOMOTIVE VEHICLES. HOWARD J. MURRAY, New York, N. Y. Filed Jan. 12, 1921. Serial No. 436,802. 8 Claims. (Cl. 180—90.)

5. A safe adapted to be mounted on a vehicle, constituting a space-enclosing-box provided with a lockable door which when opened permits access to the interior of the safe, a vehicle instrument mounted on the inner side of the door, having its contained mechanism housed within the outlines of the safe and protected ther by from burglarous attempts to affect the same when the door is closed and locked, said door having an opening extending therethrough and said instrument including a part extending through said opening, said extending part having a functional utility in connection with the

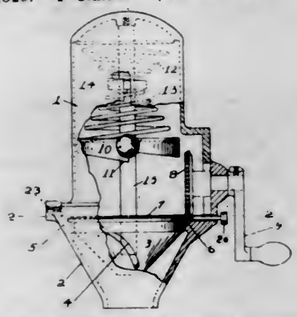
instrument and provided with means tending to defeat attempts to gain access through the hole to the interior of the safe or to the mechanism in the instrument, said extending part being functionally accessible from the outside of the closed safe.

1,502,345. GEAR SYNCHRONIZER. HOWARD J. MURRAY, New York, N. Y. Filed Aug. 16, 1922. Serial No. 582,168. 15 Claims. (Cl. 74—58.)



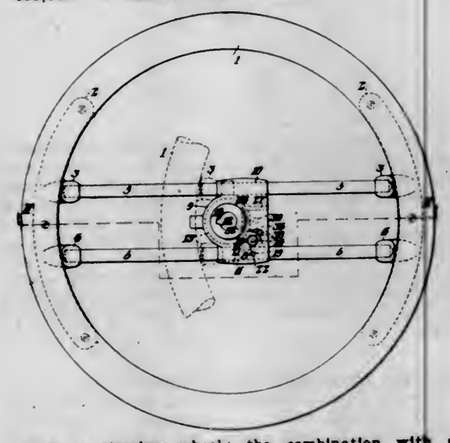
1. In a device of the class described, the combination of a pair of gears adapted to be shifted into a driving relation, one of said gears provided with a pinion constituting an element of a tooth clutch, a coacting clutch element carried by said gear provided with a gear meshing with the other of said pair of gears and provided with a coacting pinion adapted to be moved into mesh with said first named pinion and control means including a shift lever movable in one direction for causing in sequence a meshing of the pinions and then a meshing of said pair of gears.

1,502,346. STAPLE-DRIVING MACHINE. JOHN MUTH, Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Nov. 10, 1921. Serial No. 514,281. 8 Claims. (Cl. 1—23.)



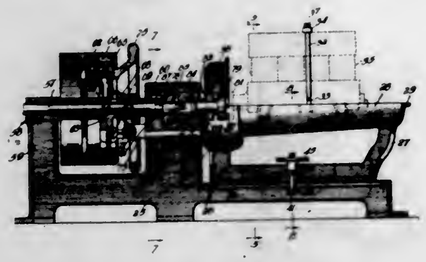
1. In a stapling machine, in combination, a staple strip carrying bar, a staple strip feeding means, a pivoted

staple straightening device above the staple strip provided with downwardly extending fingers, and means for



forcing said fingers between the arms of two adjacent staples to straighten the same on the strip.

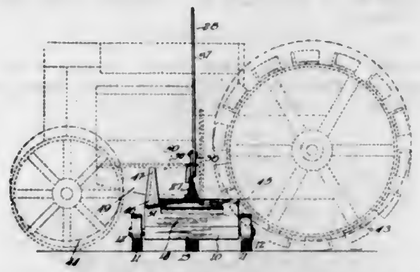
1,502,347. SOAP-DISPENSING MACHINE. IVAN J. NELSON, Saginaw, Mich. Filed Sept. 24, 1923. Serial No. 664,529. 4 Claims. (Cl. 146—61.)



1. In a soap dispensing machine, the combination of a receptacle for the soap to be dispensed, a revolvable dished cutter receiving the soap, means for revolving said cutter and a movable latch carried by said receptacle and engaging said cutter at each revolution and means for manually releasing said latch.

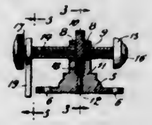
1,502,348. STEERING WHEEL. ARTHUR E. PAIGE, Philadelphia, Pa. Filed Aug. 19, 1921. Serial No. 493,631. 8 Claims. (Cl. 74—33.)

1. In a steering wheel; the combination with an annular rim; of two similar brackets mounted on said rim at diametrically opposite sides thereof; each of said brackets having, in unitary relation therewith, two cylindrical sockets; said sockets being parallel with each other in each bracket and said sockets in each bracket being in axial alinement with the sockets in the other bracket; a pair of cylindrical rods having their opposite ends respectively engaged in said brackets and extending in parallel relation with each other from side to side of said rim; one of said rods having a locking bolt recess; a hub member, having a pair of cylindrical bores extending therethrough in parallel relation with each other and respectively engaging said rods in slidable relation; said hub member having an axial bore, at right angles to the plane of said rim and arranged for presentation in coaxial relation with said rim; said hub member having means arranged to retain a steering shaft in said bore in operative relation with said hub member; said hub member having two locking plunger bores, in parallel relation with said axial bore, and a J-shaped locking plunger, arranged to reciprocate in said plunger bores, and including a locking bolt arranged to engage said locking bolt recess when the axial bore of said hub member is in concentric relation with the axis of said rim; said locking plunger having a push cap nut, normally extending above said hub member, and adapted to reciprocate in one of said plunger bores; and a helical spring encircling said plunger, within that plunger bore of said hub member, beneath said cap nut; whereby said locking plunger is normally spring pressed to engage said locking bolt recess in said rod and retain said wheel rim in concentric relation with said hub member.



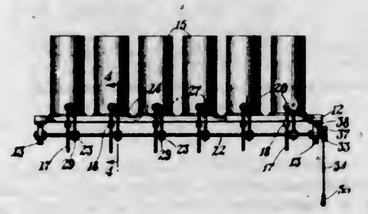
1,502,349. APPARATUS FOR USE IN ASSEMBLING, REPAIRING, AND LIMBERING GAS ENGINES OF VARIOUS TYPES. HARRY E. PATRICK, Evanston, and ANDREW J. PETERSON and JOHN W. BERMES, Chicago, Ill., assignors, by mesne assignments, to Dearborn Equipment Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Mar. 5, 1919. Serial No. 280,740. 10 Claims. (Cl. 29—89.5.)

1. Apparatus of the character described comprising a base having a low work-supporting table with a longitudinally open top, a machine head on the base at one end of the table, a power-delivering shaft at an elevated position in said head and equipped for rotative union with the crank shaft of a motor, a holder for the latter removably mounted upon the table, and clamping means for securing the holder to the table at differing longitudinal adjustments as permitted by the aforesaid opening in the top of the table.



1,502,350. TRUCK JACK. HARRY E. PATRICK, Evanston, and ANDREW J. PETERSON and JOHN W. BERMES, Chicago, Ill., assignors, by mesne assignments, to Dearborn Equipment Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Oct. 27, 1919. Serial No. 333,682. 6 Claims. (Cl. 254—5.)

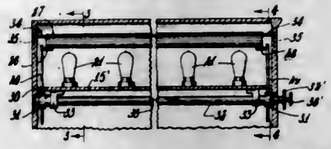
1. An apparatus of the character described comprising truck base, a table mounted thereon with provisions for elevating it through relative movement between it and the truck base, a holder resting upon and



straddling said table, and operating means for effecting the aforesaid relative movement between the table and the truck base.

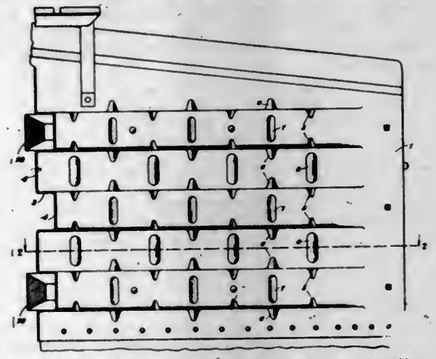
1,502,351. SASH FASTENER. SAMUEL SEGAL, New York, N. Y., assignor to Segal Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1922. Serial No. 532,907. 17 Claims. (Cl. 292—251.)

1. In a device of the character described, the combination with a base secured to a member, of a rotatable bolt associated with said base and adapted to engage a second member and a clutch member for locking said bolt against movement.



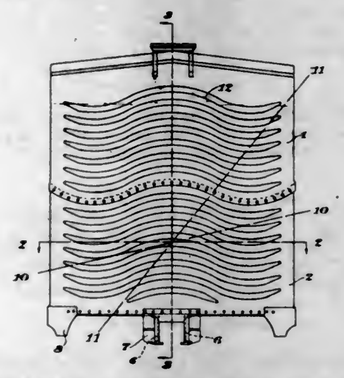
1,502,352. SHAMPOO LIQUID FOUNTAIN FOR HAIRDRESSING PARLORS. LEO B. SIMONSON, New York, N. Y. Filed July 13, 1923. Serial No. 651,286. 3 Claims. (Cl. 221—67.)

2. An apparatus of the type described comprising a number of containers, pipe lengths projecting therefrom and having valves thereon, and a unitary means for controlling said valves, said means including a rock shaft formed with sockets and short longitudinal slots angularly spaced from said sockets, collars freely surrounding said shaft, arms on said collars, arms on said valves having a slot and pin connection with the first arms, and screws in said collars adapted to engage either in said sockets or in said longitudinal slots.



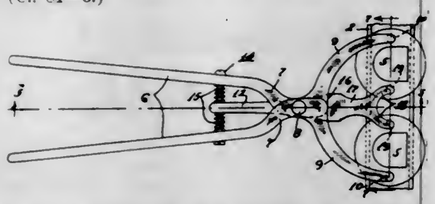
1,502,353. MEANS FOR ILLUMINATING BOOTHS. LEO B. SIMONSON, New York, N. Y. Filed July 13, 1923. Serial No. 651,287. 3 Claims. (Cl. 240—4.)

1. In a device of the class described, a pair of booths, a partition separating said booths, a lamp on said partition, and a reflector adapted to be adjusted to either reflect the light equally into both booths, or mainly



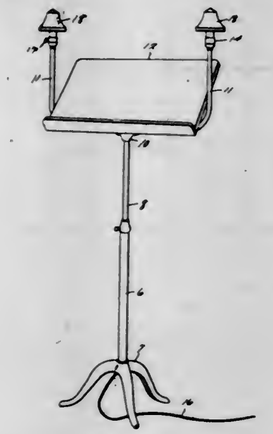
into one booth, said reflector comprising a pair of members hinged together at one side, and engaging guide elements at their opposed sides.

1,502,354. CORRUGATED METAL END STRUCTURE FOR CARS. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed Oct. 1, 1920. Serial No. 414,058. 9 Claims. (Cl. 105—410.)



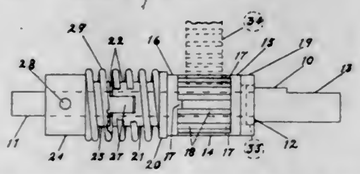
1. A metal panel for car ends having a plurality of reinforcing corrugations formed therein, said corrugations formed with wall members and wall connecting portions, and substantially triangular reinforcing ribs connecting said wall members and wall connecting portions.

1,502,355. CORRUGATED WALL PLATE. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 9, 1922. Serial No. 605,931. 6 Claims. (Cl. 105—410.)



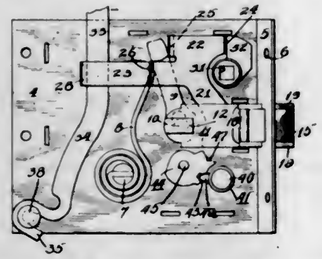
1. In a wall for railway cars, a metallic plate having a plurality of corrugations formed therein extending from opposite edges of the plate, said corrugations deflected from a straight line whereby any straight line drawn across the plate crosses one corrugation at least twice or crosses at least two corrugations.

1,502,356. TONGS. AUGUST J. SMITH, Chicago, Ill. Filed Feb. 27, 1922. Serial No. 539,795. 8 Claims. (Cl. 81—3.)



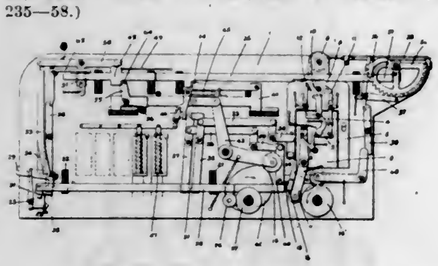
2. Tongs comprising three pivotally mounted clamping members disposed in substantially the same plane, and gripping pins formed on each of said members.

1,502,357. MUSIC STAND AND LIGHT SUPPORT. EDWARD J. SMITH, Cleveland, Ohio, assignor to Mrs. Mary E. Smith, Cleveland, Ohio. Filed Sept. 1, 1921, Serial No. 497,584. Renewed June 9, 1924. 4 Claims. (Cl. 240—4.)



1. The combination with a music stand, of means to illuminate the same by direct and indirect rays, comprising lamps at opposite sides of the head of the stand, each of said lamps being provided with a shade having an inner reflecting surface and a bottom having an opening located in the line of direct rays from the lamp to the middle portion of the head of the stand.

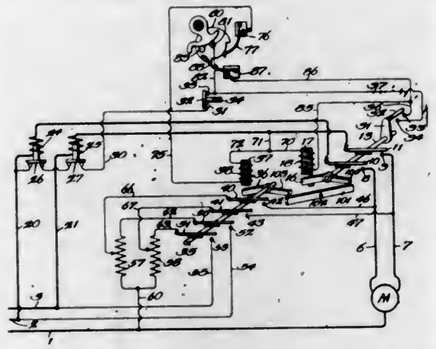
1,502,358. AUTOMATIC SAFETY CLUTCH. OSCAR E. STOKES, Streator, Ill. Filed Jan. 4, 1923. Serial No. 610,734. 8 Claims. (Cl. 64—106.)



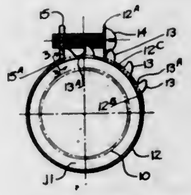
1. The combination with a shaft, a collar mounted on the shaft, a pin passing through the shaft and securing the collar against rotation, spaced apart collars rotatably mounted on the shaft, a gear intermediate the rotatable collars, studs carried by the rotatable collars and lying between the teeth of the gear, a sleeve clutch comprising coacting portions, flanges integral with the sleeve clutch portions, one of the sleeve clutch portions being adapted to have longitudinal movement on the shaft, and a spring supported by the sleeve clutch and adapted to force one of the flanges into engagement with one of the collars.

1,502,359. VEHICLE DOOR LOCK. BAYARD E. TAYLOR, Oak Park, Ill. Filed May 18, 1921. Serial No. 470,643. 11 Claims. (Cl. 292—173.)

1. A vehicle door lock comprising a latch bolt, a wedge member, an arm pivotally mounted on said wedge member and engaging said latch bolt, a spring engaging said arm for impelling said latch bolt and said wedge member outwardly into latching position, a handle for retracting the latch bolt and wedge member against the action of said spring, and a lever adapted to be removably inserted into said lock when the latch bolt is retracted to afford a means for operating the latch bolt and said wedge independently of said handle.



1,502,360. PRINTING TABULATING MACHINE. HEINRICH TOLLE, Villingen, Baden, Germany, assignor to Deutsche Hollerith Maschinen Gesellschaft m. b. H., Berlin, Germany, a German Corporation. Filed May 18, 1923. Serial No. 639,832. 8 Claims. (Cl. 235—58.)



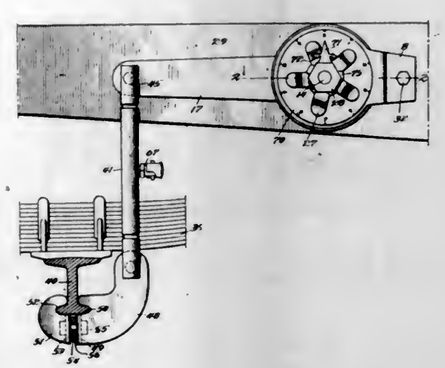
1. A tabulating machine provided with reciprocating racks, adding mechanism, and printing devices, and including in combination a plurality of actuating devices for the racks, one of said devices including reciprocating latches which are adapted to be coupled with the racks for a particular setting, another of said devices including pusher bars which actuate the racks only when the said racks are disengaged from the reciprocating latches.

1,502,361. MOTOR STARTER. HERMON L. VAN VALKENBURG and FRANCIS W. MAGIN, Milwaukee, Wis., assignors to Industrial Controller Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 5, 1920. Serial No. 349,576. 2 Claims. (Cl. 172—289.)

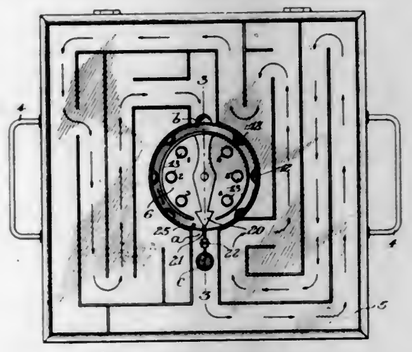
1. A motor starter having a starting switch for energizing the motor during the starting period, a running switch, said switches being biased toward open position and having electromagnetic coils for closing them, and a time controlled element for controlling said coils, said time controlled element having a rotating disc adapted to make a complete rotation each time the device is operated, said disc having a long contact extending over a considerable number of degrees, and a momentary contact, the long contact being adapted to close the circuit through the coil of the starting switch, and a maintaining switch adapted to maintain the circuit through the coil of the running switch, the momentary contact being adapted to energize the coil of the running switch to close it, and the maintaining switch being mechanically connected to the running switch to be closed by it at the same time that the running switch is closed.

1,502,362. CLAMP. MARIE VITEK, Maywood, Ill. Filed Sept. 6, 1921. Serial No. 498,809. 3 Claims. (Cl. 24—19.)

1. A clamp comprising a flexible band having a tightening member at one end thereof, a nut for said tightening member, a plurality of pairs of separated prongs on the other end of said band and so constructed and arranged to receive between them and guide the end carrying the tightening member, said nut adapted to engage said pairs of prongs for locking engagement therewith.



1,502,363. VALVE SPRING. JOHANN HEINRICH HERMANN VOSS, New York, N. Y. Filed Feb. 17, 1922. Serial No. 537,346. 1 Claim. (Cl. 251—144.)

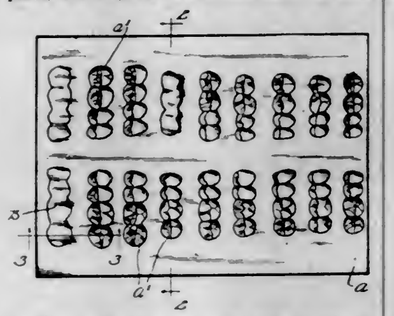


As a new article of manufacture, an undulated valve spring formed of a straight wire coil.

1,502,364. SHOCK ABSORBER. ARTHUR WATERMAN, East Orange, N. J., assignor to Edward V. Hartford, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 7, 1922. Serial No. 534,679. 12 Claims. (Cl. 188—130.)

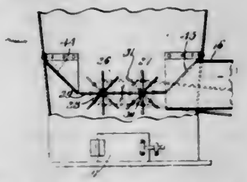
1. A shock absorber for vehicles having spring supporting means, comprising inner and outer superposed discs, the outer discs being relatively non-rotatable, a member formed to be rigidly secured to a part of the vehicle and provided with a portion adapted to pass through said discs to maintain the same in axial alinement, means for rendering said outer discs non-rotatable relative to said vehicle part, a tensioning device for maintaining all of said discs in frictional contact, and means of connection between an inner disc and another part of the vehicle whereby the relative movement of the vehicle parts will be controlled by said device.

1,502,365. GAME OF SKILL. BERTRAM E. WILSON, Rochester, N. Y., assignor of one-half to John R. Haupenthal, Rochester, N. Y. Filed Jan. 20, 1923. Serial No. 613,955. 18 Claims. (Cl. 161—17.)



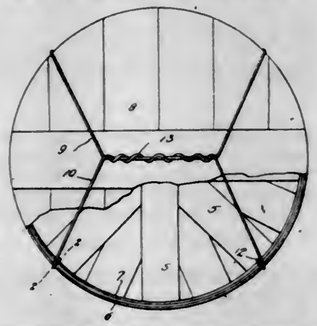
1. A game comprising a board having starting and finishing points, an object movable over the board from the starting to the finishing points, and means operating automatically to indicate the time required for the object to travel from the starting to the finishing point.

1,502,366. DIE PLATE FOR DENTAL BRIDGEWORK. JAMES A. WRIGHT, Chicago, Ill. Filed Feb. 9, 1922. Serial No. 535,185. 1 Claim. (Cl. 32—6.)



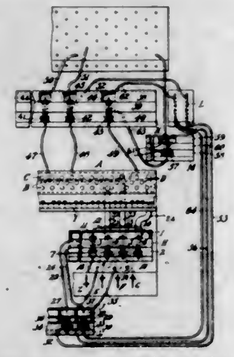
As a new article of manufacture, a die for dental work comprising a die plate, the upper surface of which is formed into a plurality of apertures, said apertures each conforming to the shape of a plurality of adjacent molars positioned substantially as in the human jaw, the die

plate being formed with a plurality of such apertures graduated as to size, said apertures being aligned along said plate, the impressions of the teeth on one side of



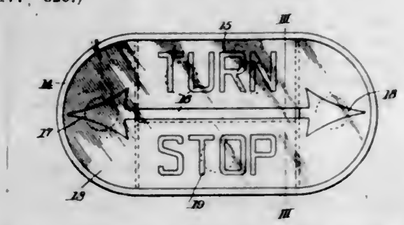
the jaw being aligned along one side of the plate and those of the other side of the jaw being aligned along the other side of the plate.

1,502,367. MATTRESS-FILLING MACHINE WITH DOUBLE ROTARY BEATER. PHILLIP BAKER, Malden, Mass. Filed July 28, 1922. Serial No. 578,218. 1 Claim. (Cl. 226—43.)



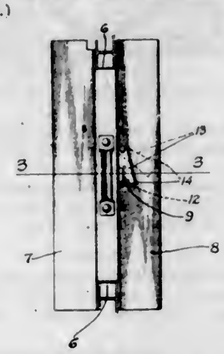
A machine for filling mattresses and the like having, in combination, a receptacle for filling material, a circulating fan, intake and return pipes connecting said fan to said receptacle and a pair of rotary beater elements, each of said beater elements comprising a rotary shaft and a plurality of radial arms thereon, said shafts lying in approximately the same horizontal plane, and a pair of oppositely disposed downwardly inclined chutes positioned on opposite sides respectively of said receptacle and terminating at their lower ends adjacent the outer ends of said rotary beater elements and approximately in said horizontal plane.

1,502,368. BASKET-COVER FASTENER. ARTHUR D. BIGGS, South Bend, Ind. Filed Sept. 27, 1923. Serial No. 665,055. 4 Claims. (Cl. 217—122.)



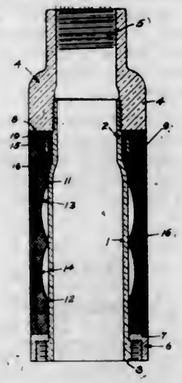
1. In combination with a basket having inner and outer hoops at the upper portion thereof and a cover disposed upon the hoops with the edge of the cover flush with the outer surface of the outer hoop, means for fastening the cover in place comprising a pair of substantially complemental U-shaped wire members having their central portions twisted together at the center of the cover and arranged with the legs thereof extending outwardly, the free ends of the legs of said members being interlocked with said hoops beneath the margin of the cover.

1,502,369. WIND MUSICAL INSTRUMENT. CHARLES F. BRINDLEY, Sheffield, England. Filed Aug. 15, 1921. Serial No. 492,452. 4 Claims. (Cl. 84—344.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



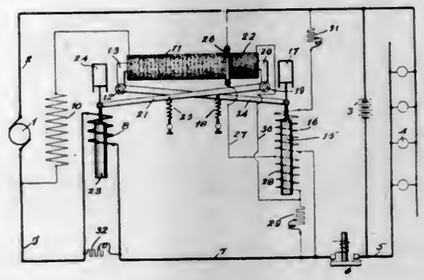
4. A wind instrument comprising a clavier, a plurality of tone departments, a stop knob for the individual members of the tone departments, a plurality of transition controllers, means between the tone departments and one of the transition controllers whereby when the latter is operated the operation of a stop for one tone department will put out of operation the previously operated tone department and connections to the other transition controllers whereby when one of the latter controllers is operated, all other tone departments are rendered inoperative and all of the individual members of its corresponding department, whose stops are operated, are rendered operative.

1,502,370. TRAFFIC-MOVEMENT INDICATOR FOR VEHICLES. EDWIN E. BULLARD, Fresno, Calif. Filed Feb. 7, 1922. Serial No. 534,668. 4 Claims. (Cl. 177—329.)



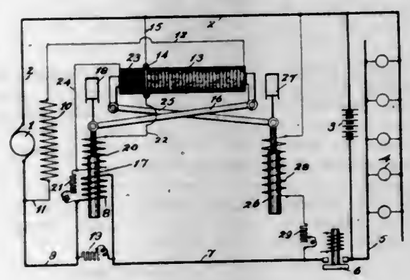
4. The combination with a signal box having a plurality of compartments, of a face plate covering said compartments and bearing a double headed arrow and the word "Turn," the heads of said arrow pointing in opposite directions and overlying different compartments, the stem of the arrow and the word "Turn" both overlying another compartment, an electric lamp in each of the compartments which the heads of the arrow overlie, two electric lamps in the compartment which the word "Turn" and the stem of the arrow overlie, a switch arm, an electric circuit including said switch arm, one of the lamps in the compartment which the word "Turn" and the stem of the arrow overlie, and the lamp in the compartment which one of the arrow heads overlies, a contact in said circuit to be engaged by said switch arm when the latter is swung in one direction for simultaneously illuminating one of the lamps in the compartment which the word "Turn" and the stem of the arrow overlie and the lamp in the compartment which one of the arrow heads overlies, another electric circuit including the switch arm, the other one of the lamps in the compartment which the word "Turn" and the stem of the arrow overlie, and the lamp in the compartment which the other one of the arrow heads overlies, and a contact in the latter circuit to be engaged by said switch arm when the latter is swung in the opposite direction for simultaneously illuminating said other lamp in the compartment which the word "Turn" and the stem of the arrow overlie and said lamp in the compartment which the other arrow head overlies.

1,502,371. MASON'S TOOL. OTTO W. L. BUSS, Minneapolis, Minn., assignor to Buss Metal Window Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 15, 1923. Serial No. 680,891. 5 Claims. (Cl. 25—131.)



5. A mason's tool having a recess to receive a frame member and providing surfaces extending from each side of the recess to act as a form for emplacement of the frame member in masonry whereby a predetermined portion of the frame member may be embedded, one of said tool surfaces having an aperture therethrough to receive a projection of a frame member, and a locking device mounted on the tool and adapted releasably to lock said projection in said aperture.

1,502,372. PACKER. JAMES T. CALLANAN, Jr., Parkersburg, W. Va., assignor to Parkersburg Machine Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed July 10, 1922. Serial No. 574,063. 4 Claims. (Cl. 166—10.)

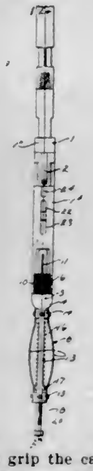


1. In a well packer, relatively movable members and a sleeve of expansible material confined between said members having a fabric reinforcement capable of circumferential expansion and but slight elongation.

1,502,373. ELECTRIC REGULATION. JOHN L. CREVELING, White Plains, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Nov. 1, 1916, Serial No. 128,825. Renewed May 12, 1924. 17 Claims. (Cl. 171—229.)

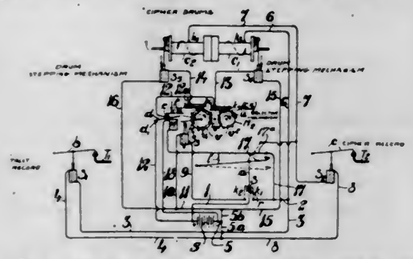
1. The combination with a generator and a regulating element by manipulation of which the generator may be regulated, of means for operating said element to regulate the generator to compensate for speed changes responsive to voltage fluctuations, and means comprising a shunt coil magnetically cooperating with the voltage responsive means to operate said element to regulate the generator to compensate for speed changes independently of the voltage fluctuations.

1,502,374. ELECTRIC REGULATION. JOHN L. CREVELING, Tucson, Ariz., assignor to Gould Coupler Company, a Corporation of New York. Filed July 29, 1919, Serial No. 313,991. Renewed May 12, 1924. 11 Claims. (Cl. 171—229.)



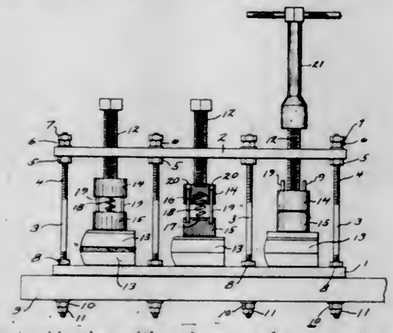
1. Means for regulating a generator comprehending a regulating element, means for affecting said element in response to current fluctuations, means for usurping the function of the current responsive means, and voltage responsive means for controlling said usurping means and regulating the generator.

1,502,375. CASING PERFORATOR. ROLAND R. CRUM, Whittier, Calif. Filed Feb. 14, 1923. Serial No. 618,919. 13 Claims. (Cl. 81—195.)



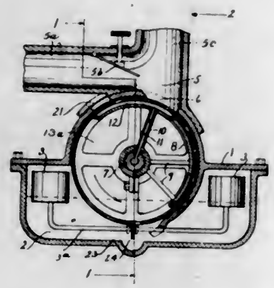
1. In a casing perforator, the combination of a body, a perforator tool carried thereby, said body comprising two relatively movable members, a holding device carried by the body and operating to support itself within the casing, anchoring means for one of said relatively movable members controlled through the agency of the hold-

ing device, said relatively movable members constructed so as to cooperate when given a down jar to actuate



the anchoring means to grip the casing, and means operating by the relative movement of said body members to each other to actuate the perforator tool.

1,502,376. PRODUCTION OF CIPHERS. ARVID GERHARD DAMM, Ronninge, Sweden. Filed Apr. 2, 1920. Serial No. 370,708. 11 Claims. (Cl. 35—13.)

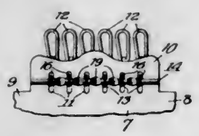


1. In a machine for producing cipher, means corresponding to two series of contacts arranged opposite to one another, means to cause the stepwise movement of said contacts relatively to one another, mechanism to cause the interruption of the stepwise movement of either or both of said series of contacts.

1,502,377. DENTAL FLASK PRESS. FRANK P. DAVIES, Rock Island, Ill. Filed Mar. 12, 1923. Serial No. 624,480. 1 Claim. (Cl. 18—33.)

In combination with a frame, and compression screw therein, a tension device, adapted to be interposed between said screw and a flask contained in said frame, comprising a pair of spaced blocks and extensible spring centrally thereof, one of said blocks being fitted with guide-ways and the other block with pins slidable therein.

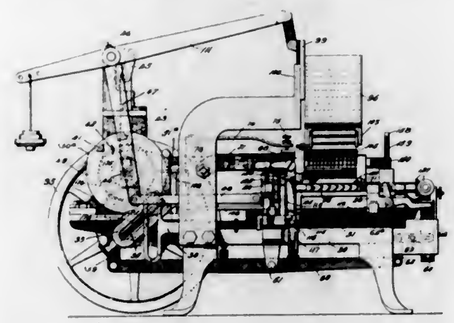
1,502,378. CARBURETOR. HERMAN C. DREIS, near San Jose, Calif. Filed July 5, 1921. Serial No. 482,538. 4 Claims. (Cl. 261—92.)



1. In a carburetor, a revoluble two-part drum provided with interlocking fingers, means for changing the relative position of the two parts to form pockets between said fingers, means for filling said pockets with fuel, and means for retaining the fuel in said pockets during a portion of the revolution of said drum.

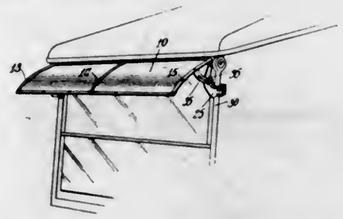
1,502,379. MANUFACTURE OF CELLULOSE DERIVATIVES. HENRY DREYFUS, London, England. Filed Apr. 25, 1921. Serial No. 464,387. 11 Claims. (Cl. 260—152.)

1. Process for the manufacture of cellulosic derivatives characterized by the introduction into the cellulosic molecule of at least one group derived from halogen substitution products of polyhydric alcohols.



8. Process for the manufacture of cellulosic derivatives according to claim 1, characterized in that cellulosic bodies are treated in presence of alkali with halogen substitution products of polyhydric alcohols, for the purpose of forming corresponding cellulose ethers by combination of hydroxyl hydrogen of the cellulosic body with halogen of the halogen substitution product, the total amount of water employed in the etherification, disregarding water formed in the reaction itself, being not greater than from about the natural humidity content of the cellulosic body up to about four times the weight of the dry cellulosic body, and the total amount of alkali employed in etherification being a total quantity which would represent an aqueous solution of between 50 and about 95 per cent. if it were dissolved in said total quantity of water, the etherifying reaction being performed in presence of an organic diluent not liable to undergo etherification.

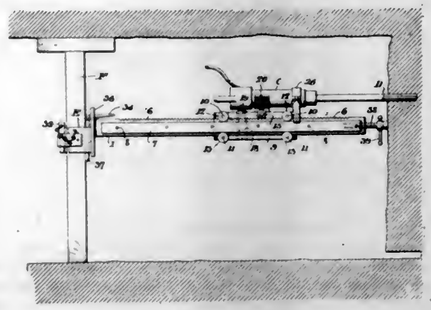
1,502,380. KEY CASE. NATHAN EISEMAN, Chicago, Ill., assignor to Eiseman, Kaye Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1923. Serial No. 666,003. 3 Claims. (Cl. 150—40.)



1. A key-case of the character described provided with a key-carrying flap-extension provided with slots at intervals and folded upon and secured to the inner face of the case-back, a pintle extending through and confined in said folded flap, and hooks having on their stems rings surrounding the pintle and projecting through said slots, said stems having flexible-joint connections with the rings, rendering the hooks rotatable on their own axes.

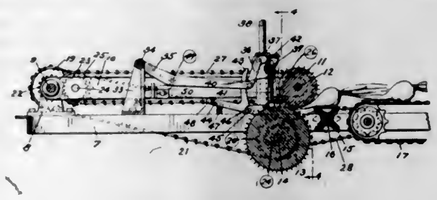
1,502,381. ENGRAVING MACHINE. CHARLES H. FIELD, Providence, R. I. Filed June 23, 1921. Serial No. 479,903. 36 Claims. (Cl. 29—24.3.)

29. In an engraving machine, a work-support, an engraving tool, means for producing a relative longitudinal movement of said tool and work, a series of pattern bars for obtaining a lateral movement of the tool relative to the work, independent means for producing a vertical movement of the tool during its movement across the face of the work whereby different figures may be produced at intervals along the length of the work, and means for automatically varying the longitudinal position of the bar to vary the relative position of the figures.



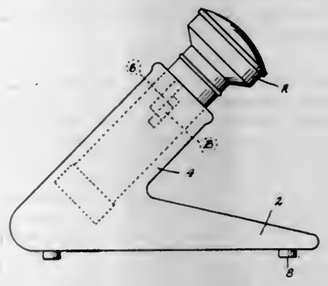
1,502,382. WEATHER SHIELD AND GLARE VISOR. OWEN E. GRIGSBY, Park Ridge, Ill., assignor to Grigsby-Grunow-Hinds Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 13, 1922. Serial No. 600,701. 5 Claims. (Cl. 296—95.)

1. A weather shield and glare visor for automobiles comprising a visor member, a bracket at each end of the visor for attachment to wind shield uprights, each bracket comprising an upright member having an attaching clamp at its lower end, a horizontal shaft reversibly secured to the upper end of the bracket, and pivotal supports for the shaft attached to the visor to permit adjustable insertion of the shaft with the bracket either beneath the visor or beyond the outer end thereof.



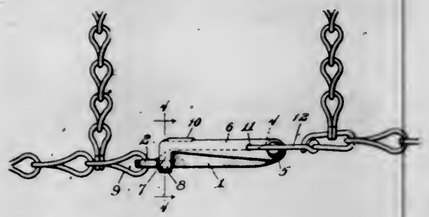
1,502,383. SUPPORT FOR DRILLS. PIETRO GUERRINI and LUIGI ZACCARIA, Nokomis, Ill. Filed Apr. 19, 1923. Serial No. 633,185. 7 Claims. (Cl. 255—51.)

1. A drill support comprising an open rectangular member, track rails on the outer sides of said member, rack teeth on one edge of each of the sides of said member, a carriage fitting within said member and travelling longitudinally thereof, upper and lower sets of wheels



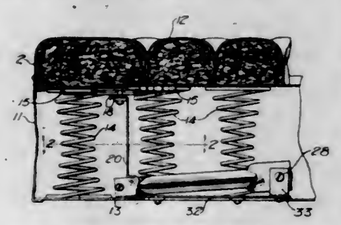
supported by the carriage and running on both edges of the track rails, and pinions supported by said carriage and engaging said rack teeth.

1,502,384. BEET-TOPPING MACHINE. OLE C. HANSON, Hopkins, Minn. Filed May 11, 1923. Serial No. 638,211. 15 Claims. (Cl. 146—85.)



1. The combination in a topping machine, of a main frame, an auxiliary frame pivotally mounted at one end to the main frame, a roller at the other end of the auxiliary frame, a second roller mounted in the main frame for engagement with the first mentioned roller, a knife movable to and from the second roller, means operative by the auxiliary frame for raising the knife, and means for dropping the knife upon lowering of the auxiliary frame.

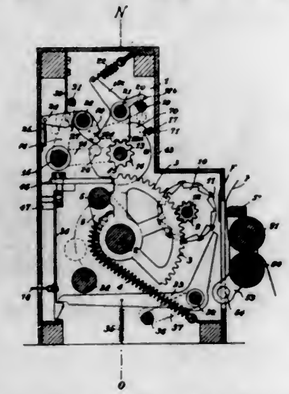
1,502,385. FLASH-LIGHT SUPPORT. JOHN HAUENSTEIN, Kansas City, Mo. Filed Aug. 25, 1923. Serial No. 659,242. 1 Claim. (Cl. 240—52.)



In a device of the character described a base, a socket extending obliquely from said base and adapted to support a flash-light, and an L-shaped slot within the socket to receive and coact with the flash light switch in holding the flash-light in the socket.

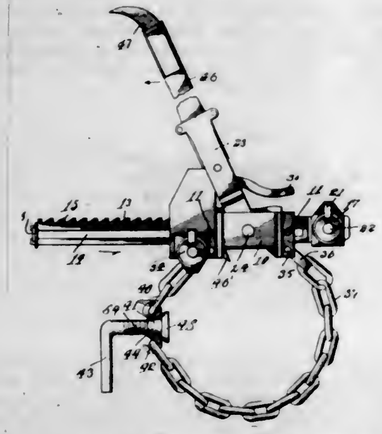
1,502,386. CHAIN FASTENER. ELMER L. HILL, Rapelje, Mont. Filed June 14, 1923. Serial No. 645,400. 3 Claims. (Cl. 24—242.)

1. A fastener of the class described comprising an elongated member provided with an inwardly facing hook at one end, a lever pivotally engaged with the opposite end to engage one of the members to be connected to the member and of a length to closely approach the hook when the lever is in substantially overlying relation with respect to the member, the second member being substantially permanently connected direct with the lever at a point outwardly of the pivotal connection between the lever and member, the outer end portion of the lever being provided with a laterally disposed arm terminating in an inwardly facing hook, said hook of the arm straddling or bridging a marginal portion of the member when the lever and member are substantially in over-lying relation, the opposite marginal portion of the member being provided with a cam surface with which the hook member of the arm engages to permit said hook of the arm to pass over the member.



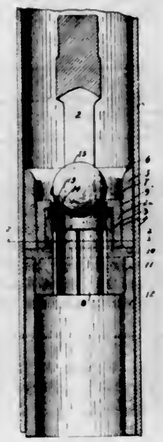
1,502,387. CUSHION. JOSEPH N. KELMAN and JOHN H. KELMAN, Los Angeles, Calif. Filed Jan. 16, 1922. Serial No. 529,471. 14 Claims. (Cl. 267—9.)

1. A shock absorber for use within a cushion and comprising: parallel members in the form of side bars wholly within said cushion; a friction block sliding in said members; and elastic means for causing said members to engage said block to increase the friction as said block travels from one end of said members to the other end of said members.



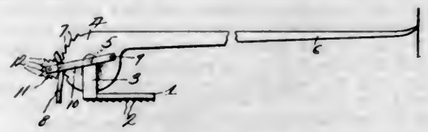
1,502,388. ADDING MACHINE. MARTIN LEBEIS, Berlin-Friedenau, Germany, assignor, by mesne assignments, to Naamlooze Vennootschap Machina Maatschappij voor Handel en Industrie, Amsterdam, Netherlands. Filed Mar. 19, 1923. Serial No. 626,171. 3 Claims. (Cl. 235—58.)

2. A machine for adding items expressed by perforations made in a card, comprising a series of spring-pressed setting sectors, a series of type wheels provided with eleven spaces of which one is empty, said type wheels being geared to the sectors so as to be set thereby and so that the empty space is normally in the printing position, a bar supporting the sectors so as to prevent them normally from moving, means for retracting the bar so as to allow the sectors to move forwards, means for returning the bar and the sectors to the initial position, card-controlled means for arresting the movement of the sectors and of the type wheels in accordance with the number to be set up, card-controlled means for preventing all movement of sectors and type wheels in front of the first significant figure, a totalizing counter comprising a series of numeral wheels, means for gearing said numeral wheels to the sectors during the return movement so as to perform the addition, means for transferring the tens, means for gearing the numeral wheels to the sectors during the



forward movement when the total is to be printed so as to receive motion therefrom in the reverse direction, means for stopping the backward motion of the numeral wheels when they arrive in the zero position so that the type wheels will be set for printing the total, and means for taking prints from the type wheels after each setting.

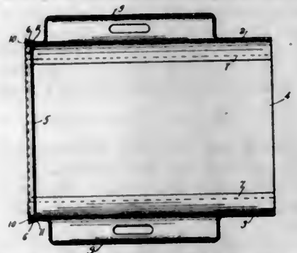
1,502,389. WIRE STRETCHER. GEORGE A. LOVATT, Boulder, Wyo. Filed Aug. 17, 1922. Serial No. 582,448. 1 Claim. (Cl. 254—71.)



A tool comprising a body including a pair of spaced parallel sections, a pair of spaced parallel guide plates disposed in the body, an operating lever including an inner yoke shaped end fitted between the sections of the body and the guide plates, means pivotally securing the lever to the plates and the sections of the body, transversely extending guide pins arranged across the body connecting the sections thereof together, a rack bar slidably mounted in the body between the guide plates having a longitudinally extending slot therein for receiving the guide pins, means carried by the lever for moving the rack bar in a step-by-step movement in the body, and wire clamping means carried respectively by the body and rack bar.

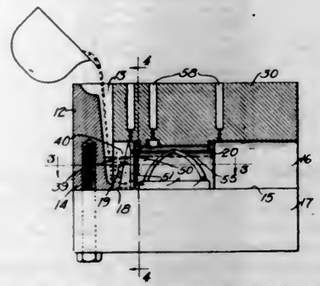
1,502,390. PUMP. GEORGE E. MCCRACKEN, San Jose, Calif. Filed Jan. 19, 1924. Serial No. 687,242. 1 Claim. (Cl. 103—225.)

A structure of the character indicated, comprising a cage having an annular exteriorly and interiorly threaded portion, a nut having a ball valve arranged thereon and carrying an outwardly extending annular flange threaded into said cage portion, a sleeve threaded on to said cage portion and having substantially the same outer diameter as said flange, and a sleeve threaded on to said nut in alignment with said first mentioned sleeve.



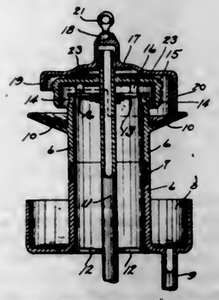
1,502,391. SPIKE PULLER. JOHN O. MCPHERSON, Renton, Wash. Filed Dec. 21, 1923. Serial No. 682,015. 3 Claims. (Cl. 254—22.)

1. A spike pulling device comprising a base, upwardly extending spaced arms at the forward end of said base, a disc pivotally mounted between the arms, a tangential handle member carried by said disc, a plurality of concentrically arranged teeth carried by the periphery of the disc at its forward side, arms pivoted to the disc at opposite sides thereof and rearwardly of the pivotal point of the disc and disposed outside of the upwardly extending spaced arm, said pivoted arms extending forwardly of the disc, and a toothed wheel pivotally mounted between the pivoted arms forwardly of the disc.



1,502,392. OVEN FOR ELECTRIC RANGES. ROBERT H. MACINNES, Hamilton, Ontario, Canada, assignor to D. Moore Company, Limited, Hamilton, Canada. Filed Mar. 24, 1924. Serial No. 701,405. 1 Claim. (Cl. 126—19.)

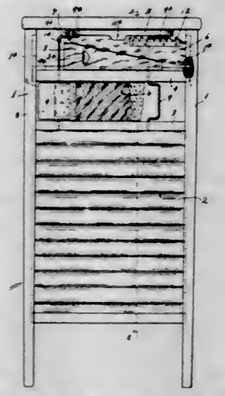
In an oven for electric ranges, top and bottom sheets having rounded lateral ends, lateral sheets connecting the top and bottom sheets by having offset upper and lower edges overlapping the edges of the rounded lateral ends of the top and bottom sheets, the said rounded ends and lateral sheets being upon a common plane and thus providing an even inner surface to the side walls of the oven, said top and bottom sheets having offset rear edges and said lateral sheets having offset rear edges, a rear frame structure inserted between the offset ends of the top and bottom sheets and the offset ends of the lateral sheets and provided with a peripherical flange at the outer edge



thereof abutting against said ends of the top, bottom and lateral sheets, and a rear sheet provided with an outwardly directed peripherical flange inserted within said frame structure, substantially as described.

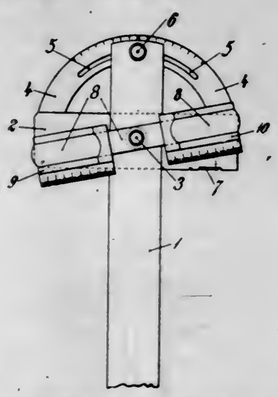
1,502,393. DIE FOR CASTING BEARING LINERS. JOHN L. MORRIS, Los Angeles, Calif. Filed Sept. 7, 1921, Serial No. 498,078. Renewed May 5, 1924. 1 Claim. (Cl. 22—134.)

A die for forming hollow semi-cylindrical objects comprising walls forming a cavity having the shape of the desired object, the axial plane defining the edges of the semi-cylindrical object being substantially horizontal; and walls forming a vertical channel extending from said plane upwardly through the top of the mould, the substance of the mould being cut away to provide an open communication between said vertical column and the end of said cavity, the openings between said channel and said cavity extending from a point in said plane to a point at or near the highest point of said cavity.



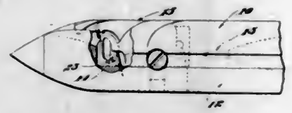
1,502,394. HYDROCARBON BURNER. MORRIS B. MOSER, Wells, Minn. Filed Dec. 11, 1922. Serial No. 606,092. 2 Claims. (Cl. 158—53.)

1. A hydro-carbon burner comprising an air intake stack, a stack cap spaced above and surrounding the upper end of said stack, of a deflecting cap located above said



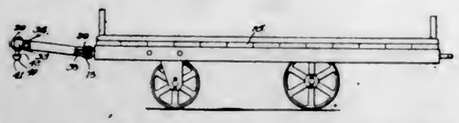
stack cap, and a fuel feed pipe extended upward through said stack and stack cap and delivering into the deflecting cap, said stack below said cap having an outstanding deflecting flange and said deflecting cap having a depending flange which, throughout a portion of a circle, terminates high above the deflecting flange of said stack and which throughout the remaining portion of the circle extends downward substantially to said deflecting flange.

1,502,395. SOAP HOLDER FOR WASHBOARDS. MARY J. MURPHY, St. Paul, and OLIVE SANDBANK and WILLIAM SANDBANK, New York Mills, Minn. Filed Apr. 17, 1922. Serial No. 554,068. 7 Claims. (Cl. 68—29.)



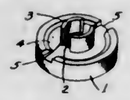
4. A washboard having a rubbing surface and a soap receptacle, a movable bottom in said receptacle, a pair of spaced movable members supporting said bottom rotatable about axes extending longitudinally of said board and a locking means for said members for holding the same and said bottom member in various adjusted positions.

1,502,396. T-SQUARE. JAN NEUMANN, Kromeriz, Czechoslovakia. Filed Aug. 20, 1923. Serial No. 658,469. 1 Claim. (Cl. 33—99.)



A T square comprising a head and a principal blade, a screw holding the two elements together so that they can be set at different angles relative to one another, a supplementary blade, and two graduated slides fitted on said supplementary blade so that they can be used for guiding the latter along the principal blade and maintaining the supplementary blade at right angles thereto, the principal blade being formed with an aperture whereby it can be normally connected to said screw.

1,502,397. SELF-THREADING SHUTTLE. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Oct. 28, 1919. Serial No. 333,879. 2 Claims. (Cl. 139—223.)

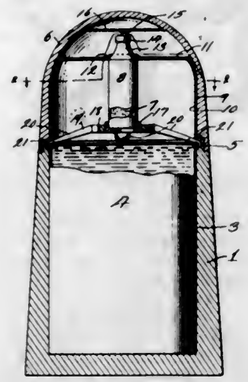


1. A self-threading shuttle having, in combination, a body portion provided with a delivery eye, a thread block having a depending horn and a thickened beak adjacent to the horn and provided with a short depending thickened tip, the beak and horn being constructed and arranged to engage the thread on the first pick of the shuttle and to retain it against upward motion.

1,502,398. VEHICLE. FRANK J. REICHMANN, Chicago, Ill. Filed Jan. 28, 1921. Serial No. 440,627. 14 Claims. (Cl. 280—33.2.)

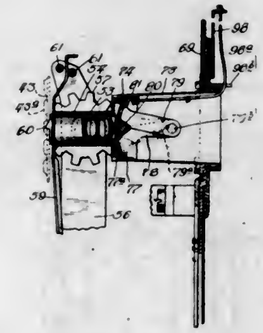
1. In a vehicle, the combination of its body and draft-rigging thereon comprising a rod extending lengthwise of the vehicle for connection at one end, adjacent one end of the vehicle, with another vehicle and movable lengthwise thereof, a plurality of rods spaced apart and extending lengthwise of the vehicle and movable lengthwise thereof, said last-referred-to rods being provided for connection adjacent the other end of the vehicle carrying them, with another vehicle, a cross-piece connected with said last-referred-to rods and through which said first-referred-to rod extends a yoke-shaped bar connected at its end portions with the structure formed of said plurality of rods and said cross-piece and through which said first-referred-to rod extends, and a spring through the medium of which draft on said plurality of rods is communicated to the body of the vehicle.

1,502,399. RIVETABLE NUT. HAROLD G. RENNER, Detroit, Mich. Filed May 14, 1923. Serial No. 638,714. 5 Claims. (Cl. 151—21.)



1. The combination with a member formed of sheet material and having an opening, of a nut having a threaded bore and having integral projections from one of its end faces at opposite sides of said bore, passing through said opening and bent to overlap the margin of said opening, and means restraining said nut from rotation relative to said material.

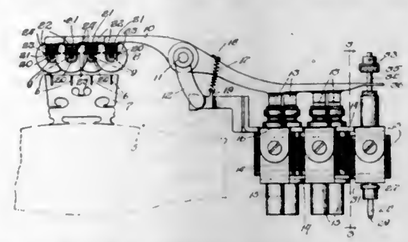
1,502,400. INFLAMMABLE SHELL. HENRY SAFFORD, Little Rock, Ark. Filed Jan. 25, 1924. Serial No. 688,487. 3 Claims. (Cl. 102—29.)



1. An inflammable shell comprising a base having a chamber therein, a cap threaded on said base, a liquid container disposed within the chamber of the base, a spider adjacent the forward end of the liquid container

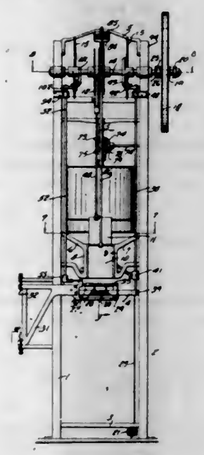
and having diverging radial arms, the outer ends of said arms being disposed in recesses in the wall of the chamber of the base, an adjustable bushing axially disposed in the spider, a bursting charge container having its inner end mounted in the adjustable bushing,

the outer end of the bursting charge container being tapered and mounted in a tapered opening of a support, a cap carried by the outer end of the bursting charge container and a firing pin carried by the threaded cap in registration with the bursting charge container cap.



1,502,401. MOTION-PICTURE CAMERA. HENRY K. SANDELL, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 10, 1921, Serial No. 491,156. Divided and this application filed July 14, 1922. Serial No. 574,910. 15 Claims. (Cl. 88—16.8.)

1. In a moving picture machine, in combination, a lens cell, a weighted shutter intercepting the lens and movably secured thereto, and means for reciprocating the lens cell whereby the inertia of the shutter causes it to move with relation to the lens.

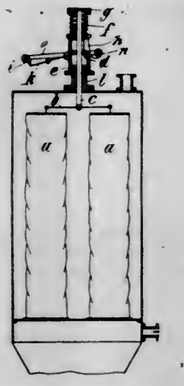


1,502,402. SELF-PLAYING MUSICAL INSTRUMENT. HENRY K. SANDELL, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1922. Serial No. 575,195. 3 Claims. (Cl. 84—11.)

1. In a self-playing musical instrument of the viol class, a plurality of rotating sounders corresponding with the strings of the instrument, a lever for bringing each of said sounders into engagement with its string, an electromagnetic device for actuating each of said

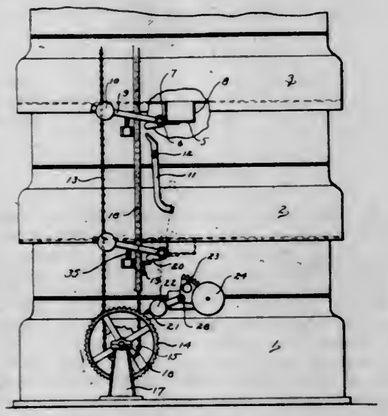
levers to effect such engagement, and an electromagnetic device operative to retract said levers to effect complete disengagement of the sounders from their strings.

1,502,403. CIGAR-BUNCH MACHINE. JOHN SEGEDY, Brooklyn, N. Y., assignor to Morris Kraus, New York, N. Y. Filed May 21, 1923. Serial No. 640,426. 9 Claims. (Cl. 131—42.)



9. A cigar bunch machine comprising a rotatably mounted shaft, a double sector, provided with gear teeth, rigidly mounted on said shaft, a vertical shaft, a sector provided with gear teeth, rigidly mounted on the upper end of said shaft, with said gear teeth in the path of movement of the gear teeth on said double sector, and said double sector arranged to move the gear teeth thereon successively into engagement with the gear teeth on said sector on said vertical shaft, and means to return said vertical shaft to and yieldingly maintain it in its initial position, in combination with a plurality of cam members rigidly mounted on said shaft, a funnel, a pivoted arm, a connection between said funnel and said arm, and a projection on said connection positioned in the path of movement of said plurality of cam members, all arranged so that the movements of said vertical shaft and said funnel are in timed relation.

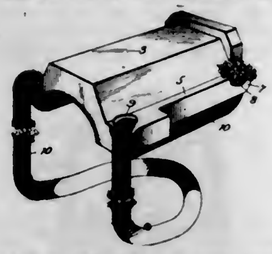
1,502,404. ARRANGEMENT FOR CLEANING FILTERS OF FABRIC. GOTTHILF SEITZ, Frankfort-on-the-Main, Germany. Filed Mar. 13, 1924. Serial No. 698,990. 4 Claims. (Cl. 183—44.)



4. In combination with a fabric filter, a cleaning device comprising a rod secured at one end to a plurality of filter bags; an abutment fixed on said rod; a sleeve

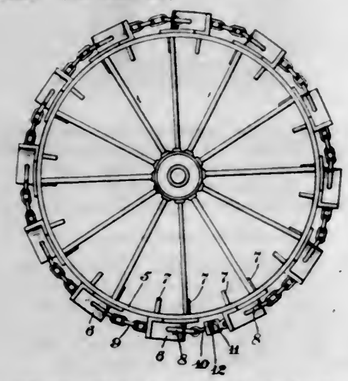
slidably mounted on said rod; a spring provided on the free end of said rod and adapted to abut at one end on said sleeve; a pawl on said sleeve adapted to abut on said abutment on the rod to secure said sleeve in

a locked position; and means operative to raise said sleeve against the force of said spring into said locked position, and then to release said sleeve to allow said filter bags to drop whereby said bags will be raised by the action of the spring.



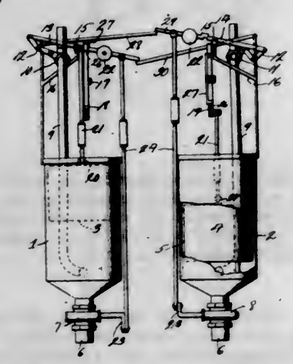
1,502,405. PROCESS AND APPARATUS FOR CHARGING COOKERS. ORLANDO SHEPPARD, Jr., Atlanta, Ga., and RUSSELL A. TRACE, Dayton, Ohio, assignors to Buckeye Iron & Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 28, 1921. Serial No. 456,454. 8 Claims. (Cl. 87—6.)

1. In a cooker, means for cooking oil bearing material, means for loading and unloading said cooker, an alarm and means actuated by said loading and unloading means for operating said alarm at predetermined intervals of time of its operation to indicate the unloading of the cooker.



1,502,406. LUBRICATOR. GEORGE P. SIMMONS, Herkimer, N. Y., assignor to Horrocks Desk Company, Herkimer, N. Y., a Corporation of New York. Filed May 23, 1921. Serial No. 471,699. 3 Claims. (Cl. 64—24.)

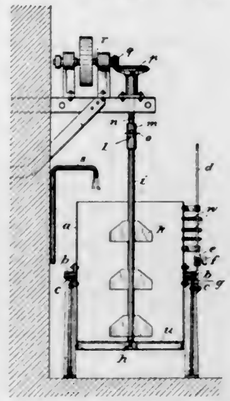
1. A brass for use in car journal boxes having on opposite sides and near its ends, brackets or holders adapted to receive and hold a wick but to leave the same fully exposed on its outer side in the space be-



tween the brackets, said brackets being formed integral with the brass.

1,502,407. TRACTION DEVICE. WAYNE L. SMITH, Columbus, Ohio. Filed Dec. 4, 1923. Serial No. 678,376. 4 Claims. (Cl. 301—44.)

2. A traction device for the wheel of a tractor, comprising, in combination, a series of cleats each having a pin for engaging the wheel rim and a chain upon which said cleats are strung composed of elongated eyebolts slidingly engaged with the cleats, and links connecting the eyebolts.

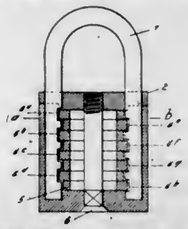


1,502,408. LIQUID MEASURER AND CAN FILLER. WILLIAM ELIAS SORENSEN, New Orleans, La. Filed Aug. 21, 1923. Serial No. 658,574. 2 Claims. (Cl. 73—28.)

1. A liquid dispensing device comprising adjacent receptacles, floats disposed within said receptacles, intake and discharge valves in connection with the receptacles, and float controlled mechanism in connection with each

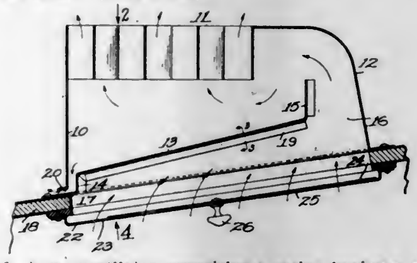
receptacle and cooperating whereby fluid will be intermittently taken in and discharged from the receptacles, said means comprising rotatable discs and levers controlled by the discs and cooperating with each other.

1,502,409. DEVICE FOR NEUTRALIZING PICKLED NOURISHMENTS AND FODDER. ROBERT SPEIDEL, Calmbach, Wildbad, Germany. Filed May 15, 1922. Serial No. 561,075. 8 Claims. (Cl. 99—2.)



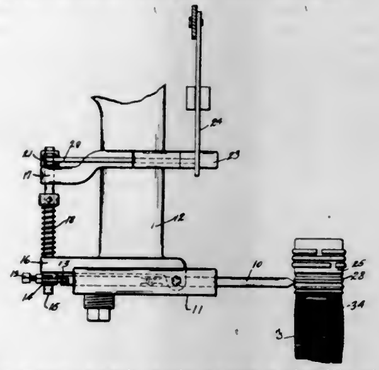
1. An apparatus for neutralizing pickled nutriments and fodder, consisting of a cylindrical vessel, an agitating device arranged therein, means for supplying fresh water at the top of the vessel, a water outlet in the bottom of the vessel, a sieve above the main bottom of the vessel, means for swinging said vessel about a horizontal axis, and means for driving the agitating device.

1,502,410. AUXILIARY AIR-INTAKE MECHANISM. HARRY TEEGAN, Des Moines, Iowa. Filed May 23, 1921. Serial No. 471,828. 2 Claims. (Cl. 251—87.)



1. In a device of the class described, a valve chamber formed with three ports, one of said ports being adapted to admit atmospheric air and the other to admit a liquid to said chamber, the third of said ports being connected to an air supply pipe, and a rotary valve member formed with an arcuate channel adapted to form communicating means selectively between said third port and the other two.

1,502,411. COMBINATION LOCK. ERNEST TOBLER, Braunschweig, Germany. Filed Nov. 2, 1922. Serial No. 598,648. 1 Claim. (Cl. 70—113.)

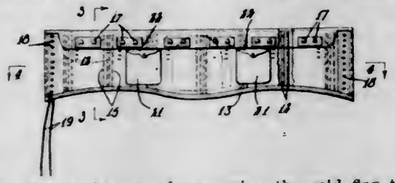


A combination padlock of the character described, comprising a U-shaped shackle having notched limbs, the notches of one limb being staggered relative to those of the other limb, a casing having bores in which to receive the limbs of the shackle, and a plurality of superposed rings arranged rotatably in said casing so as to encroach on the bores and engage the notches of the shackle limbs, each ring having an elongated notch which registers with the full portion of one limb so as to allow a partial rotation of the ring through the notch in the opposite shackle limb, the ring having also a notch which, in one end position of the ring, registers with said latter limb so as to allow the shackle to move.

1,502,412. CAR VENTILATOR. CHARLES H. TURNER, Worcester, Mass., assignor to Osgood Bradley Car Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 13, 1921. Serial No. 492,044. 4 Claims. (Cl. 98—22.)

1. A car ventilator comprising a casing having a grid-like portion and an imperforate portion in its outer face and having an opening in the inner face in part aligned with said grid-like portion, a baffle plate between said grid-like portion and said opening providing an air passage around one end of said plate from the inner to the outer parts of said casing at the imperforate portion and means to control the flow of air through said opening.

1,502,413. WEFT-DETECTING MECHANISM. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1922. Serial No. 556,618. 9 Claims. (Cl. 139—269.)

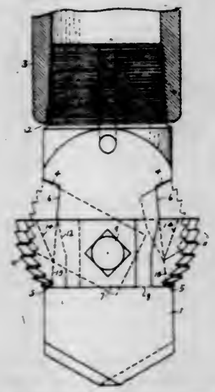


1. In a loom, a weft carrier having a plurality of axially movable elements mounted thereon, such movement being restrained by a sufficient supply of weft on the weft carrier, and a weft detector engaging said elements and effective to indicate weft exhaustion upon axial concentric separation of said elements in the path of said detector.

1,502,414. CONCEALED TROUSER-SUPPORTING BELT. JOHN WASHUK, Detroit, Mich. Filed Apr. 15, 1922, Serial No. 552,953. Renewed May 5, 1924. 5 Claims. (Cl. 241—9.)

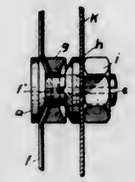
1. A concealed trouser supporting belt comprising a fabric formed with pockets, stays in said pockets adjust-

able in length, a flap extending along the upper edge of said fabric and adapted to be folded over the tops of the



said stays, and means for securing the said flap to the body of the fabric in vertically adjusted positions, for the purpose specified.

1,502,415. ARTIFICIAL LEG. CHESTER B. WINN, Buffalo, N. Y. Filed Jan. 5, 1924. Serial No. 684,530. 5 Claims. (Cl. 3—11.)



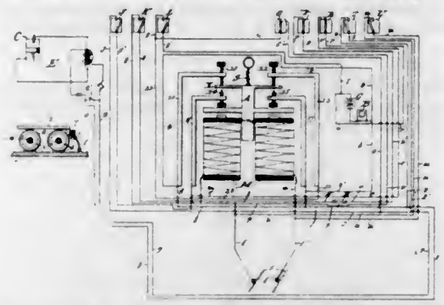
1. An artificial leg, comprising a thigh section, a lower leg section, a knee journal pivotally connecting said sections, said leg section having a guide adjacent to its rear side, a suspender, and a controlling member connected to the suspender and looped around said guide and said knee-journal to slide freely thereon.

1,502,416. FISHING TOOL. JAMES S. ABERCROMBIE, Houston, Tex. Filed Jan. 28, 1921. Serial No. 440,764. 5 Claims. (Cl. 294—95.)

1. A fishing tool including a supporting member, pipe engaging dogs pivoted thereto and projecting in opposite directions beyond said member, said projecting ends having overturned flanges formed with grooves which receive the edges of said member.

1,502,417. WIRE AND ROPE CLAMP. KARL ARNSTEIN, Friedrichshafen-on-the-Bodensee, Germany, assignor to the Firm: Luftschiffbau Zeppelin, Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Filed Oct. 23, 1922. Serial No. 596,488. 5 Claims. (Cl. 24—135.)

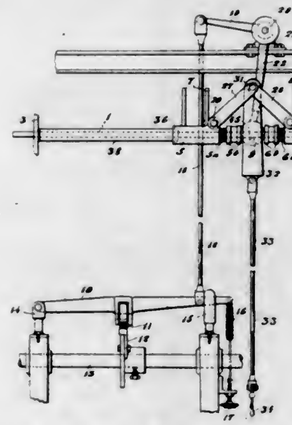
1. A clamping device for wires, and the like, comprising a member having a surface of convex spherical curvature adapted to have a wire or the like pass over it in any direction; a second member having a surface of concave spherical curvature adapted to press said wire or the like against said first member; and means for forcing said members and surfaces toward each other, the said surfaces thereby deflecting and clamping said wire or the like.



1,502,418. WIRE AND ROPE CLAMPING DEVICE. KARL ARNSTEIN, Friedrichshafen-on-the-Bodensee, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Original application filed Oct. 23, 1922, Serial No. 596,488. Divided and this application filed Apr. 16, 1924. Serial No. 706,856. 2 Claims. (Cl. 24—135.)

1. Clamping and coupling device for wires, ropes and the like, comprising in combination, two substantially disc-shaped coupling members, convex surfaces on each disc with two oppositely disposed concave recesses, the convex portions of each disc fitting in the concave recesses of the other disc, a central gap between the convex portions of each disc and means for clamping said discs together.

1,502,419. SIGNAL SYSTEM FOR RAILWAY CARS. AVERY E. BLAYLOCK, Little Rock, Ark. Filed May 13, 1921. Serial No. 469,379. 2 Claims. (Cl. 246—66.)



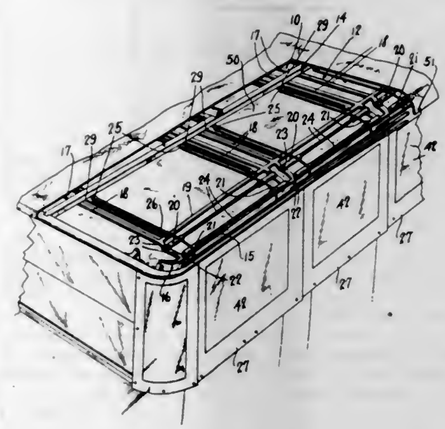
1. In association with an electrical block rail system, the combination of a motor driven vehicle having a motor circuit, the wheels of said vehicle that contact one rail being insulated from the wheels that contact the other rail, and a safety device comprising an electrical alarm

and a control device, said control device being operated by the short circuiting of the rails and comprising cir-

cuit making and breaking elements adapted to close the alarm circuit and open the motor circuit upon said short circuiting of the rails.

1,502,420. CHANGE-SPEED BELT GEARING. GEORGE HIGHFIELD BROWN, Market Harborough, England. Filed Oct. 12, 1923. Serial No. 668,210. 5 Claims. (Cl. 64—4.)

1. Change speed belt gearing, comprising, in combination, two sets of fast and loose pulleys on a countershaft or equivalent member, and arranged to give different speeds thereto, a movable belt fork for controlling the driving belt of each set, means yieldingly connecting the belt forks so that they form a unit, and can be moved simultaneously to change the drive from one fast pulley to the other, a device operable from a cam to move said units in pre-arranged manner to automatically determine which fast pulley is to be driven, and means common to both felt forks and operable at will whereby the fork controlling the belt from which the drive is at the time being taken can be moved relatively to the other fork for the purpose of stopping and starting the countershaft or member.



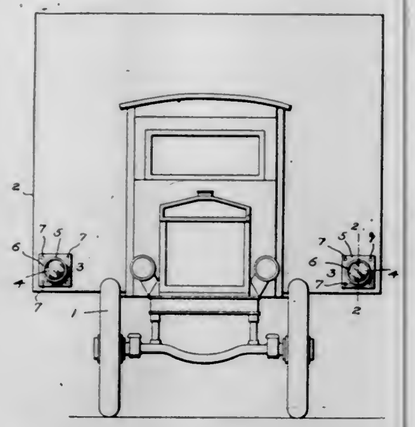
1,502,421. ENAMEL OPACIFYING COMPOSITION AND PROCESS OF MAKING THE SAME. HUGH SPENCER COOPER, Cleveland, Ohio, assignor to Kemet Laboratories Company, Inc., a Corporation of New York. Filed Mar. 29, 1921. Serial No. 456,742. 7 Claims. (Cl. 106—36.2.)

1. Process of treating naturally occurring zirconium silicate to produce an enamel opacifier, which comprises wet-milling the material to a condition of extreme fineness, treating the milled material with an acid and then washing, drying, and strongly igniting the material.

1,502,422. ZIRCONIUM CONTAINING COMPOSITION AND PROCESS OF MAKING THE SAME. HUGH S. COOPER, Cleveland, Ohio, assignor to Kemet Laboratories Company, Inc., a Corporation of New York. Filed Aug. 10, 1921. Serial No. 491,300. 18 Claims. (Cl. 106—36.2.)

1. Process of treating zirconium silicate, which comprises wet-milling the silicate to a condition of extreme fineness, reacting upon the milled material with concentrated sulphuric acid, and removing residual acid and substances rendered soluble thereby.

1,502,423. AUTOMOBILE CURTAIN AND TOP. BENJAMIN H. COZINE, Louisville, Ky. Filed Dec. 19, 1919. Serial No. 345,923. 6 Claims. (Cl. 296—140.)



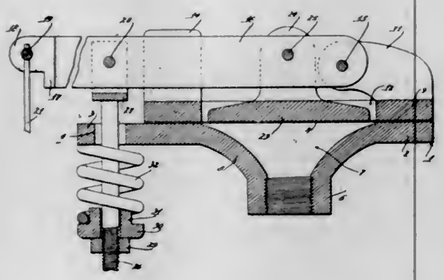
2. In a device of the class described, a curtain including a flexible transparent element, and a roller substantially co-extensive in length with the width of the curtain and over which the curtain is movable, said roller having end portions of enlarged diameter for bearing against the side portions of the curtain beyond the flexible transparent element thereby relieving pressure on the flexible transparent element.

6. The combination with a vehicle top, of a unitary frame and curtain structure removably mounted in the vehicle top and including a frame substantially co-extensive with the vehicle top, a series of curtains disposed upon the frame in substantially flat condition, with their transverse edges in over-lapping relation, elastic elements connecting the curtains with the frame, the curtains being otherwise free and unrestrained, and guiding means carried by the frame over which the elastic elements operate, the sides of the frame being spaced from the longitudinal sides of the vehicle top to provide a free uninterrupted space through which the curtains may be drawn.

1,502,424. AUTOMOBILE LIGHTING SYSTEM. HENRY P. J. EARNSHAW, Berlin, Mass. Filed Dec. 13, 1920. Serial No. 430,110. 1 Claim. (Cl. 88—1.)

The combination with a vehicle having a body considerably wider than the wheels, of reflector holders secured to the front of the vehicle closely adjacent the outer edge of said body or the load thereon, each holder having a reflector-receiving recess surrounded by a protecting wall or flange, and a convex reflector in each recess constructed

so that the light from the headlights from an automobile coming at an angle to the vehicle carrying the reflectors



will be reflected back towards the driver of the automobile, said flange projecting beyond the reflector and protecting the same from injury.

1,502,425. HARDENING ALLOY FOR BEARING METALS AND PROCESS OF USING SAME. ROBERT HUGHES EVANS, Detroit, Mich. Filed Nov. 13, 1922. Serial No. 600,681. 2 Claims. (Cl. 75—1.)

1. As a distinct composition of matter a hardening alloy for bearing metals consisting of the following ingredients mixed in substantially the proportions by weight here indicated, to wit:

	Parts.
Antimony	70
Tin	25
Copper	3
Bismuth	2

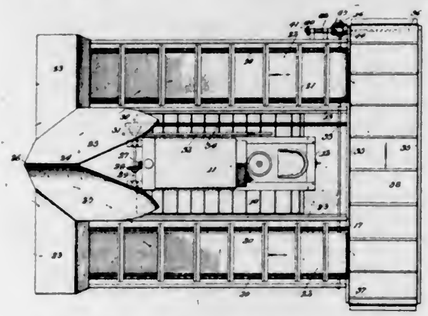
1,502,426. STEAM-DIAPHRAGM REGULATOR. ALEXANDER T. GARDEN, Augusta, Kans. Filed Dec. 15, 1922. Serial No. 607,161. 1 Claim. (Cl. 236—26.)

In a device of the class described, a base having an opening, a diaphragm extended across the opening, an annular cap on the diaphragm and having a support which overhangs the opening, the cap being provided with a guide disposed opposite to the support, means for securing the cap to the base, a lever slidable in the guide and pivoted to the support at a point closely adjacent to the inner end of the support, a foot pivoted to the lever and engaging the diaphragm within the cap, a plunger slidable freely in the base and pivoted at one end to the lever, an adjusting device on the other end of the plunger, and a compression spring surrounding a portion of the plunger, and engaging the base and the adjusting device.

1,502,427. WELL TOOL. FRED I. GETTY, Jennings, La. Filed Apr. 21, 1922. Serial No. 555,895. 9 Claims. (Cl. 255—73.)

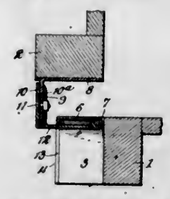
1. A well tool comprising a rod, a plurality of metal cutting milling cutters longitudinally spaced upon said rod.

1,502,428. WHIPSTOCK FOR WELLS. FRED I. GETTY, Jennings, La. Filed Oct. 1, 1923. Serial No. 665,827. 9 Claims. (Cl. 255—1.)



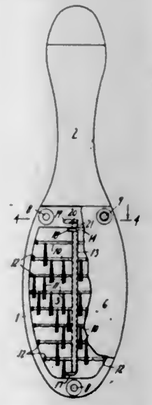
1. A whipstock comprising an elongated body having a taper extending throughout a major portion thereof providing a wedging face, a portion tapered oppositely from the angle of said wedge extending from a point adjacent to the lower end of said wedge to the lower end of the body, means to press the portion of the body between said tapered portions against the interior of a well casing, whereby to cause the upper end of the body to hug the opposite surface of the well casing.

1,502,429. SHOE TONGUE. CLIFFORD M. HADDOX, Charleston, W. Va. Filed Feb. 27, 1924. Serial No. 695,504. 2 Claims. (Cl. 24—117.)



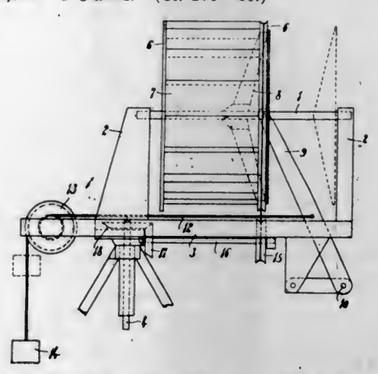
1. The combination with the tongue of a lace shoe of a strip of pliable material secured at one end to a lateral edge portion of said tongue adjacent to the upper end of the tongue, said strip having an eyelet adjacent to its other end, said eyelet being adapted to permit of the threading of the lace of the shoe therethrough.

1,502,430. SNOWPLOW. FAY C. HAYES, Altamont, N. Y. Filed July 30, 1921. Serial No. 488,655. 2 Claims. (Cl. 37—45.)



1. In combination, a tractor, a main frame supported by the tractor, vertical struts and inclined elevators supported by the main frame, on each side of the tractor, a dividing plow carried at the front end of the main frame, a scoop on each side of the plow and at the lower ends of the respective elevators, means for driving said elevators, by the tractor, a horizontal conveyor supported by the struts and disposed at the upper end of the elevators, means for operating the conveyor and gear shifting mechanism pivotally connected to the struts whereby the material may be deposited on either side of the elevators.

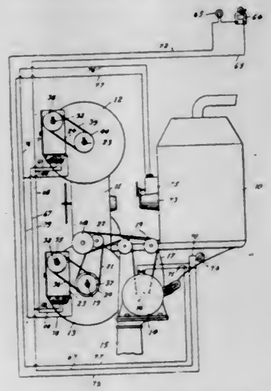
1,502,431. HINGE. RICHARD W. HUBBARD, Ashtabula, Ohio. Filed Nov. 16, 1922, Serial No. 601,338. Renewed June 10, 1924. 2 Claims. (Cl. 18—135.)



2. In a hinge the combination of a member having an internal portion formed at right angles thereto and an aperture in said portion, a second member having an integral portion formed at right angles thereto and having pintle receiving means and a plate having walls arranged at right angles to each other; one of said walls adapted to register with that of the first integral portion whereby fastening means may removably secure the plate to the first member and the other angular wall having pintle receiving means whereby a pintle may removably secure the plate to the second member.

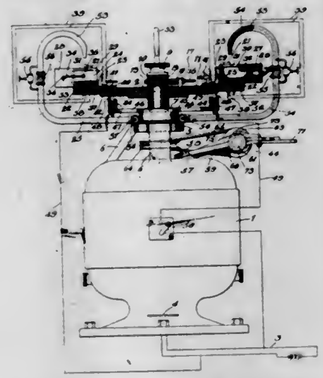
1,502,432. FOLDING BRUSH. STANLEY A. JAROSKI, Holyoke, Mass., assignor to Jaroski and Klocko, a Copartnership composed of said Jaroski and Matthew Klocko, Hatfield, Mass. Original application filed May 16, 1923, Serial No. 639,349. Divided and this application filed Nov. 10, 1923. Serial No. 674,062. 4 Claims. (Cl. 15—203.)

1. The combination, in a folding brush, a body having a recess therein, and a plurality of rods pivotally mounted in said recess and provided with bristles adapted to be projected above the body, a tubular member pivotally connected with said rods, and a rod extending through said tubular member and having its opposite terminals formed respectively into a handle and a lug beyond but contiguous with the ends of said tubular member, retaining means provided on said body adapted to cooperate with said lug, when said last-named rod and said tubular member are moved into position to erect said bristles, for the purpose of locking the member in place.



1,502,433. WINDMILL. JOHAN ALFRED JOHANSON, Stockholm, Sweden. Filed Mar. 16, 1923. Serial No. 625,548. 3 Claims. (Cl. 170—40.)

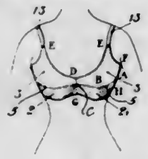
1. A wind mill, comprising in combination a horizontal shaft an open ended cylindrical cage on said shaft, the periphery of said cage being formed by vanes to be operated by the wind, a loosely mounted bottom to close



one end of said cage, and means to operate said bottom so as to maintain same in closed position during a light wind but opening same more or less during a stronger wind to allow the excess pressure to escape without operating the vanes.

1,502,434. AUTOMATIC SIGNAL AND SAFETY DEVICE FOR MOTION-PICTURE MACHINES. CARL F. LICK, St. Paul, Minn. Filed Feb. 23, 1921, Serial No. 447,108. Renewed May 15, 1924. 17 Claims. (Cl. 88—17.)

1. In combination with a reel shaft of a motion picture projecting machine, a shutter adapted to cut off the light through the projecting machine, and means operated from said reel shaft adapted to actuate said shutter.

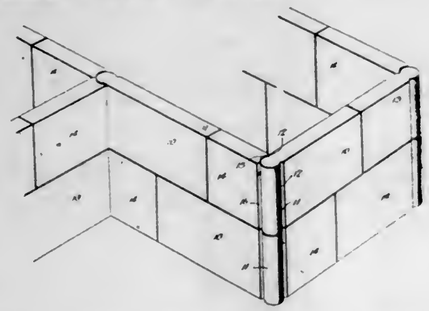


1,502,435. ELECTRICAL DENTAL MACHINE. NUMA ERVIN MORGAN, Atlanta, Ga. Filed Dec. 8, 1920. Serial No. 429,222. 5 Claims. (Cl. 22—65.)

1. A dental machine comprising an electric motor having a vertically extending shaft, a turn-table mounted thereon, a clutch positioned between said shaft and turn-table, a plurality of molds carried by said turn-table, and alternate means whereby gas or electricity may be used to heat said molds.

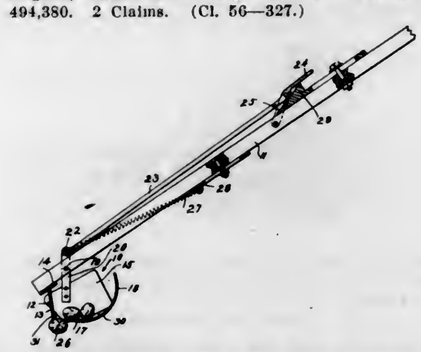
1,502,436. BUST SUPPORT. TERESINA MARIA NEGRI. Paris, France. Filed Jan. 23, 1921. Serial No. 439,835. 1 Claim. (Cl. 2—42.)

A breast-supporter comprising on the one hand, two breast pockets each of which is formed by the combination of two front fabric pieces extending from the middle of the chest to the armpit; a lower front piece having a bottom edge cut straight and two upper edges cut upon the bias and an upper front piece having a bottom edge cut straight and sewn to the one of said two upper edges of the lower front piece which is remote from the middle of the chest and a side edge cut upon the bias and sewn to the other of said two upper edges of the lower front piece, and on the other hand two back fabric pieces, each



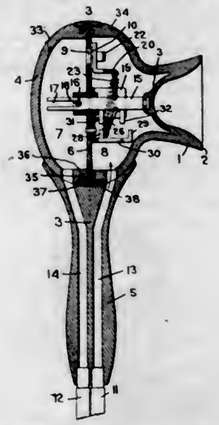
extending from the armpit to the middle of the back, each having a bottom edge cut straight, a side edge under the armpit sewn to the adjacent side edges of the two said front pieces and another side edge at the back provided with fastening means, and two shoulder straps fixed each at the top of one of the back pieces and of the corresponding upper front piece.

1,502,437. MEANS FOR PROTECTING GASOLINE OR OTHER TANKS. JACQUES POBEREJSKY, Paris, France. Filed Oct. 12, 1922. Serial No. 594,157. 2 Claims. (Cl. 244—31.)



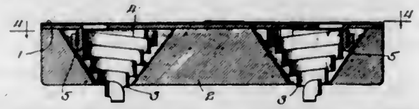
1. A protective armor for gasoline or other tanks, comprising a plurality of lattice-work layers arranged one over another, with the component members of adjacent layers disposed out of registration; said armor adapted to completely enclose the tank and to be secured to the walls thereof.

1,502,438. BUILDING ELEMENT. HENRY M. PRICE. Washington, D. C. Filed May 10, 1923. Serial No. 638,032. 3 Claims. (Cl. 72—38.)



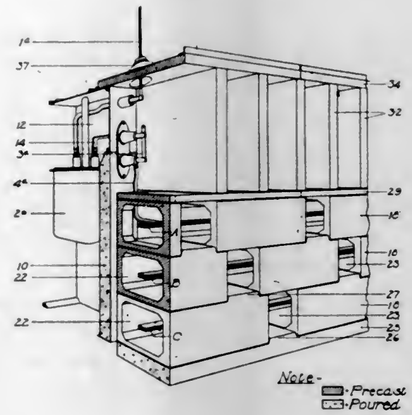
1. In a bonded building construction, the combination of a pair of complementary building elements of different sizes to present a break joint wall, said elements having interengaging and cooperating bead and groove construction whereby they may be united together by cementitious material in any angular position relative to said wall which is comprehended within an arc of substantially 180°.

1,502,439. PICKING DEVICE. LON B. RECTOR, Los Angeles, Calif. Filed Aug. 22, 1921. Serial No. 494,380. 2 Claims. (Cl. 56—327.)



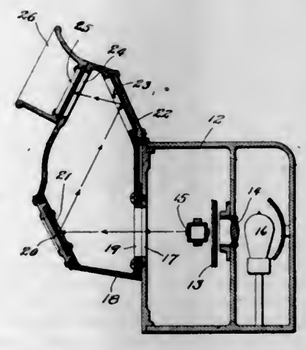
1. In a nut picking apparatus, a handle member provided with a jaw member, a receptacle pivotally secured to said handle adjacent the jaw member, means to normally maintain said receptacle in yielding contact with said jaw member, and means to adjust said receptacle away from said jaw member to form an opening of a desired width therebetween.

1,502,440. MASSAGING IMPLEMENT. HERBERT F. ROBERT, Malden, Mass. Filed June 10, 1922. Serial No. 567,274. 11 Claims. (Cl. 128—39.)



1. In a massaging implement, the combination with a flexible cup-shaped member having a rim adapted to be placed against the body, of means connected to said member for developing suction and pressure alternately within said member.

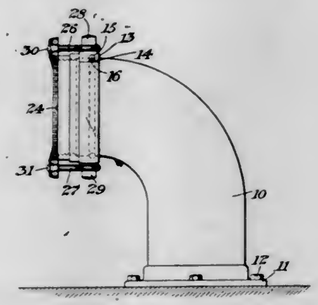
1,502,441. HOOF PAD. SAMUEL H. ROBERTS, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 553,635. 3 Claims. (Cl. 168—28.)



1. A hoof-pad having an aperture therein adapted to house a calk, in combination with a resilient metal spiral calk set in said aperture and adapted to positively engage the ground to prevent slipping, said calk having its main axis disposed perpendicularly to the plane of the pad.

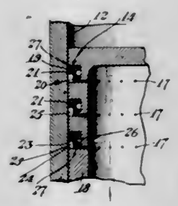
1,502,442. BUS STRUCTURE. ALLEN M. ROSSMAN and JOHN C. SANDERSON, Chicago, Ill., assignors to Sargent & Lundy, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed May 12, 1920. Serial No. 380,861. 39 Claims. (Cl. 175—298.)

17. In combination, a plurality of tiers of individual blocks laid in a wall, the blocks of each tier being spaced apart longitudinally to form transverse openings, each of the blocks having an opening therethrough longitudinally of the wall, said longitudinal openings being in alignment to form a longitudinal passageway of each tier, conductors mounted in the longitudinal openings of each tier, insulating means supporting said conductors and removable means closing the transverse openings.



1,502,443. AUTOMATIC SCALE. HENRY C. SCHAPER. St. Louis, Mo., assignor to The General Automatic Scale Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 12, 1918. Serial No. 253,670. 6 Claims. (Cl. 88—24.)

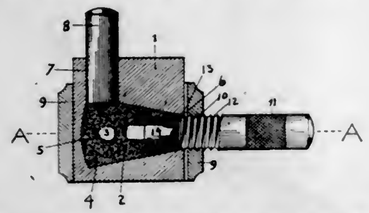
1. The combination with a weight indicator for scales including a housing provided with an opening in one of its side walls, a source of light in said housing, projecting means spaced from said source of light, a transparent member provided with weight indicia and movable in vertical plane between said source of light and said projecting means, of a casing arranged on one of the side walls of said housing and provided with an opening which registers with the opening in said housing, a reflecting member arranged in the lower portion of said casing in the path of travel of the light rays from said projecting means and adapted to reflect said light rays upwardly, a reflecting member arranged in the upper



portion of the casing and oppositely disposed relative to the lower reflecting member and in the path of travel of the reflected light rays, and a translucent screen arranged in the upper portion of said casing forwardly of said upper reflecting member.

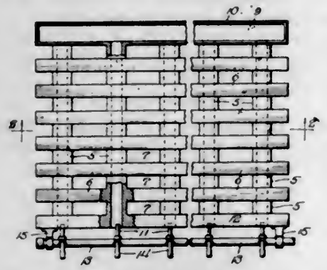
1,502,444. STANDPIPE CAP. JOHN H. STILLWAGGON, Richmond Hill, N. Y. Filed Apr. 18, 1922. Serial No. 554,688. 3 Claims. (Cl. 137—13.)

3. In a stand pipe and in combination with the swivel end connection thereof, a plate of relatively thin material, the said plate having a plurality of transversely placed grooves in its inner face, a plurality of pins extending from the inner face of the plate for centering the same in the swivel connection, lugs in oppositely disposed positions on the said plate, each lug having a hole therethrough and a groove therein, and cotter pins adapted to fit over the trunnions of the swivel connection and to pass through the holes in the said lugs and to be turned down in the grooves therein to secure the plate in place.



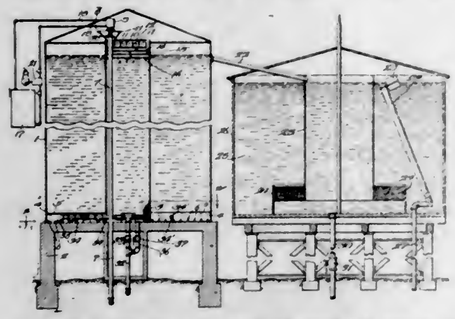
1,502,445. PISTON RING. CHARLES DELBERT STROMGREN, Los Angeles, Calif. Filed Aug. 11, 1919. Serial No. 316,889. 6 Claims. (Cl. 74—109.)

1. A piston ring for internal combustion engines comprising a ring having a body portion arranged to slidably engage the opposite walls of a groove in the piston, and a flange formed on the upper end of said body portion extending outwardly therefrom arranged to engage the wall of the cylinder, said body portion having perforations directly under the flange extending through the body portion to a point on the inside of the ring above the lower face of the ring.



1,502,446. DENTAL SWAGING DEVICE. SAMUEL JAMES SYMMONS, San Francisco, Calif. Filed Sept. 16, 1922. Serial No. 588,647. 2 Claims. (Cl. 113—39.)

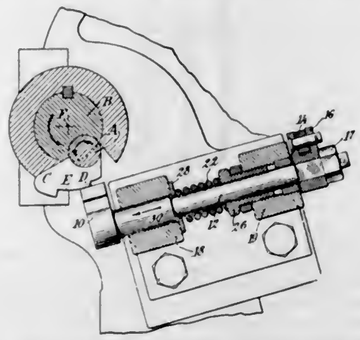
1. In a swaging device comprising a cylindrical matrix block with a frusto-conical die chamber and having an opening on the side wall of said block, the said opening being of sufficient size to permit the insertion, and removal of a die, a mass of mouldine contained in said chamber, a longitudinal off-center bore extending from said chamber, a solid compression plunger slidable in said bore and projecting into said die chamber, a ring



slidable on said block, a handle threaded into said ring and of a diameter to snugly fit into the opening of said die chamber.

1,502,447. GRID FOR GAS-BURNING BROILERS. JACOB L. SHROYER, Oak Park, Ill. Filed Aug. 18, 1923. Serial No. 658,150. 3 Claims. (Cl. 126—41.)

1. A broiling grid and burners comprising a series of inverted, parallel, open channel members; a flue with which the openings in all the channels communicate; a series of transversely-extending bars connecting the channels and providing a broiling surface and a burner for each channel arranged to project a flame directly into each channel.



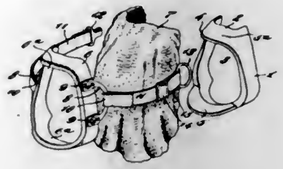
1,502,448. LIQUID-TREATING APPARATUS. INOS R. TANNER, Chicago, Ill., assignor to Jos. E. Nelson & Sons, Chicago, Ill., a Copartnership. Filed July 23, 1921. Serial No. 487,121. 3 Claims. (Cl. 210—21.)

1. Liquid treating apparatus including a source of liquid furnishing liquid under pressure to be treated; a pipe communicating with said source; a valve in said pipe operated by the liquid, the pipe having a port closed by said valve and also opened to varying extents by the valve according to the pressure exerted upon the valve by the liquid; a settling chamber into which the liquid to be treated is discharged through said port; a chemical tank having a port through which chemical

is discharged into the settling chamber; and a valve adapted to open and close the port in the chemical tank to varying extents and actuated by the other valve, said valves and ports being interrelated to cause the proportion of the chemical and liquid supplied to the settling chamber to be substantially constant with varying rates of flow of the liquid and chemical.

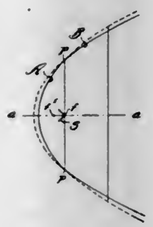
1,502,449. CLUTCH. WALTER THOMA, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Feb. 14, 1924. Serial No. 692,675. 4 Claims. (Cl. 192—29.)

1. Clutch-operating mechanism comprising a part adapted to make contact with a part of a clutch-key or pin, a spring for cushioning the shock of contact between said operating part and clutch part, and means for relieving said operating part of shock on the reaction of said spring.



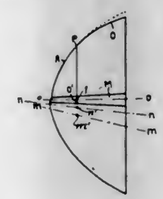
1,502,450. RESPIRATOR. WILLIAM H. WOOD, South Euclid, Ohio. Filed June 30, 1919. Serial No. 307,497. 8 Claims. (Cl. 128—146.)

1. A respirator comprising a base member adapted to conform to the face of the wearer, said member having an outwardly inclined surface, an open-work supporting frame projecting outwardly from said member, a clamping member adapted to be applied to the inclined outer surface of the first mentioned member, a pliable strainer element adapted to be inserted between said members and to be supported upon said frame, and means connected with the clamping member for supporting the respirator in operative relation to the face of the wearer.



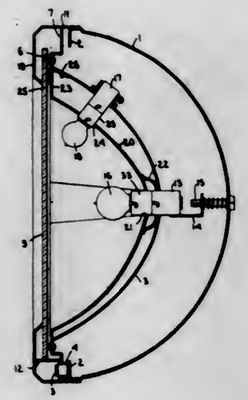
1,502,451. RESPIRATOR. WILLIAM H. WOOD, South Euclid, Ohio. Filed Mar. 1, 1920. Serial No. 362,195. 4 Claims. (Cl. 128—146.)

1. A respirator comprising a rigid open base member shaped to conform t the face of the wearer, an open clamping member, and a strainer member of yielding material interposed between the first two members and projecting inwardly beyond the inner edge of the base member, the base member having an extended outer bearing surface, the said surface and the inner surface



of the clamping member being shaped to permit the clamping member to be adjusted to various positions upon the base member and to cause the edge of the strainer member to engage the face of the wearer.

1,502,452. LAMP. WILLIAM H. WOOD, South Euclid, Ohio. Filed Oct. 18, 1920, Serial No. 417,736. Renewed Oct. 28, 1921. Serial No. 511,147. 6 Claims. (Cl. 240—44.)

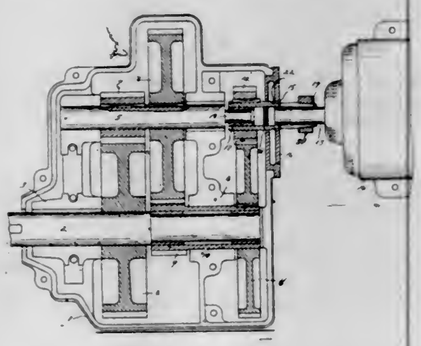


1. An automobile headlight comprising, in combination, a one piece reflector whose vertical section exhibits two approximately parabolic portions arranged one in front of the other, the focal point of the foremost portion being located rearwardly of that of the rearmost portion and the surfaces of the two portions merging together substantially opposite said focal points, having a V shaped light source in said reflector symmetrically arranged relatively to said axis and having its apex presented toward the open face of said reflector.

1,502,453. HEADLIGHT. WILLIAM H. WOOD, South Euclid, Ohio. Filed May 11, 1921. Serial No. 468,639. 3 Claims. (Cl. 240—41.)

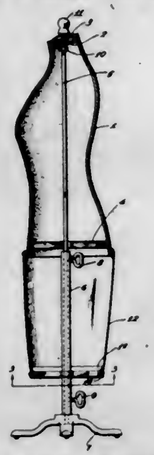
1. A one piece, sheet metal reflector for headlights, comprising, in combination a semi-paraboloid heel portion terminating substantially at its parameter, the portion of the reflector on the opposite side of the axis being located outside the imaginary surface defined by said first portion and the remaining portion of the reflector which lies upon the same side of the axis being located inside such imaginary surface.

1,502,454. LAMP. WILLIAM H. WOOD, South Euclid, Ohio. Filed Apr. 25, 1921. Serial No. 464,361. 9 Claims. (Cl. 240—41.)



1. A reflector for headlights having a flange at its open end, a metal spring carried by the forward face of said flange adapted to engage the glass of the headlight in which it is placed and a plurality of laterally projecting metal centering devices spaced around such open end.

1,502,455. STORAGE BATTERY. WILLIAM H. WOOD, South Euclid, Ohio. Filed July 1, 1921. Serial No. 481,981. 9 Claims. (Cl. 204—29.)

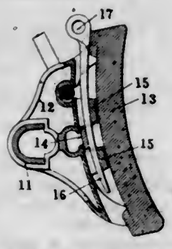


5. An acid-resistant, electrolytic diaphragm consisting of a supporting structure of impervious insoluble material, having apertures therein which are filled with organized porous keratin.

1,502,456. REDUCTION GEARING. WILLIAM E. BEE, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 15, 1923. Serial No. 612,732. 4 Claims. (Cl. 74—7.)

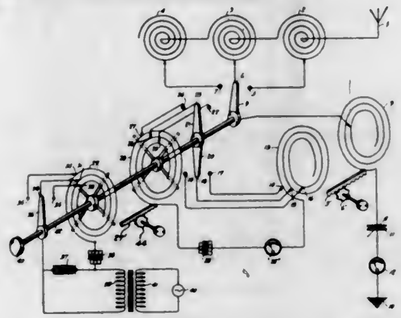
1. The combination with a gear casing, of a drive shaft outside said gear casing, a coupling sleeve having an outer flexible portion surrounding and clamped at its end upon said drive shaft, a bearing within said casing for the inner end of said coupling sleeve, and gearing within said casing including a gear member secured upon the inner end of said coupling sleeve and surrounding a portion of said bearing.

1,502,457. COMBINED BUST AND SKIRT FORM. MAX BRECKER, Brooklyn, N. Y. Filed July 18, 1921. Serial No. 485,609. 1 Claim. (Cl. 223—18.)



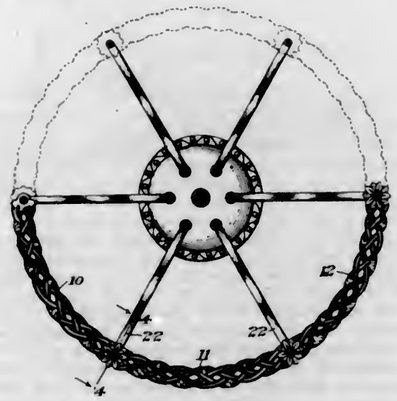
A combined bust and skirt form embodying a rigid permanently shaped bust portion provided with an open bottom chamber at its base, a skirt portion permanently secured to the bust portion and adapted to normally hang therefrom, said skirt portion being a fabric whereby it may be raised and collapsed into concealed position within the chamber in the bust portion, and a distending member permanently attached to the lower edge of the skirt portion for maintaining said portion in proper shape when the skirt portion is lowered and adapted to be forced into the chamber in the bust portion when the skirt portion is collapsed with said chamber, for maintaining the skirt portion in collapsed position within the chamber of the bust portion when the skirt portion is raised.

1,502,458. OPEN-FACE SLEEVE SEAL. EDWARD J. BROOKS, East Orange, N. J. Filed Mar. 13, 1924. Serial No. 698,937. 1 Claim. (Cl. 24—23.)



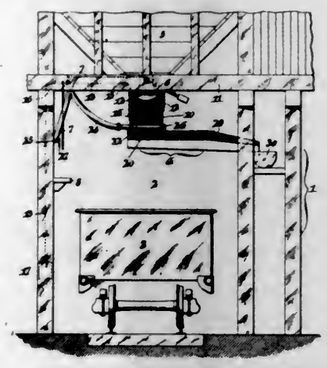
An open face sheet metal seal comprising: a main portion provided with an upstanding wing at each side, both of said wings extending in the same direction and the main portion forming a concavo-convex bridge between the wings, the convexity of said main portion extending in the same direction as the upstanding wings.

1,502,459. BRAKE-SHOE KEY. STERLING H. CAMPBELL, St. Louis, Mo. Filed Aug. 4, 1923. Serial No. 655,568. 4 Claims. (Cl. 188—243.)



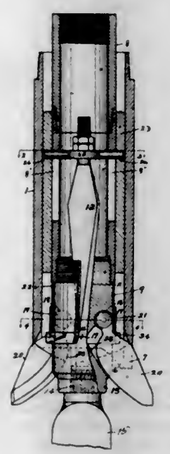
1. In a device of the class described, the combination with a brake head, of a brake shoe, and a key extending alternately through lugs on both parts for securing said parts together, said key being provided at its upper end with a laterally opening aperture adapted to engage with a key removing tool inserted from the side of the brake.

1,502,460. RADIO SIGNALING APPARATUS. GEORGE H. CLARK, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 26, 1921. Serial No. 464,556. 6 Claims. (Cl. 250—17.)



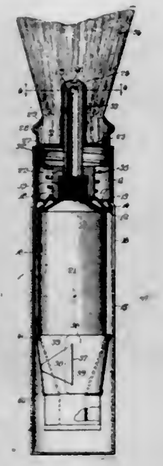
1. In apparatus for transmitting signals, the combination of an antenna circuit, a primary circuit containing a quenched spark gap, a source of power for supplying energy to the spark gap, means for transferring said energy from the primary to the antenna in increments whereby the effect of shock excitation is eliminated, each of said circuits and said last mentioned means having means for adjusting for different wave lengths and means for operating said last mentioned means in unison.

1,502,461. LIGHTING-FIXTURE RING. ABRAHAM COOPER, Brooklyn, N. Y. Filed Feb. 24, 1923. Serial No. 620,875. 4 Claims. (Cl. 240—78.)



1. In a lighting fixture, a plurality of arms, a ring divided into a plurality of sections, with one end of each ring section adapted to inter-engage with the end of the next adjacent section, a device attached to and extending beyond one end of each of the ring sections and adapted to conceal the joint between the same and the interengaging end of the next adjacent section, and means acting through the said device and with the inter-engaging end of the next adjacent section for simultaneously connecting these ends of the sections to one another and to an arm of the fixture.

1,502,462. APPARATUS FOR CLEANING GRAVEL AND THE LIKE. HARRY F. CURTIS, Philadelphia, Pa. Filed Oct. 6, 1923. Serial No. 666,926. 2 Claims. (Cl. 83—56.)



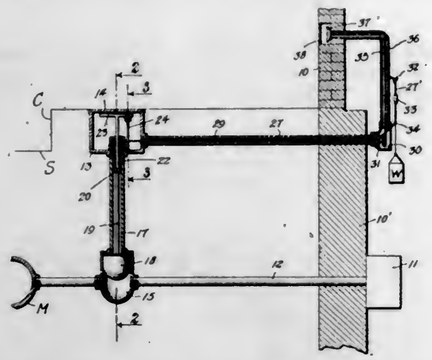
1. In apparatus for cleaning gravel and the like the combination of an all sheet metal chute having a foraminated bottom over which the gravel is conducted, said chute being pivotally suspended for angular adjustment, an underlying attached trough aligned with the chute for collecting the spent cleaning fluid, a gutter extending transversely at the discharge end of said trough and chute and rigidly secured thereto, a perforated pipe extending transversely of the chute for directing a fluid spray in opposition to the movement of the material being cleaned, a flexible tube interposed between said pipe and the source of cleaning fluid supply, and means whereby the angular inclination of the chute may be varied and counterbalanced.

1,502,463. DRILL BIT. GEORGE W. DUNSWORTH, Houston, Tex. Filed Dec. 26, 1922. Serial No. 609,150. 11 Claims (Cl. 255—76.)

1. A device of the character described including a tubular stem, a bit adapted to be passed through said stem and attached to, or detached from, the lower end thereof, said bit including a central boring tool, and lateral reamers, said stem and bit having co-operating,, spiralled abutting parts, which interlock when the stem is rotated.

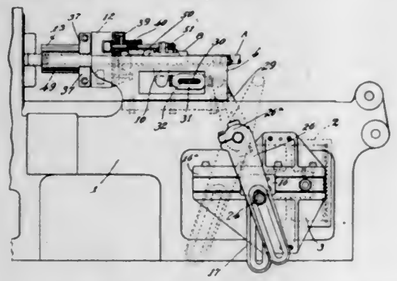
1,502,464. FOUNTAIN LATHER BRUSH. GEORGE G. FLOYD, Riverside, Ill. Filed Mar. 2, 1921. Serial No. 448,984. 2 Claims. (Cl. 15—135.)

1. In a fountain-brush, the combination of a shell, a brush including bristles and a hollow brush-head slidable with relation to said shell, an internally-threaded member in said shell adapted to receive the threaded neck of a collapsible supply tube, a pipe with a valve-port connected to said member and extending through the hollow of the brush for the passage of the contents of the tube to the bristles, a valve sleeve in said brush-head encasing and slidable on said pipe and adapted by its reciprocations to open and close said valve-port, and a spring acting on said brush-head tending to shift the latter to valve-port closing position.



1,502,465. CAN OPENER. SAMUEL H. GARRETT, Philadelphia, Pa. Filed July 29, 1922. Serial No. 578,327. 5 Claims. (Cl. 30—3).

1. A can opener comprising a semi-circular knife member, said knife member terminating in a point and having sharpened edges diverging from said point to the side margins of the knife member, and a member extending across between the upper limits of the sharpened edges of the knife member forming a shoulder in conjunction therewith, said shoulder being adapted to engage and bend inwardly the material of the can top cut by the edges of the knife member.



1,502,466. COMBINED CURB BOX AND AUTOMATIC GAS CUT-OFF. JOSEPH GILLEN, Flushing, N. Y. Filed Feb. 5, 1923. Serial No. 616,998. 6 Claims. (Cl. 137—162.)

1. The combination with a gas supply pipe, a cut off valve therein, and a curb box remote from the outside of the building inclosing valve actuating means normally held in inoperative position, of means operatable from

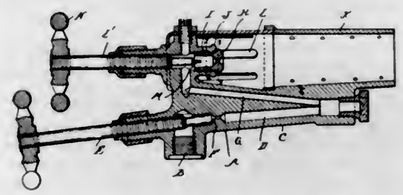
the inside of the building to release the valve actuating means to effect the closing of the valve in the cut off.

1,502,467. AUTOMATIC SCREW MACHINE. FREDERICK P. GLOSH, Cincinnati, Ohio, assignor to The Cincinnati Planer Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 28, 1921. Serial No. 448,366. 22 Claims. (Cl. 29—37.)

1. In an automatic screw machine, the combination with a frame, an end tool slide or the like, a rock shaft supported by the frame and extending across beneath the path of the slide, a lever on the shaft, and a turn buckle serving as a link between the lever and the slide, said lever being on substantially the center line of the slide.

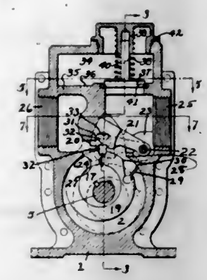
12. In a machine of the character described, the combination of a tool slide, tool holders in the tool slide, a shaft over which the slide moves in a path to and from the work, connections from the shaft to the tool holders to revolve them, and means for locking the tool holders against movement, and dis-connecting them from the said shaft, whereby fixed tools may be held in said holders, and means on the slide for providing a rest to fixed tools mounted in said holders, said means comprising a projection from the forward end of the slide, having tool engaging grooves therein, and having a cylindrical conformation, said means having a clearance space for the said shaft.

1,502,468. WINDOW-CONTROL MEANS. WILLIAM C. GROB, Toledo, Ohio, assignor of one-half to George B. Storer, jr., Toledo, Ohio. Filed Feb. 13, 1922. Serial No. 536,062. 3 Claims. (Cl. 292—175.)



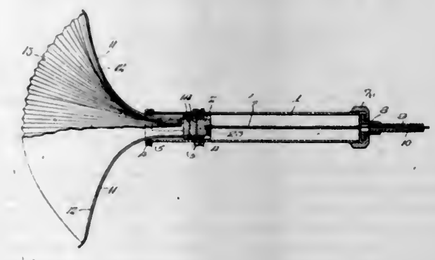
1. In combination, means forming a window casing, a window mounted for vertical reciprocatory movements in the casing, a hollow guide bar secured to a side of the casing lengthwise thereof and having a longitudinal

opening in its outer side and a plurality of bolt receiving openings in its inner side spaced longitudinally of the bar, a block mounted in the guide bar for reciprocatory movements longitudinally thereof, a bolt carried by the block for reciprocatory movements transversely of the guide bar and adapted to have its inner end engage a registering opening in the inner side of the guide bar,



the outer end of the bolt extending through the outer opening of the guide bar and forming a handle, a spring carried by the block and acting on the bolt to normally hold it in engagement with a registering opening, and a rod extending down from the block through the guide bar and fixedly attached to the lower edge of the window to cause the window and block to have movements in unison.

1,502,469. OIL BURNER. OTTO J. GROEHN, Detroit, Mich., assignor to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 6, 1919. Serial No. 328,835. 1 Claim. (Cl. 158—33.)

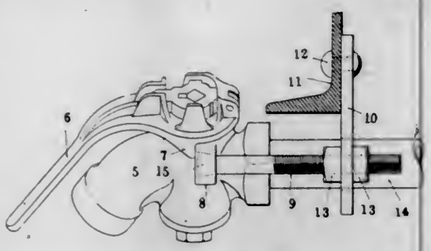


In a blow pipe torch for developing intense heat, a flame tube having an open forward end and air passages into the tube in the rear of said forward end, a vapor discharge nozzle at the rear end of the tube and substantially in alignment with the axis thereof, said nozzle having a discharge port, a stem in alignment with the axis of said discharge port and adjustable toward and from said discharge port, a support for said stem, a cleanout member carried by said stem and adjustable through said discharge port, said stem and cleanout member being adapted to be withdrawn entirely from said support, said stem remaining in alignment with the axis of said discharge port during the withdrawal thereof, a vaporizing passage leading from a source of supply of fuel to the port of said discharge nozzle, and a valve for controlling the supply of fuel to said vaporizing passage located at a position remote from said discharge nozzle, said valve having a stem provided with a screw-threaded adjustment for positively forcing the valve to its closed position independent of said stem which is adjustable in relation to the port of the discharge nozzle.

1,502,470. PUMP. IRA B. HART, St. Louis, Mo., assignor, by mesne assignments, to St. Louis Pump and Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 6, 1920. Serial No. 422,140. 5 Claims. (Cl. 103—132.)

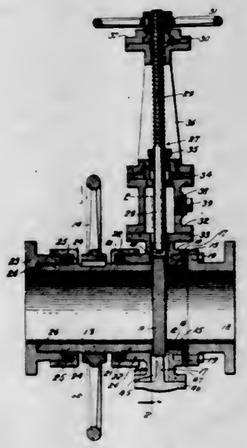
1. In apparatus of the class described, in combination, a cylinder member having a plurality of compartments; a steel shaft therethrough; each compartment having in it an eccentric fixed upon and rotatable with the shaft, a piston rotatably mounted upon the eccentric bosses upon the cylinder member, a pin mounted therein, a bronze rocker-arm pivotally mounted on said pin a tie-block upon the piston, a steel boss or piston-support on said tie-block and bolts securing said piston-support and tie-block upon the piston, the piston-support fitting in a recess in the rocker-arm to form a pivotal connection between piston and rocker-arm.

1,502,471. DISAPPEARING DIMMER. EMIL HLAVACEK, Two Rivers, Wis. Filed Feb. 5, 1924. Serial No. 690,768. 1 Claim. (Cl. 240—45.)



In a vehicle light, a dimmer comprising an accordion pleated fan spread by two specially shaped strips of flat spring steel and having two other wider flat spring guides riveted to grooved block operating on a guide rod in a tube to which is fastened a half-union and piping enclosing a continuous wire attached to block at one end and at other end to a movable angle held in place by a stamped plate having a slot to permit angle ends to be moved up or down from top side of the dashboard of the vehicle.

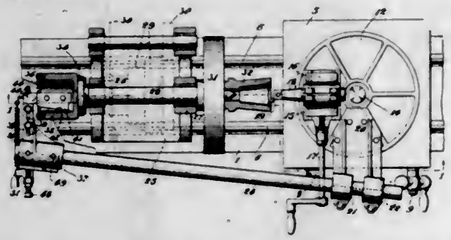
1,502,472. ANGLE-COCK HOLDER. LOUIS A. HOERR, St. Louis, Mo., assignor to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 15, 1923. Serial No. 668,472. 5 Claims. (Cl. 248—30.)



1. In a device of the class described, the combination with an angle cock provided with a lug, of a bolt ex-

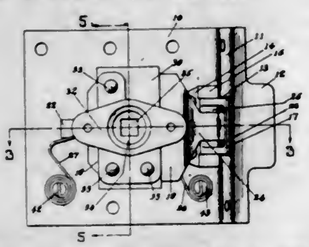
tending rearwardly from said lug, a supporting member through which said bolt passes and means for adjusting

said bolt longitudinally whereby the distance between the support and angle cock may be varied.



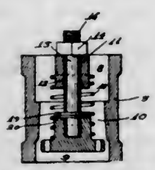
1,502,473. VALVE. JOSEPH JOULE, Belleville, N. J., assignor to Eastwood Wire Manufacturing Company, Belleville, N. J., a Corporation of New Jersey. Filed Apr. 13, 1922. Serial No. 552,165. 6 Claims. (Cl. 251—55.)

1. A valve-structure of the character described comprising a body-casing containing a through passage and having a transverse guide-way for a gate-valve therefor, a plate gate-valve in said guide-way, means for operating the valve comprising a threaded stem articulated to the upper end of the plate and means for effecting vertical movement of the stem, a ring valve-seat at one side of said gate-valve and a tubular pipe section at the other side of said gate-valve and having a threaded connection with said body-casing and having exterior thereto an exposed surface to which manually operative means are applied for rotating said pipe section, said pipe section being extended laterally beyond said body-casing.



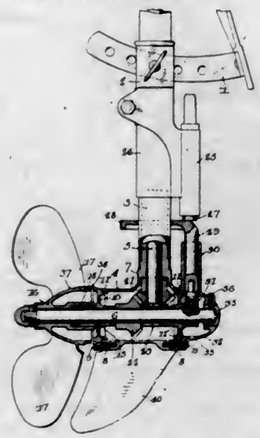
1,502,474. DEVICE FOR MAKING FLUTED GLASS MOLDS OR THE LIKE. PETER KUCERA, Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,373. 20 Claims. (Cl. 82—14.)

1. A device for manufacturing fluted molds for glass machines and the like comprising a main shaft, means for mounting a mold body on said main shaft, a pattern member also mounted on said main shaft, a turntable, a forming tool mounted on said turntable and adapted to operate upon said mold body, and an actuating device cooperating with said pattern to oscillate said turntable and said tool to produce a predetermined configuration on said mold.



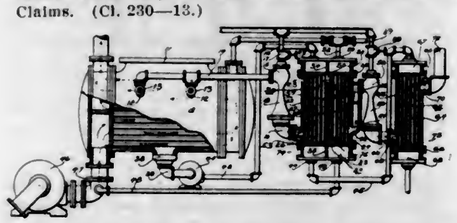
10. A device of the character described comprising a main shaft, work supporting means on one end of said main shaft, a pattern member on the other end of said main shaft, a forming tool adapted for rotation relatively to said main shaft, means to feed said tool longitudinally of the work, an actuating device carrying the templet and being adapted to oscillate said tool to cause same to follow a predetermined path, a templet adapted to engage said pattern, and stop means adapted to determine when said oscillation shall begin relatively to the feed of the tool.

1,502,475. LATCH MECHANISM. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1921. Serial No. 496,042. 15 Claims. (Cl. 292—222.)



1. A latch mechanism comprising a base plate, a swinging latch bolt mounted thereon, a bolt-operating member slidably mounted on said base plate and provided with a lug sliding in a slot therein, the body portion of said member being spaced from the base plate, said member being connected to said latch bolt, a rotatable roll-back engaging said bolt-operating member to actuate the same, and means for rotating said roll-back.

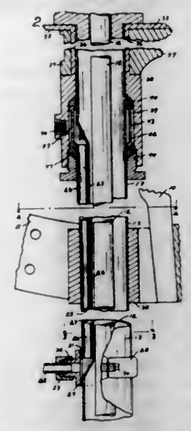
1,502,476. GAS-ENGINE GOVERNOR. BENJAMIN T. MCCANNA and EMIL R. KLEMM, Chicago, Ill. Filed Nov. 15, 1920. Serial No. 424,323. 2 Claims. (Cl. 137—152.)



1. A governor device, comprising a casing, a tapered chamber therein, a chamber at the intake end of said casing of larger diameter than said tapered chamber and connected thereto by a shoulder, and a governor valve normally below said shoulder and movable in said casing past said shoulder, the diameter of said valve being substantially the same as that of the lower larger end of said tapered chamber.

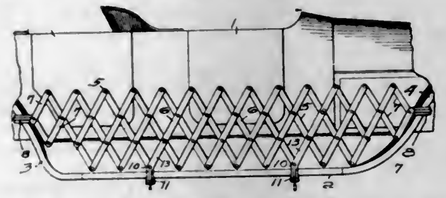
1,502,477. MARINE PROPULSION DEVICE. CHRISTOPHER J. MEYER, Milwaukee, Wis., assignor to Evinrude Motor Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 12, 1921. Serial No. 507,225. 7 Claims. (Cl. 115—18.)

1. In a marine propulsion device provided with a substantially vertical power shaft and a sleeve concentric therewith, the combination of a casing supported from said sleeve and dirigible therewith, closures for the end of said casing provided with bearings, a shaft rotatably mounted in said bearings, power transmitting mechanism within said casing adapted to drive said last named shaft from said power shaft, a propeller upon the driven shaft, a cam upon the driven shaft exterior to the casing, a housing for said cam, and a plunger operatively associated with said cam within the housing, said housing being ported, whereby to relieve it of pressure.



1,502,478. AIR EJECTOR. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 25, 1923. Serial No. 653,783. 13 Claims. (Cl. 230—13.)

1. In combination with a high vacuum condenser provided with two pumps connected in series for withdrawing air and vapor therefrom, the first of said pumps being a steam-operated ejector pump, a condensing device for absorbing the heat of the steam utilized in the ejector and a cooling device for subsequently reducing the temperature and specific volume of the air and vapor prior to their delivery to the second pump.

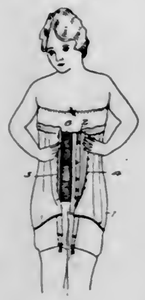


1,502,479. WATER-SUPPLY CONNECTION. JAMES A. MOULD, Milwaukee, Wis., assignor to Evinrude Motor Company, Milwaukee, Wis. Filed Jan. 7, 1924. Serial No. 684,720. 9 Claims. (Cl. 115—18.)

1. In a device of the character described, the combination with a support for the submerged parts of an outboard motor mounted for rotation and provided with a central cavity, of a bearing block disposed at an intermediate portion of said support, said support being formed with an arcuate bearing surface adapted for operative bearing contact with said block, and a water

supply pipe extending along said support externally of the cavity therein wholly at one side of the cavity and within the radius of said bearing surface.

1,502,480. AUTOMOBILE LUGGAGE RACK. ALBERT H. NEUKOM, Toledo, Ohio. Filed Dec. 20, 1920. Serial No. 431,840. 1 Claim. (Cl. 224—292.)



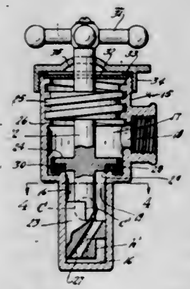
In an automobile luggage rack, a plurality of bars connected together by a double "lazy tong" construction and formed by two sets of parallel bars, the bars of one set being located at an angle to the bars of the other set and pivotally connected to the bars of the other set, screw hand clamping members having integral bar portions extending at an angle to the clamping members and forming certain of the bars of one set secured to bars of the other of the sets, and for clamping the "lazy tong" construction to the running board of an automobile and located at right angles to the running board, while the bar portions of the clamps extend at an angle to the running board, and clamps connected to the ends of the "lazy tong" construction for connecting the ends of the construction to the fenders of the automobile.

1,502,481. CORSET. SAMUEL J. NEWMAN and RAYMOND E. DODGE, New Haven, Conn., assignors, by mesne assignments, to I. Newman & Sons, Inc., New Haven, Conn., a Corporation of Connecticut. Filed Apr. 12, 1922. Serial No. 551,780. 3 Claims. (Cl. 2—38.)

1. In a front lace corset, a vest structure adapted to extend across the front edges of the corset, said vest structure comprising a single elastic section secured at one edge to the corset between the front edge of the corset and the side and extending across the opening in the front of the corset beyond the edge of the corset to which it is secured, said vest structure also including an inelastic section which is inelastic throughout its full width, said inelastic section being secured to said

corset an appreciable distance from the front edge of the corset toward the side with the free edge thereof lying between its line of connection with the corset and the edge of the corset section to which it is secured,

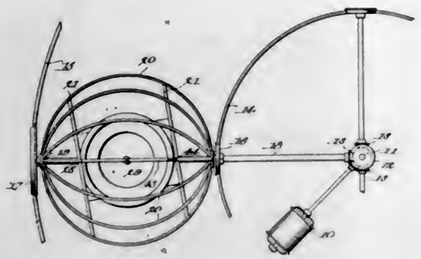
and disengageable fastening means carried by the free edge, said elastic section and by the inelastic section whereby said sections are disengageably connected together at a point at one side of the front edge of the corset.



1,502,482. DULL OR ROUGHENED PHOTOGRAPHIC FILM AND PROCESS OF MAKING SAME. RUDOLF OERTEL, Lichterfelde, near Berlin, and FRIEDRICH DREYER, Zehlendorf, near Berlin, Germany, assignors to the Firm Goerz Photochemische Werke G. m. b. H., Zehlendorf, near Berlin, Germany. Filed Dec. 26, 1923. Serial No. 682,827. 10 Claims. (Cl. 91—69.)

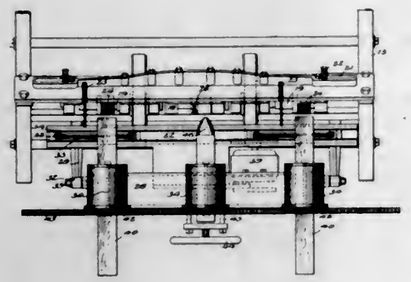
1. The process of dulling photographic sheets, which consists in treating the surface thereof with a spray of a varnishing composition.

6. The process of dulling photographic picture sheets, which consists in mixing nitro-cellulose with about one per cent of chloride of calcium, mixing about one per cent of said mixture with equal quantities of ether and alcohol, and dusting said mixture upon the surface to be treated.



8. As a new article of manufacture a photographic picture sheet, carrying a dull coating of most finely divided grains of a cellulose compound.

1,502,483. MIXING VALVE. LEO F. O'FLAHERTY and WILLIAM L. KIRKPATRICK, Elgin, Ill. Original application filed Oct. 23, 1922. Serial No. 596,219. Divided and this application filed Nov. 5, 1923. Serial No. 672,726. 7 Claims. (Cl. 251—106.)

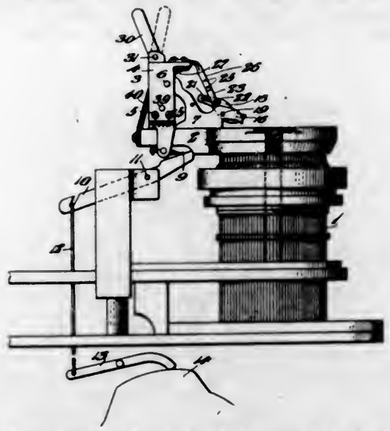


1. A mixing valve comprising a casing having a plurality of inlets and an outlet, a valve stem with a solid integral core, peripheral pockets on said core registerable with said inlets, and a small bore through said core providing communication between said pockets.

1,502,484. ROUNDABOUT. OSCAR F. OLSON, Bethlehem, Pa. Filed Feb. 11, 1922. Serial No. 535,841. 9 Claims. (Cl. 46—27.)

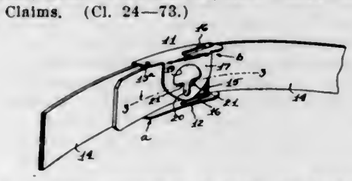
1. An amusement device comprising a circular track, a globular cage mounted for rotation over said track, means for rotating said globular cage, an endless track mounted interiorly of said cage at an angle to the axis of rotation of said cage, the angle being less than ninety degrees, a car mounted for backward and forward movement over said track and in the path of said circular track upon rotation of said globular cage.

1,502,485. SHOE-TREE-FORMING MACHINE. OSCAR OLSON, Brooklyn, N. Y. Filed Aug. 3, 1922. Serial No. 579,518. 9 Claims. (Cl. 144—145.)



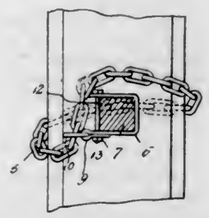
1. In a machine for making shoe tree parts, a frame, a second frame movably connected to said first named frame, a shaft rotatably carried by said first named frame, groups of cutting wheels and saws carried by said shaft, article retaining units carried by said second frame and corresponding in number to the number of groups aforementioned, cutting devices carried by said second frame adjacent to said units, and means for operating and projecting said last named cutting devices, whereby to bring the same into engagement and to transversely sever the articles carried by said units.

1,502,486. YARN-CHANGE BINDER FOR CIRCULAR-KNITTING MACHINES. FRANK W. ROBINSON, Reading, Pa., assignor to Schuylkill Hosiery Mills, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed May 1, 1923. Serial No. 635,839. 7 Claims. (Cl. 66—12.)



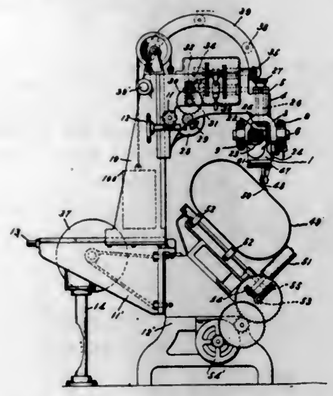
1. A yarn change binder, comprising a book suspended over the yarn which is out of knitting action,

a plurality of yarn fingers and their actuating means, said yarn fingers controlling the movement of said hooks,



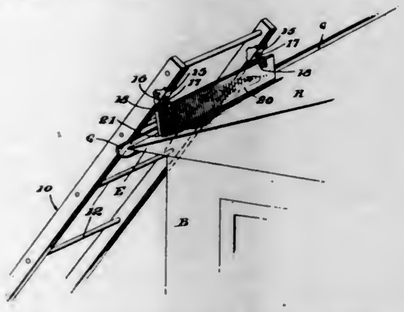
and automatically actuated yarn binding and cutting mechanism.

1,502,487. BELT BUCKLE. PAUL M. SABLE, Minneapolis, Minn. Filed Mar. 13, 1923. Serial No. 624,780. 2 Claims. (Cl. 24—73.)



1. A buckle comprising a body for attachment to opposite ends of a belt, a flange reaching back from said body and a hanger plate depending from said flange, said hanger plate having a button hole therein to receive a button attached to a garment, said button hole including a half-round opening communicating medially at its flat side with a downwardly reaching slot, lips comprising those opposed portions of the hanger plate at the junction of said opening and slot, said lips being flared back to facilitate the application of the button to said hanger plate and to form anti-slipping lugs for engagement with the garment near the root of the button, said hanger plate being adapted normally to guide the button against said flange and thereby limit movement between the buckle and garment.

1,502,488. ANTISKID DEVICE FOR VEHICLE WHEELS. ANGELO SERAFINI, Erie, Pa. Filed Aug. 30, 1923. Serial No. 660,088. 2 Claims. (Cl. 152—14.)

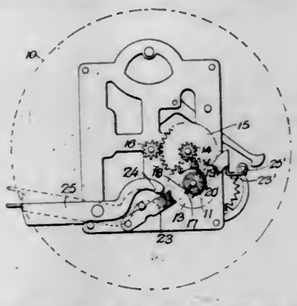


1. In an anti-skid device for vehicle wheels, a clamp element adapted to be secured to one of the spokes of the wheel and including a link element and a hook element, a chain section having one of its end links engaged over said hook element said chain section adapted to engage around the wheel and adapted to have its opposite end passed through said link element and to have its opposite end link also engaged over the hook element of said clamp.

1,502,489. APPARATUS FOR AUTOMATIC ARC WELDING. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 2, 1920. Serial No. 348,937. 10 Claims. (Cl. 219—8.)

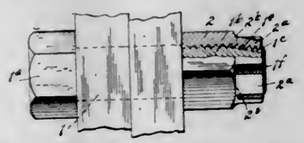
1. An arc welding apparatus comprising a welding head arranged continuously to feed a welding electrode to the work, conveyer mechanism for guiding and feeding articles to be welded into operative relation with the welding head and tracker means for guiding and positioning the welding head with respect to the articles to be welded.

1,502,490. LADDER ATTACHMENT. WILLIAM G. TACK, Garrettsville, Ohio. Filed Jan. 16, 1923. Serial No. 612,966. 8 Claims. (Cl. 22S—60.)



1. In a ladder attachment, a clamp adapted to be secured to a ladder, an arm extending outwardly from and inclined with respect to said clamp, a second clamp at the outer end of said arm, and a supporting member mounted in said outer clamp and inclined with respect to said ladder clamp.

1,502,491. ALARM-CLOCK MECHANISM, ARON S. TREGER, Independence, Kans. Filed Dec. 20, 1923. Serial No. 681,724. 8 Claims. (Cl. 58—22.)

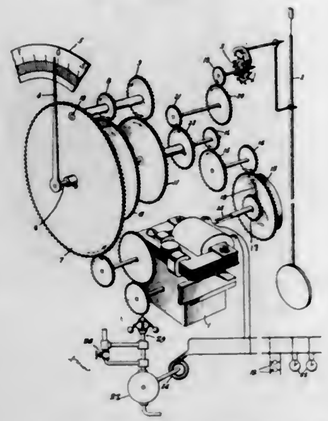


1. In alarm clock mechanism, the combination of a hand carrying arbor having a lateral pin, a disc loosely

carried by the arbor and engaged by the pin, a gear wheel connected with the clock mechanism, a spring

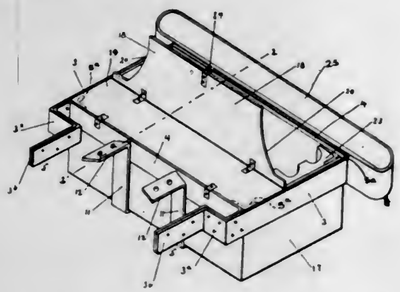
adapted to hold the gear wheel and disc in engagement, and a lever adapted to nullify the action of the spring.

1,502,492. LOCK NUT. FREDERICK C. WARNE, Mansfield, Ohio. Filed Apr. 20, 1922. Serial No. 555,776. 6 Claims. (Cl. 151—21.)



1. A lock-nut having an interiorally threaded cylindrical section divided into a plurality of regularly spaced longitudinally tapered wedge shaped locking fingers.

1,502,493. TIME-INDICATING APPARATUS. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Apr. 15, 1918. Serial No. 228,633. 4 Claims. (Cl. 58—26.)



1. In an instrument of the character described, a standard clock, a synchronous motor, two hands mounted concentrically, connections between one hand and the standard clock and between the other hand and the synchronous motor, so proportioned that both hands revolve normally at the same rate, and connections between the synchronous motor and the driving mechanism of the standard clock whereby the spring of the latter is kept constantly wound.

1,502,494. TIME-INDICATING APPARATUS. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, a Corporation of Maine. Filed Apr. 2, 1920. Serial No. 370,787. 12 Claims. (Cl. 58—24.)

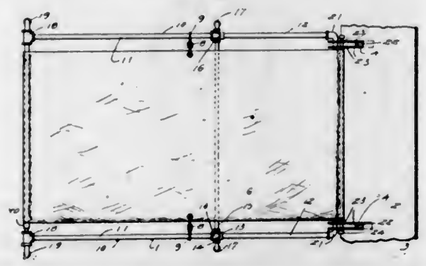
1. In an instrument of the class described, a synchronous motor, a gear driven thereby, two planet gears of unlike size connected together carried by said first mentioned gear and free to rotate about their support, a clock movement, a gear controlled thereby, one of said planet gears meshing with said last mentioned gear, an indicator, a gear adapted to rotate the same, the other of said planet gears being operatively connected with said indicator rotating gear, whereby variations in the relative speeds of the motor driven gear and the clock-controlled gear may be observed by the movement of said indicator.

1,502,495. AUTOMOBILE FENDER. CHARLES WEINBERG, Brooklyn, N. Y. Filed Sept. 1, 1921. Serial No. 497,566. 5 Claims. (Cl. 293—55.)

4. In an attachment for automobiles, a frame and means for fastening the same to the rearward end of an automobile chassis, a box carried by said frame, and means for clamping extra tires within said box, and a transversely extended resilient protective fender located rearwardly of said box.

1,502,496. SHAVING-STICK CONTAINER. PHILIP K. WILLIAMS, Glastonbury, Conn., assignor to The J. B. Williams Company, Glastonbury, Conn., a Corporation of Connecticut. Filed July 20, 1922. Serial No. 576,315. 6 Claims. (Cl. 206—56.)

1. A package comprising a cylindrical soap stick and a container therefor, including two caps and a split ring, said caps and said ring having screw threaded connections, said ring being adapted to slide on said soap stick when said caps are disengaged from said ring, and said

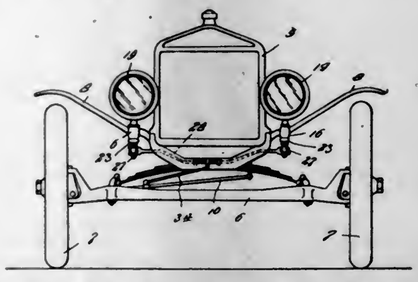


caps and ring being so proportioned and dimensioned that the threading of either of said caps on said ring binds the ring in place against said soap stick.

1,502,497. KITCHEN IMPLEMENT. CHARLES P. COX, Toledo, Ohio. Filed Mar. 10, 1923. Serial No. 624,174. 5 Claims. (Cl. 254—2.)

1. A kitchen implement of the character specified, comprising a blade, a frame attached to an end portion of the blade and projecting longitudinally therefrom to provide a lifter, and a second frame having pivotal connection with the first mentioned frame and constituting a bake pan and pastry tin lifter, and coacting means between the second frame and blade to hold the parts in determinate position.

1,502,498. FOLDING BED FOR AUTOMOBILES. CHARLES E. DAVIS, Bend, Oreg., assignor to Handy Auto Bed Company, Inc., Bend, Oreg., a Corporation of Oregon. Filed Feb. 2, 1922. Serial No. 583,560. 7 Claims. (Cl. 5—119.)



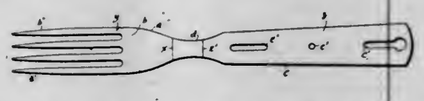
1. A device of the class described comprising a frame having a section adapted to assume either a substantially horizontal or an upstanding position, means for connection of said section to a running board, extension means for the frame utile in a substantially horizontal position when said section is substantially horizontal and in said position adapted to cooperate with said section to provide a bed frame, the extension means having its component parts foldable into compact relation to the said section whereby the said section in an upstanding position may form a luggage carrier, and a bed forming element including means normally maintaining the component parts of said extension means in bed forming relation.

1,502,499. TOY ARROW. THEODORE J. DECK, Baltimore, Md. Filed June 9, 1922. Serial No. 567,133. 1 Claim. (Cl. 102—26.)

An arrow having a tapered end, a tack having its head engaging the flat extremity of the tapered end, a removable paper cap fitting over the tapered end and having a hole therein through which the pointed end of the tack passes and wings upon the cap.

1,502,500. DIRIGIBLE HEADLIGHT CONSTRUCTION FOR MOTOR VEHICLES. NATHANIEL GRUENEICH, Long Lake, S. Dak. Filed Apr. 13, 1923. Serial No. 631,780. 1 Claim. (Cl. 240—62.)

In combination with an automobile machine having pivoted steering knuckles and a steering rod connected with the knuckles and bridging the space between them, a dirigible headlight mechanism comprising lamp posts pivotally mounted upon a portion of the machine which is superimposed with relation to the knuckles and which may have vertical movement with relation to the knuckles, a cross rod connected with the lamp post and disposed approximately parallel with said steering rod, collars mounted upon the cross rod at spaced intervals, a third collar slidably mounted upon the cross rod between the first mentioned collars, springs coiled about the cross rod and bearing at their inner ends against the opposite sides of the slidable collar and at their other ends against the first mentioned collars, and a rod pivotally connected with the slidable collar and disposed between the cross rod and the steering rod with its longitudinal dimension disposed at an acute angle to both of said rods, the last mentioned rod having an angularly disposed extension also pivotally connected with the slidable collar, and means pivotally connecting the last mentioned rod with the steering rod at a point to one side of all of the collars.



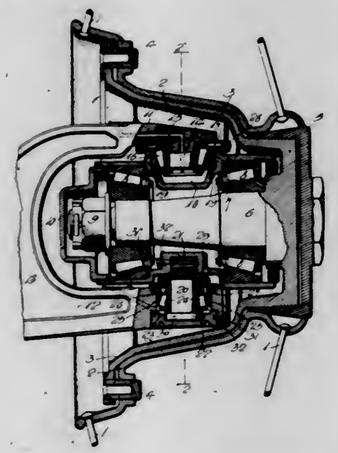
1,502,501. WATERPROOF BRICK. ANTONI GUMOWSKI, Camden, N. J. Filed Aug. 1, 1922. Serial No. 579,058. 1 Claim. (Cl. 91—68.)

As an article of manufacture, a brick having at least one of its faces waterproof, such face having a shellac coating thereon with the shellac coating partially permeating the brick at such face to produce the waterproof characteristic.

1,502,502. METHOD OF MAKING TABLE CUTLERY. AUSTIN W. HAWES, Greenfield, Mass., assignor to John Russell Cutlery Company, Turners Falls, Mass., a Corporation of Massachusetts. Filed Mar. 26, 1921. Serial No. 455,865. 5 Claims. (Cl. 76—105.)

1. The hereindescribed method of making table cutlery which comprises cold rolling a bar of wrought iron or steel to impart to the surfaces thereof a hardened and

polished finish, cutting blanks for the articles from said strip, and shaping and finishing the blanks to form the

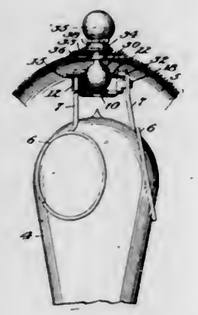


completed articles whereby the original surfaces of the blanks become, without change, the finished surfaces of the completed articles.

1,502,503. CATAMENIAL APPLIANCE. JOSEPH HOLLRIGL, Manchester, N. H. Filed Feb. 28, 1922. Serial No. 540,024. 3 Claims. (Cl. 128—285.)

1. A device of the character described comprising a cup member, a hollow stem carried thereby and having a perforated head, and a flexible bag connected with said cup member, said cup member having its upper surface concaved and formed with a plurality of perforations.

1,502,504. AUTOMOBILE STEERING KNUCKLE AND AXLE. WILLIAM MARTIN JONES, Jr., Rochester, N. Y. Filed Apr. 21, 1921, Serial No. 463,114. Renewed Dec. 26, 1923. 6 Claims. (Cl. 280—96.3.)

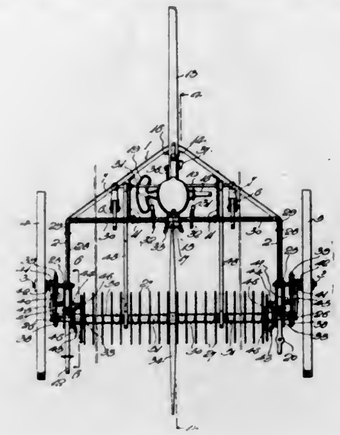


1. In combination, a wheel supported hub shell, an axle having upper and lower fork arms in close proximity to the upper and lower sides of said hub shell, and means for holding said arms and shell against relative vertical movement and for pivoting said shell between said arms, comprising upper and lower weight supporting bearings associated with the upper and lower fork arms and equally distributing the entire load upon both of said arms.

1,502,505. CUT-OFF OR NAIL-CHECKING ATTACHMENT FOR NAILING MACHINES. JOSEPH KARSKY and HERMAN MEYER, Eau Claire, Wis. Filed June 12, 1922. Serial No. 567,711. 2 Claims. (Cl. 1—6.)

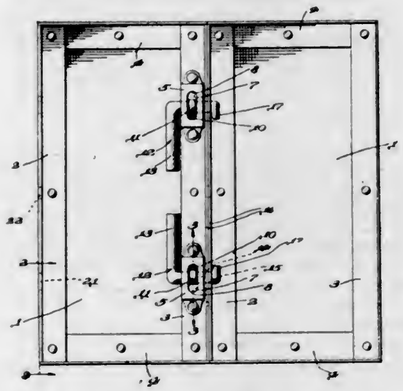
2. In a nailing machine, a supporting plate formed with a guide and having an opening communicating with a nail tube, an angular bracket secured to the plate and formed with a bifurcation, bars arranged in spaced relation and secured upon said angular plate to constitute a nail chute leading to said opening, a slide mounted for reciprocation upon the support and having an opening adapted to register with the chute and the tube, and a pair of plates secured upon the slide and having their corners most remote from the chute diagonally cut away to be in non-obstructing relation to the opening in the slide and to define a point and a cam edge on one plate, said point being out of alignment with the corresponding point of the other plate to act as a check for holding back the nails in the chute, said inclined edge camming the nails into said opening in the slide.

1,502,506. LAMP-SHADE SUPPORT. WILMAR F. LENT and GEORGE L. HINMAN. New Haven, Conn., assignors to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 21, 1921. Serial No. 454,289. 2 Claims. (Cl. 240—138.)



1. In a device of the class described, the combination with a plurality of wire coils for embracing a lamp bulb, a cage having laterally bent parts to receive the stems of said coils, a ball in said cage, clamping means for securing the wires to said cage and for retaining the ball therein, and a lamp shade connected with said ball.

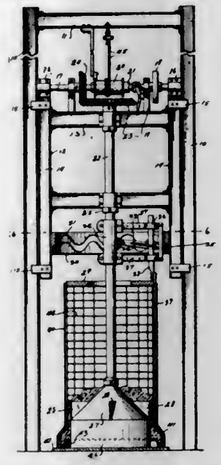
1,502,507. FIELD IMPLEMENT. LEWIS LINK, Cottonwood Falls, Kans. Filed Aug. 6, 1923. Serial No. 656,073. 6 Claims. (Cl. 56—385.)



1. An implement comprising a frame having a pair of spindles and supporting wheels removably mounted thereon, a normally idle spindle carried by said frame at right angles to the aforesaid spindles and adapted for mounting one of said wheels when the implement is to be drawn

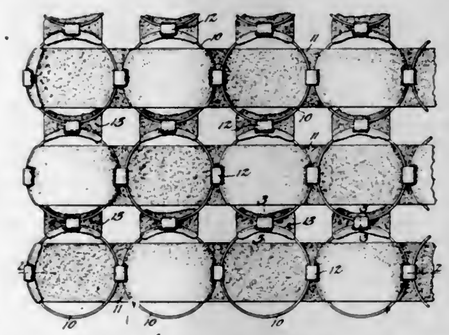
idly from one place to another, a tongue detachably connected to the frame and having a normally idle laterally extending spindle, and means for connecting said tongue

temporarily with the frame in a position at right angles to its normal operative position, the spindle of said tongue being then adapted for mounting the other wheel.



1,502,508. SECTIONAL STEEL FORMS FOR CONCRETE CONSTRUCTIONS. LESTER A. LONGLEY, Oconto Falls, Wis. Filed Dec. 31, 1921. Serial No. 526,223. 5 Claims. (Cl. 25—131.)

3. In a device as set forth, a plate provided with tie rod receiving openings, tie rods, brackets carried by said plate and provided with openings registering with said first named openings, locking levers carried by said brackets, cams on said locking levers for engagement with said tie rods and forcing them into gripping engagement with said brackets, said locking levers provided with transverse projections adapted for engagement with a second plate to maintain the plates in proper connected relation.

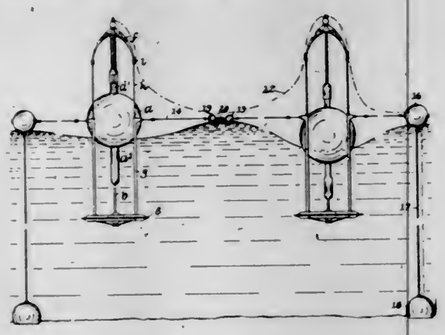


1,502,509. CONCRETE-PIPE-FORMING MACHINE. SAMUEL G. MACTARNAGHAN, Nunda, N. Y. Filed Oct. 3, 1923. Serial No. 666,381. 12 Claims. (Cl. 25—37.)

1. A pipe forming machine of the character described comprising an outer form having a height equal to the pipe section to be formed and having a diameter equal to the external diameter of a section, means for centering the cylindrical reinforcing web within the form, and means operating on the inside of said form and inward

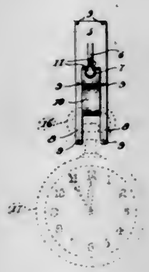
of the web acting to force plastic material uniformly outward from the center toward the form and acting to smooth the inside of the pipe.

1,502,510. COVERED SPRING STRUCTURE. SAMUEL S. MARCUS and SAMUEL KRAKAUER, New York, N. Y. Filed Aug. 16, 1922. Serial No. 582,228. 4 Claims. (Cl. 5—353.)



1. In combination, a covered spring structure embodying a plurality of rows of contiguous spring sections, and a common means for holding the same under partial compression and for insulating the convolutions thereof from each other, comprising a strip of flexible material connected at one extremity to one of the end convolutions of an end spring section and passed alternately under and over the spring sections of each row, and means for securing the strips at diametrically opposite points to the end convolutions.

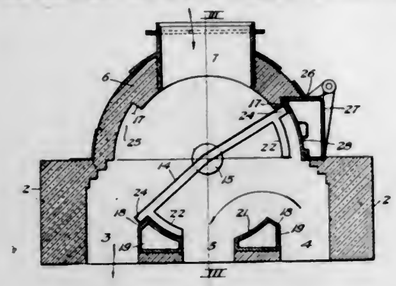
4. In combination, a covered spring structure embodying a plurality of rows of contiguous spring sections and a common means for holding the same under partial compression and for insulating the convolutions thereof from each other, comprising a strip of flexible material connected at its opposite ends respectively to an end convolution of the end spring and alternately passed under and over the intermediate spring sections of each row, means for securing the intermediate portions of the strip to the end convolutions respectively at its points of contact therewith, and means for connecting the contiguous points of the end convolutions of the spring sections of



the adjacent rows and for insulating the convolutions thereof comprising a single vertical strip of a length approximately equal to the height of a spring section and passing between adjacent spring sections, the upper end of said strip being connected to adjacent parts of the contiguous upper convolutions and the lower end being connected to adjacent parts of the lower contiguous convolutions.

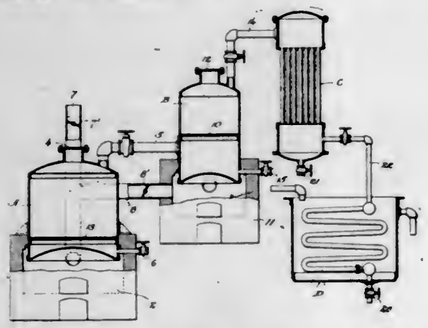
1,502,511. WAVE MOTOR. FREDERICK B. MARVIN, Port Jervis, N. Y. Filed Aug. 11, 1922. Serial No. 581,047. 13 Claims. (Cl. 253—5.)

4. A wave motor including a constant-level stator member, a surface-floating member operatively associated with the stator member to move up and down relatively thereto, the latter member including a submerged resistance member having a chamber for fluid under pressure, and means, carried by one of said members and actuated by the other on movement of the floating member relatively to the stator member, to deliver fluid into said chamber.



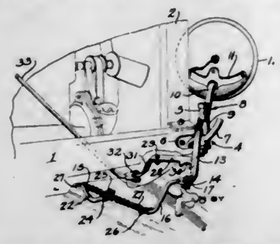
1,502,512. CLASP. GEORGE MEZEI, Clinchco, Va. Filed Mar. 13, 1924. Serial No. 698,940. 1 Claim. (Cl. 24—3.)

In an article of the type described, a body portion formed of relatively thin material, an S-shaped hook stamped therefrom and formed by an upward bending of the portion cut from said body portion, and a latch member cut from said body portion and bent outwardly therefrom for the purpose of yieldably engaging the outer transverse edge of the hook member.



1,502,513. REVERSING VALVE. RUSSELL G. MILLER, Pittsburgh, Pa. Filed Dec. 15, 1921. Serial No. 522,673. 8 Claims. (Cl. 137—148.)

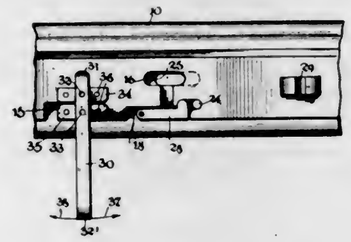
1. A reversing valve comprising a casing having an inlet port, a middle outlet port, and outer circulation ports, and a pivotally mounted water cooled valve extending transversely across within the casing adapted to alternately open and close each circulation port with relation to the inlet and outlet ports respectively, and having



water cooled lateral extensions adapted to be located alternately between the outlet port and either circulation port.

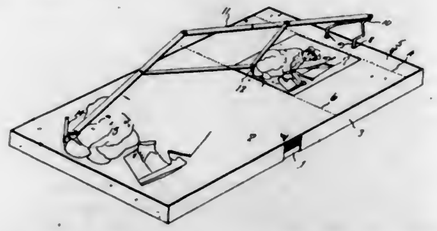
1,502,514. MANUFACTURE OF WATERPROOF PAINT. DAVID B. MITCHELL and GEORGE J. MITCHELL, Louisville, Ky. Filed May 28, 1923. Serial No. 641,944. 14 Claims. (Cl. 134—17.)

10. The process of producing a base and vehicle constituents of waterproof paint which consists in contacting the vapor of heated rosin with commercial tire rubber having fabric vulcanized therein to render said rubber fluent, condensing the vapor from the rosin which passes through the rubber to form the paint vehicle, draining the fluent rubber from the fabric, crushing and grinding the fabric, and then mixing the crushed and ground fabric with the previously drained fluent rubber to form the paint base.



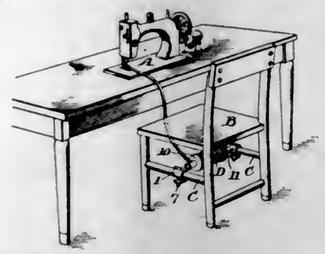
1,502,515. DIRIGIBLE HEADLIGHT. GIDEON MORRIS, Grand Saline, Tex., assignor of one-half to Willis H. Roberson, Grand Saline, Tex. Filed June 15, 1923. Serial No. 645,602. 2 Claims. (Cl. 240—62.)

1. In a dirigible headlight, opposite lamp supports having posts and secured to the opposite sides of the car, lamp brackets pivoted on the posts and carrying lamps and having rearwardly directed arms, a transverse rod



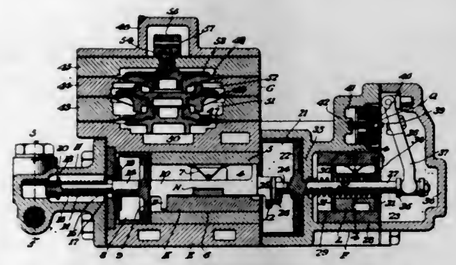
pivotally connected to the rear ends of said arms and passing beneath the chassis of the car, and a pitman having one end bifurcated to span the rod with a pin connected to the bifurcation to hold it to the rod, and pivotally connected at the other end to the steering crank arm for transmitting motion to the lamps to move the same in unison with the steering wheels, said transverse rod having adjustable stops secured thereon in spaced relation to the slidable connection of the pitman, and coiled springs surrounding the rod between the bifurcated end of the pitman and the stops to cushion the force imparted by the pitman to the transverse rod.

1,502,516. DEMOUNTABLE RIM. JOHN STANLEY MULTER, Portsmouth, Ohio. Filed July 9, 1923. Serial No. 650,514. 3 Claims. (Cl. 301—11.)



1. A demountable rim formed of a pair of telescopic sections, each of said sections consisting of a continuous clencher flange and an inwardly extending band, each of said bands projecting inwardly from the base of the flange, one of said bands having its inner portion inset with respect to its remaining portion, thereby providing a shoulder against which the other band abuts when the sections are in telescopic position, said inset portion provided with a plurality of bayonet slots, a semi-circular notch, a rectangular recess, an oval-shaped slot, a cut-out portion and an opening leading from said slot to said cut-out portion and further provided with a plurality of openings in proximity to said rectangular recess, the other of said bands provided with a plurality of lugs engageable in said bayonet slots and further having an oval gageable in said bayonet slots and further having an oval-shaped slot adapted to register with the oval-shaped slot in the inset portion, said last mentioned band provided with a plate seating in said rectangular recess and with a latch engageable in said semi-circular notch.

1,502,517. DRAWING PAD. JOHN C. MURRAY, Lakewood, Ohio. Filed Oct. 22, 1921. Serial No. 509,684. 4 Claims. (Cl. 283—45.)

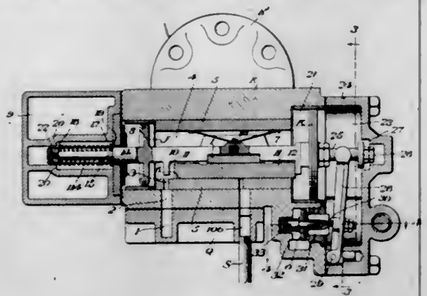


1. A pad comprising a plurality of sheets each having a stub end connected thereto by a severing line and each having a severing line spaced from the first mentioned severing line and a picture interposed between said lines, and means carried by the stub end of the pad for supporting a pantograph.

1,502,518. REEL SUPPORT. DOMINICK NASTA, Brooklyn, N. Y. Filed Jan. 23, 1924. Serial No. 687,958. 6 Claims. (Cl. 242—85.)

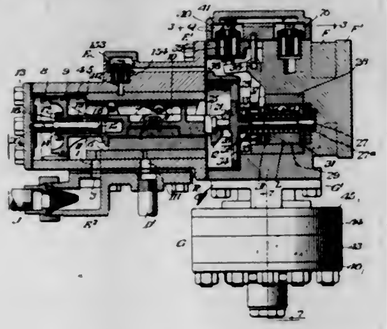
1. A reel support comprising two clamps adapted to be attached to the rungs of a chair or the like, upwardly projecting arms carried by said clamps, a rod, guide plates carried by said rod and members carried by the ends of said rod and provided with openings to fit said arms.

1,502,519. AIR-BRAKE APPARATUS. SPENCER G. NEAL, New York, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed May 2, 1923. Serial No. 636,095. 22 Claims. (Cl. 303—27.)



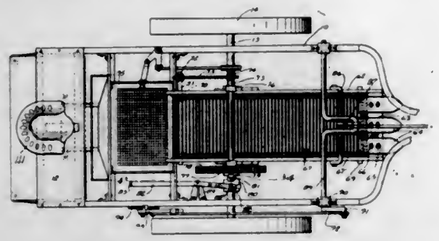
1. A triple valve for air brake apparatus formed with a main brake pipe chamber provided with a brake pipe connection and having aligned cylindrical extensions of different diameters at its opposite ends, a service piston in the smaller extension of said chamber, a larger release and emergency piston in the larger extension of said chamber, a supplemental brake pipe chamber on the opposite side of the service piston from the main brake pipe chamber, an emergency valve chamber on the opposite side of the emergency and release piston from the main brake pipe chamber, a main slide valve in the main brake pipe chamber, a graduating valve in said chamber, means operatively connecting said valves to the service piston, an emergency valve in the emergency valve chamber, means affording a lost motion connection between the emergency piston and the emergency valve, means affording a lost motion connection between the emergency piston and the service piston, the main and graduating valves being formed with ports and passages to control the admission and relense of brake cylinder pressure, and the emergency valve in emergency position operating to vent the brake pipe to atmosphere in emergency applications of the brakes.

1,502,520. AIR-BRAKE APPARATUS. SPENCER G. NEAL, New York, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed July 13, 1923. Serial No. 651,313. Renewed May 29, 1924. 28 Claims. (Cl. 303—27).



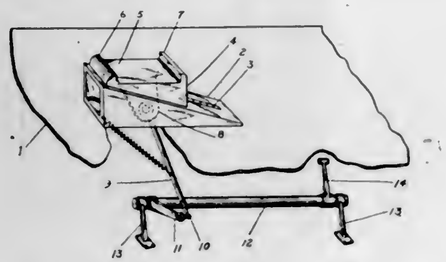
1. A triple valve for an air brake apparatus comprising a main slide valve, a graduating valve, a piston operatively connected to said valves and operating in response to a reduction in brake pipe pressure to move the

said valves to service application position to admit air to a brake cylinder and operating in response to an increase in brake pipe pressure to move the said valves into position to exhaust air from the brake cylinder, and a detachable restriction plate secured to the triple valve



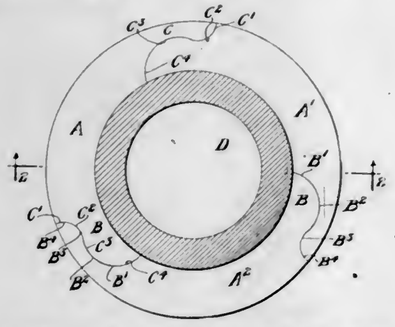
body and provided with passages adapted to form parts of the brake cylinder supply passage and the brake cylinder exhaust passage, whereby air flowing to the brake cylinder for an application of the brakes and from the brake cylinder for a release of the brakes must pass through the said passages in the restriction plate.

1,502,521. AIR-BRAKE APPARATUS. SPENCER G. NEAL, New York, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 27, 1923. Serial No. 671,220. 8 Claims. (Cl. 303—27.)



1. A triple valve for air brake apparatus formed with a main brake pipe chamber provided with a brake pipe connection and having aligned cylindrical extensions of different diameters at its opposite ends, a service piston in the smaller extension of said chamber, a larger release and emergency piston in the larger extension of said chamber, a supplemental brake pipe chamber on the opposite side of the service piston from the main brake pipe chamber, an emergency valve chamber on the opposite side of the emergency and release piston from the main brake pipe chamber, a main slide valve in the main brake pipe chamber, a graduating valve in said chamber, means operatively connecting said valves to the service piston, an emergency valve in the emergency valve chamber, means affording a connection between the emergency piston and the emergency valve, and means affording a connection between the emergency piston and the service piston, the main and graduating valves being formed with ports and passages to control the admission and release of brake cylinder pressure and the emergency slide valve in emergency position operating to vent the brake pipe to atmosphere in emergency application of the brakes.

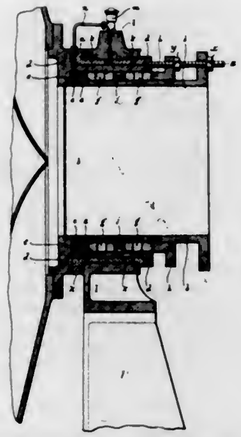
1,502,522. VEGETABLE HARVESTER. HENRY C. NIEMEYER, Chicago, Ill. Filed Mar. 17, 1921. Serial No. 453,046. 5 Claims. (Cl. 55—9.)



2. A harvester of the class described comprising a rear axle, a conveyor frame mounted thereon, an endless conveyor mounted in said frame, a plurality of plows mounted at the front end of said frame, and means for adjustably mounting said plows to dig a separate row of vegetables with each plow.

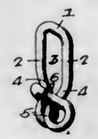
1,502,523. FOOT ACCELERATOR. NORMAN W. PEEK, Milwaukee, Wis. Filed Oct. 7, 1922. Serial No. 593,044. 3 Claims. (Cl. 74—81.)

1. In a device of the class described, a foot operated member for operating a part to be controlled, adapted to be moved by a foot of the operator, and means for guiding and supporting said member so that the same moves in a laterally inclined plane.



1,502,524. PISTON-ROD PACKING. JOSEPH W. PRICE, Jr., Philadelphia, Pa. Filed Oct. 25, 1919. Serial No. 333,395. 1 Claim. (Cl. 288—3.)

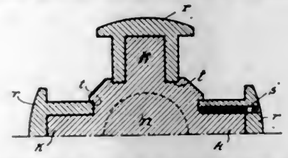
A metallic packing ring made up of two or more similar segments, each having an outwardly facing bulb shaped hook at one end and an inwardly facing bulb shaped hook at its other end, both of said hook ends having tapered ends to facilitate slip on each other in



taking up wear, the contact of faces of said hooks being formed of merging reversed curves and said hooks being complementary to each other, so that said inner and outer hooks will interengage and fit together when assembled on a piston rod, and said hooked ends being so formed that the segments when assembled as a ring on a rod are locked against lateral displacement from each other and the rod and against angular displacement from each other.

1,502,525. STEAM CONDENSER. DAVID MCNAB RAMSAY, Glasgow, Scotland. Filed May 24, 1921. Serial No. 472,133. 1 Claim. (Cl. 286—8.)

In a steam condenser, a stationary trunnion-like steam admission pipe, a rotatory header-carrying member having a sleeve surrounding said pipe, a collar at the inner end of the steam admission pipe, a co-acting shoulder on the header-carrying member, a thrust bearing between said collar and shoulder at one side of the plane of the collar, and a gland packing between the pipe and sleeve on the opposite side of the plane of the collar on the steam admission pipe.

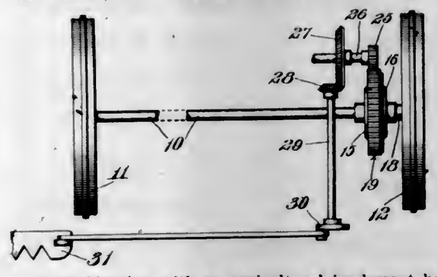


1,502,526. CHAIN LINK. MARTIN O. REHFUSS, Philadelphia, Pa., assignor to United States Chain and Forging Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 18, 1921. Serial No. 478,561. 6 Claims. (Cl. 59—92.)

1. A chain link consisting of a rod bent to form an open body and coils lying adjacent each other at one end of said body, the ends of the rod being respectively bent over the coils on one side of the body and terminating adjacent each other outside of the body on the same side thereof as that over which they are bent.

1,502,527. ROTARY FIELD MAGNET. WALTER REICHEL, Berlin-Lankwitz, and WILHELM GSCHEIDLEN, Berlin-Schmargendorf, Germany, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Nov. 6, 1920. Serial No. 422,359. 2 Claims. (Cl. 171—252.)

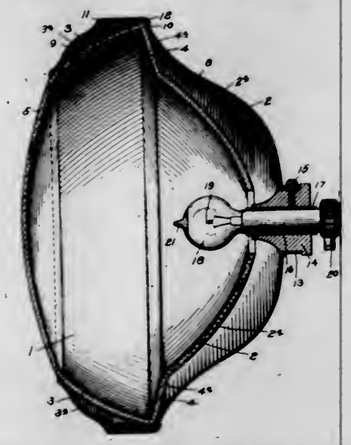
1. In a rotating field magnet system for electrical machines, a plurality of pole cores of substantially rectangular cross-section, all having a common hub integral therewith, and saddle-shaped pole hoods arranged there-



on, the shanks of said polehoods extending to said hub and only on the sides of the cores parallel to the rotor axis.

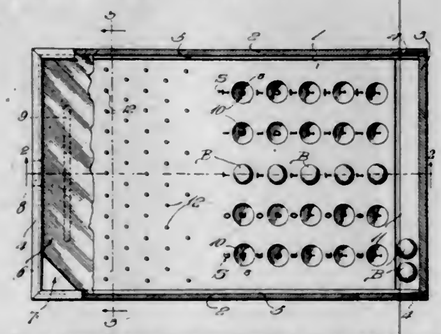
1,502,528. EXTENSIBLE TOOL HOLDER. LOUIS REULBACH, Cleveland, Ohio. Filed Oct. 15, 1921. Serial No. 507,918. 2 Claims. (Cl. 279—103.)

1. An extensible tool holder comprising the combination of a pair of members telescopically fitted together so as to be capable of endwise adjustment, the outer one of said members being fashioned with longitudinally spaced pairs of registering cross openings, the inner one of said members being provided with a crosswise extending bore adapted to register with either pair of said cross openings, a part yieldingly carried by said inner member so as normally to project into said bore and a pin selectively insertible through either pair of said cross openings and into said bore, said pin being fashioned with a groove adapted to be engaged by said part when the latter is in its inserted position.



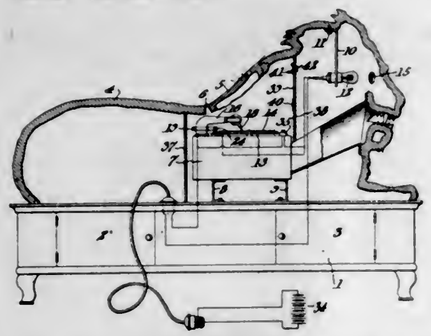
1,502,529. AGRICULTURAL IMPLEMENT. LOUIS A. RIEDESEL, Wheatland, Iowa. Filed June 5, 1924. Serial No. 718,115. 4 Claims. (Cl. 74—99.)

1. In combination with an agricultural implement having a member to be driven, an axle and a pair of supporting wheels on the axle, one of the wheels being fixed to the axle, the other of the wheels being rotatable upon the axle, opposed gear wheels mounted upon the axle and one secured to the axle and the other to the first



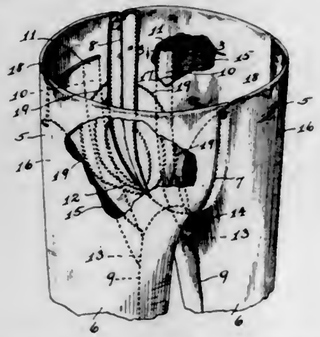
named wheel, a spider rotatably mounted upon the axle between said gear wheels and bearing pinions meshing with both of said gear wheels, an annulus mounted upon the periphery of the spider, means connecting the annulus to the spider during rotation of the spider in one direction and disconnecting the same during rotation of the spider in the opposite direction, and a connection between the annulus and the member to be driven.

1,502,530. LIGHT PROJECTOR. JOSEPH T. ROFFY, Pittsburgh, Pa., assignor to The Standard Corporation, a Corporation of West Virginia. Filed Nov. 17, 1920. Serial No. 424,641. 1 Claim. (Cl. 240—41.)



In a light projector, a blown glass unit comprising a reflector portion and a forwardly bulging portion serving as a cover and joining said reflector portion at the point of the unit's greatest circumference, a shell or casing comprising a rear portion spaced from the reflector portion of the glass unit except at its greatest circumference where the shell or casing is provided with a seat against which the glass unit rests and an annular casing closing member overlapping the front portion of the shell or casing and extending forwardly of the casing unit and out of contact therewith to a point where the circumference of the glass unit is materially less than its greatest circumference.

1,502,531. GAME BOARD. CHARLES A. ROSENTHAL, New Orleans, La. Filed Sept. 22, 1923. Serial No. 664,289. 1 Claim. (Cl. 46—41.)

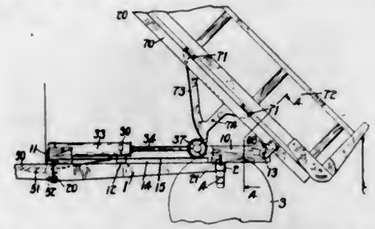


In a game board, the combination of a casing having a base and side and end boards, an aperture formed in one end board, a cover arranged on the casing and having an opening, a plate formed on the base in rear of the opening of the end portion, pins arranged on the base in rear of the plate, recesses arranged on the base in rear of the pins, a gutter formed in rear of the recesses, said recesses being provided with symbols and other symbols arranged outside the recesses, substantially as and for the purpose set forth.

1,502,532. PHONOGRAPH. CHARLES S. TOBIN, Miami, Fla. Filed Sept. 25, 1922. Serial No. 590,349. 4 Claims. (Cl. 192—121.)

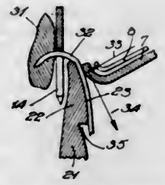
1. In combination with a phonograph having a rotary platen and a swingingly mounted tone arm, means to simultaneously effect braking of the platen and display of a light, said light constituting a signal and a platen illuminating means, and an element carried by the tone arm and swinging therewith to engage the first mentioned means and effect operation thereof.

1,502,533. TROUSERS. SAMUEL B. WAXMAN, Baltimore, Md., assignor to L. Greif & Bro. Incorporated, Baltimore, Md., a Corporation of Maryland. Filed June 6, 1922. Serial No. 566,316. 2 Claims. (Cl. 2—126.)



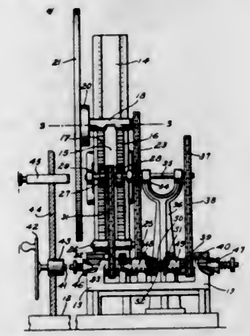
1. A trouser garment having a body and leg-parts and provided with the usual inseams in the legs, said trouser having narrow fabric stay strips whose upper ends are stitched to the inner side of the trousers about the waistline and which extend down along the inner side of the seat and project forwardly into the legs below the crotch the lower forward ends of said narrow fabric stay-strips being stitched in the inseams of the legs below the crotch of the garment.

1,502,534. VEHICLE-BODY DUMPING APPARATUS. LOGAN T. WOOD, Milwaukee, Wis. Filed May 11, 1921. Serial No. 468,655. 9 Claims. (Cl. 298—22.)



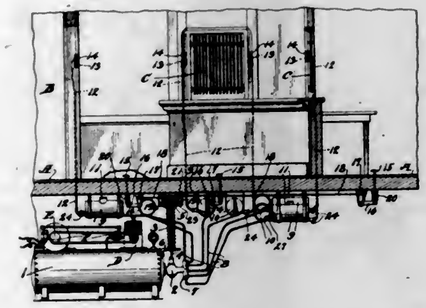
1. Means for tilting a vehicle body about a fixed axis and in respect to a chassis whereby said body is carried, said means comprising spaced relatively inclined sets of

tracks carried respectively by the body and by the chassis, each set including a plurality of tracks, and wedge means movable substantially horizontally along



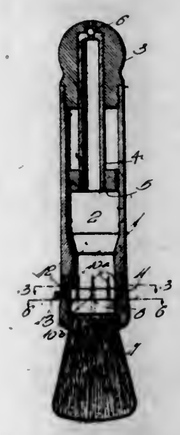
between said tracks, and constructed and arranged to cause equal angular movements of the members of the set of tracks carried by the body, whereby warping of the body is avoided.

1,502,535. METHOD OF AND MEANS FOR PICKING FOWL AND THE LIKE. VALEDO M. YOUNG, Chicago, Ill. Filed Apr. 16, 1923. Serial No. 632,257. 23 Claims. (Cl. 17—11.)



23. The method of pulling feathers which comprises training the feather over a smooth pressure surface, pressing a friction striker against the feather to grip the same between the striker and the smooth surface and sliding the striker and the feather along said surface to pull the feather.

1,502,536. MAP MOUNTING AND MEANS FOR OPERATING IT. HARRY FRANK AMMIDOWN, Southbridge, Mass. Filed July 2, 1923. Serial No. 649,132. 2 Claims. (Cl. 35—6.)

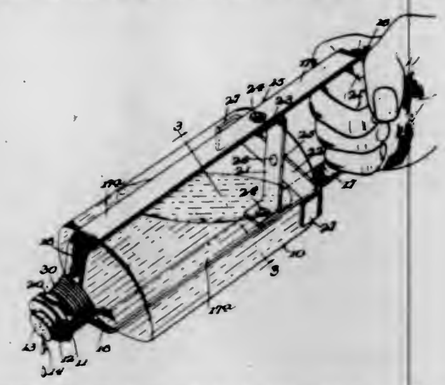


1. A map mounting or support which includes a frame vertically disposed, a carriage slidable with respect to said frame, a disk mounted on said carriage for rotation, mechanical gearing means connected to said carriage to move it in a vertical plane, gear elements connected to said disk for rotation of it on the carrier, a manually operable shaft, and means disposed adjacent the shaft and adapted to connect it to the respective sets of gearing elements as the shaft is selectively moved in one direction or another for a separate and independent movement of the carriage and the disk thereon.

1,502,537. HOLDUP-PREVENTING DEVICE. ARTHUR E. ANAKIN, Long Beach, Calif., assignor to Anakin Specialty Manufacturing Company, Long Beach, Calif., a Corporation of Delaware. Filed Apr. 18, 1922. Serial No. 555,521. 10 Claims. (Cl. 20—1.01.)

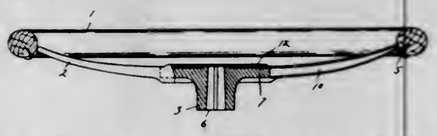
3. A holdup preventing device for institutions having windows and an entrance, conduits leading to each side of said windows and entrance, breakable seals for said conduits, chemical discharge means under pressure and associated with the conduits, means for releasing said pressure to break said seal.

1,502,538. FOUNTAIN LATHER BRUSH. ARTHUR J. ANDERSON, Binford, N. Dak. Filed May 15, 1923. Serial No. 639,132. 2 Claims. (Cl. 15—138.)



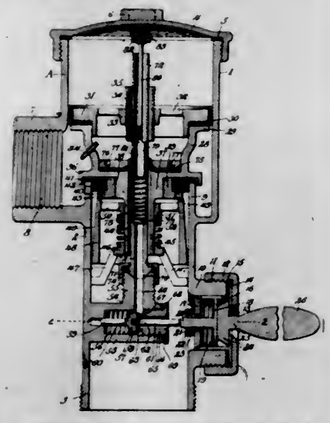
1. In a device of the class described, the combination with a casing, of a cap detachably mounted on said casing, a hollow plunger attached to said cap, a head on said plunger, said cap and plunger provided with valve means, and a brush supported upon said casing.

1,502,539. POISON APPLIER. FLETCHER GLADSTONE ASBILL, Ridge Springs, S. C. Filed Aug. 23, 1923. Serial No. 659,025. 5 Claims. (Cl. 215—100.)



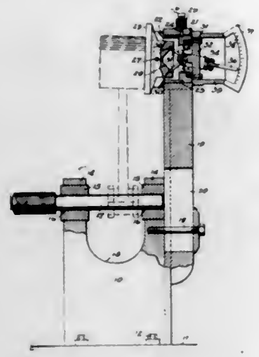
1. In a poison applier, a container for the poison comprising a bottle and a holder for the bottle comprising a U-shaped frame having a body portion and side bars, the side bars extending longitudinally of the bottle and engaging the outer periphery thereof at diametrically opposite points, means for clamping the side bars into engagement with the periphery of the bottle, a spider secured to the side bars and engageable with the base

of the bottle, the side bars of the frame extending beyond the base of the bottle and the body portion thereof



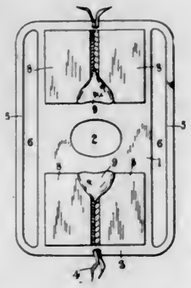
connecting the side bars at a point spaced from the base of the bottle and from the spider, and a block carried by the body portion to provide a handle.

1,502,540. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich., assignor to Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1923. Serial No. 640,588. 11 Claims. (Cl. 74—33.)



1. A steering wheel comprising a hub piece having integral radially extending projections, radially extending arms resting upon said projections and having flanges crimped over projections upon said hub piece, and a rim carried by said arms.

1,502,541. FLUSHOMETER. THOMAS ROBERT BEGGS, Hartford, Conn. Filed May 31, 1922. Serial No. 564,823. 28 Claims. (Cl. 137—93.)

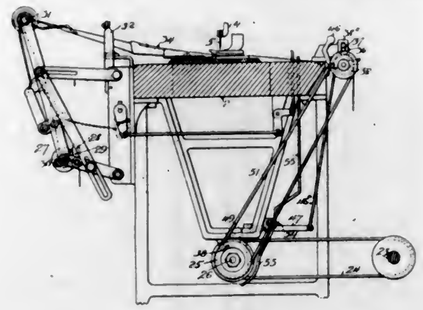


1. In a flushometer, a casing having means for connecting the interior thereof to a source of water supply under pressure, an outlet for connection to a bowl to be flushed, and means for retaining a predetermined pressure of water in the casing during the flushing operation.

1,502,542. ALIGNING JIG. NORMAN A. BEST, Midland, Mich. Filed Feb. 16, 1923. Serial No. 619,509. 3 Claims. (Cl. 33—180.)

1. A piston aligning jig comprising a base, means for supporting a connecting rod and piston therefrom, a column projecting vertically from said base, a pivoted face plate carried by said column, a pivoted yoke carried by said column, means for operating the pivoted yoke by the pivotal movement of said pivoted face plate, means carried by said pivoted yoke and movable therewith, and a stationary scale on said column over which said last-mentioned means is movable for indicating the pivotal movement of said yoke and said face plate.

1,502,543. MARINE LIFE-SAVING APPLIANCE. MARLETT DAWES BODDY, London, England. Filed June 26, 1923. Serial No. 647,871. 5 Claims. (Cl. 9—17.)



1. A marine life-saving appliance of the kind set forth comprising in combination a buoyant compartment formed of solid cork, a recess in the edge of said compartment which lies nearest the head of the wearer, and means of a soft nature associated with said recess for preventing the chin of the wearer from entering therein.

1,502,544. STRIP-FEEDING MECHANISM FOR SEWING MACHINES. JOHN BOSTON, Newark, N. J., assignor, by mesne assignments, to Thomas Harden Carter. Filed Sept. 4, 1918. Serial No. 252,527. 18 Claims. (Cl. 112—203.)

1. The combination of a sewing machine adapted to stitch a strip of fabric and means for winding up the

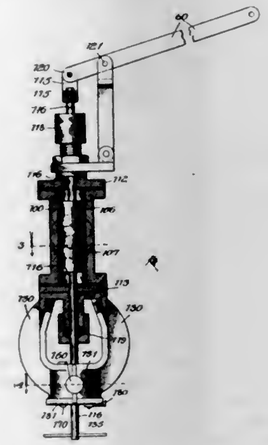
strip of fabric, including a roller, a slip clutch for operating said roller and a brake controlled by the strip

of fabric for resisting the operation of said roller by its operating means to change the speed of operation of the roller for the purpose set forth.

1,502,545. STRAINER FOR GASOLINE TANKS. NELSON M. BOWES, Saybrook, Conn. Filed Nov. 15, 1923. Serial No. 674,933. 2 Claims. (Cl. 210—169.)

2. A strainer for the gasoline tank of an automobile comprising a straining tube adapted to be inserted into the filling neck of the tank and having a continuous flange at its upper end to be clamped on top of said neck by the cap therefor, said flange and the contiguous portion of the tube having notches formed therein to receive neck-engaging retaining fingers on the cap.

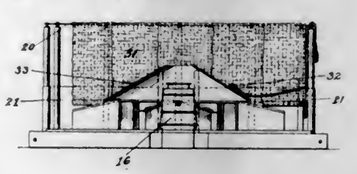
1,502,546. COMBINED STEAM AND INTERNAL-COMBUSTION LOCOMOTIVE. JACOB BUCHLI, Baden, Switzerland. Filed Sept. 25, 1923. Serial No. 664,687. 2 Claims. (Cl. 105—62.)



1. In a combined steam and internal combustion engine locomotive, the combination of at least two power units or groups coupled together for operating independently of each other, each group being formed by at least one vehicle, and one group being propelled by steam and the other by internal combustion engines, one of said power units carrying the fuel and water for both groups.

1,502,547. DIATOMACEOUS EARTH PRODUCT AND PROCESS OF MAKING THE SAME. ROBERT CALVERT, KARL L. DERN, and GORDON A. ALLES, Lompoc, Calif. Filed Nov. 6, 1922. Serial No. 599,434. 26 Claims. (Cl. 252—2.)

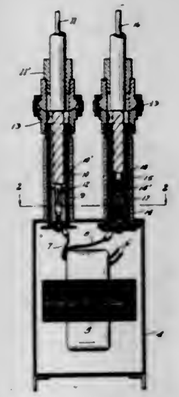
1. The process which consists in mixing finely divided diatomaceous earth with a material adapted to lower the sintering point thereof and then calcining at a temperature sufficient to sinter the siliceous dust in the material but not sufficient to sinter the mass.



22. A new article of manufacture consisting of a calcined finely divided mixture of diatomaceous earth and a halide of an alkali forming metal.

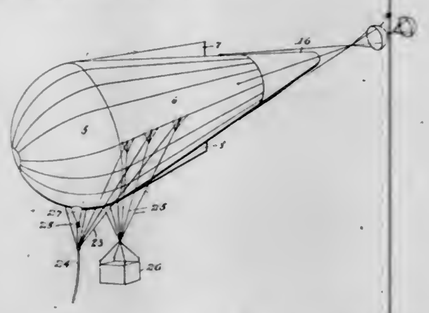
1,502,548. AUTOMATIC CONTROL DEVICE. GERALD S. CARRICK, Chicago, Ill. Filed Jan. 26, 1921. Serial No. 439,992. 3 Claims. (Cl. 251—75.)

3. In an automatic control device, a valve with a constant stroke controlled by fluctuations in a variable through a constant range, said valve comprising a cylinder with diametrically arranged ports in its side, a piston adapted for vertical movement in the cylinder and having a port adapted to register with the ports in the cylinder, and means for rotating the piston, so as to vary the maximum opening through the valve.



1,502,549. BROODER. VALENTINO CASAZZA, Vineland, N. J. Filed Sept. 10, 1923. Serial No. 661,902. 5 Claims. (Cl. 119—32.)

1. In a brooder platform, a pair of semi-cylindrical floor sections adapted to be secured together to provide a circular floor, posts extending upwardly from each of said sections about the periphery thereof, and a wall

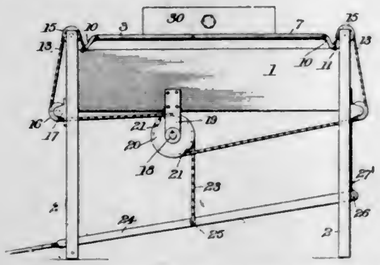


detachably secured to said posts and enclosing the circular floor, the end posts of each of said sections being spaced from the meeting edges of the sections whereby to form spaces in said walls, and drinking fountains having restricted portions engageable between said posts and completing the wall.

1,502,550. ELECTRICAL CONNECTION. GEORGE L. CHAMBERLAIN, Chicago, Ill. Filed Aug. 14, 1922. Serial No. 581,622. 6 Claims. (Cl. 173—363.)

6. The combination of a metallic casing; an electrical transformer mounted in said casing; two tubes leading into said casing and provided with insulating linings; a metallic socket mounted at the inner end of the lining in one tube; a complementary pin mounted at the inner end of the lining of the other tube; wires leading from said socket and pin to the primary winding of said transformer; a lead insertable in one of said tubes and provided with a pin insertable in the socket therein; and another lead provided with a socket insertable in the other tube and engageable with the pin therein or with the pin on said other lead, substantially as described.

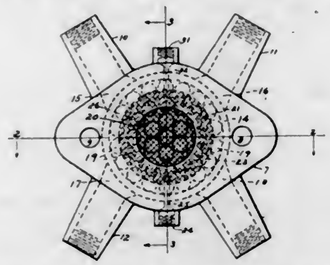
1,502,551. CAPTIVE BALLOON. MATT Q. CORBETT, WILLIAM E. HUFFMAN, and CLARENCE F. ADAMS, Dayton, Ohio. Filed June 27, 1923. Serial No. 648,023. 7 Claims. (Cl. 244—4.)



1. A captive balloon embodying a variable capacity aerostat having a hemispherical nose portion, a conoidal after portion, and internal elastic stays attached to the rear part of said after portion and serving to flex said rear part inwardly to vary the cubical internal capacity.

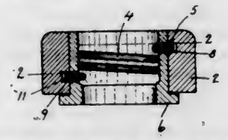
1,502,552. PUMP SCREEN. MARTIN ROBERT DONNALLAN, Long Beach, Calif. Filed July 23, 1923. Serial No. 653,394. 6 Claims. (Cl. 210—170.)

1. A pump screen comprising a collar having its inner edge formed with an annular seat against which is adapted to be positioned the edge of the inlet end of the main shaft of the pump, said collar overlapping and extended from said end, a hollow foraminous element integral with and extended from the lower face of said collar and controlling the entrance of material to the inlet end of a pump shaft, and means connected with said collar for detachably connecting it to the main shaft of the pump.



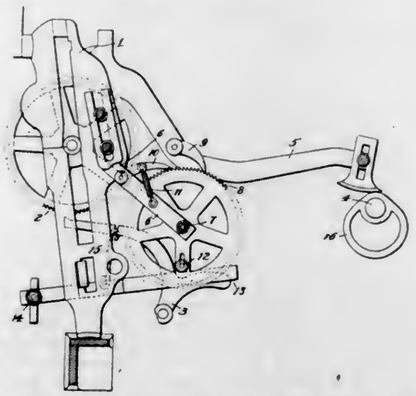
1,502,553. APPARATUS FOR TESTING AND REPAIRING RADIATORS. JOE FRANK DOZIER, Nashville, Tenn., assignor of one-half to J. T. Jolley, Nashville, Tenn. Filed June 8, 1922. Serial No. 566,821. 8 Claims. (Cl. 73—51.)

1. In an apparatus of the character described, a tank, a horizontal frame within said tank, flexible members attached at one end to the frame at separated points for suspending the same, revoluble members over which the flexible members pass, and means connected to all of the flexible members at the other end thereof and operable to pull each of the flexible members vertically the same distance, so as to raise the frame while maintaining its horizontal position.



1,502,554. VAPORIZER. CHARLES W. DUCKWORTH, Jacksonville, Fla. Filed Sept. 4, 1923. Serial No. 660,769. 2 Claims. (Cl. 48—180.)

1. In a vaporizer of the class described, an inner part having a chamber with one or more inlets and outlets through which the exhaust from the engine flows; a plurality of tubes placed in said chamber and heated by the exhaust; a fuel inlet part having a conical opening communicating with the said tubes; an air inlet in said fuel inlet part; a screen interposed in said conical opening;

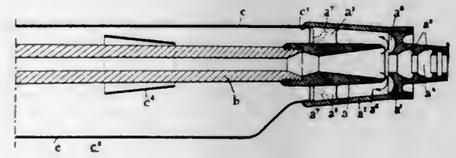


a fuel outlet part for guiding the vaporized fuel into the engine; an air inlet in said fuel outlet part; and means for attaching the vaporizer.

1,502,555. LOCKING DEVICE. OSKAR ARVID EKLUND, Stockholm, Sweden. Filed July 6, 1923. Serial No. 649,971. 1 Claim. (Cl. 151—14.)

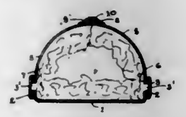
A locking device comprising a nut, a spiral spring engaging the threads of a screw, and a sleeve mounted in the nut, one end of the spring extending through a hole in the sleeve and projecting into a slot in the nut the other end of the spring extending through a slot in the sleeve and projecting into a slot in the nut.

1,502,556. CLOTH-FEED INTERRUPTER FOR AUTOMATIC LOOMS. GEORGE AVERY FRANKLIN, Augusta, Ga. Filed Sept. 21, 1921. Serial No. 502,287. 2 Claims. (Cl. 139—24.)



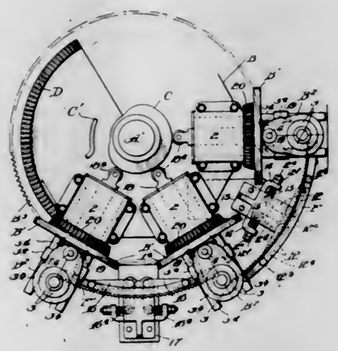
1. In a take up interrupting attachment for looms, the combination with a pick wheel and an actuating pawl therefor, a rotating member, means actuated in the operation of the loom for intermittently rotating said member, an arm pivoted to the loom, a stud radially adjustable on the rotating member for displacing the arm from its normal position, and an operative connection between the arm and pawl whereby when the former is displaced the latter will be withdrawn from engagemene with the pick wheel and the take up interrupted for a predetermined period.

1,502,557. MOUNTING-BOARD SHAKING BOX AND BEARING THEREFOR. PETER C. CHRISTIAN FRIDRICHSEN, Independence, Mo. Filed June 19, 1922. Serial No. 569,204. 6 Claims. (Cl. 154—1.)



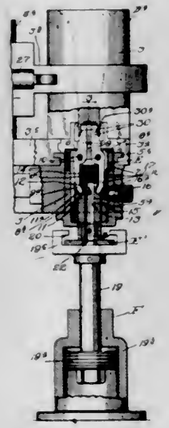
5. A mounting board shaking box comprising a receptacle for the reception of the removable mounting board for supporting tiles, a rectangular frame arranged below said receptacle and formed with longitudinal and transverse strips to provide a plurality of rectangular openings, portable ball bearings confined within said openings and supporting said receptacle and providing means to admit of the imparting to the receptacle the desired shaking or vibrating movements, and said receptacle being of greater height than the height of the mounting board.

1,502,558. RECOIL-ABSORBING MEANS FOR FIREARMS. NORBERT JULES ANDRÉ GALLIOT, Vaucresson, France, assignor of one-half to Georges Henri Louis Gaston Bory, Paris, France. Filed Nov. 1, 1921. Serial No. 512,078. 8 Claims. (Cl. 89—42.)



1. In a fire-arm, the combination of a barrel and of a recoil absorber mounted at the end of said barrel coaxially therewith and rejecting the gases of combustion in a backward direction, said recoil absorber comprising a nozzle coaxial with the gun muzzle and arranged in extension thereof; said nozzle being of divergent shape toward its outer end to afford an expansion chamber, an end closure for the nozzle having a central opening for the passage of the projectile therethrough, and a single annular gas escape passage, opening from the interior to the exterior of the nozzle, said passage being of increasing cross section toward its discharge end to accelerate the escape of gases therethrough, together with means arranged behind said recoil absorber for collecting substantially the whole of the gases escaping from said recoil absorber and being of sufficient size to permit substantially complete expansion of said gases, and means for allowing said gases after substantially complete expansion to escape into the atmosphere in a direction non-injurious to the personnel.

1,502,559. FOOTWEAR. PATRICK J. GIBLIN, La Crosse, Wis. Filed Mar. 16, 1922. Serial No. 544,330. 5 Claims. (Cl. 36—12.)



1. In a bedroom slipper or the like, an upper, a sole portion and a welt strip interposed between said upper and sole portion and connected thereto by substantially horizontally disposed stitching.

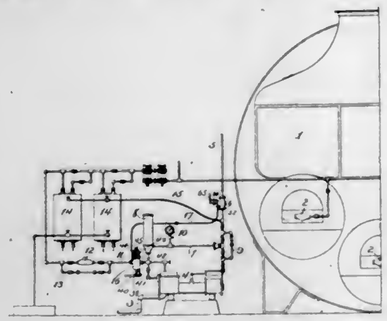
1,502,560. MACHINE FOR MAKING BOTTLES, ETC. WARREN E. GLASPEY, Bridgeton, N. J., assignor to Spring Stopper Company, New York, N. Y., a Corporation of Delaware. Filed May 29, 1922. Serial No. 564,596. 16 Claims. (Cl. 49—9.)

16. In a machine of the character set forth, the combination of a mold-carrier, a series of molds carried thereby, nuts carried with said molds, threaded mandrels working through said nuts, frictionally-held gears mounted on the lower ends of the mandrels, yieldingly-mounted racks disposed on opposite sides of the path of said gears, one of said racks being adapted to turn the gears in a direction to elevate the mandrels and the other of said racks being adapted to turn the gears in the direction to lower the mandrels, and stops serving to limit the raising and lowering of the mandrels.

1,502,561. MACHINE FOR MAKING BOTTLES, ETC. WARREN E. GLASPEY, Bridgeton, N. J., assignor to Spring Stopper Company, New York, N. Y., a Corporation of Delaware. Filed May 29, 1922. Serial No. 564,597. 15 Claims. (Cl. 49—9.)

1. In a machine of the character set forth, the combination of a mold-carrier, a series of molds carried thereby, a non-rotating mandrel associated with each mold and equipped with a sheathable lug-forming member, and means for raising and lowering the mandrels.

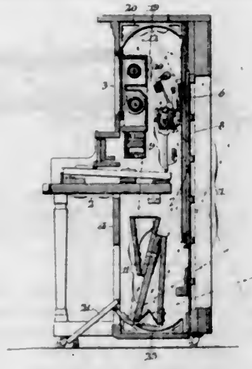
1,502,562. THERMOPILE AND METHOD OF ITS MANUFACTURE. HERBERT HAUSRATH, Durlach, near Karlsruhe, Germany, assignor to the Firm of Schott & Gen., Jena, Germany. Filed Aug. 15, 1922. Serial No. 582,030. 5 Claims. (Cl. 171—73.)



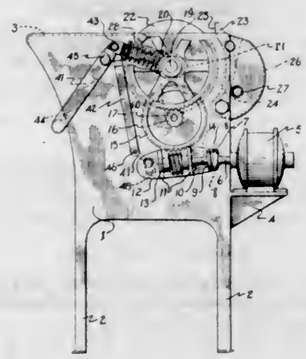
3. Method of making thermo-piles, consisting in connecting two foils of different metal along a line, dividing out of this pair of foils a number of strips side by side and substantially parallel to each other in such a direction that each strip crosses the said line and connected with each other on both ends by a coherent margin, superposing a plurality of such pairs of foils, and fixing them upon each other in such a way that of two strips, consisting of different metals, only two ends each are in electric contact with each other, and then removing the said coherent margins.

1,502,563. PROCESS OF BREAD MAKING. WILFRID PAUL HEATH, Chicago, Ill. Filed Apr. 29, 1922. Serial No. 557,379. 7 Claims. (Cl. 99—10.)

1. In the manufacture of bread, the process of controlling the atmospheric bubble content thereof, consisting in agitating the bread materials in an atmosphere of carbon dioxide, and thereafter producing with yeast, in the same materials, a fermentation process, thereby forming a bread or bakery product having a homogeneous atmosphere in all its bubbles.



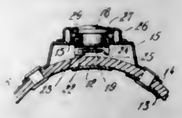
1,502,564. STEAM-BOILER PLANT. FREDERICK HEATH, Bellingham, Wash. Filed Jan. 26, 1923. Serial No. 615,122. 4 Claims. (Cl. 103—13.)



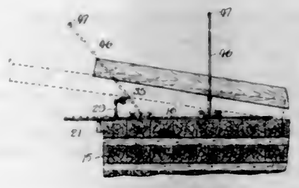
4. The combination of an oil burner, a pump, an oil line leading from the pump to the burner whereby fuel may be delivered under pressure to the burner, a valve interposed in the oil line to control the flow therethrough and arranged to cut off the flow upon reduction of pressure in the oil line between itself and the burner, a valve controlling the flow of steam to the pump and in communication with the oil line to be normally held open by the pressure in the oil line, and means for closing said valve upon reduction in said pressure.

1,502,565. MUSICAL INSTRUMENT. FLORENCE J. HEPPE, Philadelphia, Pa. Filed Dec. 18, 1919. Serial No. 345,786. 2 Claims. (Cl. 84—189.)

1. In a piano the combination with a casing, a string frame therein, and a sounding-board to the rear of said string frame, of a plurality of concave reflectors of minimum vibratory character disposed around the sides, top and bottom of the casing, said reflectors having their reflecting surfaces directed toward the string frame for reflecting sound waves back toward the sounding board.

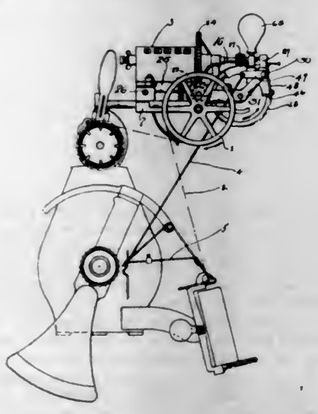


1,502,566. IRONING MACHINE. EDGAR R. HILL, Oak Park, Ill. Filed Jan. 12, 1922. Serial No. 528,622. 8 Claims. (Cl. 68—9.)



1. In an ironing machine, a frame, an ironing shoe extending between the ends of the frame, means for heating the ironing shoe, a pivoted arm at each end of the frame, a feed roll rotatably mounted in the ends of the said arms, a lever pivotally mounted on each end of the frame, yieldable means connecting the end of each lever with the shaft of the feed roll, a driving mechanism for rotating the feed roll comprising a worm and gear, means for rotating the worm, a plate pivotally mounted at one end of the frame and rotatably supporting the worm, the said plate being provided with a recess, a cam rotatably mounted in the recess and provided with a spring arm, a bar pivotally connecting the end of one lever with the spring arm of the cam, the arrangement being such that upon upward movement of the levers to move the feed roll toward the ironing shoe the worm is moved into mesh with the worm gear and upon downward movement of the levers to withdraw the feed roll from the ironing shoe the worm is moved out of mesh with the worm gear.

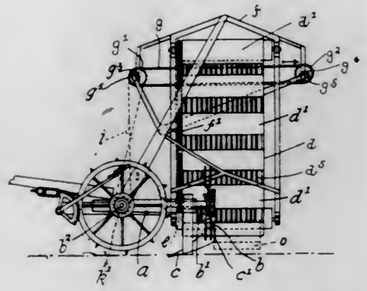
1,502,567. HANDLAMP SWITCH. FREDERICK L. HUMESTON, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Feb. 24, 1923. Serial No. 620,919. 14 Claims. (Cl. 200—60.)



1. A contact device for battery hand lamps comprising a contact member for closing the lamp circuit and a rotatable element adapted to cooperate with said contact member to lock said member positively, in open circuit position whereby all movement of said member is prevented.

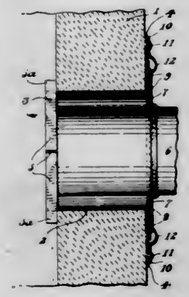
1,502,568. APPARATUS FOR HANDLING RAILWAY TIES. ROBERT S. HURLEY, Toledo, Ohio. Filed June 18, 1923. Serial No. 645,947. 20 Claims. (Cl. 214—1.)

1. In an apparatus for unloading ties from ricks, the combination of a track insertible between the topmost and next underlying horizontal rows of ties, and a transversely disposed teetering bar on the forward end of said track.



1,502,569. MEASURING APPARATUS. CHARLEY F. HUSSEY, Milwaukee, Wis., assignor to Precision Machine Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 2, 1921. Serial No. 466,355. 15 Claims. (Cl. 33—132.)

1. A device for measuring the length of yarn comprising a driving wheel over which said yarn passes, counting mechanism operatively associated with said driving wheel to register the length of yarn which passes over said driv-

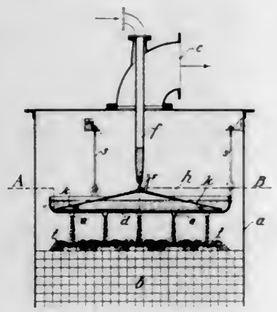


ing wheel, and a cam operated catch for disconnecting said counting mechanism from said driving wheel when a predetermined length of yarn has passed over said driving wheel.

1,502,570. POTATO DIGGER. WILLIAM JOHNSTON, Ballykilbeg, Ireland. Filed July 1, 1918. Serial No. 242,722. 1 Claim. (Cl. 130—32.)

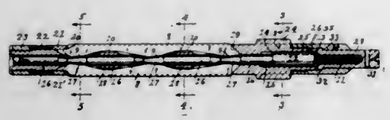
In a potato digger, a flexible, endless riddle to receive and separate the potatoes, haulms and soil discharged thereupon, means for actuating said riddle, an inclined screen for receiving the potatoes from said riddle, and having its lower discharge terminal at an angle in the same direction as the main portion and of a resilient nature in order to cause the potatoes to jump beyond the end of the angular position, and means to agitate said screen laterally.

1,502,571. STOVEPIPE MOUNTING. ANTON KATRINA, Yukon, Pa. Filed July 5, 1923. Serial No. 649,707. 1 Claim. (Cl. 126—314.)



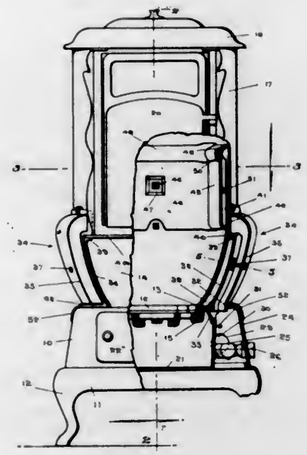
In a stove pipe mounting, a wall sleeve positioned in a chimney wall and having a relatively wide annular end flange forming a face plate for the inner side of the chimney wall, a pair of crossed bars embedded in the outer end edge of said wall sleeve and projecting from the periphery thereof for engaging the face of the chimney for retaining the sleeve in the wall, a centrally apertured disk plate of greater diameter than the bore of said sleeve, an annular bead formed in said disk plate adjacent its peripheral edge, pivotal cleats carried by the end flange of said wall sleeve and adapted to engage the bead formed in said disk plate for clamping the latter against the outer face of said end flange and for retaining the aperture of said disk plate in axial alinement with the bore of said wall sleeve, and a stove pipe having its outlet end projecting into said wall sleeve through the aperture in said disk plate.

1,502,572. BUCKLE FOR STRAPS AND BELTS. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Sept. 25, 1923. Serial No. 664,757. 6 Claims. (Cl. 24—194.)



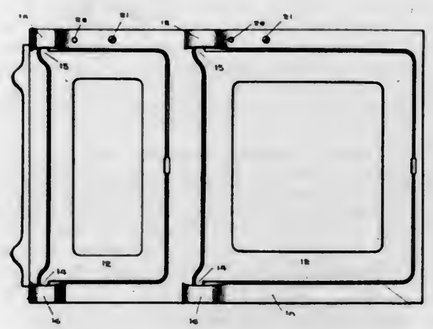
1. A buckle having a frame provided with channel side bars and a slide having side flanges and accurately mounted and slidable in said channel side bars.

1,502,573. SPRINKLING DEVICE FOR GAS SCRUBBERS, COOLING TOWERS, AND THE LIKE. ARTHUR KUHN, Recklinghausen, Germany, assignor to Firm: Carl Still, Recklinghausen, Germany. Filed May 3, 1922. Serial No. 558,280. 8 Claims. (Cl. 299—58.)



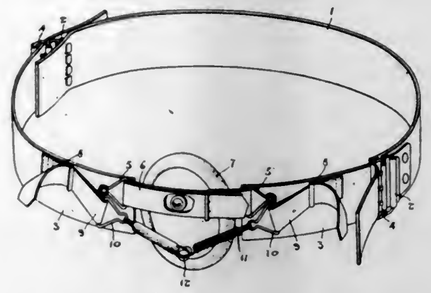
7. A sprinkling device for gas scrubbers and the like comprising a tray having equally distributed outlets throughout its base and means for maintaining a coherent layer of practically undisturbed liquid above all outlets.

1,502,574. ADJUSTABLE REAMER. OSKAR KYLIN, Elkhart, Ind. Filed Jan. 3, 1921. Serial No. 434,496. 2 Claims. (Cl. 77—76.)



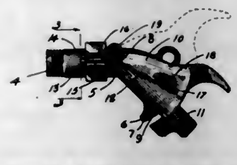
1. In an adjustable reamer, the combination of a body having a central bore, and a plurality of longitudinal blade slots, a plurality of outwardly and inwardly movable blades formed with cam seats on their ends and cam surfaces on their inner edges, a longitudinally movable spindle mounted in said central bore having a plurality of cams engaging the cam surfaces on said blades, a collar sleeved on said body formed with an internally beveled end facing said spindle cams and clampingly engaging one end of said blades, fixed cams on said body engaged with the other end of said blades, and a spring backing said collar and adapted to be compressed by the longitudinal movement of said spindle and blades in the same direction after the reamer has been inserted in a hole and its blades expanded into contact with the wall of the latter, said spring and spindle operating to feed said blades outwardly when reaming after said spring has been thus compressed.

1,502,575. COMBINATION COAL AND GAS HEATER. HENRY LANGE, Quincy, Ill. Filed July 13, 1923. Serial No. 651,321. 15 Claims. (Cl. 126—58.)



1. A combination heater comprising a base shell having a top, a side wall and a chamber therein adjacent to said wall under said top, a firepot on the top of the shell, and a fluid fuel burner within said chamber under the top and behind the wall of the shell.

1,502,576. STOVE HINGE. HENRY LANGE, Quincy, Ill. Filed Jan. 21, 1924. Serial No. 687,606. 17 Claims. (Cl. 126—194.)



1. A structure of the character described comprising a wall having a hinge portion and an opening behind said hinge portion, an outwardly opening door at the outer side of said wall having a pintle inserted from the inner side of said wall outwardly through said opening into said hinge portion, and means for retaining said pintle in said hinge portion.

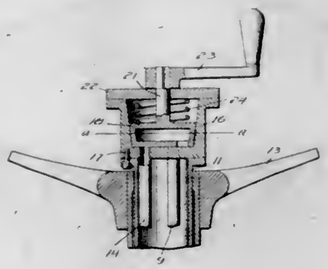
1,502,577. TRUSS. THOMAS J. LE CRAS, Toronto, Ontario, Canada. Filed Mar. 27, 1922. Serial No. 547,347. 2 Claims. (Cl. 128—111.)

1. In a truss, a belt, a pad flexibly supported at a point above its centre from the belt, and a pair of elastic members connected to the pad below its centre and extending angularly outward and upward therefrom adjustably connected to the belt at points either side of the pad.

1,502,578. ATTACHMENT FOR MOLASSES GATES. HARRY T. LEISENRING, Denver, Colo. Filed Aug. 25, 1922. Serial No. 584,238. 2 Claims. (Cl. 251—125.)

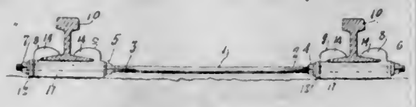
1. An attachment adapted to be applied to a molasses gate for the purpose of causing the same to close, comprising, in combination, a pair of springs, a clamping member having means for securing it to a cylindrical member, and means for clamping the ends of said springs.

1,502,579. PANEL-BOARD SWITCH. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Sept. 16, 1922. Serial No. 588,576. 9 Claims. (Cl. 200—168.)



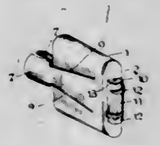
1. In a panel-board switch, a support, an adjusting plate, a face plate having an opening for part of the adjusting plate, and a cover plate secured to said support to cover the joint between the adjusting plate and the face plate.

1,502,580. PRESSURE BRAKE FOR AUTOS. CLYDE J. MCNERNY, San Francisco, Calif. Filed Feb. 28, 1920. Serial No. 362,041. 2 Claims. (Cl. 188—154.)



1. In an apparatus of the class described a tubular support, a valve casing attached to said support over one end, a plurality of conductors extending through said support and communicating respectively with said valve

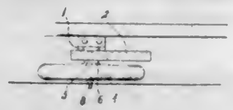
casing, one of said conductors adapted to be connected to a source of supply of liquid under pressure, another of said conductors adapted to be connected to an operating



mechanism, and another of said conductors leading to the open air, a hollow valve within said casing and having spaced ports adapted to register alternately with said conductors, and means for actuating said valve.

1,502,581. RAIL BRACE. JOHN G. MUELLER, Dayton, Ohio. Filed Oct. 9, 1922. Serial No. 593,235. 10 Claims. (Cl. 238—53.)

3. A new article of manufacture consisting of a strip of plate metal having a rectangular body portion and a hook projecting from one of its longitudinal edges and having its ends bent at right angles to said body in the same direction.

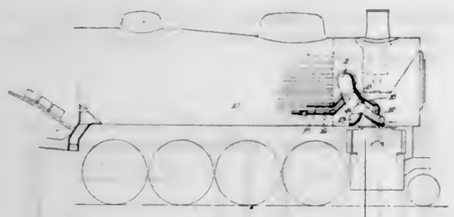


1,502,582. COVER FOR ELECTRIC SWITCH KEYS. CLAUDE E. NEIDIG, Camp Hill, Pa. Filed Oct. 21, 1922. Serial No. 596,019. 1 Claim. (Cl. 240—1.)

A cover comprising a hollow body open at its one end and closed at its other end and being adapted to fit over the handle portion of an electric switch key, said body having a seat in the closed end portion thereof, said seat being substantially semi-circular in cross sectional contour, a cylindrical holder adapted to be partially received in the seat and being formed of a transparent material, said holder being adapted to hold a luminous substance in the bore thereof and fingers integral with the body and adapted to be bent at will to embrace the holder to hold the latter against displacement from the seat or to release the holder.

1,502,583. CARRIER. LEONCE G. PEPIN, Augusta, Me. Filed May 9, 1923. Serial No. 637,817. 2 Claims. (Cl. 224—29.)

2. A carrier of the class described comprising a standard, a slotted casing connected with the upper end of the standard and extending at right angles therefrom, a block slidably mounted in the casing and having a part extending through the slot, a disc connected with



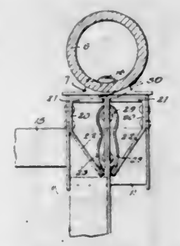
said part and a locking bolt passing through the disc and the block and arranged to engage the slotted hole at the front end of the casing.

1,502,584. ATTACHMENT FOR KNITTING OR CROCHET NEEDLES. HANNAH O. PERRY, Darien Center, N. Y. Filed July 10, 1923. Serial No. 650,677. 6 Claims. (Cl. 66—17.)

6. An attachment for knitting and crochet needles, consisting of an elongated comparatively narrow strip of leather of suitable thickness with successive corrugations of similar dimensions provided with a plurality of openings disposed in longitudinal alinement through opposite portions of the corrugations.

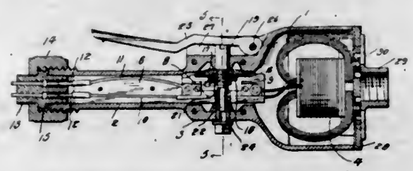
1,502,585. SMOKE CONSUMER. WILLIAM PETERSEN and CHARLES D. MILLER, Chicago, Ill., assignors of one-fourth to Emil Anderson and one-fourth to Emil Johnson, both of Chicago, Ill. Filed Oct. 14, 1921. Serial No. 507,615. 2 Claims. (Cl. 110—50.)

1. In a smoke consumer construction, the combination of a locomotive boiler having a fire box and a smoke box and flues connecting said boxes, an air-intake pipe arranged alongside and exteriorly of the smoke box and connected at one end with the interior thereof and having at its opposite and intake end branch pipes extending forwardly and rearwardly, respectively, and open at their ends, and means for supplying fluid under pressure to the interior of the air-intake pipe between the intake end thereof and the smoke box.



1,502,586. OPERATING MEANS FOR CURTAINS. JOHN PILNY, New Brighton, and WILLIAM KUEHN, Elmhurst, N. Y. Filed Apr. 7, 1923. Serial No. 630,555. 4 Claims. (Cl. 156—20.)

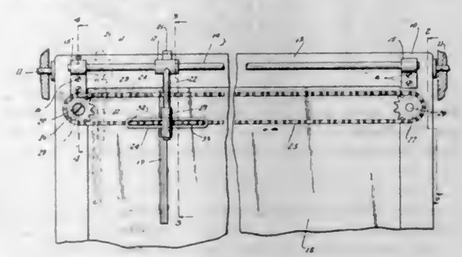
4. The combination with a frame; of brackets secured to the sides of said frame and provided with aligned slots, a trackway having its ends mounted in said brackets and provided with an open top and a longitudinal slot in the bottom registering with the slots in said brackets, a plurality of carriers movable in said trackway and insertable thereinto through said open top, a



hanger connected to each carrier and projecting through the slot in said trackway, a curtain supported by said hangers, and means connected to one of said carriers for moving said carriers in said trackway to adjust said curtain to open and closing positions.

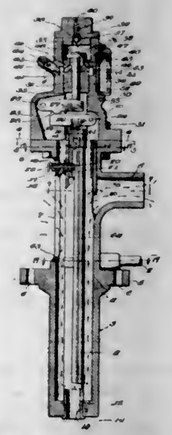
1,502,587. FRAME FOR BEDS. LEON JOSEPH PRIEBATSCH, Brookhaven, Miss. Filed May 12, 1923. Serial No. 638,558. 5 Claims. (Cl. 5—288.)

1. In a frame for beds, a corner post, a housing carried thereby and including a web and side plates extending from said web, cooperating retaining elements each of which has an intermediate portion secured to one of said side plates and an end portion extending laterally from said side plate in spaced relation to said web, the other end portions of said retaining elements being arranged in converging relation, and a rail having a portion extending between the converging end portions of said retaining elements and also having other portions engageable between the first named end portions of said retaining elements and said web.



1,502,588. ELECTRIC ENAMELING TOOL. WILLIAM G. PROBST, Louisville, Ky. Filed Jan. 28, 1922. Serial No. 532,523. 1 Claim. (Cl. 172—36.)

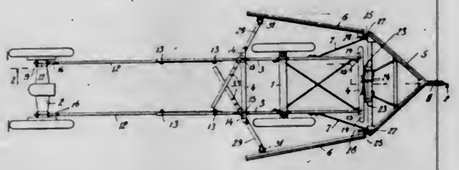
An enameling tool consisting of a one-piece casing, said casing having a hollow tubular handle, a conductor-means securing nut externally threaded on one end of said handle, the casing being increased in thickness at



the other end of the handle to provide an outwardly disposed shoulder and to form a neck, said nut and shoulder providing abutments for the hand, said neck having an exterior longitudinally extending recess, a switch carried by said neck having an operating member disposed in said recess and extending rearwardly and having its gripping portion disposed intermediate said nut and shoulder so that it is engageable and operable by the same hand which grasps the handle, a hollow head integral with and of greater diameter than the neck extending from the neck, a vibrating mechanism in the head, the outer end of said head being open, and a sleeve-mounting plate closing said end.

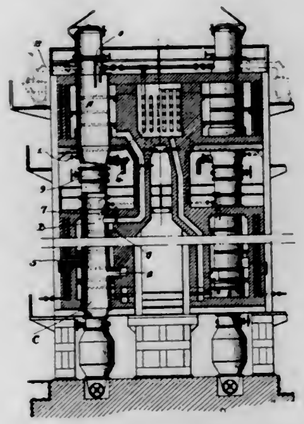
1,502,589. WINDSHIELD WIPER. MARTIN J. RAFFERTY, Chicago, Ill. Filed Dec. 30, 1922. Serial No. 610,066. 4 Claims. (Cl. 74—14.)

1. Operating mechanism of the class described including a member adapted to be mounted for continuous movement in one direction, means adapted to support a carriage for a reciprocatory movement, a carriage on the support, means arranged and adapted to have slidable relation with the carriage and provided with a portion having an elongated slot formed therein, and means carried by the said first named member engaged in said slot and adapted at the completion of each stroke of the carriage to shift the means having slidable relation with the carriage to reverse the direction of movement of the carriage.



1,502,590. LOW-WATER SAFETY TELLTALE. GEORGE A. SAGER, Albany, N. Y. Filed Mar. 4, 1920. Serial No. 363,206. 14 Claims. (Cl. 122—504.2.)

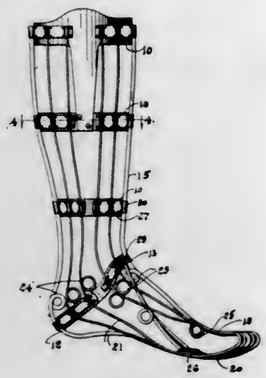
1. In a thermally operated tell-tale, a valve including a seat, a casing supporting said valve and seat, a thermally expansible valve operating element carried by said



casing for expansion and contraction to control the opening and closing of said valve, and means rendered operative by the opening of said valve for assisting contraction of said thermal element.

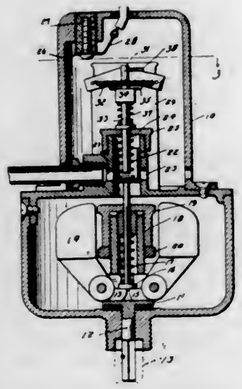
1,502,591. TRUCK SNOWPLOW. DON A. SARGENT, Bangor, Me., assignor to Northern Trailer Company, Bangor, Me., a Corporation of Maine. Filed Aug. 21, 1923. Serial No. 658,484. 11 Claims. (Cl. 37—44.)

1. A snow plow comprising the combination of a frame, a nose connected thereto, and means for securing the frame to both axles of a motor truck, said frame being adjustable longitudinally and laterally.



1,502,592. PROCESS FOR PREPARING DECOLORIZING CARBON. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands. Filed Mar. 26, 1923. Serial No. 627,757. 16 Claims. (Cl. 252—3.)

1. A process of producing decolorizing carbon which comprises subjecting solid carbonaceous raw material to destructive distillation and subjecting the heated material while moving as a stream, to the action of a counter current of gases which have not more than a slight oxidizing character, and thereafter subjecting the product of such treatment to the action of activating substances.

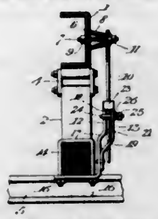


1,502,593. ARTIFICIAL LIMB. GEORGE HAMILTON SHRODES, Porterville, Calif. Filed Nov. 9, 1923. Serial No. 673,757. 4 Claims. (Cl. 3—3.)

1. An artificial lower limb comprising in combination a plurality of wires forming the lower limb construction and foot, and a plurality of bands engaging said wires and attached thereto to maintain said wires in proper spaced relation, one of said bands being positioned to represent the transcrucial ligament, said wires each having its forward portion provided with a spring coil

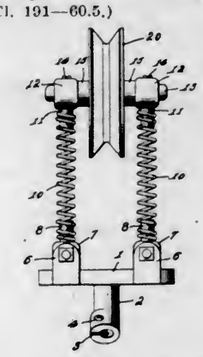
immediately beneath the last mentioned band, and its rearward portion provided with a similar coil immediately above the last mentioned band.

1,502,594. SPEED CONTROL. GILES F. SPIVA, Spokane, Wash., assignor, by direct and mesne assignments, to Ideal Speed Control, Inc., Spokane, Wash., a Corporation. Filed Jan. 20, 1922. Serial No. 530,584. 5 Claims. (Cl. 123—118.)



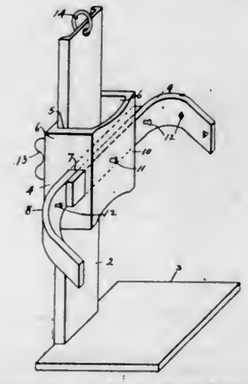
1. A speed control for motor vehicles having a centrifugal governor, a circuit breaker movable to ground the ignition circuit, a plunger operable by the governor to operate the circuit breaker, and means operable by the plunger having a limited movement relatively to the circuit breaker to admit air to the engine fuel line.

1,502,595. COMBINED STABILIZER AND SHOCK ABSORBER. FRANK N. SPRAGUE, Holyoke, Colo. Filed Apr. 14, 1923. Serial No. 632,023. 6 Claims. (Cl. 188—129.)



1. In a device of the character described, the combination with an automobile frame and axle, of a depending blade-like member secured at its upper end to said frame, parallel plates secured to said axle and adapted to receive between them the lower portion of

said blade, a U-shaped bolt the members of which pass around one of said plates and through the other plate, nuts on said bolt members, and coil springs interposed

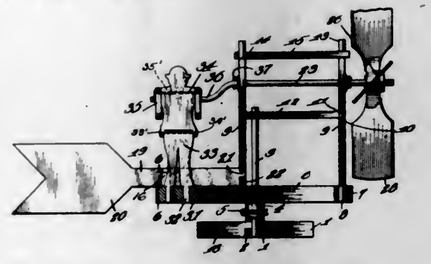


between said nuts and the adjacent plate, whereby the said plates are caused to engage the said blade with a resilient pressure.

1,502,596. TROLLEY. MERLE D. STALDER, Lincoln, Nebr. Filed Sept. 14, 1923. Serial No. 662,725. 3 Claims. (Cl. 191—60.5.)

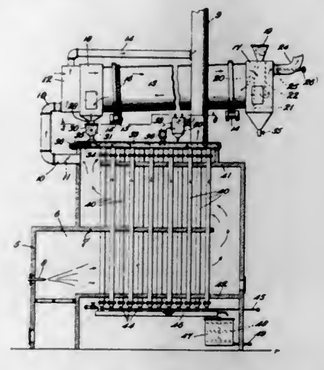
1. A trolley comprising a base frame, members mounted on said base frame to rock in the direction of the width of the trolley and having upstanding studs, coiled springs surrounding and supported by and extending upwardly by the said studs, members having pendent studs disposed in the upper convolutions of the springs, and a trolley wheel mounted between the last-named members.

1,502,597. BAG HOLDER. HARRY E. TAYLOR, Holland, Pa. Filed Feb. 8, 1923. Serial No. 617,690. 2 Claims. (Cl. 83—26.)



1. A bag holder comprising an upright, a slide vertically adjustable on said upright, arms horizontally adjustable in the slide relative to each other, and a single means for holding the slide and arms in their different adjusted positions.

1,502,598. WATERPROOFING FOR CLOTH. NATHANIEL A. THOMPSON, Kansas City, Kans. Filed Mar. 8, 1923. Serial No. 623,725. 6 Claims. (Cl. 134—17.)

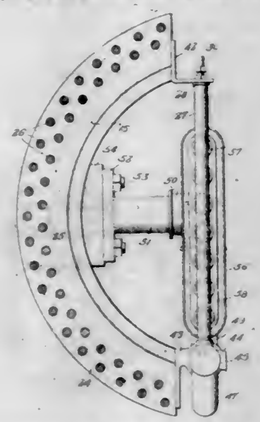


1. A water-proofing composition composed of a viscid vegetable oil, approximately 40 to 50 per cent, rubber 5 to 10 per cent, asphalt 5 to 10 per cent, and a filler of 30 to 50 per cent.

1,502,599. KNOCKDOWN TOY. SAMUEL E. TIMMONS, Lawton, Okla. Filed Oct. 26, 1922. Serial No. 597,050. 2 Claims. (Cl. 46—14.)

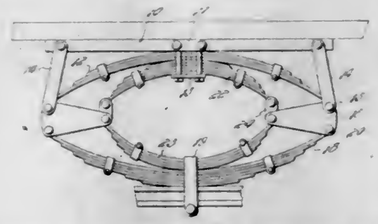
1. A knockdown toy including a pivot pin, a bottom strip mounted to rotate thereon, a standard detachably mounted on the bottom strip and having an opening therein, a slotted dowel detachably engaging the bottom strip, a vane having a shank extending through the slotted dowel, a projection on the shank detachably seated in the opening in the standard, a crank shaft journaled in the standard, a wind wheel on the shaft and a jointed figure detachably connected to the bottom strip and pivotally connected to the crank of the shaft.

1,502,600. CARBONIZING AND REVIVIFYING RETORT. RAFAEL VACHIER, Baton Rouge, La. Filed Dec. 17, 1923. Serial No. 681,251. 5 Claims. (Cl. 202—12.)



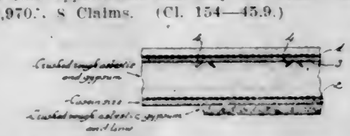
1. In an apparatus of the class described, a combustion chamber; a plurality of retort tubes in said combustion chamber; a predrying chamber comprising an inclined rotatable drum; means for feeding carbon material into said predrying chamber; means for producing a flow of air through said predrying chamber; means for heating said air; and means for feeding the carbon material from said predrying chamber to said retort tubes.

1,502,601. HEATER. GEORGE VAN BALLEGOOIJEN, Zion, Ill. Filed Sept. 15, 1923. Serial No. 662,943. 3 Claims. (Cl. 158—65.)



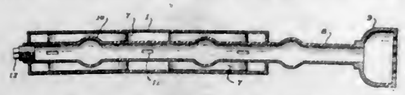
3. A liquid fuel burner comprising in combination, an arc shaped shell, a conduit communicating with said

shell adjacent the central portion of its concave side, a retort supported from the ends of said shell and subtending the arc, a retort heating burner comprising a shell underlying said retort and having burner openings



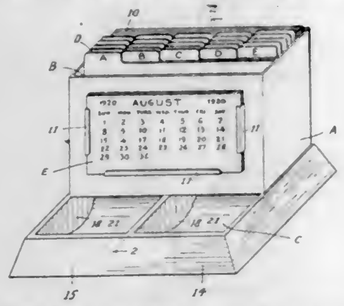
and a communication with said conduit, a mixing chamber at the end of said conduit, said mixing chamber having an inlet for air and an opening receiving the jet from said retort, said arcuate shell having burner openings.

1,502,602. VEHICLE SPRING. JOHN BATTISTA VIDACK, Chicago, Ill. Filed May 16, 1923. Serial No. 639,292. 1 Claim. (Cl. 267—36.)



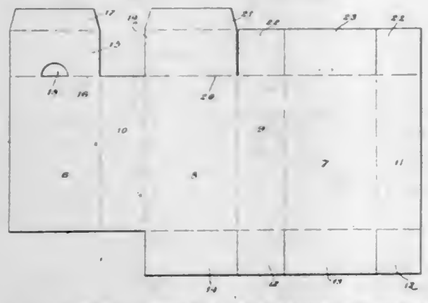
A device of the class described, comprising upper and lower main leaf springs, reversely arranged, shackles pivoted to the ends of one of the springs, plates pivoted to the shackles and to the other spring and extending inwardly from the point of connection, supplementary leaf springs positioned between those first named, shackles pivoted to the innermost ends of the plates, and to the adjacent ends of the supplementary springs and devices connecting the central portions of the supplementary springs, respectively with one of the main springs.

1,502,603. COMPOSITION BOARD. CURRY ORA WALKER, Detroit, Mich., assignor, by direct and mesne assignments, to Standard Plastering System, Detroit, Mich., a Corporation of Michigan. Original application filed Aug. 20, 1921, Serial No. 493,921. Divided and this application filed July 24, 1922. Serial No. 576,970. 8 Claims. (Cl. 154—45.9.)



8. A wall board comprising a plastic composition containing crushed rough asbestic, calcined gypsum and metal.

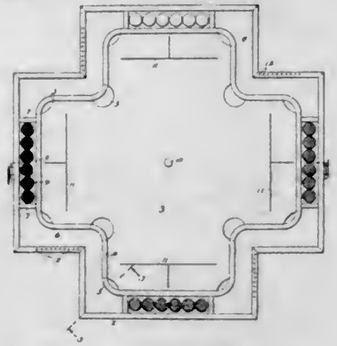
1,502,604. GAS BURNER. CHARLES WEISS, Lansdale, Pa., assignor to Central Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 4, 1923. Serial No. 655,612. 2 Claims. (Cl. 158—99.)



1. In a burner of the character described, a casing having its top wall perforated, a fuel supply pipe extending through the casing and provided with bulbous enlargements spaced apart longitudinally of the pipe, said pipe being further provided with outlet openings positioned within the casing and between the enlargements, and air tubes extending through the casing from the top to the bottom thereof and open at both ends.

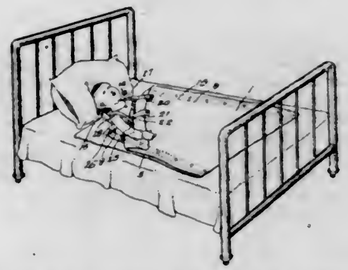
1,502,605. DESK FILE AND TRAY. PAUL H. WELCKER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Sept. 17, 1920. Serial No. 410,849. 6 Claims. (Cl. 120—1.)

1. A device of the class described comprising a base portion stamped from sheet material, downwardly extending lips adapted to form side walls for compartments, a separate bottom portion for the compartments, tongues in said base portion adapted to support said bottom, a card index compartment adapted to be supported by said base formed from sheet material and tongues projecting from said base adapted to engage and support said card index compartment.



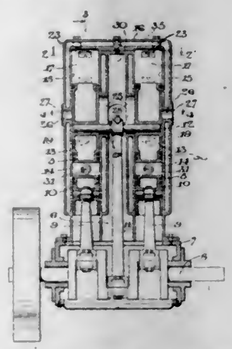
1,502,606. CARTON. FRANK J. WHELAN, Brooklyn, N. Y. Filed Dec. 20, 1922. Serial No. 607,995. 3 Claims. (Cl. 229—17.)

1. A receptacle including a body having an open end, inner and outer auxiliary closure flaps for said open end, the inner flap having a discharge opening normally closed by the outer flap, and other closure flaps positioned adjacent said outer flap when the package is sealed and adapted to be severed from the body to expose said outer auxiliary flap.



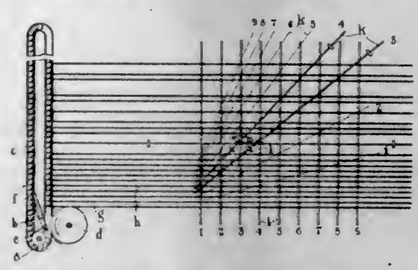
2. A receptacle including a body having inner and outer front wall sections, side sections and an open end, a closure flap for said open end carried by one of said front wall sections and having a discharge opening, a second closure flap cooperating with the first-named flap and having a portion thereof interposed between said front wall sections when the second flap is in closing position, and flaps carried by said side sections and one of said front wall sections foldable over said closure flaps when the receptacle is sealed and capable of being severed from the latter sections to expose said second closure flap.

1,502,607. GAME. GEORGE WRIGHT, Aurora, Colo. Filed Feb. 21, 1922. Serial No. 538,371. 1 Claim. (Cl. 46—61.)



A game board including a playing field, spaced outer and inner walls surrounding said field, the inner wall having a plurality of corners each of which is provided with an opening, and transverse partitions extending between said outer and inner walls and defining a plurality of compartments certain of which are segregated from the playing field for receiving tokens not in play, the other compartments each communicating with said playing field through one of said openings to receive a token from said field which has been put in play.

1,502,608. BABY-BLANKET HARNESS. HELEN B. YOUNG, New York, N. Y. Filed Apr. 25, 1923. Serial No. 634,531. 3 Claims. (Cl. 5—336.)

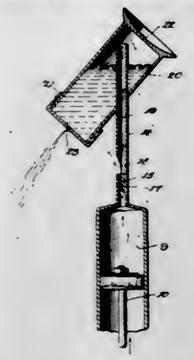


1. A combined blanket and harness, comprising a blanket body adapted to be folded centrally, strips connected to said body along each edge, said strips being provided with snap fasteners, a pair of straps connected to said strips near one end, a single strip, connected to the first mentioned strips near the opposite end, one of said straps and said last mentioned strip being formed with snap fasteners, and a plurality of auxiliary straps co-acting with the first mentioned straps for presenting shoulder straps.

1,502,609. INTERNAL-COMBUSTION ENGINES. HUGO J. ASCHERIN and RAYMOND W. LOOMIS, East Troy, Wis. Filed May 17, 1922. Serial No. 561,748. 3 Claims. (Cl. 123—51.)

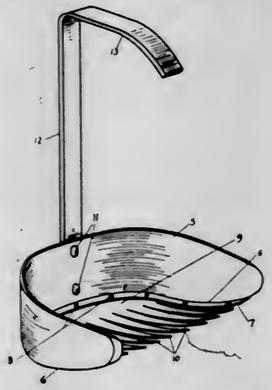
1. In an internal combustion engine, the combination of a pair of cylinders, of two pistons working in each of said cylinders in opposite directions and forming combustion chambers therewith, a wrist-pin connecting together the pistons working in one direction in said cylinders, pump chambers in which the back ends of said last named pistons work, a three-throw crank shaft, a connecting rod connecting said wrist-pin with one of the cranks, the other two cranks being disposed opposite to the first mentioned crank, connecting rods respectively connecting the last mentioned cranks with the other pistons, inlet ports at one end of the combustion chambers and exhaust ports at the other end of said chambers uncovered by each set of pistons near the end of the power stroke, inlet ports to said pump chambers controlled by the pistons working therein, and means for transferring the working agent from said pump chamber to the inlet ports for the combustion chambers.

1,502,610. CALCULATING MACHINE. JAMES MARK MCGINNIS BARR, London, England. Filed July 9, 1923. Serial No. 650,501. 13 Claims. (Cl. 235—61.)



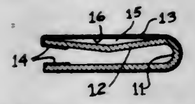
1. A calculating machine of the kind referred to, comprising a plurality of counting mechanisms corresponding to the various denominations occurring in the maximum result obtainable in the machine, each of which is associated with means whereby the counter may have delivered to it for counting a number of members representing any of the partial products corresponding to its denomination that may occur in any calculation within the limits of the machine.

1,502,611. WHEELED SOUNDING TOY. HARRY E. BOEDECKER, Benham, Ky. Filed Sept. 25, 1922. Serial No. 590,453. 5 Claims. (Cl. 46—47.)



1. In a wheeled sounding toy, a standard, a ground wheel mounted thereon, a cylinder, a piston working in

the cylinder and having operative connection with the said wheel, a sounding reed leading upwardly from the

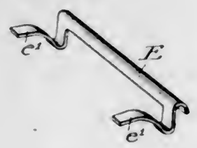


upper end of the cylinder, and a water reservoir into which the end of the said reed projects, the reed having a vent exterior to said reservoir.

1,502,612. PLANT PICKER. ROBERT L. WELLS and FRANK BUCKNER, Chicago, Ill. Filed June 22, 1922. Serial No. 570,240. 4 Claims. (Cl. 56—330.)

3. A device for severing and collecting the heads of plants, such device including a scoop having a curved wall open at the front and an inwardly turned flange on the lower edge of said wall; a metallic plate secured to said flange, said plate having teeth formed therein spaced at their outer ends and converging toward their inner ends, and handle means fastened to the rear wall of said scoop for swinging said scoop, such means overhanging said teeth.

1,502,613. WORKHOLDER. CHARLES C. CASEY, Detroit, Mich. Filed July 1, 1921. Serial No. 481,807. 5 Claims. (Cl. 40—23.)

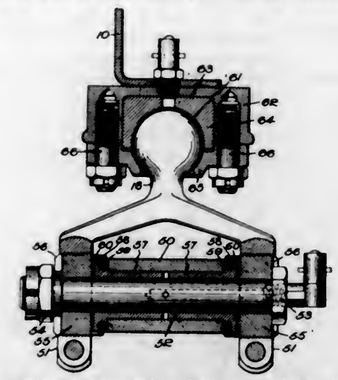


1. A combined finger piece and card holder for a leaf comprising a member having configuration affording a restricted passage into which the leaf may extend and be frictionally held by said member, a card on said member, and means cooperating with the configuration of said member in engaging the longitudinal edges of the card and retaining the card on said member.

1,502,614. GARMENT. ROBERT W. CELLARS, Delaware, Ohio. Filed Mar. 29, 1923. Serial No. 628,506. 1 Claim. (Cl. 2—70.)

In an article of apparel, upper and lower garments, a portion of one overlapping part of the other, a series of loops of fixed form spaced around the underneath part of the one garment, a belt encircling said underneath part and passing through said loops, said belt being secured to said part at the sides of said loops, thereby pivotally attaching said loops to said part, the overlapping portion of said other garment being formed with slits through which said loops may extend, and a removable outer belt passing serially through said loops outside of said overlapping portion.

1,502,615. SKIN SMOOTHING AND STRETCHING DEVICE FOR SAFETY RAZORS. RUSS J. CHRISTY, Fremont, Ohio. Filed June 16, 1921. Serial No. 478,148. 2 Claims. (Cl. 30—12.)

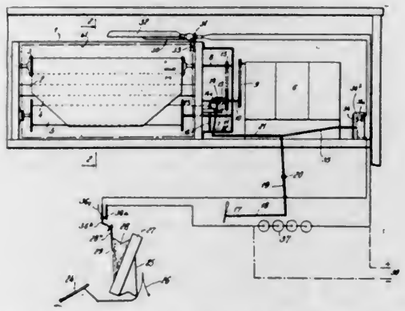


1. In a safety razor, the combination with a blade holder and a guard rigid therewith, of a skin stretching and smoothing device secured to said holder and movable independently of said guard, said device consisting of a strip of sheet metal bent into U-shape in cross section and located in front of and immediately adjacent to and parallel with the guard, spring arms secured to said strip and extending rearwardly thereof and secured to said holder, and said strip operating to stretch and smooth the skin in advance of the cutting edge of the blade.

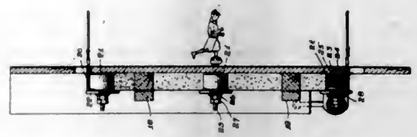
1,502,616. VEHICLE SPRING SUSPENSION. HAROLD D. CHURCH, Fairfield, Conn., assignor, by mesne assignments, to Locomobile Company of America, Incorporated, New York, N. Y., a Corporation of New York. Filed July 22, 1920. Serial No. 398,171. 2 Claims. (Cl. 267—54.)

1. In a vehicle spring suspension, the combination of two pivotally connected parts one of which supports the other, and one of which parts carries abutments between which the other part is received, a pivot about whose axis said parts turn one on the other, bushings having

sleeve portions interposed between said pivot and said other part, and collar portions interposed between said abutments and said other part, fibrous washers interposed endwise between said collar portions and said other part, and annular shields carried by said abutments and encircling said washers.



1,502,617. REFLECTOR. WILLIAM CLINE, Lancaster, Pa. Filed Sept. 2, 1922. Serial No. 585,962. 1 Claim. (Cl. 240—104.)

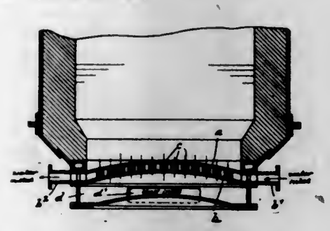


A reflector produced from flat sheet metal to form, by bending, a fluted cone-shaped body and a center portion integral therewith, all of uniform thickness, said center portion being slit radially to provide without stretching the metal, a plurality of tapering, gripping members bent upwardly parallel to the axis of the body and terminating with inwardly bent tapered fingers adapted to engage the exterior surface of a bulb.

1,502,618. PLAYER PIANO AND THE LIKE. JOSEPH HUNTER DICKINSON, Larchmont, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed June 8, 1920. Serial No. 387,307. 10 Claims. (Cl. 84—115.)

7. In an automatic player embodying pneumatic means for actuating it and music roll means for supporting a music sheet in playing position, a lamp positioned to illuminate a music sheet in playing position, and means controlled according to the presence or absence of pneumatic operating conditions in said pneumatic means for lighting and extinguishing said lamp.

1,502,619. BASEBALL GAME BOARD. MORK MENASHA DOOB, New York, N. Y. Filed Feb. 8, 1921. Serial No. 443,393. 1 Claim. (Cl. 46—63.)

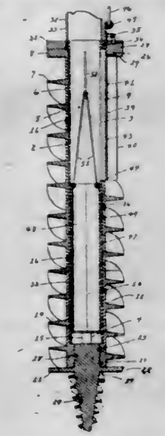


A game-board having a base-ball diamond thereon and player figures adapted to be disposed at will about the board, a movable belt on the board, said belt having sockets at intervals adapted to receive the player figures, said sockets comprising tubes disposed in the belt, and pins on said player figures adapted to be inserted in the sockets.

1,502,620. POISON INDICATOR. HENRY FLEISHER, Gambrills, Md. Filed June 16, 1922. Serial No. 568,749. 1 Claim. (Cl. 215—9.)

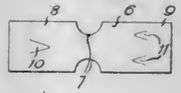
A device of the class described comprising a plate made in the form of a skull and cross bones, eara at the bottom of the plate, a pointed member pivoted between said ears, ears at the top of the plate and a corkscrew pivoted between said eara.

1,502,621. CONVERTER. HAYO FOLKERTS, Aachen, Germany. Filed Feb. 16, 1924. Serial No. 693,363. 5 Claims. (Cl. 266—35.)



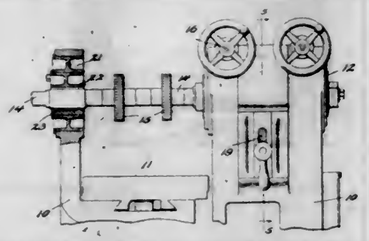
1. In a converter, a nozzle-carrying converter-bottom consisting of a plate of non-oxidable steel.

1,502,622. PROSPECTING OR WELL-DRILLING DEVICE. WILLIAM H. FORSYTH, Philadelphia, Pa. Filed Aug. 10, 1923. Serial No. 656,728. 5 Claims. (Cl. 255—67.)



1. In a device of the character stated, a drill member comprising a tubular barrel open at both ends and having

a slot adjacent its upper end, a sectional auger removably mounted upon said barrel, a portion of said auger having

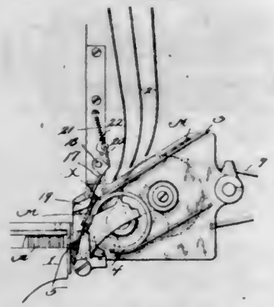


an opening therethrough to coincide with the opening in the barrel, and a combined bit and cutter detachably mounted in the lower end of the auger member.

1,502,623. PAPER CLIP. JOHN FRITZ, New Bedford, Mass. Filed Mar. 16, 1923. Serial No. 625,356. 1 Claim. (Cl. 24—153.)

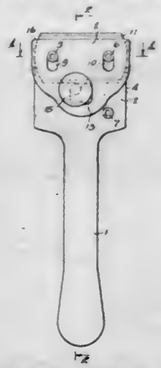
A paper clip formed from an elongated strip of resilient material having oppositely disposed notches dividing said strip into end portions, one of said end portions having a single prong struck therefrom and capable of being projected entirely through a sheet of paper and extended in one direction, and the other portion of said strip having a pair of prongs struck therefrom of less length than the first-named prong and also capable of being projected entirely through said sheet and extended in a direction directly opposite to that of the first-named prong.

1,502,624. ADJUSTABLE ARBOR SUPPORT FOR MILLING MACHINES. CARL GABRIELSON, Syracuse, N. Y., assignor, by mesne assignments, to Meldrum-Gabrielson Corporation, Syracuse, N. Y., a Corporation of New York. Original application filed June 10, 1920, Serial No. 388,014. Divided and this application filed Jan. 3, 1922. Serial No. 526,694. 11 Claims. (Cl. 90—16.)



1. In a machine of the kind described, a frame, a table, an arbor adjustable toward and from the table, means for supporting the free end of the arbor comprising a cylinder bushing rotatably mounted in said frame, the free end of said arbor being eccentrically journaled in said bushing, and means for locking said bushing in the desired position.

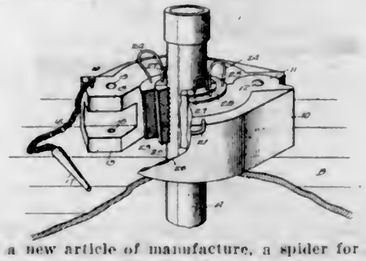
1,502,625. WIRE BALE TIE. ALEC JOHN GERRARD and PARVIN WRIGHT, Chicago, Ill. Filed Jan. 16, 1923. Serial No. 613,058. 4 Claims. (Cl. 24—27.)



1. A bale tie comprising a wire having a flattened deformed portion on one of its ends, and a loop portion on the other of its ends.

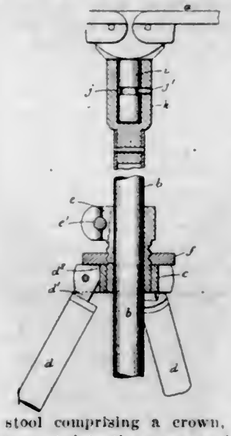
1,502,626. TYPOGRAPHICAL MACHINE. EDMUND M. GOODROPY, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 21, 1922. Serial No. 569,778. 2 Claims. (Cl. 199—28.)

1. In a typographical machine of the class wherein matrices are delivered from a magazine and assembled in a line, the combination of assembling means in which the matrices are assembled in a line, a revoluble toothed member for stacking the matrices in a line, a matrix delivery belt inclined downwardly toward the assembling point and arranged to receive the matrices delivered from the magazine, a pulley over which said belt passes, said pulley being located immediately, adjacent to said toothed member, and a chute plate having a toe located opposite to the portion of the travelling belt beyond the point at which the belt first bends over said pulley and operative to divert the leading ends of the matrices from the inclined position which they occupied while travelling with the belt toward and upright position and tensioned to press the matrices while passing the toe into contact with the travelling surface of the belt opposite to the toe.



1,502,627. BLADE HOLDER. EDWARD WHEELER HAMMOND, New York, N. Y. Filed Mar. 23, 1923. Serial No. 627,159. 2 Claims. (Cl. 30—9.)

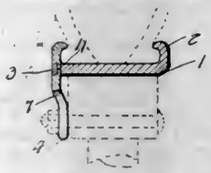
1. A blade holder, which includes a head plate having a front and a lateral edge, three studs formed integrally thereon, two of said studs being disposed parallel to one edge and the third stud being disposed with one of the first-mentioned studs parallel to the lateral edge, a razor blade having apertures therein to be disposed along either



edge in coincidence with the studs, a slidable clamping plate to be disposed against the head plate and the blade to hold the blade in position, and means for clamping the plate against the head plate and the blade, said clamping plate being slotted to permit it being slid forward so that its edge projects beyond the edge of the blade.

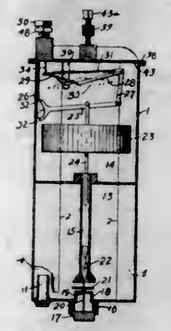
1,502,628. HINGED SPIDER. FRANK LEE HANNA, Wichita, Kans., assignor of forty-five one-hundredths to Frank L. Hanna, forty one-hundredths to Frederick E. Mallonee, and fifteen one-hundredths to Thomas R. Ermey, all of Wichita, Kans. Filed Sept. 7, 1923. Serial No. 661,477. 1 Claim. (Cl. 24—263.)

As a new article of manufacture, a spider for application to well casings, said spider comprising a body composed of hinge sections jointly presenting a bore, a separate sectional liner in the bore of said body, and a sectional gripper fitting the bore of said liner and adapted to bind on the well casing, said body sections, said liner sections and said gripper sections having handles thereon at the top.



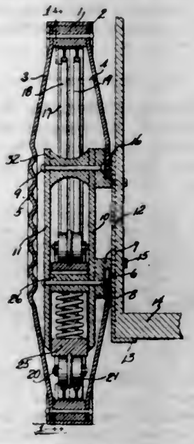
1,502,629. PORTABLE STOOL. LAURENCE ROBERT HARDY, Alnwick, England, assignor to Hardy Brothers (Alnwick) Limited, Alnwick, England. Filed May 1, 1922. Serial No. 557,718. 1 Claim. (Cl. 155—137.)

A portable stool comprising a crown, a plurality of legs pivotally connected to the crown and each having a flat shoulder on its upper extremity, a split collar carried by the crown and having a threaded portion above said legs, a seat pillar slidably fitted through the split collar, contracting means for the split collar to bind the same on the pillar, and a retaining nut on said threaded portion of the split collar and adapted to be turned down against said flat shoulders on the upper extremities of the legs for holding said legs in open position.



1-502,630. DEMOUNTABLE RIM. ALLEN C. HARGRAVE, Anna, Ill., assignor of one-tenth to Ed. Samson, Anna, Ill. Filed May 9, 1922. Serial No. 559,532. 3 Claims. (Cl. 301—35.)

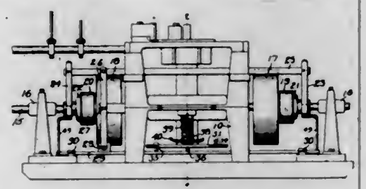
1. A demountable rim structure including a rim, a tire-retaining ring at one side thereof, interengaging means on said rim and ring to engage and disengage through the rotation of one of said parts relatively to the other part, means on the inner surface of the rim



engageable by a tool to effect the said movement and the ring having an opening through which the tool may extend and fulcrum to impart said movement.

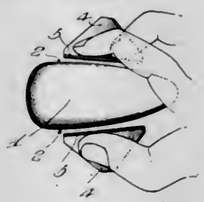
1,502,631. VACUUM FUEL FEED TANK. WILLIAM E. HART, near San Jose, Calif. Filed May 15, 1923. Serial No. 639,143. 4 Claims. (Cl. 103—236.)

1. A tank of the character indicated comprising a shell having at least three corners partitioned off to form conduits, tubular elements arranged in the upper ends of said three conduits, one of said three conduits having communication with the interior of said shell at its lower end and having a discharge passage arranged therein, and the other two of the said three conduits being closed off from the interior of the shell but communicating with the exterior thereof at their lower ends, and a partition arranged in the shell to divide the same into upper and lower chambers, and a conduit connecting said chambers.



1,502,632. WHEEL. THOMAS R. HASLEY, Menominee, Mich. Filed Dec. 2, 1921. Serial No. 519,490. 4 Claims. (Cl. 180—10.)

1. In a wheel of the character described, a separate traction member, a frame arranged in said traction member, anti-friction means carried by the frame and resting on said traction member, spring means carried by said

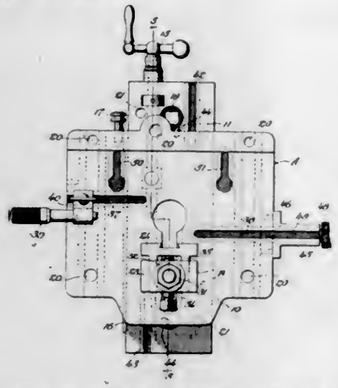


frame, a load carrying member extending into said frame and resting on said spring means, said load carrying member being formed with means for laterally guiding said frame and further means for guiding the traction member.

1,502,633. STOP MECHANISM FOR BENDING MACHINES. JULIUS HERMAN HOLMGREEN, San Antonio, Tex. Original application filed Aug. 4, 1919, Serial No. 315,154. Divided and this application filed Nov. 6, 1922. Serial No. 599,408. 11 Claims. (Cl. 192—139.)

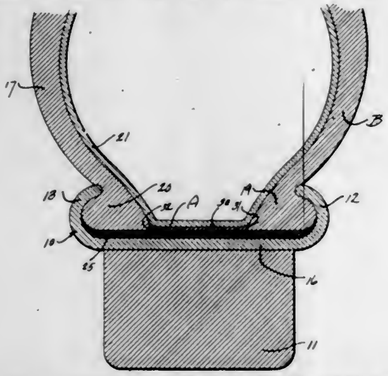
1. Indexing means for bending machines comprising a plate, having a series of holes in a face thereof, a stop member adapted to be inserted in one of said holes comprising a shank and a head, yielding means on said shank for retaining said stop member in retracted position on said plate, and means for pressing the stop member downward.

1,502,634. GLIDING TORPEDO. REUBEN C. INGEBRITSON, Camp Kearny, Calif., assignor, by court decree, to Marie Ingebritson, widow. Filed Sept. 28, 1923. Serial No. 665,420. 4 Claims. (Cl. 124—1.)



1. A toy comprising an elongated rearwardly tapered smooth-sided body adapted to rest on a smooth flat surface, a pair of bases adapted to rest on said surface at opposite sides of said body, and a pair of smooth walls rising from said bases and adapted to be forced by finger pressure against the rearwardly converging sides of said body to project the latter.

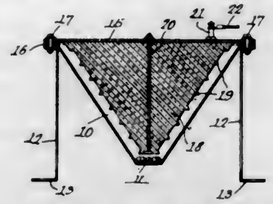
1,502,635. PACKAGE-HANDLING MACHINE. MAX JAEGER, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 27, 1920. Serial No. 354,416. 28 Claims. (Cl. 226—80.)



2. In a packaging apparatus, the combination with an intermittently operating mechanism of a continuously operating supply mechanism effective to advance vessels continuously in succession at a constant speed along a substantially straight path, and a positioning mechanism effective to engage vessels during their movement by the supply mechanism and advance them at the same speed into position for the action of the operating mechanism.

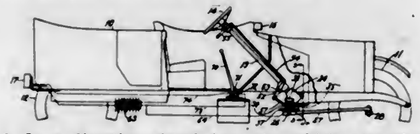
1,502,636. ADJUSTABLE CHUCK. ALFRED JULIUS JOHNSON, Fairfield, and CHESTER SLIWONIK, Bridgeport, Conn. Filed Nov. 8, 1922. Serial No. 799,704. 5 Claims. (Cl. 82—40.)

2. A chuck of the kind described comprising a base structure consisting of a pair of connected members the first of which is adapted to be fixed to a support and the second of which is adjustable with respect to the first, work clamping means on said adjustable member, and a work positioning stop device interchangeably engageable with said members, said device when engaged with one of said members being adapted to contact with the other member to determine the position of the work with respect to the first member, and when engaged with the second member being adapted to contact with the work to determine the position of the work with respect to said second member.



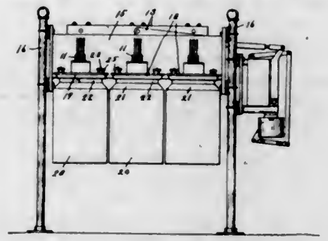
1,502,637. PROTECTOR FOR PNEUMATIC TIRES. STEVE S. KONIECZKI, Stevens Point, Wis. Filed Aug. 5, 1922. Serial No. 579,879. 1 Claim. (Cl. 152—20.)

A tire protector comprising a flexible base portion including water proof inner and outer layers of substantially the same width having a series of intermediate layers therebetween successively of less width from the outer layer toward the inner layer, said intermediate layers being uniformly disposed with respect to the longitudinal center of the flexible base portion to gradually reduce said base portion toward the side edges thereof, and a narrow flexible strip mounted on the outer layer of said flexible base portion.



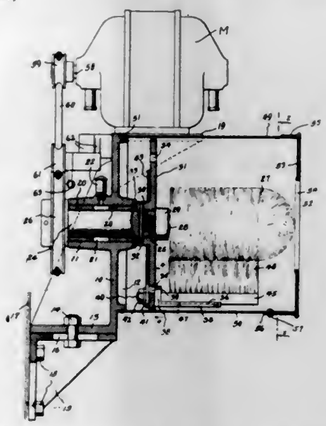
1,502,638. CIRCUIT-CLOSING DEVICE. WILLIAM A. LEE, Roselawn, Ind. Filed June 19, 1923. Serial No. 646,408. 2 Claims. (Cl. 200—52.)

1. A device for use in connection with an internal combustion engine for short circuiting the ignition circuit of the same when the engine inclines beyond a predetermined limit, comprising an upstanding tapered metal shell decreasing in diameter downwardly, a metal cover for the shell insulated therefrom, a tapered obstructing member arranged within the shell and decreasing in diameter downwardly and spaced from said shell, said member



having vertically spaced obstructing elements formed thereon, movable circuit closing means mounted within the shell and adapted to electrically connect said shell and cover, a binding post secured to the cover, and an electrical connection secured to the shell.

1,502,639. AUTOMOBILE SIGNAL. FRANK J. MAY, St. Paul, Minn., assignor of one-fourth to Ervie W. Olson, St. Paul, Minn. Filed Aug. 31, 1922. Serial No. 585,338. 2 Claims. (Cl. 200—59.)



1. In a direction signal for auto vehicles, an electric switch comprising, a base, an insulated block fixed on the base, a switch-lever fulcrumed on the block to swing in plane with the base, operative connection between one arm of said lever, a finger operated lever mounted near the steering wheel; the other or second arm of the lever having springs holding it normally idle between the terminal points of its swinging movement, two switch members fixed on the base in normally spaced relation to the second arm, one at each side thereof; a leaf spring secured at its middle to the base below said second arm and being curved segmentally with its ends upward from the base and being each provided with a catch arranged to engage the arm of the lever and hold it in contact with either one of the fixed switch members, a roller arranged to move back and forth above the leaf spring and adapted to depress either end of the spring so as to disengage the catches from the switch lever when it is to be returned to normal position, and a swinging arm carrying said roller and having operative connection with the steering shaft of the vehicle.

1,502,640. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed Oct. 19, 1920. Serial No. 417,902. 3 Claims. (Cl. 200—150.)

2. The combination of supporting means, a plurality of substantially contiguous switch frames carried by said supporting means, said switch frames having depending peripheral aprons, and a plurality of substantially contiguous oil receptacles having reduced neck portions received within the depending peripheral aprons and supported from said switch frame.

1,502,641. CLEANER FOR TUMBLERS OR THE LIKE. JOHN L. DAHL, Teaneck, and ROBERT H. FRECH, Bogota, N. J., assignors to the Electrisan Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 12, 1921. Serial No. 521,721. 5 Claims. (Cl. 15—75.)
